The *dâk* arrangements are said to be so excellent that the chiefs used to eat dinner cooked at Skardu, which reached them warm at a distance of about 400 miles.

The following song is still preserved at Gilgit in memory of these Chiefs :—

"(1) Ala, Sher Shah, Ali Shah, Murad trai draro, Khiri nile sine aje Kaltor ganaige.

(2) Ala pote, Makpoon ai pote, trai draro Khiri nile sine aje Kaltor ganaige.

(3) Ala, Sher Shah, Ali Shah, Murad, trai draro, Khiri hole sarega lam guti ganaige.

(4) Ala, pote Makpoon ai pote, trai draro Khiri hole sarega lam guti ganaige.

(5) Ala, Sher Shah, Ali Shah, Murad, trai draro, Hathoo Khān Khur bai Khiri Hosi ga Yur phiraigai.

(6) Ala, pote, Makpoon ai pote, trai draro, Hathoo Khān Khur bai Khiri Hosi ga Yur phiraigai.

(7) Ala, Sher Shah, Ali Shah, Murad, trai draro, Chemogar ai cel phote, sang brang tharaigai.

(8) Ala, pote, Makpoon ai pote, trai draro, Chemogar ai cel phote, sáng brang tharaigai.

(9) Ala, Sher Shah, Ali Shah, Murad, trai draro, hune nili Chili ai Khiri devai notaige.

(10) Ala, pote, Makpoon ai pote trai draro, hune nili Chili ai Khiri devai notaige.

(11) Ala, Sher Shah, Ali Shah, Murad, trai draro, hune nile Chili ai Khiri dum dolo bashaigai.

(12) Ala, poti, Makpoon ai pote trai draro, hune nili Chili ai Khiri dum dolo bashaigai.

(13) Ala, Sher Shah, Ali Shah, Murad, trai draro, Khiri Brook ga Balim photai, Khiri roni ronal tharaigai.

(14) Ala, pote Makpoon ai pote trai draro, Khiri Brook ga Balim photai, Khiri roni ronal tharaigai.

### Trakhan's being Thrown into the River.

539
173

Tra-Trakhan, an ancient Rá of Gilgit, is said to have married a woman of a wealthy family of Darel. The Rá was very fond of playing polo and used to go to Darel weekly for the purpose of playing his favourite game with the seven brothers of his wife. One game was played on the condition that whichever party lost the game should be murdered. After a long and skilful game the Rá was winner, and according to the conditions of the agreement he executed all his brothers-in-law. The Soni (queen), who was much disturbed on hearing the sad news of her brothers' death, determined to revenge them and mixed arsenic in her husband's food. So he died, and she took the reins of government into her own hands. After a lapse of a month she gave birth to a son who was named Trakhan; but, his mother, who was deeply grieved on account of her brothers' fate, did not like to see the son of a murderer, and cruelly locked him up in a wooden box, which she secretly threw into the river. The box is said to have been carried away by the current as far as Hodar, a village in the Chilas District, where it was seen by two brothers of poor means, who were collecting wood on the river bank. Noticing that

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

539 173

the box was floating quite close to the bank, and thinking that it might contain some treasure, one of them jumped into the river and brought it ashore. Thinking it better to open the box in their house, they concealed it in a bundle of wood and carried it home. There they opened it; but to their and their mother's great surprise, a lovely infant was found in it still alive. Their mother brought up this outcast child with every care. The family was in straitened circumstances, but after the arrival of the child they grew richer and richer, and they considered his arrival the cause of their prosperity. When the infant was six years of age he began to talk freely with his foster mother, who now related to him the story of his appearance among them, and their becoming more prosperous since his arrival. When Trakhan reached his twelfth year he wished to see the Gilgit district, of which he had heard a great deal, specially in respect of its fertility. So he set out for the place accompanied by his foster brothers. He stayed for a few days on Harali, a hill to the north of Gilgit which has a flat stretch of land called "Baldas" on its top. This was cultivated in those days, as the water-supply (which has now dried up) was sufficient, and there existed a small village on the spot.

The mother of Trakhan was still the ruler of Gilgit, but had then fallen dangerously ill. The people were therefore in search of another competent Rá from any of the neighbouring districts, as there was no one left of the ruling family of Gilgit. One early morning when the village cocks began to crow, the birds, instead of the usual noise of *Kukroonkoon*, uttered the following words, to the great astonishment and delight of the people, "*Beldas tham bayi*" (there is a king at Baldas). Men were at once sent thence to bring down any stranger they happened to find. The three brothers were seen by them and captured and forcibly carried before the queen. Trakhan was handsome and stately in appearance, and the queen therefore addressed him, and asked him to relate the reason of his undertaking this journey, and inquired of his country and his birth. He related all his history at full length, and she found, to her extreme surprise and joy, that the boy then speaking was her own son, whom she had so mercilessly thrown into the river, when her mind was disturbed by the murder of her brothers. She then embraced Trakhan and proclaimed him the rightful ruler and heir to the chiefship of Gilgit.

### Trakhan and a Crow.

On a certain day, it is said, Trakhan, the strongest and the proudest Rá of Gilgit, was sitting on the banks of a water-channel in the midst of an assembly of his followers. There he told them that there was no one in the world equal to him in bravery and strength. While he was thus boasting, a crow happened to pass over his head and soiled him. He turned very angry at the impudent action of the crow, and ordered his followers to catch it at once by any means possible. The bird having been pursued by so many men, flew away towards the village of Manawar, and from thence towards Danyore across the Gilgit river; but seeing that the gathering did not quit its pursuit, it escaped towards the Danyore Nullah. There a woman was washing the flesh of a markhor. The pursuers took from her a piece or two of the flesh, and by the help of this meat they succeeded in seizing the poor bird. It was brought before their Rá, who indignantly asked the bird to explain the cause of its conduct towards a king of Gilgit.

539 173 The crow, it is said, replied saying, "The boast made by you on a spot I know well to be the grave of a nan far more powerful than you, did not please me. A ring of the same warrior is also buried at this spot, and it will show you how strong he was in comparison with you." Trakhan gave orders to dig up the ground; these were at once obeyed, and a finger ring was found in the grave so wide that Trakhan could pass it over his body. A delicate feast of meat was then prepared for the crow, and afterwards the bird was set free.

### Su Malik's Bravery and a "Tallufar."[1]

Su Malik, an ancient Rá of Gilgit, is said to have presented a dog as a dowry to his sister, who was married to Farmaish, a ruler of Yasin. When Taj Mughal, the chief of Badakhshan, arrived at Darkot for the purpose of attacking Gilgit, the Rá of which place had refused allegiance to Badakshan and stopped sending the tribute of Chogas, Farmaish wrote a letter to Su Malik, and enclosing it in the collar of the dog, ordered it to start at once for Gilgit. The dog arrived here within five hours, travelling by night. Su Malik got the letter and started on the same day with a strong force to check the enemy's advance, and to assist Farmaish against the Mongols invading Yasin. Both the forces reached Yasin on the same day and encamped on the opposite sides of the river bank. The Mongols, who had come by short and slow marches, sent a message to Su Malik to commence the fighting; but the Gilgit men were too weary to fight owing to their previous haste, and so Su Malik sent a reply requesting them to postpone the combat until the next day. However, he asked the Mongols that if there were any strong athletic men in their army, they should show him their skill. Taj Mughal ordered one of his champions to show his prowess to Su Malik. The man caught hold of a large goat and threw her across the river, with such strength that the goat fell in the Sarginis (Gilgitis) camp near Su Malik. On this Su Malik, who was very strong, and had reached his full muscular development, took up a large and heavy log of wood and threw it in turn towards the Mongols with such force that, though the log was much heavier than the goat, it fell into the Mongol camp across the river. Seeing this prowess on the part of Su Malik, the Mongols lost their courage, and giving up the idea of any further fighting, they retreated on the same night. By dawn Su Malik, seeing no enemies in their camp, pursued them rapidly and caught them at Darkot, where Su Malik, having tumbled from his pony, fell into his enemies' hands and was carried by them as a prisoner to Badakhshan, without its being known to them that he was the Rá of Gilgit. There he was given the work of bringing wood for the Mir's kitchen. On a certain day when he was collecting wood he saw the head of a dead animal and began to weep over it. His companions asked him to explain the reason of his grief, but he made reply to none until the Mir of Badakhshan heard the news and sent for him to know the reason of his weeping. He related to the Mir that his grief was only because the head was that of an excellent *tullufar* horse. Taj Mughal, seeing that the man had a good knowledge of animals, appointed him as a caretaker of his stable, and asked him to see if there was any *tullufar* animal in the stable. Su Malik saw all the animals and came to the Mir to say that a mare was in foal with a *tullufar*, and that the young animal should be

[1] The *tullufar* is said to be the offspring of a mule and a mare. It is said to be very swift and strong.

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

539
173

taken out by opening the belly of the mare, as otherwise she would die in a few days and the colt would be lost as well as the mother. The Mir gave him permission to cut the mare's belly. Thus obtaining the Mir's consent, he performed the operation and secured a magnificent foal. On this success he received a handsome reward and a *khillat* from the Mir. When the foal grew up Su Malik used to take it about with him. The animal is said to have turned out so swift and strong a steed that Su Malik brought him back from a round of 100 miles in four hours. Su Malik then requested Taj Mughal that, as the animal had grown fit for riding, he should hold a Durbar to perform the ceremony of riding the new steed. A day was fixed for the Durbar, and invitations were sent by the Mir to all the officials and headmen of the district. On the appointed day the magnificent Tullufar was brought by Su Malik to the crowded ground caparisoned with gold. When everything was ready, Su Malik begged the Mir to give him permission to show the spectators the animal's swiftness and merits. It was given, and Su Malik who was attired neatly, addressed the Mir in the following way :—

"I, who was brought by your men as a captive from Gilgit, am Su Malik, the Rá of that country, and now I am going back to my native land on this *tullufar* pony of yours. If it is in your power to arrest me now, pray try your utmost! Adieu!"

As soon as he had uttered the above words, he spurred the pony, and galloped away at full speed from the assembly. A number of riders on good ponies were sent after him by the Mir to arrest him wherever they could find him, but in vain, as no one could catch him except one rider on a certain good mare. This man caught up Su Malik in Gujhal[1] territory. On seeing him Su Malik stopped to await his arrival, and to satisfy his curiosity by seeing the excellent mare which had been able to compete with the *tullufar*. As soon as the man approached Su Malik, the latter informed him that one man like him was useless in attempting to arrest Su Malik, that he would lose his own life, and that it was better for him to return with the happy news that his mare was in foal with a *tullufar* colt. The rider was very pleased to hear this of his mare, and returned to Badakhshan to tell to the Mir that he had come back unsuccessful. From Gujhal Su Malik came to Yasin *viâ* the Darkot pass, and found that his sister was badly treated by her husband Farmaish, who had no fear of Su Malik, thinking that he would never return to his country. He was therefore severely punished by Su Malik. Now Su Malik is said to have been given a piece of advice by an old man of Yasin who was well aware of his sudden fits of rage. These he soon learnt to overcome by following the advice, which was not to punish with the weapons at hand, but to start out and search for others at a distance. When Su Malik reached Gilgit, he saw a stranger sitting in his house by the side of his wife, and became so angry that he felt impelled to kill both his wife and the man by means of a big stone which was lying quite close to him. But he remembered the advice of the old Yasini and went out to search for another weapon. In the meantime he came to know that the man whom he had thought to be a stranger was his own son Khisrau Khan, whom he now embraced. In gratitude he sent a good reward to his old Yasini adviser.

[1] Wakhan was formerly called Gujhal, and its people Gujhai. As some Gujhais have come and settled in the upper part of Hunza, that country is now called Gujhal.

present a few striking images which want connection, and which are often repeated with wearisome iteration. The Khowar songs are mostly of an amatory nature, seldom treating of warlike subjects, and give evidence of a more cultivated taste than those in Shina, while the musical nature of the language and the better rhythm of the verse entitle them to the first place in Dard poetry. Generally two performers stand a little distance apart and sing in strophe and antistrophe to each other: a chorus stand by who do not repeat the words, but give emphasis to the periods by a loud *Ah Ha* and by stamping.

D 533 B 533

The following examples will give a good idea of the different styles:—

TRANSLATION.

*A bulbul has alighted to drink at the fountain,*
*I cannot restrain myself from clasping her neck.*
*Oh my life, I will give my life for you!*

~~121~~ Biddulph G-3 (1873-1878) 1880 ~~AU1 Afghanistan AU1~~
4 AV3 Dard AV3

539 *A bulbul has alighted on the turf for shade,*
*I am ready to be cooked like an onion for you.*
*Oh my life, I will give my life for you!*

*Oh bulbul, oh mynah, what is in your heart?*
*You know my life is placed in my hand for you,*
*Oh my life, I will give my life for you!*

*Let it not be concealed, I am dying for love of you,*
*Give me one glance with your crystal eye,*
*Oh my life, I will give my life for you!*

*Forgetting my country I am distracted and wander,*
*On what joyful day shall I see your face?*
*Oh my life, I will give my life for you!*

*Your cuckoldy husband touching your milk-white neck*
*Is like a fly defiling cream.*
*Oh my life, I will give my life for you!*

III.

*I roam on the mountains as if I trod on hot ashes,*
*The sword of love has stricken me; I made of myself a shield of two bones.*
*Oh Yoormun Hamin!*

*Oh Fairy I swear by God after seeing you there is no light,*
*Night and day are alike dark to me, no dawn comes to me.*
*Oh Yoormun Hamin!*

*The curls of my bulbul are like rosebuds and maiden hair fern,*
*Come sit by me and sing like a mynah or a bulbul.*
*Oh Yoormun Hamin!*

*Still I look at you; you turn away and look elsewhere,*
*My life is yours, why do you look at my enemies?*
*Oh Yoormun Hamin!*

*Your long ringlets and your well-curled hair are like bedmushk,*
*You bind up your locks to slay this lad.*
*Oh Yoormun Hamin!*

*I sigh day and night for the bulbul,*
*I kiss your pearly ringlets in my dreams.*
*Oh Yoormun Hamin!*

533 This is a very favourite song in Upper Chitral, where the grave of Yoormun Hamin is still to be seen. A romantic story is attached to her memory.

The above songs must not be studied as examples of the language: they contain many inflexions which are not found in the colloquial. Dr. Leitner has collected a large number of Shina songs.

Biddulph G-3 (1873-1878) 1880 ~~AU3 Afghanistan AU3~~
4 AV3 Dard AV3

then took some of the leaves, and pouring wine and water on them placed them on the fire, and the rest were sprinkled with flour and suspended from the ceiling. She then sprinkled flour on her husband's head and shoulders, and addressed him thus:—"Ai Shiri Bagerthum, son of the fairies, you have come from far!" *Shiri Bagerthum*, "the dreadful king," being the form of address to the cedar when praying for wants to be fulfilled. The next day the wife baked a number of cakes, and, taking them with her, drove the family goats to the Chili stone. When they were collected round the stone, she began to pelt them with pebbles, invoking the Chili at the same time. According to the direction in which the goats ran off, omens were drawn as to the number and sex of the kids expected during the ensuing year. Walnuts and pomegranates were then placed on the Chili stone, the cakes were distributed and eaten, and the goats followed to pasture in whatever direction they showed a disposition to go. For five days afterwards this song was sung in all the houses:— 782

782
539 ●

Dread Fairy King, I sacrifice before you,
How nobly do you stand! you have filled up my house,
You have brought me a wife when I had not one,
Instead of daughters you have given me sons.
You have shown me the ways of right,
You have given me many children,
You have made me like the mountain,
I have brought the family of the mountain tops,
I have gone to Sargin Gilit,
That I might see the people.
You slay many wild goats,
You with the gun on your shoulder,
Oh you with the sword in your hand!
Oh you riding upon a horse!
Oh you clothed in a fine robe!
Dread king, I will slay you a ram.
Oh you that have come from the mountain,
I will rub your feet with butter.
Oh you that have come from below,
I will anoint you with oil.
I have been to the wide plain,
They have slain you a fine he-goat,
A ram has been slain, I have honoured you to-day,
To-morrow you will depart.
Go, dread Fairy King, I salute you,
You have given me prosperity,
How shall I let you depart!

The Chili stone is still to be seen at the entrance of every Shin village. [778]

changed yearly in accordance with instructions from their spiritual head.

The following is a favourite poem recited in praise of the Imam-i-zeman :—

HELP! OH ALI.

Oh amulet of life, thou glory, Sahib-i-zeman,
Speak thy praise incessantly,
Sahib-i-zeman.

Sultan of both worlds from east to west,
All kings are beggars compared to you,
Sahib-i-zeman.

The sun of heaven shines by your beauty,
Sun and moon by your light,
Sahib-i-zeman.

When shall peace be from evil and strife of Dejjal,
Except it be your pleasure,
Sahib-i-zeman.

I hope that my heart may be lighted up
One day under the dust of your feet,
Sahib-i-zeman.

There will be a day with my last breath,
I shall speak your praises,
Sahib-i-zeman.

It is time that the sound of your trumpet
Be heard through the world,
Sahib-i-zeman.

From Kaf to Kaf take the whole world
In your world-conquering hand,
Sahib-i-zeman.

The time is come for the faithful to gird
Their loins and follow you,
Sahib-i-zeman.

Jesus will come down from the fourth heaven
To imitate you,
Sahib-i-zeman.

Nobody will worship or pay respect to God
Without worshipping also you,
Sahib-i-zeman.

Wine is drunk by the Maulais without concealment, and they do not strictly abstain from eating the flesh of animals not killed in the orthodox manner. Being absolved from the constraints of prayer and fasting, the practical religion of the uneducated consists of little more than obeying the commands of their Caliphas and Pirs, and making offerings freely through them to their spiritual chief. They are by no means intolerant, and, where permitted, live on good terms with Soonnees and Shiahs, with whom they intermarry without restraint. The only cases I have known of ill-feeling between the sects have been caused in the first instance by Soonnees from other places. From Shiahs they seldom meet with hostility, owing probably to the respect they show to Ali; though they do not celebrate the martyrdom of Hassan and Hoossain.

On the death of a Maulai the choicest articles of his portable property are set aside for the Imam-i-zeman. No food is cooked in the house, for from three to eight days, according to the rank of the deceased, and the family subsist on food cooked elsewhere. Food is also placed on trees and exposed places for birds to eat. On the evening of the appointed day a Calipha comes to the house, and food is cooked and offered to him. He eats a mouthful and places a piece of bread in the mouth of the dead man's heir, after which the rest of the family partake. The lamp is then lighted (from which the ceremony is called "Chiragh roshan"), and a six-stringed guitar called "gherba" being produced, singing is kept up for the whole night.

The Noor Buksh sect, which has been before referred to, is peculiar to Baltistan, where it numbers over twenty thousands followers, most of whom are to be found in Shigar and Khapolor. It is apparently an attempt to form a *vid media* between Shiah and Soonnee doctrines. Mahommedanism is said to have been first introduced into Baltistan according to Soonnee tenets by Syud Ali Hamadani. Later, a certain

366 A. H. Francke—*A language map of West Tibet with notes.* [No. 4,

T D 174 797 782 539

The following is my attempt at a restoration of the text according to the Dard-dialect of Da:

Dargyassi de tija namo hla zhuni
Shuni bhi tija namo hla zhuni
Sinani bhi tija namo hla zhuni

Translation:

Give abundance! Honour to thee, oh god Zhuni!
Crops also! Honour to thee, oh god Zhuni!
A son also! Honour to thee, oh god Zhuni!

T D 539

Notes on the Dard text:

*Dar-rgyas* is a Tibetan synonym compositum meaning about 'abundance;' *di* was probably in course of time contracted from *de*, give, and *ti*, thee; *tisha* or *tija* means 'to thee,' *sha* and *ja* are frequently used terminations of the dative case; *nomo* instead of *namo* is a case of assimilation of the vowel of the first syllable to that of the second syllable; *namo* as well as *nomo* often occur in the sense of 'glory, honour' in the Bono-na-songs, Ladakhi Songs, No. XXXI ff; *hla* is the Tibetan *lha*, a Pre-Buddhist god; *Zhuni* is the proper name of the house god. *Shuni* means 'harvest'; *bi* is supposed to be the same as Urdu *bhi*, meaning 'also.' Also in the second and third lines the *ti* of *tisha* was lost in the preceding word. The *si* in *sinani* is the emphatic syllable of Tibetan.

T D 174 527 796

(4) *Dard customs.*—To the present day the Māmani-festival is considered as a Dard custom. It is held 1½ months after the 21st of December. In Khalatse it is celebrated in this way:—Cooked heads of goats and sheep, and omelettes called *ten ten*, are brought before an ancient row of *mchod rten* (mchod rtengyi sgang) which goes back to Dard times, and a feast is given to everybody who will partake in it. Strangers are welcome.

T D 174 533

Also the Ladakhi music and art of dancing is so entirely different from Tibetan music and dancing that non-Tibetan influences must be suspected here. In Ladakhi music, besides the Chinese scale,—classical scales are in frequent use. Of classical scales I have discovered the following in my collection of Ladakhi tunes: Ionian, Aeolian, Lydian, Mixo-Lydian. It is easier to believe that these scales came here through a Dard channel than from Tibet. Although the metre of the Tibetan Ladakhi songs is almost invariably trochaic, the metre of the Ladakhi tunes is iambic.

T D 174

I have tried to prove the Dard origin of one single West Tibetan village only. It would probably be easy to accumulate similar reasons

St Gervis T-3 (no date) 1954 AVI Kashmir [illegible]
Dard AVJ

One story so told will never be lost to the people; there is little doubt that it is authentic history and concerns Trakhan, one of the most famous of all the Ras of Gilgit. Here it is. 539 ● 526

Many years ago there was a dashing young Ra of Gilgit who married the only daughter of a good family of Darel. They lived happily together, and as Queen Soni she was very much loved by the people, being beautiful and kind, She bore the Ra one daughter. The Ra was admired by all; as was to be expected of him he was the superior of all his subjects in horsemanship and "the manly sports"; his physique surpassed that of all his men. His one great passion was polo, and during each of the months of the year when the pass was open, he used to take a team of Gilgit men over to Darel to play against a team which consisted of the seven brothers of his Queen. The play was always fairly even, each winning side receiving from the losers some prize; at first it was a few goats, then fine clothes, next the horses they had ridden, and gradually, as the years passed, the games became keener with jewels, land and slaves as the stakes, until finally the two teams staked their own lives, the losers to forfeit them to the wish of the winners.

One can imagine the polo played on that fateful day. The finest polo ponies were brought out, each side determined to win—being Gilgit men the thought of what would happen were they to lose, never entered their heads. The play ran even, five all, six all, seven all, then the men of Darel scored the eighth goal, they had but one more to win the game. The shouts of those who crowded and crushed round the ground ceased, as did the blaring of the bands at this dramatic hour; there came only the sound of thundering hoofs, of the crack of the polo sticks striking the hard mulberrywood ball, the yell of a player as he shouted to another of his side. Then the Ra of Gilgit struck the ball, it hit the stone wall and bounced, he caught it in his hand, and as polo is played there, tore away with it through the goal. The game was now eight all, and the Ra was to take the "toiki" —a more or less free shot, he, by the rules of the game, riding half way down the field, throwing the ball in the air, and striking it as it fell. The Ra's own band started to play crazily with excitement, his few supporters cheered until their throats closed dry. With the Darel players on either side of him, he threw the ball, struck it, and as it flew towards the goal, with

St Gervais T-3 (no date) 1864 AVI Kashmir
Dard AV3

539 cruel spurs and whip, all sped after it. It fell short of the goal, but
526 the Ra's mount was famous throughout the land, he was there first, the ball was through the goal, then as with their last gasp they tried to pick up the ball and so make bad the goal, he was again there first, and the fatal ninth goal was scored against the men of Darel.

539 Of such are the men of those parts, that the Ra in the flush of victory immediately demanded the penalty from the losers; it was his right, none could deny that. But he could not take as slaves to his castle the brothers of his Queen, he could not sell into bondage men of such quality and breeding, and so, with no consideration for the superb game that they had given him on that and many previous occasions, with no thought to his robbing himself of further games, he had all seven of the Queen's brothers beheaded on the polo field. Terrible though it was, the men of Darel who had come to watch, and outnumbered by hundreds those few men of Gilgit, considering it fair, allowed the team from Gilgit, together with its supporters to return untouched, whilst they buried their dead.

A messenger with fleet feet raced ahead with the news so that when the champions arrived home they were received with songs of victory, dancing and feasting. Only one among those that waited did not rejoice, that was Queen Soni; she had dearly loved her brothers who had adored her always. In that night of Gilgit's rejoicing her love for the Ra turned to bitter hate; then the blood of the hills rose in her and she became determined to avenge them. It was easy for a woman to put an end to her man, and the next day the green vegetables in the Ra's evening meal contained some poisonous herb, so that with the dawn he did not awaken. Her only regret was that she had not dared feed him a poison which would have caused his last hours to be a writhing agony, but had she done so, he might have guessed that it was she who was responsible, and in his death throes have ordered her an execution the same as her brothers had suffered, or even one like that of all the old and useless people of Gilgit in those days, they being carried in a basket to the top of a hill and cast over the precipice.

Even then her hatred, which had overcome grief was not complete; it remained within her, and when her son was born

Jk Gurvin T-3 (no date) 1954 AVI Kashmir
Dard Ars

about a month later, she saw in him a part of the Ra, whom she could now only think of as the murderer of her brothers. So soon as she was able to do so, she took the baby, pushed him into a box and cast him on the waters of the river. Through rushing gorges over rapids, round swirling pools the box went down the Gilgit river and on into the river Indus, until it came to rest on a sandbank close to Hodar. A poor peasant villager happened to come across it as he was gathering driftwood; his wife took pity on the tiny babe and brought it up with her own son of the same age. They gave the foundling the name of Trakhan. He brought them good fortune and from that time their flocks of goats increased, their little crops of grain became heavier, the amount of ghee they were able to make increased; they became wealthy farmers according to the standards of that part. 539

Then when he was about sixteen years of age Trakhan's foster-parents told him how he had come into their family. He dwelt on what he had heard, became determined to find the country from which he must have come, and together with his "brother" set off for Gilgit.

In that town Queen Soni then ruled alone, but although she was still not old, she was frail, always ailing, and the men of Gilgit knew that they must really have a Ra to rule over them.

The two boys reached a place called Baldar; here they found a spring, and could look down upon the valley of Gilgit. On the morning following their arrival there a strange thing happened in Gilgit, the cocks began to crow louder and more vigorously than ever before, and those who listened swore that they heard each of them cry, "Baldasar thum bel!"—"A King may be found in Baldar!" Everyone awakened at this, men rushed to tell the Queen, what was happening, others went in search of the king in Baldar, but later returned to tell the Queen that they had only found two youths who declared that they intended to settle there, the one saying, "Here I shall build my house, and here my cattle pens. There I shall cultivate the land and feed it with water from the spring"; whilst the other, who spoke like a lord said, "Here I shall have built my fort; here shall be stables made for my horses, and there a polo ground which will be better than that to be found even in Gilgit"

2z Gervis T-3 (no date) 1964 AV1 Kashmir
Dard Av3

539 And the Queen ordered that the youths be brought to her. She was at once smitten by the likeness of the now handsome Trakhan to the Ra she had poisoned. She asked the youth from whence he had come, who his parents might be, and he told her all he knew. Then she was certain that he must be her son. The years had softened her; she was sad and lonely at times, for her daughter had married and left her castle, and she told him the rest of his story, pronouncing him to the men of Gilgit as their rightful Ra and seating him on the "Nilo But"—the coronation stone of the Ras of Gilgit. He was later to become the most famous of all the Ras of Gilgit, his rule was wise and strong, he extended the frontiers of his country, "he increased them to beyond Hunza and Nagar, right to the confines of Cathay." His nephews Girkis and Mughlot—the sons of his sister—he made the first rulers of Hunza and Nagar, their descendants being the Mirs there today. His memory will ever remain with the people of Gilgit, for there are so many songs of his great deeds and his wisdom now held up before the youths of those hard mountain parts as an example of what they, who also are born of that land, can achieve.

538 The men will sit for hours telling such stories as this to the young men and boys, stories of blood, honour, swords and wars, whilst the women's stories, though not as bloodthirsty, are also those which rekindle a determination in the girls that the land, the gold and the women of Gilgit shall never be taken, whatever the sacrifice demanded or the price paid to hold them.

543 The people of Gilgit are Mohammedans of both the Shia and the Sunni sects; the people of Nagar are of the Shia sect only, those of Hunza of the Ali-Ilahi sect—that is, believing that Ali is God; the others are Mulahis.

172 Yet there are signs that the Buddhist faith at one time also reached as far as this, for Knight tells of walking to the entrance of the Kargha nullah, through which there is a track leading on to Yaghistan, and of a carving of the Lord Buddha to be seen on the face of a great rock.

721 The chiefs of Gilgit "living in their mountain fastness", were in the days gone by, "notorious for their raids into the countries of their neighbours, which they made with impunity".

[See category 539, pp. 225-227 -- Ashish]

D 105 Marriages are arranged for auspicious days and hours which are ascertained on each occasion from the village priest.

B 105 *Temporary unions* are allowed by Shias only.

Free access is not allowed before marriage generally.

No caste prohibits remarriages of widows. Moral laxity prevails to a certain extent.

8. *Death.*—The head of the dead points North but the face is turned to the West towards Mecca, the religious centre of Muslims. When a death occurs food is not cooked in that house for three days and cooked food is sent by relatives for that period. On the third, seventh and fortieth day alms are given to avert calamities, also on the first anniversary after the death.

Indigenous drugs are used for medicines and almost every one knows the medicinal properties of certain local plants and use them when required.

9. *Amusements.*—Swimming, polo playing, racing, wrestling, tug of war, archery, dancing, singing, etc., are some of the amusements indulged in; women do not participate in the sport undertaken by men. They hold their own separate congregation on occasions of rejoicings such as Id and indulge in singing and dancing away from the eyes of the men.

*Festival occasions.*—Id-ul-Fittar, Id Haj, Id Ghadir and Nauroz are the chief occasions on which rejoicings are made by dancing, singing, polo playing, running and wrestling etc. Dancing is held in a circle to the beat of drum.

D 585 539 10. Before a number of the village people after sunset on the night before the marriage the following song is sung at the bridegroom's house in the following manners:—

B 585 539 A large iron pan is placed in the middle of the assembly and a man of the Katchate or Babuse family rushes forth with some ghee, atta, and seeds of wild rue or leaves of chili, and, putting these things into the pan burns a little fire under it till the contents begin to smoke. To fumigate all the air in the room he holds the pan by its brim and lifting his hands above his head, commences to dance to the accompaniment of the band, while the people applaud and sing a song of which the following is a translation:—

(1) The pan belongs to Bair Gul.

I will never let any one place this pan on the hearth.

I will place it there myself.

(2) The pan belongs to Malik, the Chief of Gilgit.

I will never let any other place this pan on the hearth.

I will place it there myself.

(3) The pan is worthy of belonging to kings, etc.

(4) The pan is worth being kept by a family, etc.

(5) The pan belongs to Shah Mir, the Chief of Kashmir, etc.

(6) The pan belongs to Maqpun, the Chief of Skardu, etc.

(7) The pan belongs to Mughlot, the Chief of Nagar, etc.

Dard AV3
Burusho AV7

D
585
539

(8) The pan belongs to Khana, the Raja of Yasin, etc.

(9) The pan belongs to righteous Girkis (the ruler of Hunza).

(10) The pan belongs to Maryo the son of Machat (a celebrated person of the Rono family).

B
585
539

(11) The pan is placed on Neelo But etc. At the same time the women who are in an inner room recite the following song :—

*Translation.*

(1) A large coral grain belongs to Bair Gul.

I will never let another string this on a thread.

I will string it myself.

(2) A large coral grain belongs to Malik, the Chief of Gilgit.

I will never let another string this.

I will string it myself.

After the marriage cermony the following song is sung at the house of the bride :—

*Translation.*

(1) Come out, O beloved of your mother, why are you delaying?

(2) Come out, O water sprite, why are you delaying?

(3) Come, O possessers of golden locks, why are you delaying?

(4) Come out, O mistress of charming eyes, why are you delaying?

(5) Come out, O owner of pearly teeth, why are you delaying?

On this she is brought out. She weeps bitterly at the separation from her relatives, and the assembly sings the following song :—

*Translation.*

(1) Do not weep, O flower-like girl, thy complexion will turn pale.

(2) Thou wilt go on a lofty hill, O girl, thy complexion will turn pale.

(3) Thou wilt (by weeping) burn your heat, thy complexion will turn pale.

Chitral

Mastuj we found a horrible place. The valley is much broader than usual, and at one time probably held much cultivation; there is but little now. The fort is close to the junction of the Laspur valley, down which we had come, and the main valley, and we camped a mile beyond it, at the far end of the polo ground. Mastuj is about the windiest place I know; being at the junction of three large valleys there is always a wind, generally a gale.

In Afzul's territory we first saw the Chitralis show off on the "janáli," the exercise ground, which belongs to every fair-sized village. We used to be taken to this before reaching our camp, and had to sit for some time, either on our horses or on the ground, watching various feats of arms. A high pole is set up, on the top of which are fixed gourds, sometimes silver globes full of dust, and man after man dashes by at full gallop and fires at these marks. They load their guns as a rule with a cylinder of wood instead of a bullet, though a handful of fine pebbles, or a charge of shot if they can get it, does not come amiss. The latter practice is not regarded as quite fair. The mark is occasionally hit, the prize going to the lucky marksman. Sometimes you are treated to an exhibition of archery, the riders flying by and shooting at a mark on a mound of earth. The bows are very strong, being made of markhor horn, but the shooting is, as a rule, of the poorest. This sort of thing, though interesting when you first see it, becomes very wearisome when you are constantly called on to sit in a hot sun for an hour or more after a long march to watch it. But the humours of the scene were various. Afzul fairly took my breath away one day during

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

huge red spots, finished off with bright red trousers, a costume at once startling and effective.

We rode in this way three miles to the bridge, which we dismounted to cross, then on past the fort, which Robertson was a few years later to know so well, and to assist in defending so splendidly, to the polo ground. There the usual performance was gone through, but on a greater scale than I had seen before, with many more riders and more brilliantly arrayed. Then we rode back to my camp, which was in an orchard a few hundred yards from the fort, I having had quite enough of riding hand-in-hand with my host, a custom which, however honourable, involves you in difficulties when you have to ride over small stone walls, narrow water-courses, and in and out of deep ravines. The Mehtar took his leave after a few minutes' conversation, and soon after sent us in a most excellent dinner cooked by the ladies of his household. In the couple of hours I had been with him he had made a deep impression on me. He was a fine old man, a striking figure as he rode along, sitting his horse upright and well; and had the history of his forty years of rule been unknown, there was that in him which attracted your attention at once. I felt instinctively that I was face to face with a ruler of men.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

camp, the outside being composed of Bokhara silk in broad bands of red and gold. Our first halt was at Shoghot, a point at which all the roads leading over the passes mentioned above converge. We passed over the Chitrali racecourse on the way, a stretch nearly four miles long of flat ground which, once cultivated, has been ruined by floods, and is one mass of sand and stones. At the far end of the plain is a raised mound, the Mehtar's grand stand, and the course was the full distance. How any horse could survive being raced four miles over the stones is difficult to understand, but they did. Afzul-ul-Mulk amused me by saying he had a horse which was undefeated over this course, and that he much regretted he had not taken him to Calcutta and entered him at the races there, as he certainly would have won the Viceroy's Cup, the Derby of India. After passing over this open ground, the road runs through a limestone gorge, with absolutely perpendicular sides.

As it was now autumn, and the rivers had shrunk, we marched as a rule up the bed of the stream, which was crystal clear and full of fish, fording a dozen times a day with the water to our saddle-flaps. The trees were just turning, and every valley you looked up was ablaze with "the flying gold of the ruined woodland." We passed many wild duck decoys, at constructing which the Chitralis seem very clever. They run off a portion of the stream on to a flat field, making a pool twenty yards or so square, at one corner of which the water runs in. Here they make a wicker cage with a wide mouth and tunnel gradually tapering up-stream.

anything which is told him will get into difficulties. 649
You must learn to disbelieve any story told you, however plausible, unless you have proof positive from other sources of its accuracy; your first thought when any statement is made must always be what is the speaker's motive, especially if he has told you the truth. No man ever approaches the object he aims at directly. By roundabout and devious paths he will lead up to his point, which is perhaps only brought out casually at the end of a long interview. You live in an atmosphere of falsehood and deceit, the men you do business with lying freely and unblushingly on every available occasion; but they bear you no ill-will when you expose their little lapses, and at once set to work to weave some new plot. The Mehtar was a past master in the art, and it was a never-failing source of excitement and interest to have dealings with him. We got to know each other fairly well by the end of the next four years.

In the afternoon of the last day we spent together 541 ●
we went off to look on at polo. The game was dull, 535
for the players were indifferent, and the ground, at each end of which cropped up huge rocks, was half under water. But the show was diversified by the Mehtar producing various rifles, and making some very fine shooting at a mark across the polo ground, firing over the heads of the players. Then followed the usual dances, one a sword dance to the music of the royal band, the drummer in which, who had only one tooth in his upper jaw, fascinated Robertson and me by his excitement and animation, throwing his arms about frantically, his whole face lighting up,

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

541 and his eyebrows working furiously in time to the
535 dancing. After the Chitralis had danced, some Bajouri Pathans present gave us an exhibition, the most picturesque piece of dancing we had seen. Five men, dressed in the loose flowing blue Pathan shirt, formed a circle round a flower thrown on to the ground, and danced round it, alternately advancing and retiring, swaying their bodies forward till their heads nearly touched in the centre of the ring, then throwing up their arms and swinging back their bodies and dancing away, their clothes flying and giving a wonderful grace and go to the dance. They then gave us another dance, also in most perfect time, to a plaintive song which they sang, their faces indicative of the deepest grief. This was followed by a wild repetition of the first dance, much faster, and with more dashing action, the accompaniment on the part of their friends being the rapid discharge of their guns. The flower in the centre represented a lovely maiden, and the dance tells the tale of a love story ending in an elopement.

159 Next morning the Mehtar paid me what was really his final visit, presented me with a last horse, badly galled, and recapitulated all his wants and views. We parted after an exchange of many civil speeches, and promises of eternal friendship, with genuine regret on my side, for I had got to like the old man very much, and to admire his strength of
487 character and undoubted powers. We returned to
133 Mastuj by the right bank of the river, making a detour through some of the higher valleys. The road the first day was very bad in parts; one awful cliff, across which it seemed to run for miles,

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

## C. BIRTH CEREMONIES.

As soon as the child is born the father or the Mulla repeats the "Bâng" in his ear "Allah Akbar" (which an Astóri, of the name of Mirza Khan, said was never again repeated in one's life!). Three days after the reading of the "Bâng" or "Namáz" in Gilgit and seven days after that ceremony in Astor, a large company assembles in which the father or grandfather of the newborn gives him a name or the Mulla fixes on a name by putting his hand on some word in the Koran, which may serve the purpose or by getting somebody else to fix his hand at random on a passage or word in the Koran. Men and women assemble at that meeting. There appears to be no pardah whatsoever in Dardu land, and the women are remarkably chaste.* The little imitation of pardah amongst the Ranis of Gilgit was a mere fashion imported from elsewhere. Till the child receives a name the woman is declared impure for the seven days previous to the ceremony. In Gilgit 27 days are allowed to elapse till the woman is declared pure. Then the bed and clothes are washed and the woman is restored to the company of her husband and the visits of her friends. Men and women eat together everywhere in Dardu land. In Astór, raw milk alone cannot be drunk together with a woman unless thereby it is intended that she should be a sister by faith and come within the prohibited degrees of relationship. When men drink of the same raw milk they thereby swear each other eternal friendship. In Gilgit this custom does not exist, but it will at once be perceived that much of what has been noted above belongs to Mussulman custom generally. When a son is born great rejoicings take place, and in Gilgit a musket is fired off by the father whilst the "Bâng" is being read.

* This is said to be no longer the case, except in those Dard republics, where foreigners have not yet interfered. In monarchical Yasin, and, above all, in Hunza, sexual laxity has ever been great. Where Sunni rulers have substituted dancing-boys for the dancing of men (formerly both men and women danced together), a worse evil has been introduced. A most sacred relationship is the one created by the foster-mother. The linguistic portion of "The Hunza-Nagyr Handbook," as also of Parts I. and II. of "Dardistan" solves the questions of whether and where polygamy, endogamy, etc., existed among the Dards, who, in appearance and sentiment as regards women, as also in legendary lore, are very "European," but whom invasion will convert into strict Muhammadans and haters of the "Firenghi."

AV3 Dard AV3
Balti AV2

Though their traditions as a separate race have long passed away, the Shins still look on themselves as the aristocracy of the country, and claim to be of a more honourable caste than others, without being able to show any foundation for this claim. A Shin considers it a disgrace to have to carry a load, and regards hunting and agriculture as the only honourable pursuits for a man. They are strictly confined to the Indus Valley and its affluents. D 186 D 554

The Shins who are found in Baltistan do not, however, arrogate to themselves any superiority over their Tartar neighbours. On the contrary, the position they occupy towards the Tartars is similar to that of the Yeshkuns in Gilgit towards themselves. They are called by the Tartars, contemptuously, "Brokpas," or highlanders, from their cultivating the highest—that is, the least fertile—ground. The Baltis habitually mention this fact when speaking of the Brokpas or Dards of the Iskardo district, but do not try to account for it. B 564

This, together with the difference of estimation in which the Shins are held in Gilgit and Iskardo, gives a valuable clue to changes which have taken place among the different races. It is evident that in Baltistan the Tartars, and not the Brokpas, are the last-comers. D 174

As already mentioned, the part of the Indus Valley from below Gor to the Afghan limits near Ghorband is called Shinkari, and it is in the lower part of this that the purest Shin community is now probably to be found; but the name of Shinkari, which still exists in Pukli, where the population is now entirely Afghan, perhaps indicates that the original home of the Shins was in that valley.

The most remarkable peculiarity of the Shins is their feeling with regard to the cow, to which Mr. Drew has already directed attention. In spite of their conversion to Mahommedanism, the feeling is still maintained in Nager, Gilgit, Astor, and the Indus Valley above Boonji. In the Indus Valley below Astor the feeling has died out, but in the places mentioned, orthodox Shins will not eat beef, drink cow's milk, or touch a vessel containing it. A sucking calf, or any portion of a dead animal, is especially unclean, so that purification is necessary if even the garments should chance to touch them. It is not uncommon for a Shin to make over his cow and calf to a Yeshkun neighbour, to be restored to him when the calf is weaned. Shins also regard the domestic fowl as unclean, and in districts chiefly inhabited by them not a single fowl is to be seen. D 262 783 [779] D [235]

### The Ceremony of Nagi Suchemi.

Nagi Suchemi is said to be a goddess who lived at Nangam in the Astore district, on a stone altar situated at the foot of the Nagishi hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jungmi was specially appointed by the Rá to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present; in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sochemi, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this solemnity were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discoverer of the offending juryman at dawn of that day. For some days the case was left awaiting the decision of "Nagi Sochemi," and if in this period the suspected person suffered any kind of loss of property, of relatives, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

776 778 695 [782]

### "Khuran" or "Majari."

In Chilas and in the adjacent valleys of Jalkot, Palas, Koli, Darel, Tangir, Gor, Harban, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khuran" in Shinaki (Chilas, Darel, Tangir, Gor, Harban and Sazin), and "Majari" in Kohistan (Jalkot, Palas, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must needs submit.

## VI.

### Danyals.

There are some men and women of these parts who are called Danyals. When they are worked up into a state of frenzy the giants and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Danyals as well as the local musicians. A bundle of green chili leaves is then brought, and some of these, with a little *ghi*, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Danyals push their way towards the fire and begin to inhale the smoke, until

D 454 before he has had time to confide the secret of their hiding place to his son. The practice is entirely confined to the Shins, who have many legends of lost treasures which have fallen under the guardianship of demons.

D 234 251 556 In both Chilas and Darel, a practice exists of storing clarified butter in cellars for a great number of years. It turns deep red and keeps for more than a hundred years, when it is much prized. A tree is sometimes planted over the cellar to ensure its not being disturbed, and wealth is computed by the amount of butter stored up. On one occasion a deputation came to me from Darel to ask that some run-away slaves should be compelled to say where they had buried their master's butter, as they alone knew the secret.

D 273 B 273 Wine, which at one time was universally drunk, is also placed in flagged underground cellars to ripen in large earthen jars, but is never kept more than a year. In digging the foundations of my house at Gilgit, I came on one of these old cellars with two large jars in it, which had evidently been undisturbed for many years. The drinking of wine has much diminished under Islam, and where still practised is concealed as much as possible, except in Hunza and Ponyal, where public jollifications are not uncommon. The Maulai sect make no secret of the practice, and on my visit to Hunza, in 1876, a bottle of Scotch whiskey made Ghazan Khan so gloriously drunk that all Hunza spoke of it with admiration.

D 526 Polo-playing, of which so complete an account has been given by Mr. Drew, is the national game. Dardistan play, however, lacks the neatness of the Munnipoori game; but what is wanting in style is quite made up in enthusiasm, old men joining in the game as long as they are able to sit on a horse. Matches are generally played for some small stake, and the conquerors exact all the rights of victory by taunting their beaten opponents. In Chitral the game, which is called "ghal," is played somewhat differently from the way described by Mr. Drew. Aman-ool-mulk, the present ruler of Chitral, was said to be the best player in the country when a young man.

000 The game is quite unknown in Badakhshan, where "buzkushi," or "goat-snatching," is the favourite amusement. The following description of this game as played by the Kirghiz is given by Shaw,[1] under the name of "Ooghlak:—"

"The headless body of a goat is thrown on the ground, and every one tries to pick it up without leaving the saddle. The press is tremen-

Chitral

000 We tried to find our fairy-visiting friend in one of the Owir hamlets, but failed, I forget why.

556 Next day we crossed into another valley, and
567 halted for breakfast at a place called Barun, the residence of a headman whose ancestors had been kings of this collection of valleys. He was a rich man, the possessor of over three hundred slaves.

133 All the four valleys of the Owir district are of the same type, and are remarkable for the outcrop of saltpetre, which reduces the soil available for cultivation. The Owir stream is formed by the junction of the waters from the four valleys, and runs out finally into the Chitral river, through the narrow gorge described above, up which no man can force his way. The march beyond Barun was terribly severe, in and out of a succession of steep ravines hundreds of feet deep, the last ascent of a thousand feet, up which our horses barely carried us, landing us on the watershed between the Owir and the Mastuj valley. The view back was indescribably grand, we were told: unfortunately for us, Tirich Mir veiled his face. Still it was very fine, a grand circle of snow-clad mountains fencing the valley, which is broken by the four main streams into a series of long promontories, the upper and flatter part of the amphitheatre one mass of cultivation and autumn colouring. After descending a few hundred feet the road turned north, and the view was again lovely; at one's feet the great gently sloping circle of the Lun valley cultivation, and in the distance the Mastuj, Turikho, and Murikho valleys.

The Lun valley is a replica of the Owir; Turikho

## C. BIRTH CEREMONIES.

As soon as the child is born the father or the Mulla repeats the "Bâng" in his ear "Allah Akbar" (which an Astóri, of the name of Mirza Khan, said was never again repeated in one's life!). Three days after the reading of the "Bâng" or "Namáz" in Gilgit and seven days after that ceremony in Astor, a large company assembles in which the father or grandfather of the newborn gives him a name or the Mulla fixes on a name by putting his hand on some word in the Koran, which may serve the purpose or by getting somebody else to fix his hand at random on a passage or word in the Koran. Men and women assemble at that meeting. There appears to be no pardah whatsoever in Dardu land, and the women are remarkably chaste.* The little imitation of pardah amongst the Ranis of Gilgit was a mere fashion imported from elsewhere. Till the child receives a name the woman is declared impure for the seven days previous to the ceremony. In Gilgit 27 days are allowed to elapse till the woman is declared pure. Then the bed and clothes are washed and the woman is restored to the company of her husband and the visits of her friends. Men and women eat together everywhere in Dardu land. In Astór, raw milk alone cannot be drunk together with a woman unless thereby it is intended that she should be a sister by faith and come within the prohibited degrees of relationship. When men drink of the same raw milk they thereby swear each other eternal friendship. In Gilgit this custom does not exist, but it will at once be perceived that much of what has been noted above belongs to Mussulman custom generally. When a son is born great rejoicings take place, and in Gilgit a musket is fired off by the father whilst the "Bâng" is being read.

* This is said to be no longer the case, except in those Dard republics, where foreigners have not yet interfered. In monarchical Yasin, and, above all, in Hunza, sexual laxity has ever been great. Where Sunni rulers have substituted dancing-boys for the dancing of men (formerly both men and women danced together), a worse evil has been introduced. A most sacred relationship is the one created by the foster-mother. The linguistic portion of "The Hunza-Nagyr Handbook," as also of Parts I. and II. of "Dardistan" solves the questions of whether and where polygamy, endogamy, etc., existed among the Dards, who, in appearance and sentiment as regards women, as also in legendary lore, are very "European," but whom invasion will convert into strict Muhammadans and haters of the "Firenghi."

2i Lettmn 1-3 (1888-92) 1892 A73 Dard A73

for many years a slave in Chilis, as Ahmad Shah reports). The Gabrilis were converted to Muhammadanism by a saint named Abbûk, whose shrine is in Gabrilî, and is one of the most frequented places by pilgrims. The Gabrilis say that this saint lived six or seven generations ago. Mir Abdulla (who is really of Afghan descent, but now lives in Gabrilî) says that the Gabrilis were converted to Islâm about 150 years ago. Lately, this religion has made great progress among the people of Kandia generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attached to them, which are generally crowded by students from every caste. In Gabrilî, the Mullahs or priests are, for the most part, of the Shin caste, but men of every caste are zealous in giving education to their sons. Their education is limited to Muhammadan law (of the Hanifite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and caligraphy, that great Oriental art; so little, indeed, that Hamîdullah and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the caligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Panjâb.

The most accomplished scholar in Kandia is the high priest and chief of Patan, named Hazrat Ali, who is a Shin.

The people generally are peaceful, and have a fair complexion and erect bearing. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the usual punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (maliks), but is seldom found among the common people.

GOVERNMENT.—Every village or town is governed by a Council of elders, chosen from among every tribe or "tulik." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shins or Yashkuns. No Kamin can be elected an elder, though he may become a Malik, but a Mulla-kamin also cannot be admitted to the Council.

The reigning Council of Gabrilî consists of 12 persons, of whom 9 are Shins and 3 Yashkuns. Patshé Khân is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influential of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose operation is limited to inter-tribal feuds.

CUSTOMS AND MANNERS.—Hockey on horseback, which is called "lughût" in Gabrilî, is played on holidays; and the place where they meet for the sport is called "lughût-kârin-jha."

Guns are called "nâli" in Gabrilî, and are manufactured in the town by blacksmiths.

Dancing is not practised generally, as in the other Shin countries. Only "Doms" dance and sing, as this is their profession; they play on the "surdi" (pipe), rabâb (harp), and thapâ (drum).

The "purdâ" system, or "veiling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

crops, the female population of the village proceeded to the Devi in their best attire. They sang on their way, and when they reached their destination presented a goat to the "Bak Bin." He then threw up some small branches of the juniper in the air, and the women attempted to catch them before they fell to the ground. It was believed that a woman would be blessed with as many children as the branches she succeeded in catching. Descendants of the original "Bak Bin" still remain, but the ceremony is no longer observed.

A stone of this kind is also found at Barmas near Gilgit. The ceremony performed upon this stone was exactly the same as stated above, but it has a different name, viz. "Mulbeen."

### "Rasts" or "Cists."

At Parkah, a village in the Sagwa valley, there are five small platforms of land situated at the foot of a mountain and called Chum Rasts, Shilo Rasts, Sangar Rasts, Chilko Rasts and Thoko Rasts. In these rasts there are five very large boulders and five small stones, called respectively "Dev-ai Maron" and "Bin Samaran Kon" (viz., stone for distributing fruit). Here the "Rasts" ceremony, also called "Chil," used to be performed as follows. During the first six days of the ceremony, which lasted for seven days, the people wore new and clean clothes, the sexes being separated and inhabiting different houses. On the seventh or the last day, all the people of the different communities or families of the village assembled separately and went to their respective "Rasts," with a goat and some young branches of the chil or *Juniperus macrocarpa*. These branches were placed upon the "Dev-ai Maron," and the blood of the goat which was now sacrificed was thrown on. The meat was placed on the "Bin Samaran Kon" and distributed among those present, who roasted and ate it at the same place. It was never given to any woman or to a man of any family other than that of "Rasts." The shoulder blade of the goat killed was then placed on a high stone and fired at by marksmen amidst the noisy acclamations of the people, and a dance was held in honour of the sacred ceremony. After this the people assembled round the "Dev-ai Maron," while the oldest man present or the headman of the village sat quite close to the stone and addressed it in the following manner: "O iron-like Rasts, O thou Superiman, we have come to thee to express our wants. We have no progeny: kindly endow us with children. We are destitute of money: kindly favour us with gold and silver. We are in want of grain: please supply us." In the same manner he related all their desires for cattle, clothes, goods, etc., while the other men followed him and expressed their assent to what he said by crying "Amen." The women of the village now appeared in their best attire, with some dry flour and small fat leaves. They threw the atta on the chil branches and prayed in the same manner for the fulfilling of their desires. The leaves were distributed among the men, who ate and rejoiced. At some places the women were strictly prohibited from going near the Rasts stone. This ceremony was performed and known by the same name throughout the whole of Gilgit, but in stones of different names, so that the stones at Darmiki and Bubin were called "Aja Bin," at Shushar "Shri Bin," at Gilgit and Danyor "Rasts-dandam," and at Nougam "Shri Bin." The

Rasts, p. 110.

Pakistan

languages, who differ considerably amongst themselves. As, however, there is no one name which will properly apply to the peoples and countries in question, it will be perhaps convenient to retain the names of Dard and Dardistan when speaking collectively of the tribes in question and the countries they inhabit.

The first 30 miles of the Kohistan of the Indus Valley is inhabited by tribes of cognate race, who still speak a variety of dialects and languages. Their distribution seems to show that they represent tribes who formerly lived apart, but have been forced by circumstances into contiguity. In addition to their own languages, Pushtoo is universally spoken, and they present the appearance of a decadent race in process of absorption by one of greater vigour. The country is somewhat poorer and less fertile than that already described. Long intervals of barren sand intervene between the patches of cultivation, the villages are smaller, much cultivable land lies idle, and all agriculture is of a slovenly description. The men are small and clean-limbed, with dark complexions, quick eyes and sharp features. Women are not secluded from the public gaze. Men shave their heads in a manner more suggestive of Hindoos, and many strange customs still linger amongst them, showing that Mahommedan fanaticism is not incompatible with ignorance of the Koran. In some of the more inaccessible villages idolatry can hardly yet be said to be extinct. Instead of the loose ample garments of the Pathan, the men wear tight-fitting clothes, like the natives of Hindustan.

Some 15 miles above the mouth of the Kanra-Ghorbund Valley, on the right bank of the Indus, is the extensive but thinly-populated valley of Dosbeyr, which extends nearly due north for a distance of about 30 miles. Five miles from the Indus the village of Ranooliyah, 200 houses, is reached; above this the habitations are scattered broadcast over the whole valley, instead of being collected into villages. The only village of any size is Jarg, 100 houses, 6 miles above Ranooliyah. From the head of the valley a road leads into the Swat Valley near Payeteh, and another into Kandia. The valley can furnish about 1,500 fighting men, and the ground, where cultivable, is said to yield excellent crops.

On the opposite bank of the Indus and above the mouth of the Dosbeyr Valley are the neighbouring and rival communities of Kolí and Palus, which are often spoken of as forming a single tribe. They were formerly close allies, but a feud, arising out of a dispute concerning some land to which

teen. Wives are regarded as the absolute property of the husband and his heirs. On a man's death his brother can claim to marry all his widows, and no widow can marry again without the consent of her husband's brothers. Frequently, if a man leaves several widows as well as several brothers, the latter apportion the former among themselves. So strictly is the rule observed that, should there be only one surviving brother and he an infant, the widow cannot remarry elsewhere till he is old enough to say whether he will marry her or not; On the other hand, it is considered disgraceful to refuse to marry a brother's widow, so that it is not uncommon for a boy of ten years old to marry a woman more than twice his age. So absolute is the custom, that a woman cannot refuse to marry her deceased husband's brother, and her own parents have no voice in the matter. This often leads to two sisters being wives to the same man simultaneously, though the practice is forbidden by Mahommedan law. In Chitral, marriage with a husband's brother, though common, is not compulsory on the woman. Among the Afghans of Dir, if a widow should refuse to marry her husband's brother, he has the power of selling her, as she is regarded in the light of family property, which has been purchased and paid for. Among the Shin caste the marriage of first cousins or other relations within that degree (such as uncle and niece) is strictly prohibited, though allowed by Mahommedan law. In Torwal and Bushkar the marriage of first cousins is allowed, but marriages such as of uncle and niece or niece's daughter are forbidden.

E 595 601 D 595 601

In none of the Dard languages are there terms distinctive of polygamous relationship. All wives are of equal rank, priority of marriage not conferring any claim. In the Shina and Boorishki languages, uncles on the father's side are styled "great father" or "little father," according to their age in comparison with that of the speaker's father; but there is a distinct term for an uncle on the mother's side. In the same way the term "aunt" is only applied to those on the father's side, the mother's sisters being all styled "mother." There is no specific term either for nephew and niece, who are styled "son" and "daughter." In the same way cousins are styled "brother" or "sister." This would seem to point to the former existence of communal marriage, such as still exists in some parts of India. In the Khowar language the term "uncle" is applied to the brothers of both father and mother without distinction; but aunts on the mother's side are styled "mother,"

1: Drew G-8 (1862-1872) 1875 AV1 Kashmir
Dard AV3

131 A few miles below Kolī is Batera; beyond that Dārdistān
101 ends and the Pathān country, where the Pashtū language prevails, begins. The Kolī people are Dārds; they know both the Dārd and Pashtū languages.

642 Many places have been put down as republics; what I have
646 been able to find out about the way of their government will apply to them generally. There is a general assembly of the people, called Sigās, which decides on almost every matter.
[562] It is called together by beat of drum; men, old and young, attend it, but not women; none who have the right to attend are allowed to be absent, under pain of fine. In this assembly the rights of a minority are carefully guarded. I have been told that if even one man, supposing him to be of any consideration, object to a policy, it cannot be carried out; the assembly is adjourned for a few days, and in the interval effort is made either to convince the objector or to modify the proposal; then meeting, they may perhaps have again to adjourn; but in time something or other is sure to be arranged.

643 The executive consists of a few men, may be five or six, chosen by the people in their assembly. These are called *Joshtero* in the Dārd language. They are chosen for their wisdom; but here as elsewhere wealth seems to have influence to convince the people of the wisdom of those who possess it. The office of Joshtero is not hereditary; the Joshteros must be in general accord with the assembly else they will be displaced. The Joshteros deliberate together on a policy, but cannot carry it out without the consent of the assembly of the people, which they themselves call
[692] together. The Joshteros are also arbitrators to settle disputes of water and wood, and what not.

623 Where the valley is large, like, for instance, Dārel, each village has its own Sigās, or assembly, which settles the particular affairs of that village, while for matters of more general policy the Joshteros of all the villages first meet, and make among themselves a plan to propose, and then a general parliament is called; that is, the people themselves of all the villages together meet to hear and decide. If all of the villages cannot agree on one policy, then

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

361 487 [161] etc., 5 or 6 thousand tolas of gold; and he has one wife and two or three children. Persian is read there in addition to Arabic. There is also another fort containing 500 houses, also called Samangál, a few hundred yards from the first. In fact, Dareyl, although a small country, is thickly populated.

SAMANGÁL TO PÙGUTSH, a fort, with 500 houses, 2 katsha kôs—thence 1 katsha kôs to Gayál, a fort with 600 houses—all an easy road.

GAYÁL TO KÀMI, Fort Tangîr, over a high mountain called Kùbbe-kunn, very windy, and wooded. Water must be taken with one when starting from Gayál, as none is found before reaching Rîm, a small village of 20 houses, on the Tangîr side. The road for 8 kôs is difficult, being an ascent of 4 kôs on each side. From Rîm to Tangîr the road is good, water abundant, and habitations numerous. Kàmi fort has 1,000 houses of Gujars (a shepherd and cowherd tribe that is found following its peaceful occupation, either as settlers or nomads, in the most dangerous districts), and zemindars, who are tributaries to Yasin, paying taxes in gold and kind. There is a direct road from Tangir to Yasin, viâ Satùl—6 kôs, plain, with many Gujars, paying their grazing tax in gold; thence over a small peak, Mayirév, to the plateau of Batrêt, 8 katsha kôs. (See second stage of this route.)

[563] [233]

FROM BATRÊT TO RÀUSHAN, over a small mountain. Ràushan is a small fort of Yasin, whence there are roads to Yasin, Chitrál, Gilgit, etc. Gold is washed from the Indus, which is 3 katsha kôs from Kàmi. The Tangîris are braver than the Dareylis and equally religious, having many Mullas; but the country, although larger, is not so well populated as Dareyl, the people of which are also rather shepherds than hunters. The *Gabár* are the ruling people in Tangîr, about 1,000 families, of which 500 are in Kàmi. They are the old proprietors of the country, and are all Shins who *now* have given up their old aversion to the cow, its flesh and milk.

[316] [162]

KÀMI, over the mountain Tràk, called by the Pathans Chaudunno, which has no snow on the Tangîr side, but a snow-covered plateau 1½ kôs long on the Kandiá side. Then comes a green plain. To the foot of the mountain Tràk on the Tangîr side 11 kôs pakka (11 good kôs, or nearly 22 miles), over a tree-covered plain. Then over the Tràk pass and plateau, the road goes along a plain which extends for 17 kôs to GABRIÁL. There are a great many Gujars along the road. [The road to Yasin is through the Gujar-frequented district of Kuranjá, belonging to Tangîr. Multán is the Muqaddam of the Gujars, a brave man.]

[563]

361 563 GABRIÁL has only 40 houses, but the country of Gabriál generally is studded with habitations. The famous Mullah Habîbulla, a relative of Raja Khushwaqtia, is a most influential man among Kohistanis. His tribe is Mullakheyl, and all the Gujars of Kandiá are obedient to him. The Mullakheyl are Shins, but Yashkuns also live there. Yashkuns are the peasantry of Dardistan, including Hunza, and supposed to be aborigines, though some derive the Yashkuns of Hunza from the white Yuechi, or Huns, and others give them a Western origin. They have always been Sunnis. (The Dareylis were formerly Shiahs.) (See detailed account of Gabriál by one of its Maulvis, Mir Abdullah, and of Kandiá or Kiliá,

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

translated by Dr. G. W. Leitner.) The people of Kandiá are wealthy in flocks, ghi (=clarified butter, exported to Peshawur, 18 to 25 pakka seers for the rupee). It is subject to Yasin. They possess double or Indian rupees and mahmudshahis, some having 10 or 20 thousand rupees. The poorest have 10 to 12 cows, 100 sheep, etc. The greatest among the Gujars intermarry with Yasin chiefs. The Kohistanis are independent, but the Gujars pay a tribute to Yasin. The Samu or Samasi village is 2 kôs from Gabriál. From Gabriál, ½ kôs distant, is a mountain called by the same name, with an ascent of five to six pakka kôs, with excellent water; road only open in summer. A descent of 5 kôs brings one to *Uchu*, a big village of 600 houses inhabited by Bashkaris. (See special account by Dr. Leitner of Bashkar and its language.) The Swat river touches it. The Bashkaris pay a small tribute to Yasin, but are practically independent. They are generally on good terms with the Torwaliks, who were formerly their rulers. The languages of Torwal and Bashkar are different.

From Ushù to Torwál, 13 kôs, very bad, stony road, after Kalám (2 miles from Ushù). Torwál has 200 houses. They are not so rich as the people of Kandiá and Jalkôt.

From Torwál to Branihál, the frontier of Torwál, 12 to 13 kôs, a bad stony road, 600 houses and a Bazár in which there are 5 or 6 Hindu merchants. [The Hindu traders are not molested in Yaghistán ("the wild land" as Dardistán, the country between Kabul and Kashmir is often called), because no one is afraid of them; whereas if a Sahib (English man) came, people would be afraid.] There are many wealthy people in Branihál, which may be considered to be the capital of Torwál.

Branihál to Swat, a plain; at only 1½ kôs is Shagrám, composed of 3 villages, under the children of the Sayad (descendant of the prophet Muhammad), Pir Bâba. The three villages are inhabited by Sayads and contain 500 houses. Then to Tiráh (1 mile, a plain), where the Mina- or Akhunkheyls live (300 houses).

Tiráh to Landéy, 1 kôs pakka, a Patán village, in which rice grows, beginning from Branihál; Landéy to Lalkún (a small village away from the big road to Hoti Murdan) 5 kôs, a plain. Thence Fazil banda, 12 kôs, a plain; thence to a mountain, Barkànn, 12 kôs, a plain, leaving the Swat for the Dîr territory. Jarughey (hamlet of Gujars) is the halting-place. From Jarughey into the Dara of Ushuréy, in Yaghistan proper; it is the home of the Khan of Dîr, and is inhabited by the Panda Kheyl tribe. Halt at Jàbar, a village 14 kôs from Jarughey, a fairly inhabited road. From Jàbar to Maidán (16 kôs) by the mountain Káir Dara, and passing the fort Bibiól (100 houses) a fort of the Khan of Dîr. The mountain is high. Maidán fort and Bazar, and Bandey fort (500 houses), Kumbàr 1 kôs distant, 1,000 houses, of Mians, and Bazar with many Hindus. Thence to Bandey Mayár, a great Bazár, and a renowned Ziáret (shrine), and Langar (almshouse) of Saukanó Miân, a village of Peshawar, are 2,000 or 3,000 houses, belonging to Jandûl. It is 14 kôs distant from Maidán, over an inhabited plain. Umr Khan, the ruler, has 240 excellent horsemen, 3,000 infantry, fights with Dîr, who has 500 inferior horses

*hata-jó aina giní, Tshakéoje wazze. Nu kabbo*
hand-from mirror taking, Looking she came. This left
*hata-jó surmá giní. Palèoje wazze.*
hand-from antimony taking, Applying she came.

The above describes the dream of a lover whose sweetheart has married one older than herself; he says:

*Translation.*

"That dear delicate little woman has a frightful old husband.

"Thou hast married a bear! In the dead of night, resting on my arm,

"My sleep became like waking. Hastily I turned and with a quick glance saw

"That my darling's waistband shone with many colours,

"That she advanced towards me holding in her right a mirror into which she looked,

"That she came near me applying with her left the antimony to her eyes."

7. MODERN ASTORI SONG.

This Song was composed by Rajah Bahadur Khan, now at Astōr, who fell in love with the daughter of the Rajah of Hunza to whom he was affianced. When the war between Kashmir and Hunza broke out, the Astoris and Hunzas were in different camps; Rajah Bahadur Khan, son of Rajah Shakul Khan, of the Shiah persuasion,* thus laments his misfortunes:

*Lotshúko ,abäin kên nimâz thé duwá*
Early in morning's time [usual] prayers done supplication
*them Qabûl thé, Rahîma Garìbëy . duwa*
I make Accept, oh merciful [God] of the poor the prayer.
*Dòn mahî—yeen dim*
[her] teeth [are] of fish bone = like ivory, [her] body
*puru—ye n tshamûye tshîké hane me armán*
[like a] reed† [her] hair musk is. My longing
*tûte hane Bulbúl shakàr.*
to you is [Oh] nightingale sweet!

* The people of Astor are mostly Sunnis, and the Gilgitis mostly Shiahs; the Chilásis are all Sunnis.

† A reed which grows in the Gilgit country of white or red colour.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

providing everything from popular tales and domestic ritual upwards, and its effects on the outlook of any uncultured people must be immense.

Again a new period of foreign influence opened in the nineteenth century, first with the incursions of the Dogra rulers of Kashmir, resulting in partial occupation and administration, and later, in 1892, by the establishment of British general control in the rest of the country.

There are three principal languages in use in the Gilgit area: Burushaski, Ṣhiṇa and Khowar. Burushaski is the language of the people of Hunza Nagir, and a dialect of it is spoken by the inhabitants of Yasin. Ṣhiṇa is the language of the majority, current, in various dialects, over the greater part of the Gilgit Agency, as well as in Darel and Tangir to the south. It is an Aryan language. Khowar is also of that stock and is the language of Chitral. It is spoken in the western districts of Gilgit, Ghizer, and part of Kuh, and as a secondary language in Yasin.

How far there are to-day any definite ethnical distinctions in the population corresponding to these different languages is an open question. There has certainly been considerable mingling through intermarriage and individual migration, but there are at present insufficient data for solving the ethnological problems of the Gilgit region. When in Gilgit I secured anthropometric measurements of some 600 men from the various districts, and it is possible that if these are ever worked out by some competent anthropologist they may afford grounds for intelligent guessing.

The material of which I am going to make use reached me chiefly through the medium of Ṣhiṇa: that is, it represents the beliefs of the Ṣhiṇ and Yashkun speakers of Ṣhiṇa. To a lesser extent I shall be able to refer to corresponding beliefs existing among the Burushaski speakers of Hunza and Nagir. It is significant that the names of several of the principal Supernatural actors are different in the two languages, for this means that even if the two linguistic communities derive

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

from a common racial source these supernatural beings have been long enough in the possession of each to acquire independent existence in its language. This of course probably represents an inversion of the facts. It is safer on the whole to assume independent origins and gradual assimilation through contact and social fusion.

It appears to me not an impossible theory that of the two great sections into which the Ṣhiṇa-speaking population is divided, the socially inferior Yashkuns represent the earlier population who probably shared the language and culture of the surviving Burushaski-speaking peoples, while the Shins were an invading and conquering race who imposed on the Yashkuns their language and probably took over from them some of their beliefs.

The Khowar in the western districts is due probably to the extension of the Chitrali population beyond the political and natural borders of Chitral, reinforced by intermarriage which goes on at the present day, and in part to political domination in the past, which in quite recent times amounted to actual rule. Punial and Yasin are still governed by members of the Khushwakht family of Chitral whose mother tongue is Khowar.

In order to facilitate the arrangement and handling of the material with which we have to deal, it is necessary to adopt some system of classification of the Supernatural. I am not in a position to offer any scientific scheme, but a very rough grouping will suffice to serve our needs.

From one point of view we may regard the Supernatural as represented :—

1. By ANIMATE BEINGS possessing certain supernatural powers or qualities, e.g. demons, witches, etc.

2. By QUALITIES or VIRTUES pertaining to, or affecting inanimate objects, exhibited in magical or irrational processes and properties.

With the latter category, comprising examples of sympathetic and contagious magic, the working of the evil

101 131 from the Burzil Pass to the Sharot village, a distance of 143 miles from south-east towards north-west with its small surrounding valleys of Kamri, Tarsing, Parising, Sai, Haramosh and Bagrot; and along the Hunza river from Gilgit to Guech, with its adjacent valley of Naltar, a distance of 24 miles.

125 631 The country was first conquered in 1846 by the troops of His Highness the Maharaja of Kashmir under Syed Nathe Shah from Gauhar Aman, the Khushwakti Chief of Yasin, who had usurped the district from Sikander Khan and his brother Karim Khan, the rightful rulers of Gilgit. Karim Khan had escaped to Kashmir to ask for help, and returned with a large force under Syed Nathe Shah. Hearing the news of their approach, Gauhar Aman fled to Yasin, leaving the country to be possessed by them without bloodshed. The country was restored to the rightful rulers, but some later events lead the Maharaja of Kashmir to keep the district under the direct jurisdiction of [648] his own officials. The British Agency was established in 1889. The Political Agent, an officer of the Government of India, and the Wazir-i-Wazarat, an official of His Highness the Maharaja of Kashmir, have their headquarters at Gilgit proper. The latter has jurisdiction over the district only, while the former, in addition to his control over Gilgit, has political relations with the surrounding states of Hunza, Nagir, Punial, Ishkuman, Yasin, Ghizr and the Chilas republic, which all acknowledge the suzerainty of the Kashmir Durbar. Gilgit is garrisoned by Kashmir Imperial Service Troops under a General Officer Commanding appointed by His Highness the Maharaja of Kashmir. The troops are relieved every two years.

491 205 206 A good pony road runs between Srinagar, Gilgit, Chitral and Hunza, remaining open for traffic from June to October. It is closed from November to May, owing to the heavy fall of snow on the Tragbal (Rajdiagan) and the Burzil passes. However, the ordinary letter post is carried across the passes at favourable opportunities by local runners. Kashmir, Gilgit and Chitral are also connected by a telegraph line.

162 795 619 101 [174] The present inhabitants of the country are all Muhammadans, chiefly of the Shia sect, with a few Sunnis and Maulais. The principal tribes are Ronos, Shins, Yeshkuns Kashmiris, Kramins, Dums and Gujars. They are again divided into several families called after the names of distinguished ancestors. I am of the opinion that the Kramins are the original inhabitants of Gilgit, while the Yeshkuns, Shins and Ronos came afterwards in the above order and conquered the former inhabitants.

101 619 563 The Yeshkuns are probably an Aryan race, having arrived from Central Asia *viâ* the Hindu Kush. Being stronger than the aborigines, they succeeded in conquering these districts, made the original inhabitants their servants and named them "Kramins" (attendants).

101 [795] 619 The Shins profess to be the descendants of Arabs. They are probably Jews, and have come *viâ* Afghanistan from either Persia or Turkey. They prefer a style of self-government, and endeavour wherever they settle to continue this form of their original government. It is of interest to note, however, that before embracing Islam the Shins, in this resembling the Hindus, disliked meat, milk or even *ghi* made from cow's milk, disapproved of the keeping of fowls and regarded even a fish diet with aversion. If a Shin had taken two wives, one of his own tribe and the other of the Yeshkun tribe, the children

of the former would be Shins and those of the latter would be Yeshkuns. This shows that their family system takes the mother into consideration. 101 619

The Ronos are said to have come from Rajauri, a district in Kashmir, where they belonged to a ruling family of the district.

The Gujars have recently come to these parts and speak the same dialect as in India. [197]

Besides these, there is another family of the former Muhammadan rulers of the country called "Rá." They originally came from Skardu about three centuries ago, and professed to be the descendants of Alexander the Great. The inhabitants considered them to have been born of a fairy, and this idea leads the people to think that their rulers were of a superior race touching on the divine, and that therefore it was necessary to honour and obey them. [563] [174]

The people live very simply, and their requirements are few. Each one is himself a cultivator, a weaver, a carpenter, etc. Their dress, which they weave from the wool of sheep and ibex, includes the *shuka* (cloak), woollen pantaloons, a woollen shirt and a rolled cap. The women wear loose trousers, a shirt and a cap, with a few silver ornaments and shell brooches. They wear on their feet a kind of leather socks called *pabóo*, made either of ibex skin or of cow hide. For hill journeys they wrap their feet in pieces of goat or ibex skin which they call *thauti*. 511 291 286 463

The chief amusement of the people is polo, which they play with the utmost zest, and shooting markhor, ibex and oorial with their matchlocks for the sake of meat, skin and wool. 526 224 411

The former language of the people was Sanskrit, but the dialect now spoken is generally called "Shina," though the Chitralis call it "Dangrik." It contains many Sanskrit as well as Persian words. 197

Such are the tribes to whom the folklore and customs appertain, but they have lived together for such a long period under the Buddhist and Muhammadan rulers that it is now difficult to know which of the ceremonies was originally observed by each separate tribe. 171 796

## I.*

### The Festival of "Shino Bazono."

The advent of spring in the Gilgit country brings with it the quaint festival of "Shino Bazono," which corresponds to the English May-day. It lasts about fifteen days, beginning in the middle of February and ending about the beginning of March. As indicating that the long cold winter is at an end with all its accompanying hardships, and that spring is nigh, bringing with it warmth and life and a renewal of the scanty stock of provisions which has run dangerously low during the past months, the festival is hailed with much rejoicing by the simple Gilgit folk. In order to observe this feast rightly, the people, twelve days before its commencement, put ten seers of wheat into a wooden basin. They fill this up with water and keep the mixture wet for five days, after which they take it out and place it in a small pit dug for the purpose in the ground, over which stones are heaped. The wheat is left in this pit for four days, after which the grain is seen 776 252

*[See also p. 119 *footn.*—Ed.]

796 252 to germinate. It is then taken out, dried and ground in one of the Gilgit water-mills. The flour so made is called *diram*, and of it a sweetmeat is compounded on the first of the month by adding some water, oil of apricots and walnuts to the flour and cooking the whole without the addition of any sugar. This sweetmeat has been tasted by the writer and is called *mailai diram*. It has a sweet flavour in spite of the absence of sugar, the fact being regarded as in a way miraculous. The remaining flour is utilized in making small flat loaves called *diram phiti*. This bread is eaten with raisins and oil. The combination is called *dracha bhat*. The feast is not, however, wholly of a vegetarian nature. In the month of "Nos" (about November) each family kills several sheep, and the meat is dried for future use. A leg and a tail are, however, set apart to be cooked on "Shino Bazono," and are then eaten with the *dracha bhat*.

796 539 The feast, which has been partaken of by all the members of the family together, being over, dancing commences and the following song is sung:—

(1) Aju kal ootá la Drároo aju kal chirring ga ootá.
(2) Goom ái chhani tharega, aju kal chirring ga ootá.
(3) Ghi ái chhani tharega, aju kal chirring ga ootá.
(4) Mos ái chhani tharega, aju kal chirring ga ootá.
(5) Mon ái sarai tharega aju kal chirring ga ootá.
(6) Ash to sho dez ik alo aju kal chirring ga ootá.

Translation:—

(1) May this year come again, oh Brethren, may such a year come again!
(2) We will have our stores filled with wheat, may such a year come again!
(3) Much *ghi* will be produced, may the next year be such a one!
(4) Quantities of meat will be stored, may the next year be such a one!
(5) Our vessels will be filled with wine, may such a year appear again!
(6) A blessed day has come to-day, may such a year appear again!

796 526 [563] At noon all the fighting men assemble and make preparations for polo, while the women ascend to the roofs of the houses on each side of the road along which the procession to the polo-ground will pass. In their hands are long slender sticks, with which, as the procession passes, they belabour their heroes unmercifully. Koliwals are specially made the victims of this castigation. They are the trading community of the country, and the opportunity of paying off old scores is one not to be lost. An unpopular general dealer may consider himself fortunate if he escapes from the hands of these viragos with the payment of a forfeit of gold dust. Next comes the turn of the Rá or chief, who runs the gauntlet mounted. Galloping through, he salams with both hands to the women on either side, but even he is not allowed to pass without the bestowal of liberal largess on his fair subjects. It must be admitted that the ladies generally let him off lightly, for which no doubt they have their reasons. Possibly their position at court depends on it. On the arrival of the procession at the polo-ground, a goat is killed on one of the goal-stones. This sacrifice is called "Bazono-ai-Karai." The goat's head having been cut off, a rope is attached to it; the players then touch the head with their polo-sticks. After this a *doom* or drum-beater sets off at a run holding the end of the cord, to which the goat's head is attached behind. After him rides the raja or *trangfa* of the village, who strikes the head

Pakistan

languages, who differ considerably amongst themselves. As, however, there is no one name which will properly apply to the peoples and countries in question, it will be perhaps convenient to retain the names of Dard and Dardistan when speaking collectively of the tribes in question and the countries they inhabit.

The first 50 miles of the Kohistan of the Indus Valley is inhabited by tribes of cognate race, who still speak a variety of dialects and languages. Their distribution seems to show that they represent tribes who formerly lived apart, but have been forced by circumstances into contiguity. In addition to their own languages, Pushtoo is universally spoken, and they present the appearance of a decadent race in process of absorption by one of greater vigour. The country is somewhat poorer and less fertile than that already described.[1] Long intervals of barren sand intervene between the patches of cultivation, the villages are smaller, much cultivable land lies idle; and all agriculture is of a slovenly description. The men are small and clean-limbed, with dark complexions, quick eyes and sharp features. Women are not secluded from the public gaze. Men shave their heads in a manner more suggestive of Hindoos, and many strange customs still linger amongst them, showing that Mahommedan fanaticism is not incompatible with ignorance of the Koran. In some of the more inaccessible villages idolatry can hardly yet be said to be extinct. Instead of the loose ample garments of the Pathan, the men wear tight-fitting clothes, like the natives of Hindustan.

Some 15 miles above the mouth of the Kanra-Ghorbund Valley, on the right bank of the Indus, is the extensive but thinly-populated valley of Doobeyr, which extends nearly due north for a distance of about 40 miles. Five miles from the Indus the village of Ranooliyah, 200 houses, is reached; above this the habitations are scattered broadcast over the whole valley, instead of being collected into villages. The only village of any size is Jarg, 100 houses, 6 miles above Ranooliyah. From the head of the valley a road leads into the Swat Valley near Payeteh, and another into Kandia. The valley can furnish about 1,500 fighting men, and the ground, where cultivable, is said to yield excellent crops.

On the opposite bank of the Indus and above the mouth of the Doobeyr Valley are the neighbouring and rival communities of Koli and Palus, which are often spoken of as forming a single tribe. They were formerly close allies, but a feud, arising out of a dispute concerning some land to which

[1] [i.e. the country of the Pathans = Analyst]

4 AV3 Dard AV3
Pakistan

628 both lay claim, has existed between them for several years past. It is seldom that two or three months pass without a raid from one side or the other.

[361] Koli proper consists of three villages—Honinkot or Barkali,
162 400 houses, Batangai, 200 houses, and Kirkot or Koozkali, 100 houses.[1] In local feuds the inhabitants of the Kohistan villages on the left bank of the Indus, below Koli, side with
438 the people of Koli against Palus. Land is scarce in Koli, and a considerable number of the people are forced to support themselves by trade. A large settlement of Koli people exists in Gilgit, being favoured by certain privileges conferred on them by the Cashmere Government, in recognition of services performed in the wars which led to the establishment of the Dogras in that district. They carry on a large trade as pedlers between the Punjab and Gilgit, whence they occasionally find their way into Yassin, Chitral, and the Punjkorah Valley, where the ground is chiefly occupied by Kaka Khel *traders from* Peshawur. The Neemchas of the Alai, Nundiar, Pukli, and Agror Valleys make common cause with the people of Koli. On occasions of great emergency, Koli can furnish about 3,000 fighting men.

197 Within the Koli limits four dialects founded on Sanscrit
361 are spoken, in addition to Pushtoo. In the small village of
162 Batera, consisting of 120 houses, a language peculiar to this village only is spoken.[2] In Pâto, Bhimkot, Mahrin, and Jamrah, about 300 houses in all, the people speak a dialect known as Gowro,[3] and call themselves Gawaré, or Gabaré: they are sometimes also called Mahrons, from their principal village. According to their traditions, they came originally from Râshung in Swat.

563 Scattered through the different villages are about 200 families, who are called Chiliss by their neighbours, but Galos by themselves. They have a tradition that their home was originally in Boneyr, whence they emigrated to Swat to escape being forced to become Mussulmans. Being further persecuted, they resolved to stake their all on a battle, after which, if defeated, they would consent to embrace the religion of Islam. They were defeated, but a certain number of them, clinging to their old faith, migrated to the Indus Valley. This did not, however, save them from being forced later to become Mahommedans, but they no longer form a

[1] Many of the villages in this part have a Pushtoo as well as a Dard name.
[2] This I have not yet succeeded in obtaining.
[3] See Appendix F.

~~19c~~ Biddulph G-3 (1873-1878) 1880 ~~AUI Afghanistan AUI~~
4 AV3 Dard AV3
Pakistan

separate community. Like the Gawaré, their language is founded on Sanscrit.[1] They are treated with much respect by their neighbours, and occupy, as a rule, the best land in the country. A few of them are found also in Jalkot and in Palus on the same bank of the river. In addition to the above, a dialect of Shina is spoken by the greater number of the people of Koli, who belong to the Shin race.

The people of Palus, who are also Shins, inhabit a valley of considerable extent, stretching in a south-easterly direction, and having easy communication from its head with the Alai valley. Land in Palus is plentiful, and much remains uncultivated. As has been already observed, this abundance has for some time caused the envy of the more crowded populations of Alai and Koli. The population of Palus is much scattered, and embraces the inhabitants of all the valleys on the left bank of the Indus up to the Shorai nullah, where the boundary is marked by a solitary olive tree, which is the subject of a local legend. The principal village is Jalkot, 400 houses, which was formerly jointly tributary to Koli and Palus, and has now become a bone of contention between the two communities. Palus with its allies can muster about 5,000 fighting men.

Nearly opposite to Palus, on the right bank of the Indus, is the settlement of Puttun, which, with the group of villages in adjoining valleys dependent on it, can muster from 4,000 to 5,000 fighting men. Puttun is the largest and most flourishing place in the Kohistan. The land is noted for fertility, and the crops raised from it are of great richness. Here, again, a too redundant population has caused difficulties about land, and has forced a portion to seek a living by trade. The valleys of Chilas, Darel, and Tangir are frequented by pedlers from Puttun, to whom this portion of the local trade has been abandoned by the Koli people.

A few miles above Puttun, on the right bank, is the little settlement of Seo. This, with its outlying villages, the principal of which is Mandraza, can muster 400 fighting men.

Above Seo, on the same side, is the extensive valley of Kandia, running due west and then bending suddenly to the north. From the upper part of the valley, roads lead into Doobeyr, Bushkar, and Tangir. The population being widely scattered, this valley can only furnish some 1,500 fighting men, and the villages in it are small. The people are extremely poor, and the valley very inaccessible, the road from the

[1] See Appendix C.

4 AV3 Dard. AV3
Pak. stan

361 Indus being impracticable for horses. There are no forts in
511 Kandia.

Up to this point in the Kohistan, the people along the
101 right bank of the river—that is to say, those of Bunker, Doo-
197 beyr, Puttun, Seo, and Kandia—speak a separate language[1]
186 and call themselves Maiyon. The Afghans apply the name of Mair to them. Very little is known of these people, who are the poorest of all the Kohistan communities. They combine against all others, and refuse to intermarry with any but their own people and those of Puttun and Jijál, who have, of late years only, begun to intermarry with the inhabitants of Koli and Palus. They apply the name of Dard to the people living on the left bank of the river. This is the only use of this term found among all the tribes to which it has been applied. Above Kandia, on both banks of the river, and in the lateral valleys up to and beyond Boonji, Shina[2] is the only language spoken.

361 Following up the course of the river, on the left bank, the
186 small communities of Sazin and Herbund are reached. They can respectively furnish about 400 and 500 fighting men. Between the two is the small valley of Shatial, which belongs to Sazin. The people of Sazin keep themselves apart from all others and refuse to intermarry. They have the reputation of being warlike and brave.

• 513 Immediately opposite Sazin, on the right bank, is the fertile valley of Tangir. The people, like those of Sazin and Herbund, are Shins intermixed with Yeshkuns and Krammins. They are looked upon as the rightful owners of the soil, but the fertility and abundance of the land has attracted Afghans from Swat of the Mundi Khel, Akhoond Khel, and Khuddoo Khel, and Syuds, who have begun to settle in the valley. Of late years, too, the overflow from the redundant populations of Koli and Palus has found its way into Tangir, so that now the immigrants outnumber the rightful owners of the soil. A bad feeling also exists between Tangir and Sazin on the
361 same account. The valley can muster about 1,200 fighting
162 men, of whom only one-third are furnished by the three villages of Kami, Shekho, and Diemar, the only villages in which none of the recent immigrants are found. The principal village in the valley is Kami (fort), 250 houses; after
487 this, the fortified villages of Juglot, Loork, and Diemar. From the head of the valley, which is thickly covered with pine forest, two roads lead into the Yassin territory, besides the

Biddulph G-3 (1872-1878) 1880 Afgh-Afghanistan-Afgh
H Av3 Dard Av3
Chitral

increases in density. Forty miles below Chitral a route leads from the main valley past Ashuret over the Lowri Pass to the Afghan state of Dir. Twenty miles lower down, at Birkot, is the mouth of the valley inhabited by the Siah Posh of the Bushgali tribe, the upper end of which is entered from the Dorah Pass. Several smaller valleys are inhabited by Siah Posh, who have lost their independence, and at Bailam the southernmost Kashkar village is passed, and the Afghan state of Asmar is reached. The boundary between Kashkar and Asmar is marked by a wall built across the valley on the right bank between Bailam and Nawakali, and on the left bank by the small stream below Saoo. The valley for many miles above the boundary is reputed to be extraordinarily fertile.

*Chitral, which is the seat of the ruler of Kashkar,* comprises six large villages, which extend for 3 miles along both sides of the river at an elevation of about 4,000 feet. Its name has gradually come to be applied to the whole country. On the right bank is the fort in which the Mihter, or Badshah, —for he is known by both titles,—resides. Half a mile above the fort is an excellent wooden bridge protected by a stone tower at each end. All the forts in Kashkar differ in construction from those inhabited by the Shin and Boorish races, having inordinately high towers rising 18 feet above the ramparts, which are themselves 30 feet high. Their distribution also gives evidence of a more secure state of society. Instead of every village having one, and sometimes two, forts sufficient to hold all the inhabitants, as is the case in the valleys draining directly into the Indus, the only forts in Kashkar are the abodes of rulers of districts, or persons nearly related to the ruler.

The ruling family are styled Katooré, from Shah Katoor, brother of Shah Khushwakt, the ancestor of the reigning family of Yassin; but the name Kator seems to have been applied to the country in former times, before the existence of the present dynasty of rulers. The present Mihter, Aman-ool-Mulk, is about 58 years of age, and notorious for his astute and deceitful character. The number of the population he rules over can only be roughly computed, and probably amounts to less than 200,000 souls. These numbers would appear scanty for so large an extent of country, but the population is wholly agricultural, and, as in all these very mountainous countries, the habitations are, with few exceptions, confined to a narrow strip along the sides of streams.

Rudolph G-3 (1873-1879) 1880 ...
41 AVJ Dard AVJ Chitral

This estimate does not include the tributary tribe of Bushgali Kaffirs, or the subjects of the Yassin ruler, who is independent of Chitral, though the close relationship existing between the two families causes them to act in concert in all important matters. Both rulers pay a tribute of horses, hawks, and hounds to the Maharajah of Cashmere, to whom they acknowledge allegiance. Iron, copper, and orpiment of superior quality are found in Kashkar. Cotton carpets of an inferior kind, which have the peculiarity of being alike on both sides, are made for local use, and Chitral daggers and sword-hilts are in great demand in the neighbouring valleys. Amongst the people of Kashkar, Chitral is constantly pronounced and written Chitrar and Chitlal. This seems to arise from a curious inability[1] to distinguish between the letters *r* and *l*; in this way Koonur becomes Koonul, Punjkorah Punjkolah, the Lowri Pass the Rowli Pass, &c.

The population of Chitral is a curious and intricate ethnological puzzle. The largest section of the population are the Kho, who inhabit the whole of Kashkar Bala, the Ludkho and Arkari Valleys, and the main valley down to Darosh, and have penetrated across the watershed as far as Chashi. They call the country also Kho, dividing it into different sections under the names *Toer*ikho (*Upper*), *Mosk*ho (*Middle*), and *Lud*kho (*Great*), and their language Khowar. This is the language given by Dr. Leitner under the name of Arnyia, by which it is known to the Shins of Gilgit, who style the Yassin portion of Kashkar Bala Arinah. In sound it is soft and musical.[2] Unlike the Shins and other cognate tribes hitherto mentioned, the existence of these people in the localities in which we now find them appears to date from so far back as virtually to entitle them to be considered aboriginal. They may have once occupied a wider extent of country, but there is no trace of their having conquered or displaced any previous race of inhabitants. They were undoubtedly the owners of the country until a period not very remote, and they have succeeded in imposing their language on the present ruling class, who style them contemptuously "Fakir Mushkin." They are divided into classes of which a few are Toryié, Shiré, Darkhané, and Shohané. No caste distinctions exist among them.

Above them is a large privileged class, which is divided into clans like the Afghan Khels, and spread all over Kashkar.

[1] The *l* and *r* are scarcely distinguishable in the old Persian.—*Rawlinson's Ancient Monarchies*, Vol. III. p. 100.

[2] See Appendix B.

4: AVJ Dard AVJ Chitral

First in rank comes the Sangallié, Rezaé, Mahomed Begé, and Khush Amadé, who are descended from the common ancestor and founder of the Katooré and Khushwakté families. They are generally spoken of as Shah Sangallié.[1] Next to them come the Zundré, or Ronos, of whom mention has already been made.[2] They are most numerous about Oyon. Below the Zundré comes a large class styled "Ashimadek." Their clans are—

| | |
|---|---|
| Kashé. | Shaooké. |
| Atambegé. | Baiyeké. |
| Dushmanné. | Shighnié. |
| Ludiné. | Borshintek. |
| Bairambegé. | Majé. |
| Koshialbegé. | Jikané. |

The term Ashimadek, which signifies "food-givers," is applied to all of these on account of their being bound to supply the ruler and his retainers with food to the extent of eight sheep and eight kherwars of wheat from each house, whenever he passes through their villages. This is the only revenue of any description paid by them to the ruler, and those living in the more remote villages often remain for several years exempt from even this impost. The Shah Sangallié and Zundré are altogether exempt,—the former on account of their relationship to the present ruling family, and the latter because they are descended from a former race of rulers.

Among the Ashimadek, the Shighnié and Kashé claim respectively to come from Shighnan and Kash (Kishm?), a village close to Jirm, in Badakhshan. The names of many of the others show that they trace their descent from some individual, and there appears little doubt that they are the descendants of Tajiks from Badakhshan, who settled in Chitral at the time of the establishment of the present ruling dynasty, about the beginning of the seventeenth century, whose founder they probably accompanied and aided. Their present position is not, however, due to conquest, but they appear to have gradually grown up as a large privileged class. They speak the Khowar language and form the most warlike part of the population.

In the upper part of the Ludkho Valley, above Drooshp, is a race who occupy the same position with regard to the Ashimadek as the Kho do in Kashkar Bala, and who are also styled

[1] See Katooré Genealogy.

[2] See page 34.

4 Avs Dard Avs Chitral

563 117 [173] [175] "fakir mushkin." They are a portion of the race which occupies Munjan on the northern side of the Hindoo Koosh, and they speak the same language, with slight variation in dialect. They claim to have migrated from Munjan seven generations ago, in consequence of an invasion of that district by the ruler of Badakhshan, in which the Meer of Munjan was slain. They number about a thousand families, and, like the Munjanis, all belong to the Maulai sect. In Ludkho they call themselves Yidghâh,[1] and give the name of Yidekh to the whole valley with all its branches from the Hindoo Koosh to the Chitral river.

By the people of Badakhshan and the Oxus Valley north of the Hindoo Koosh the valley is called Injigan. The principal place is Droonhp. At Ludkho in the Turich Valley there are a few families who speak a different language from their neighbours; but it appears doubtful whether it is a purely separate language, or only a mixture of the dialects spoken around them.

Below Chitral the mixture of tribes becomes still more puzzling. On the western side are the two small valleys of Kalashgoom and Bidir, inhabited by Kalash Kaffirs, who have long been subject to Chitral. The villages of Jinjuret, Loi, Sawair, Nager, and Shishi are also inhabited by Siah Posh, who have become Mahommedans, though in other respects they adhere to their ancient customs. They speak the Kalash language.[2]

Tradition relates that the whole Chitral Valley was once occupied by Kaffirs; but it is impossible to say whether by this term a tribe of the Siah Posh is indicated, or merely that the people in question were not Mahommedans. At Madaglusht is a small Badakhshi colony who speak Persian. Ashuret, Beorai, Poorgul, and Kalkotah[3] are inhabited by a tribe, said to speak a language cognate with Shina, who are still styled Dangariks by their neighbours, though they have long ago embraced Islam. The term Dangarik would seem to show that they were Hindoos before being converted. The villages of Pesingur, Birkote, Langorbat, Gud, Nariast, Maimena, Sukai, Nowshali, and Choondak are inhabited by a tribe who call themselves Gubber, but are called by their neighbours Nariasti.[4] Their name would seem to connect them with the Gabars of the

[1] See Appendix J.
[2] An account of the Kalash language is given in Dr. Leitner's work.

[4] See Appendix H.

Ao3 Dard 413
Ch.P.61

Indus Valley, but their language differs a good deal. The Chitralis always speak of them as a bald race, and the few individuals I have seen had very scanty beards. The splendid flowing locks of the Kho would make them turn bald any race less liberally endowed by nature than themselves. They are no doubt the Gokrek of Baber's Memoirs. Their language seems to link them with the Bashgalis on one side, and the tribes at the head of the Swat and Panjkorah Valleys on the other; but further examination may show that they have only borrowed words from their neighbours' languages. Several small valleys on the western side below Birkot are inhabited by Siah Posh of the Bashgali tribe, who retain their own religion and customs, though they have long been subject to Chitral. These broken tribes all belong to the "Fakir Mashkin" class. In Badam, or, as they style it, Bargam, are a few Afghan families.

The origin of many of these tribes can be at present only a matter of conjecture, but it can hardly be doubted that this mixture of broken fragments could only have been produced by pressure from the south. The frequent occurrence of the names of Shaghoor, Shougram, and Shogot, seems to point to the prevalence once of Shivaism, but there are no relics of ancient customs still existing to bear out the presumption that it was practised by any of the tribes now to be found in the valley. A tradition exists that the valley about Mastooch was at one time ruled over by Dongarika, who most probably were Shins from the Gilgit Valley, but there is nothing to show what religion was professed by the Kho before they embraced Islam.

As in the valleys to the eastward, manufactures are less esteemed than agriculture. In the valley below Chitral, scattered among the villages, a number of the meaner castes are found, as in the Gilgit and Indus Valleys. They are called *Curtáki*, "artizans," and are divided into *Darkáki*, "carpenters," *Dongard*, "wooden bowl makers," *Kumbár*, "potters," *Doms*, "musicians," and *Mochis*, "blacksmiths." The two latter only intermarry among themselves, and are looked down upon by all other castes and classes. The other three castes intermarry without restriction among themselves, and occasionally give daughters to the Fakir Mashkins, who are all agriculturists. No Curtáki are found in Kashkar Bala or in Ludkho. The ruling class recognise certain restrictions on intermarriage among themselves. The Shah Sangalik marry amongst themselves, and take daughters from the

# CHAPTER VI.

## TORWAL AND BUSHKAR.

IN the Panjkorah and Swat Valleys are two communities, Torwal and Bushkar, whose people can claim a close relationship with the tribes already mentioned, especially with those of the Indus Valley. The more considerable of the two are the Torwalik in the Swat Valley, who occupy the main valley for about 60 miles from Aranah to Chiraish, and the Chahil Durrah, the habitable part of which is about 20 miles long. Within these limits there are nine fortified villages, the largest of which are Chahil, containing 1,000 families, Branikal, 800 families, and Ramet, 600 families. The whole community numbers upwards of 20,000 souls. In appearance they do not differ from the tribes of the Indus Valley, and there can be little doubt that the Chilas are an offshoot of the Torwalik, and take their name from Chahil, the principal village of Torwal. I have not seen a sufficient number of the Torwalik to ascertain whether any tradition exists among them as to their having formerly occupied any other locality, and neither tribe seems to have retained any tradition of connection with the other, but the traditions still extant among the Chilas evidently supplies the correct clue to their former history. The separation of the two portions of the tribe has, however, produced considerable differences in the dialects now spoken.*

The large number of the Torwalik, as compared with most of the other Dard tribes, indicates that they must have once occupied some extensive valley like Hunza, from whence they, like the rest, have been expelled and thrust up into the more mountainous tracts by the aggressive Afghans. By the Afghans they are called Kohistanis, a name given everywhere by Pathans to Mussulmans of Indic descent, living in the Hindoo Koosh Valleys. The never-ceasing encroachment from the south is gradually pushing the Torwalik further north. Their most southern village, Chiraish, has a mixed population of Afghans and Kohistanis, from which the latter

* See page 10.

* See Appendix D.

Mc Nicolls G-3 (1873-1878) 1880 Afg. Afghanistan NW
4 Avj Dard Avj

563 will no doubt before long be eliminated. Greatly as they dislike the Afghans, their hostility seldom rises to active opposition, their usual attitude being one of passive resistance. The Afghan, on his part, penetrates fearlessly into the Kohistan for purposes of trade, disregarding black looks and cold welcome so long as he can discern a profit to be made. Many of the villages have Pushtoo as well as local names.

241 The Torwal country is rich and fertile, yielding below Chodgram two crops of great abundance yearly. This would show that the elevation of Chodgram is about 7,000 feet. The

233 people own enormous flocks of sheep, goats, and cattle, yielding great quantities of butter, much of which finds its way into the Peshawur market by the hands of Afghan traders. Iron also is found in Torwal.

777 The Torwalik have been too long converted to Islam and exposed to the preaching of Swat Moollahs to have retained

535 any customs connected with other religions. Like most of the other Dard tribes, they have retained their national dances.

142 Bushkar is the name given to the community which inhabit the upper part of the Punjkorah Valley, whence they

341 have overflowed into the upper part of the Swat Valley,

101 and occupied the three large villages of Otrote, Ushoo, and Kalam. They live on good terms with their Torwal neighbours, and number altogether from 12,000 to 15,000 souls. Their principal villages are Tull and Kalkot in the Punjkorah

511 Valley, containing respectively 1,500 families. They are the most degraded of all the Dard tribes, and, in spite of a fertile soil and abundant flocks and herds, live in great squalor.

571 Amongst themselves they are exceedingly quarrelsome, and are adepts in the use of the sling, by means of which they hurl

451 stones with great force and precision. Exposed as they are to raids from every side, they seem unable to offer any resistance; and, notwithstanding a payment of yearly tribute, they are subjected to frequent attacks for the sake of wringing additional payments from them. The three villages in the Swat Valley pay tribute to Yassin, and the three northernmost villages in the Punjkorah Valley pay a double tribute to Yassin and Chitral. Birkot, Biar, and Rashkot pay a double tribute to Chitral and Dir, and the five Bushkar villages below Rashkot pay tribute solely to Dir. Rashkot is better

563 known under its Pushtoo name of Patrak. There is also

187 a large Goojur population, which pays tribute to Dir. In recent years a considerable migration of Kho has taken place

Biddulph G-3 (1873-1878) 1880 AUI Afghanistan AUI
AV3 Dard AV3

from Ghizr to Ushoo, where Khowar is in consequence beginning to be spoken. The Bushkarik proper are divided into three clans, the Moolanor, Kootchkhor, and Joghior. They say that they have been Mussulmans for nine generations, and the peculiar customs still common among the Shins do not exist among them. Till somewhat recently they used to expose their dead in coffins on the tops of hills. The Bushkar dialect[1] approaches more nearly to modern Punjabi than any other of the Dard languages; but in some respects seems to show some affinity to the dialects of the Siah Posh.

The Bushkarik intermarry with the Torwalik, but not with their other neighbours. Forts are not in use among them, but their villages are built in a peculiar fashion for safety. A hill side with a suitable slope is selected, against which the houses are built in a succession of terraces rising one above the other, so that the flat roof of each house is on a level with the floor of the one above it. The whole are connected by an outer wall, within the confines of which is a labyrinth of passages, and the site is often selected so that a stream of water runs through the mass of buildings. All the houses are built of wood, and those on the outside of the village have no parapets. Bushkar is said to be very thickly wooded, and the trees are said to grow to an unusual size.

[1] See Appendix E.

Dard AV3

half a mile to a mile across; it is bounded on the south by wooded mountains, and on the north by a great steep cliffy limestone mass, which rises to 7000 or 8000 feet from the river. To the view the mountains join above and below, closing in the valley. The height of Gurez is 7800 feet above the sea. This elevation, combined with a great amount of cloud and rain in summer and of snow in winter, makes the climate inclement. In this and some other respects the place reminds me much of the valley of Pādar. Here the only crops are millet, buckwheat, and peas, which are raised by help of irrigation; rice will not ripen. The best produce of Gurez are the ponies, which are the best of their size for loads that I ever met with. In reaching this upper part of the Kishangangā Valley, we had already come into the tract occupied by Dārds; in the village of Gurez itself there is a mixture of Dārds and Kashmīrīs, but the former predominate. From there onwards the people are almost entirely of that race, and dialects of the Dārd language, a language quite different from Kashmīrī, are spoken. Where the two large streams meet, just above Gurez, is the end of the wider part of the valley. The southern stream may be said to be a continuation of the Kishangangā, as its course is the longer, and it has, I believe, the greater volume; it flows from the district called Tilel. If one had to go to Tilel one would not attempt to follow up the stream, for the gorge it here comes out of is impassable except when (for a week or two it may be) the river is frozen over; travellers must go a few miles up the other, the Burzil, stream, and cross a Pass which leads into the cultivated valley of Tilel. This I have never visited. Our own way leads for three days' march up the course of the northern stream. The valley of it is narrow, bounded by mountains rising some 4000 or 5000 feet; the stream flows for the most part in a rocky bed; for the first ten miles there are many little plateaus above the level of it, formed by the alluvium of side streams; over these the path leads us, past several small villages; on the mountain-slopes is a good deal of pine-forest; as the level of the valley rises the forest does not reach so high up the sides, and farther on the pine is replaced by spruce and silver firs.

Dard AV3
Balti AV2

D 167 795 B 563 795 D 174 101

At Drās the Dārds (who here are Sunīs) form more than half the community, the others being Baltīs, who are Shīas.

Wherever the Dārds are in contact with Baltīs or with Bhots, these others call them (whether they be Muhammadan or Buddhist Dārds) *Brokpā* or *Blokpā*. The word Brok or Blok means in Tibetan a high pasture-ground, and Brokpā or Blokpā must mean a "highlander." The origin of this appellation for the Dārds I take to be this, that they first came in contact with the Baltīs by coming over the Passes and settling in the higher parts of the valleys, parts that perhaps had been left unoccupied.

D 563 582

There is a colony of Kashmīrī among the Dārds at Gilgit, or rather there is an infusion of Kashmīrī blood in a certain section of the Gilgit people; many generations back there must have been a settlement of Kashmīrīs, who took unto themselves Gilgitī wives. The descendants have quite lost the language and the ways of Kashmir, and to a stranger's eye they are quite Gilgitī, but the Dārds themselves distinguish, and, as to intermarrying, keep separate from them.

D 174 B 174 142

In one or two higher valleys of Baltistān I have noticed a difference in the people, as compared with the ordinary Baltī, which may perhaps be due to some admixture of Dārd blood, although the fact is not noticed or known by the people themselves. Thus, at Pakora in Brāldū the men were much better looking than the ordinary Baltīs; they had well-shaped features, and had a manly bearing; I noted this at a time when I knew less about the Dārds than afterwards; now, it seems to me likely that some of that race came over the difficult Passes from Nagar and made a settlement among the Baltīs. Again, in the Turmik Valley, many villagers have a high and broad forehead, and hooked nose, though they call themselves Baltī; I have little doubt that here too is Dārd blood, the immigrating Dārds having become absorbed into the community of Baltīs, but still making a mark. These two cases I have not represented on the Race Map, not thinking them distinct enough for that; the area of Turmik and of Brāldū is coloured for Baltī alone.

There is one other peculiarity belonging to a class, which may

# CHAPTER XX.

## DÀRDISTÀN: COUNTRIES AROUND GILGIT.

D.
121 FRAGMENTS of information got from hearsay of countries that are
642 inaccessible to one, when they can be verified by comparison, are
563 not without value. I will therefore put down a few notes, which,
564 as far as they go, are likely to be correct, on those parts of Dàrd-
567 istàn which cannot at present be reached by Europeans.
795 But first I will show, in a tabular form, the several divisions
B of Dàrdistàn which have in any way come within my notice, in-
642 cluding those which have already been treated of. These divi-
564 sions are in some cases separate valleys, in other cases parts of the
567 same valley. The Table includes a statement of their form of
795 government, of the races or castes that inhabit them, and of the sect or religion prevailing, as well as the practice that may hold as regards slavery.

DÀRDISTÀN.

| | Government. | Prevailing Races or Castes. | Religion. | Condition as regards Slavery. |
|---|---|---|---|---|
| GILGIT .. | Governed directly by the Maharaja's officers. | A few Ronù; more Shìn; most Yashkun. | Half Sunì, half Shìa. | In these neither is there now, nor was there of old, either slavery or slave-trade. |
| SE .. .. | | Shìn and Yashkun | Mostly Sunì; a few Shìa. | |
| HARAMOSH | | Shìn and Yashkun | Shìa. | |
| HASORA .. | | Shìn and Yashkun | Sunì. | |
| PUNIÀL .. | Ruled by Raja 'Isà Bàgder, in dependence on the Maharaja. (Raja's caste or family is called Burshe.) | Yashkun .. .. | Molài; and a few Sunì. | |
| NAGAR .. | Ruled by Raja Zafar. (Raja's family, Mogulute.) | Yashkun .. .. | All Shìa. | |

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AVs
Burusho AV7

DARDISTĀN—*continued.*

| | Government. | Prevailing Races or Castes. | Religion. | Condition as regards Slavery. |
|---|---|---|---|---|
| HUNZA .. | Ruled by Raja Ghazan Khān, son of Ghazanfar. (Raja's family, Ayeshia.) | Yashkun .. .. | All Molāi. | |
| ISHKOMAN, or CHATARKUN | Belongs to Yāsin | Yashkun .. .. | Molāi. | |
| YĀSIN .. | Ruled by Raja Mīr Walī, son of Gaur Rahmān. (Raja's family, Bakhta.) | Yashkun .. .. | Molāi and Sunī, the former predominating; no Shīa. | Here slaves are both kept and dealt in. |
| CHITRĀL and MASTŪJ. | Ruled by Raja Imān-ul-Mulk. (Raja's family, Katorī.) | Yashkun .. .. | Sunī. | |
| GOLJĀL in BADAKHSHĀN | Dependent on the Mīr or Prince of Badakhshān (tributary to Kābul). | Wākhik * .. .. | Molāi. | |
| DĀREL .. | Republic .. .. | Shīn and Yashkun | Sunī. | In these, captives of war are kept as slaves; slave-dealing is not practised. |
| TANGĪR .. | Republic .. .. | Shīn and Yashkun | | |
| GOR .. .. | Republic .. .. | Shīn and Yashkun | Sunī. | |
| THALĪCHA .. | Republic. | | | |
| CHILĀS .. | Republic .. .. | Shīn and Yashkun | | |
| KOLĪ .. .. | Republic .. .. | Shīn and Yashkun | | |
| PĀLUS .. | Republic .. .. | Shīn and Yashkun | | |

The first five divisions I have already treated of as fully as I was able. We now come to the countries that surround Gilgit.

*Nagar* lies along the left bank of the Hunza-Nagar River, having Hunza opposite on the right bank. Since about 1867 it has paid a small tribute to the Maharaja, receiving in return a present of larger value; this cannot be considered more than a compliment, and a mark of desire for friendly relations.

The people of Nagar are called Khajanī.

*Hunza* is a more warlike country than Nagar. As shown in the last chapter, it has often been actively at enmity with the Maharaja, and it has generally been in a state of unfriendliness to him. In 1870 the Hunza Raja sent an agent to Sirīnagar to open friendly relations, who was well received; I do not know

* I have never met any of these people, but I believe them to be Dārds. Goīje is another name by which they are called; that is the territorial name, while Wākhik is the caste name.

2: Gervis T-3 (no date) 1954 AV1 Kashmir
Dard AV3

539 And the Queen ordered that the youths be brought to her. She was at once smitten by the likeness of the now handsome Trakhan to the Ra she had poisoned. She asked the youth from whence he had come, who his parents might be, and he told her all he knew. Then she was certain that he must be her son. The years had softened her; she was sad and lonely at times, for her daughter had married and left her castle, and she told him the rest of his story, pronouncing him to the men of Gilgit as their rightful Ra and seating him on the "Nilo But"—the coronation stone of the Ras of Gilgit. He was later to become the most famous of all the Ras of Gilgit, his rule was wise and strong, he extended the frontiers of his country, "he increased them to beyond Hunza and Nagar, right to the confines of Cathay." His nephews Girkis and Mughlot—the sons of his sister—he made the first rulers of Hunza and Nagar, their descendants being the Mirs there today. His memory will ever remain with the people of Gilgit, for there are so many songs of his great deeds and his wisdom now held up before the youths of those hard mountain parts as an example of what they, who also are born of that land, can achieve.

538 The men will sit for hours telling such stories as this[1] to the young men and boys, stories of blood, honour, swords and wars, whilst the women's stories, though not as bloodthirsty, are also those which rekindle a determination in the girls that the land, the gold and the women of Gilgit shall never be taken, whatever the sacrifice demanded or the price paid to hold them.

563 The people of Gilgit are Mohammedans of both the Shia and the Sunni sects; the people of Nagar are of the Shia sect only, those of Hunza of the Ali-Ilahi sect—that is, believing that Ali is God; the others are Mulahis.

172 Yet there are signs that the Buddhist faith at one time also reached as far as this, for Knight tells of walking to the entrance of the Kargha nullah, through which there is a track leading on to Yaghistan, and of a carving of the Lord Buddha to be seen on the face of a great rock.

721 The chiefs of Gilgit "living in their mountain fastness", were in the days gone by, "notorious for their raids into the countries of their neighbours, which they made with impunity".

[1] [See category 539, pp. 225-228 -- Analyst]

2: Gervis T-3 (no date) 1954 AV1 Kashmir AV1
Dard AV3

175 1859 sent out a strong force under the command of General Devi Singh, who conquered Gilgit; the "enemy fled away before this force and he occupied the district as far as Yasin". In 1865 a punitive expedition to Hunza failed: taking advantage of this the tribes around Gilgit rose; they invested the fort for some time, but reinforcements arrived and they dispersed. After that, though tributary to Kashmir, the chiefs of Hunza and of Nagar gave occasional trouble, once even capturing the frontier fort of Chaprot.

There came the final phase. Under the command of the British Colonel Durand, an expedition was sent out and captured Nilt by assault, then pressed on over the most difficult mountain conditions, glaciers, snow, precipices, against a brave, strong and determined foe. The fanatical determination of this enemy may be judged by the message the defending Vizir of Hunza sent to Colonel Durand, "This fortress of Chalt is more precious to us than the strings of our wives' pyjamas". Yet the British troops under the Colonel, captured the whole country right up to the Pamir and Chinese frontier. This was followed by a handful of troops under Sir George Robertson conquering the Chilas.

144 The people of Gilgit, Astor and some of the countries beyond
142 are a race with features of the Aryan type, and they claim to be of that stock. The majority of them are medium of height, hardy and strongly built. Again the descendants of the chiefs differ from the others, no doubt because of marriage from time to time with the most beautiful women either captured or made wives in order to ensure peace with a neighbour. These men are tall, many are fair-complexioned, with pale hazel or blue eyes, and they are extremely handsome. The features of the men of Gilgit are usually long and oval, the nose strongly curved, the expression sinister if not fierce; generally they are not as fair as
291 the men of the Valley of Kashmir. They usually wear dark woollen clothes, with a cap which has been universally adopted by most troops fighting in cold places, being a long woollen bag which is rolled up until it fits over the head, it being possible to
181 unroll it to cover the ears. Of these men Neve says, "They are an independent and bold race, more straightforward than the
● 563 Kashmiris and less bloodthirsty than the Pathan"—the latter

2: Gervis T-3 (no date) 1954 AV1 Kashmir A~~2~~
Dard AV3

being Afghans who have migrated over the frontier—"All are Mohammedans except the tribes of Kafistan." 181 363

Those Aryan features, those blue eyes, that light complexion, where does it come from? Not a few of the sons, grandsons and great-grandsons of the chiefs who once ruled in those parts, surprisingly claim to be descended from one of the Generals of Alexander the Great, if not from the Emperor himself. There is no record in history of his having visited those parts, but the people of Gilgit maintain that he came as close as the Tashkurgan and the Killik Pass, and then sent an expedition down through Hunza to Gilgit. It is known that Alexander did visit Dir, and it is believed that the expedition to Gilgit was to move on to Chitral and then join the main army at Dir. 174

I have never seen it hinted at in any book, but I dare to suggest that these Aryan features, blue eyes and the occasional tinge of gold in the hair found among those men of Gilgit—and also those of Kashmir—might have come about by their owners having been descended from the prisoners, deserters, or even soldiers who had become lost from the forces of Alexander. It is known that until not long ago on the North-West Frontier of India, a captured European who was fortunate enough to be the possessor of red hair was treated with more respect than his fellows, who, if not ransomed, suffered a ghastly, unmanly death. Although not released, he like the others, was handed over to the women, but remained alive to "husband" the widows, so that they might breed red-haired sons. Natural red hair is considered among some of the tribes to be a sign that the owner is the descendant of their particular prophet, if not The Prophet. A beautiful red-haired camp follower—and most "redheads" have blue eyes—would make a fitting concubine for any King or Chieftain; a powerful, magnificent, red-headed soldier of the forces of Alexander, a fitting lover for his widow, or even husband—if he happened to be an officer—for a daughter he had been unable to marry off to one of his own rank. Can it be from such alliances as these that the red heads, pale faces and blue eyes have come to those parts? 174 826 832

186 The people of Astor and Gilgit would be
101 surprised if they were told that they were Dards living in Dardistān, and their neighbours of Hunza-Nagar and Yāsīn would be equally astonished. If consulted, they would probably describe their country as Shīnāka, or the land of the Shīns, where Shīnā is the spoken language. They are an
517 Aryan people, stoutly built, cheery, honest, frugal, and sober.
291 They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head,
342 round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain
784 side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure
751 Shīn village no one will eat fowls or touch them. They
795 practise inoculation for small-pox, their one epidemic. The people of Astor are Musalmāns, two-thirds being of the Sunni persuasion, and the rest being either Shiahs or Maulais.
564 There is no religious intolerance in Astor.

162 Drew mentions the following caste divisions: Ronu, Shīns, Yashkun, Kremins, and Dums. As regards the Ronu caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the Rājā caste of Dardistān. The majority of the Astoris belong to the Yashkun caste, and the Shīns are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shīns, according to the Census, being 7,733. The Shīns are regarded
[582] with great respect by the Yashkuns and the other castes. The
563 Yashkuns claim the Shīns as their forefathers. The Shīns give their daughters to Ronus and to Saiyids, but take wives from the Yashkuns. Far away in Central Ladākh, in the Hanu valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they
[771] came and its Shīnā dialect, but they wear the pigtail and the Ladākhi cap. It is said that, though Buddhist by name, they
[595] really worship local spirits and demons. They practise poly-
[784] andry, but they will not eat with Tibetan Buddhists, and, like the Shīns in Dardistān, they hold the cow in abhorrence.
000 In Gilgit, as in Astor, there are few social subdivisions, for

Dard AV3
Chitral

ing peace a greater and united empire?. Let us hope so. But who that knows her methods can dare to prophesy that Russian rule will necessarily prove better for the people than Mahomedan.

One last look out over the forbidden land through which our feet might not stray, and we turned away and set our faces for India, feeling happy that we had come so far and seen so much, sad to think that the limits of our wanderings had been reached, and that each day now brought us nearer the dull routine of civilisation, from which six hundred miles now separated us. There is a fascination which no description can convey to those who have not experienced it in the nomad's life.

We had passed a Kafir village on our way up the Dorah, the people outlaws from Kafiristan owing to some blood feud, and had been hospitably entreated to stay and dine. This, as we were doing a double march to the top of the pass and back, we were forced to decline, but our would-be hosts turned up in our camp in the evening, and brought us a huge cream cheese, weighing about a stone, excellent to eat when you ignored the dirt of their methods. One boy was very handsome, with an aquiline nose and finely cut mouth, and really beautifully-shaped head and face, but the majority were uninteresting looking. We parted on the best of terms, as I gave each man and boy a looking-glass, knife, scissors, needle and thread, a priceless collection for them. We passed some wonderful hot sulphur springs at Shah Salim, a few miles below the head of the pass, and one of the curious circles of stones before mentioned, which are attributed by the people of the country to the Kafirs.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

word Dard, and they apply it to the dwellers on the left bank. Throughout the rest of the country inhabited by the Dard races, a block roughly two hundred and fifty miles from east to west, and a hundred and fifty from north to south, the name is, to the best of my belief, entirely unknown. It is a name found in the ancient geographers, both Pliny and Ptolemy use it, but it is very difficult to define exactly the limits occupied by the tribes to whom the name was applied. It is perhaps safe to conclude that the whole of the mountainous portion of the Indus valley from the plains of India to the source of the great river, was held to be occupied by tribes so called.

Who the Dards were originally is a most puzzling question, and one for the trained ethnologist and philologist rather than for the plain soldier. However, following Leitner, Drew, and Biddulph,* who made a special study of the question, it is possible to arrive at certain broad principles, which is all that the general reader requires. The Dard races may be put down as largely Aryan, and the position now held by the different classes and languages points unerringly to waves of conquest. The mass of the population of Chitral are the Kho, speaking Khowar, and they probably represent the earliest wave of invasion which swept into Chitral from the north over the passes of the Hindu-Kush. So remote is their antiquity that they may fairly be considered aboriginal. They owned the whole of

* Leitner: "Dardistan."[1]
Drew: "Jammoo and Kashmir Territories."[2]
Biddulph: "Tribes of the Hindu-Kush."[3]

[1] [See 1: Leitner in AV3 Dard file--Analyst] [2] [See 1: Drew in AV1 Kashmir file--Analyst] [3] [See 4: Biddulph, AV3 Dard file:-Analyst]

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

174 the country of Chitral, but were dispossessed by the
563 Ronus, the most honoured caste amongst the Dards, and by various other privileged classes, among whom are certainly the offshoots of families from Badakshan, who followed the fortunes of the founder of the present ruling dynasty. These upper classes have absorbed all the power, and treat the Kho with contempt, calling them "Fakir Múshkin," which
564 one might translate *les misérables*. The despised aborigines, however, have imposed their language on their superiors, and are interesting from the fact that they have no castes. This, I think, conclusively shows that they belong to the earliest Aryan race, and broke off from it before the acquisition of Hinduism; for in all other cases the Dard proper is emphatically a man with a caste. The principal caste is that of the Ronus, a small body held in the highest respect, always ranking next to royalty, and from whom the Wazirs are as a rule taken. Then come the Shins, below whom are the Yeshkuns, and lastly a collection of low castes, Krámins, Doms, etc., the millers, potters, and musicians of the com-
[582] munity. There is one plainly marked rule about the three leading castes: they give their daughters in marriage to the caste above, never to the caste below. The Ronus give their daughters in marriage to the ruling families, and in return receive the illegitimate daughters of princes, but not a daughter born in wedlock. The Shins give their daughters to Ronus, the Yeshkun to Shins, but a lawful daughter is never given to a man of the lower caste.

174 It would seem from a study of the map, and of

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard A43

themselves at the Chamarkand and Shandur passes.

As to the dates of the different invasions, or the last stage occupied semi-permanently in the tribe wandering before Yeshkun or Shin turned from the plains, and came surging up the Indus valley, who can give a definite answer? Biddulph inclines to take the Yeshkun, or Boorish, as they style themselves, to be the Yuechi who conquered Bactria about 120 B.C. Boorish, he says, may stand for Poorooaha, the ancient name of Peshawar, the seat of the Indo-Scythian kingdom founded by the son of Kitolo of the little Yuechi tribe who conquered Gandhara and Ariana in the fifth century of our era. The tribe must have swept up the Indus, and occupied it and the tributary valleys from Jalkot to the Shigar valley in Baltistan, subjugating the Aryan inhabitants as it passed. The beauty of the Aryan women—famous in all time—would soon tend to merge the races, and to stamp the Aryan type on the invader.

Buddhism must have flourished now, as the countless "mannis," or long stone altars, which abound throughout the Hindu-Kush show. The topes, chortens, and sculptured Buddhas scattered about in Chitral, Punyal, Gilgit, Nagar, and Baltistan, also testify to the spread of the gentle faith, and the voice of history in the writings of the Chinese pilgrims is not silent. With the Buddhist era came a proficiency in the arts never since equalled, as is shown by the masonry, sculpture, and clean-cut sockets to support the timbers of wooden irrigation channels taken across perpendicular cliffs near Gilgit. After an interval of some centuries, but how soon seems impossible

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

to decide, followed the Shins. That the Shin race was Hindu there can be no reasonable doubt; this is shown by their peculiar regard for the cow, their strict regard for caste, and the absence of the slightest feeling or reverence for the Buddhist remains abounding within their limits. Biddulph places their last home before the final move at Pukli, the modern Hazara district, a corner between Kashmir, the Indus, and the plains of the Punjab, and thinks that they swept up the Indus valley as far as Leh. Certain enclaves of Shin-speaking villages in Baltistan, the inhabitants of which are called Brokpas, or highlanders, by the Baltis, prove the latter proposition. The Baltis again are Tartars, who swept in from the east, swamped the Shin population, and drove it in its turn into inaccessible fastnesses.

The smaller broken Dard tribes, living for the most part in the southern portion of Dardistan, it is unnecessary to mention in detail. Biddulph considers that they fled from the increasing pressure of the Afghans in the sixteenth or seventeenth century. Like a shoal of small fish when attacked by a pike, they seem to have broken up and scattered in all directions, never to reunite. The Gawaré of the Indus valley, and the Gabars of the Chitral valley, near Narsat, are probably of the same stock, and may be identified with the Gabrak of the Emperor Baber's Memoirs, possibly with the Gouruí of the ancients. Similarly many other of the smaller scattered tribes may be traced to a single root located probably in the north of the Punjab, or in the Swat and Panjkora valleys. But the research is tedious,

Lr Lahore L-8 (1886-92) 1892? AV3 Dard AV3

mountains with their palaces and songs. Again, it is not Islam that tells them of the regeneration of their country by fairies—that places these lovely beings on the top of the Himalayas and makes them visit, and ally themselves to, mankind. The fairies too are not all good, as the Yatsh are not all bad. They destroy the man who seeks to surprise their secrets, although, perhaps, they condone the offence by making him live for ever after in fairy-land. Indeed, the more we look into the national life of the Dards the less do we find it tinctured by Muhammadan distaste of compromise. Outwardly their customs may conform to that ceremonial, but when they make death an opportunity for jokes and amusement we cannot refuse attention to the circumstance by merely explaining it away on the ground that they are savages. I have noticed the prevalence of caste among them, how proud they are of their Shin descent, how little (with the exception of the more devout Chiltais) they draw upon Scripture for their personal names, how they honour women and how they like the dog, an animal deemed unclean by other Muhammadans. The Dards had no hesitation in eating with me, but I should not be surprised to hear that they did not do so when Mr. Hayward visited them, for the Hindu-ised Mussulman servants that one takes on tours might have availed themselves of their supposed superior knowledge of the faith to inform the natives that they were making an improper concession to an infidel. A good many Dards, however, have the impression that the English are Mussulmans—a belief that would not deter them from killing or robbing a European traveller in some districts, if he had anything "worth taking." Gouhar-Amân [called "Gôrmân" by the people] of Yasin used to say that as the Koran, the word of God, was sold, there could be no objection to sell an expounder of the word of God, a Mulla, who unfortunately fell into his hands. I did not meet any real Shin who was a Mulla,* but I have no doubt that, especially in

* I have already related that a foreign Mulla had found his way to Gilgit, and that the people, desirous that so holy a man should not leave

Lt Leitner L-3 (1892-93) 1893? AV3 Dard AV3

tribe that inhabits a different valley by a different name. This will be seen in subjoined Extract from my Ethnographical Vocabulary. The name "Dard" itself was not claimed by any of the race that I met. If asked whether they were "Dards" they said "certainly," thinking I mispronounced the word "dâde" of the Hill Panjabi which means "wild" "independent," and is a name given them by foreigners as well as "yaghi," = rebellious [the country is indifferently known as Yaghistan, Kohistan and, since my visit in 1866 as "Dardistan," a name which I see Mr. Hayward has adopted]. I hope the name of Dard will be retained, for, besides being the designation of, at least, *one* tribe, it connects the country with a range known in Hindu mythology and history. However, I must leave this and other disputed points for the present, and confine myself now to quoting a page of Part II. of my "Dardistán" for the service of those whom the philological portion of that work has deterred from looking at the descriptive part.

"ṢHIN are all the people of Chilâs, Astór, Dareyl or *Darèll*, Gór, Ghilghit* or *Gilit*. All these tribes do not acknowledge the 'Guraizis,' a people inhabiting the Guraiz valley between Chilâs and Kashmîr, as *Shîn*, although the Guraizis themselves think so. The Guraizi dialect, however, is undoubtedly Shiná, much mixed with Kashmiri.

"The Shins† call themselves 'Shîn, Shiná lôk, Shinâki,' and are very proud of the appellation, and in addition to the above-named races include in it the people of Tòrr, Hárben, Sazin, [districts of, or rather near, Chilâs]; Tanyîre [Tangîr] belonging to Darèll: also the people of Kholi-Palus whose origin is Shîn, but who are mixed with Afghans. Some do not consider the people of Kholi-Palus as Shîn.‡

* The word ought to be transliterated "Gilgit" گلگت and pronounced as it would be in German, but this might expose it to being pronounced as "Jiljit" by some English readers, so I have spelt it here as "Ghilghit."

† In a restricted sense "Shîn" is the name of the highest *caste* of the Shîn *race*. "Réno" is the highest official caste next to the ruling families.

‡ My Sazini says that they are really Shins, Yashkuns, Dôms and Kramins, but pretend to be Afghans. *Vide* List of Castes, page 62. Kholi-Palus are *two* Districts, Kholi and Palus, whose inhabitants are

142 Kaghanis and Astóris—the Astóris and Gilgitis with the
144 Tibetans, and the Gurézis with the Tibetans on the one hand and the Kashmiris on the other. The consequence is that their sharp and comparatively clear complexions (where it is not under a crust of dirt) approaches, in some Districts, a Tatar or Moghal appearance. Again, the Nagyris are shorter than the people of Hunza to whom I have already referred. Just before I reached the Gilgit fort, I met a Nagyri, whose yellow moustache and general appearance almost made me believe that I had come across a Russian in disguise. I have little hesitation in stating that the pure Shin looks more like a European than any high-caste Brahmin of India. Measurements were taken by Dr. Neil of the Lahore Medical College, but have, unfortunately, been lost, of the two Shins who accompanied me to the Panjab, where they stayed in my house for a few months, together with other representatives of the various
564 races whom I had brought down with me.* The prevalence of caste among the Shins also deserves attention. We have not the Muhammadan Sayad, Shaykh, Moghal, and Pathan (which, no doubt, will be substituted in future for the existing caste designations), nor the Kashmiri Muhammadan equivalents of what are generally more names for occupations. The following List of Dard Castes may be quoted appropriately from Part II. of my "Dardistan":—

K. CASTES.

"Raja (highest on account of position).

"SHIN the highest caste; the Shins people of pure origin, whether they be Astóris, Gilgitis, Chilisis, etc., etc.*

They say that it is the same race as the 'Mughals' of India. Probably this name only suggested itself to them when coming in contact with Mussulmans from Kashmir or

* Both my Gilgit follower, Ghulam Muhammad, and the Astór emissary, Mirza Khan, claimed to be pure Shins. The former returned to my service some years afterwards and was measured together with other Dards. (See Appendix V.)

the Punjab. The following castes are ranked in their order of rank (for exact details, see "Hunza Handbook"):

"*Yashkun* = a caste formed by the intermixture (?) between the great landowning race and a lower [aboriginal ?] race. A Shin may marry a Yashkun woman [called "Yashkini"] but no Yashkun can marry a Shin woman.

"*Talishin* = caste of carpenters.

"*Yakshi* = weavers. The Gilgitis call this caste "*Bajitshen*."

"*Khan* = ironmonger.

"*Kamin* = potter.

"*Dom*" = musician } (the lowest caste).

"*Koramin* = tanner ? }

"*N.B.*—The *Brokpi* are a mixed race of Dards-Tibetans, as indeed are the Aimoris [the latter of whom, however, consider themselves very pure Shins]; the Gandias are probably Dards-Kafiristan; but I presume that the above division of caste is known, if not upheld, by every section of the Shins people. The castes most prevalent in Gurais are evidently Kashmiri as:

"Shin, Lin, Dir, Wir, Khan, Thilki, Bagh."

* It is to be seen that the Dirs are below the Koramin and that here are only 4 original castes: Shin, Yashkun, Kamin [or "Kamins"] and Dom, who, in turn, [illegible] words, except the following relative ranks: "The Shin is the right hand, the Yashkuns the left; the Kamin the right foot, the Dom the left foot." "The other castes are mere names to occupations." "A Shin or Yashkun can trade, cultivate land or be a shepherd without loss of dignity — Kamins as masons, carpenters, etc., but not musicians — as for leather, it is not prepared in the country. Kamins any employment, but, if a Dom becomes a Mulla, he is [illegible]. Members of the several castes who misbehave are called Wir, Pathgan, Wazir and Wim respectively." "A man of good caste will rejoice either and fight on the last even against his own brother." Revenge is a duty, as among Afridis, but is not transmitted from generation to generation, if the first murderer is killed. A man who has killed another, by mistake, or a fight = otherwise, make a feast [illegible] to bringing a rope, shroud and a [illegible] to the relatives of the deceased. The upper castes can, if there are no Kamins in their villages, do [illegible] and carpenter's work, without disgrace; but must not let Kamins or Doms do weaver's work. The women spin. The "Doms" are the "Rdoms" of Gilgit too.

## LEGENDS RELATING TO ANIMALS.*

### 1.—A BEAR PLAYS WITH A CORPSE.

It is said that bears, as the winter is coming on, are in the habit of filling their dens with grass and that they eat a plant, called "ajak," which has a narcotic effect upon them and keeps them in a state of torpor during the winter. After three months, when the spring arrives, they awake and go about for food. One of these bears once scented a corpse which lay the covered. It happened to be that of a woman who had died a few days before. The bear, who was in good spirits, brought her to his den, where he set her upright against a stone and fastening a spindle with his teeth and paws gave it to her into one hand and placed some wool into the other. He then went on growling "ajk-ajk-ajk" to encourage the woman to spin. He also brought her some nuts and other provisions to eat. Of course, his efforts were useless, and when she after a few days gave signs of decomposition he ate her up in despair. This is a story based on the playful habits of the bear.

### 2.—A BEAR MOURNS A GIRL.

Another curious story is related of a bear. Two women, a brother had her little daughter, were one night watching their field of Indian corn "maize," against the inroads of these animals. The mother had to go to her house to prepare the food and ordered her daughter to light a fire outside. Whilst she was doing this a bear came and took her away. He carried her into his den, and daily brought her to eat and to drink. He rolled a big stone in front of the den, whenever he went away on his route, which the girl was not strong enough to remove. When she became old enough to be able to do this he used daily to lick her feet, by which they became swollen and gallingly, dwindled down to mere misshapen stumps. The girl eventually died in childbirth, and the poor bear who was allowed to remove her to his *retreat* disconsolately shows the fields.

### 3.—ORIGIN OF BEARS.

It is said that bears were originally the offspring of a man who was driven into madness by his inability to pay his debts, and who took to the hills to refer to avoid his creditors.†

### 4.—THE BEAR AND THE OBLIGED MAN.

The following story was related by a man of the name of Gaelik [illegible] residing at a village near Lytic, called Pandong. He was one night

* These legends should be compared with the Chinese Fables published by Mikow Shamanti Shah in the *Asiatic Quarterly Review* of January, 1891, namely: "the mischievous bear," "the golden mouse," "the mouse and the frog," "the quail and the fox." See Appendix III. as also Legends in "The Hindu Magic Fraternity."

† The complainants of the Ogoni in challenging such obligations, when confronted with a number of his own race, used to be sometimes. The Ebira or Ebira of the Niger are the "Bassaris" of Europe and our "Ebiri" is a corruption of "Ebiras" or Ebiris, name as the tribe of the Ebira or Ebira the Ogoni tribe.

‡ Pandong, to be more accurate, must be ground two feet, that tailed in many about in the "abacus" (to dance) or "pandi" (night), a complete under-fourth, and has to be kept in the place for one night, after which it is fit for use after being roasted or put on a rack [see] like a Chapati [a thin cake of unleavened bread].

"Bambo" or silver bells—see bells [more bells—more lights].

Dr Leitner L-9 (1868-69) 1937 AVS Dept (AV)

When Najmuddin left his country, it was governed by a servant of the court of Bukhara.

The houses are generally built of mud, cut into smooth and symmetrical walls, and are plastered by a kind of lime called *gach*. Burnt bricks are very rare, and only the palace of the governor is made partially of them. The walls are roofed by [illegible] reeds of "dawish" (reeds), which grow abundantly on the banks of the Amou.

The *dress* consists of long, flowing chughás (stuffed with cotton) and woollen turbans. The Khalsáis wear a kind of felt boot which they call *shemach*, but lately a kind of shoe is introduced from Russia, and is called *mojkai*.

The country is connected with Yarkand by two roads, one running through Kokand and the other through the Pamir.

---

The above and following accounts were in answer to questions by Dr. Leitner, whose independent researches regarding Kandiá in 1866–70 were thus corroborated in 1881, and again in 1886, when the photographs which serve as the basis of our illustrations were taken.

---

## IV. THE LANGUAGE, CUSTOMS, SONGS, AND PROVERBS OF GABRIEL.

*Position.*—A town in *Kandiá*, a part of Yaghistan (the independent, or wild, country) situated beyond the river Indus (Mehrán-sind), which separates it from *Chilás*. The country of *Kandiá* extends along both sides of the *Khow Ghai*, a tributary of the Indus, and is separated from *Tangir* by a chain of mountains.

The town of *Gabriál* is situated three days' march from *Jalkót* in a north-east direction, and is one day's march from *Palas*, in a northerly direction. *Pattan* is the chief city of Southern Kandiá.

*Inhabitants.*—The whole tract of Kandiá can send out 10,000 fighting men. They are divided into the following castes:—

(1) Yúshi, the highest, who now pretend to be Quraishis, the tribe to which the Prophet Muhammad belonged. (Hazrat Ulla, the Gabriáli, and Ghulam Muhammad, of Gilgit, *are themselves Quraishis.*)

(2) Yashkun, who now call themselves Moghuls, are inferior to the Shin. A Yashkun man cannot marry a Shin woman. Ahmad Shah, the Jalkoti belonged to this caste.

(3) Dwángar, carpenters. } In reality these people constitute an
(4) Ashar, blacksmiths. } the Kamin, caste.

(6) Kamin, lowest class.

The people of *Northern Kandiá* (Gabriál) are called *Dumshi*, and of the southern part (*i.e.*, Pattan) *Mani*, as the Chilasis are called *Shin*. A foreigner is called *Bardesi*, and fellow-countrymen, *Bhaidesi*.

*Religion.*—The Gabriális, as well as [illegible] the people of *Chilás*, *Pattan*, and *Palas*, are Sunnis, and are very intolerant to the *Shins*, who are hated, cursed, and beat in streets. Ghulam Muhammad, the Gilgit boy, has been [illegible]

In Lothian L-8 (1900-02) 12527 AV2 Dard AV2

The most curious custom which seems to 853
perforate these countries is to foster relationship in nursing, where
a nurse and all her relations come not only within the prohibited 608
degrees, which is against the spirit of Muhammedanism, but also
create the only real bond of true attachment that I have seen in
Dardistan, where other relations seemed always engaged in
murdering one another.

Nearly all the chiefs in Dardistan give their children to
persons of low degree to nurse, and these and the children of
the nurse become attached to them throughout life and are their
only friends. But this foster-relationship is also taken in order 609
to get rid of the consequences, say, of crime; for instance, in the
case of adultery, or supposed adultery, the suspected person who
declares that he enters into the relationship of a son to the
woman with whom he is suspected, after a certain penalty, is
really accepted in that position, and the trust is in no case
betrayed. It is the only kind of forgiveness which is given in [514]
Dardistan generally to that sort of transgression; but, further
than that, drinking milk with some one, or appointing some one
as foster-father, which is done by crossing two vases of milk,
creates the same relationship, except amongst the noble caste of
Shins, who were expelled by the Brahmins from India or Kash-
mir, and who hold the cow in abhorrence as one of their religious
dogmas, whereas, in other ways, they are really Brahmins, among
whom we find Hinduism peeping out through the thin crust of
Muhammedanism.

The subject of caste, by the way, is also one which is generally 000
misunderstood, and which, if developed on Christian lines, would
give us the perfection of human society, and solve many of the
problems with which we are dealing in Europe in more advanced
civilizations. I have just read with concern some remarks
against caste by Sir John Petheram, who has been in India some
three or four years. I think that before people speak on subjects
of this interest they should [illegible] the classical and one of the
vernacular languages of India, and then alone assume the role of
teachers whilst continuing to be learners; even in regard to such
subjects of infant-marriage and the prohibition of widow re-
marriage, there is a side of the question which has not yet been
put sufficiently before the British public. Infant-marriage, when

4 AV3 Dard AV3

be found numerous flocks of the wild sheep (*O. Vignei*). At an elevation of 11,000 feet, wild onions grow in great profusion, and to this fact the range is indebted for its Chinese name Tsungling. (The Onion Mountains.)

The principal difficulty in communication is caused by the rivers, which in winter are shrunk to small dimensions, but in summer, fed by snow-fields and glaciers of enormous extent, become impassable torrents, bringing down tons of soil in their turbid waters. Many of the streams are rich in gold, especially those flowing from the great Rakiposh Mountain, and it is probable that a scientific search for minerals would be well repaid. The natives believe that the gold is generated by the glaciers, because the greatest quantity is found in the glacier mud, and there are traditions of small but rich veins of earth having been occasionally laid bare by earthquakes. Gold-washing is only practised in winter, and then by none but the poorest and meanest of the population, though the quantity found even with the rude apparatus employed is sometimes very remunerative. The gold itself is of fair quality, the best being of twenty carats.

Nearly half way between Gilgit and the Indus is the Bagrot Valley, which contains several flourishing villages, and is capable of supporting a population of 2,000 or 3,000 souls. The Bagrot gold-washings are celebrated for the quantity and fine quality of the gold they yield, and the valley contains many signs of mineral wealth. It was a favourite summer resort of the old Gilgit rulers, and was their last place of refuge when hard pressed by external enemies. The Bagrot people belong almost entirely to the Shin caste.

A mile below Gilgit itself the Hunza River joins that of Gilgit. Though fordable in winter, this is in summer a deep and rapid torrent more than a hundred yards in breadth, bring-

[illegible] mountains it drains." Cashmere jurisdiction extends some 25 miles up the valley to a point at which the river makes a sudden bend from a westerly course to south-south-east. As generally happens where these abrupt changes of course in a stream are found, the river here flows between perpendicular rocks, across the face of which none but the most expert cragsmen can find a path. On the occasion of my visit to Hunza in 1876, I suddenly found myself confronted with a more difficult and dangerous piece of ground than I had ever traversed in a tolerably large experience of Himalayan sport. For nearly half a mile it was necessary to scramble over

# CHAPTER III.

## CASTES—ADMINISTRATION.

D
564
B
564

DR. LEITNER and Mr. Drew have already shown that the people of Gilgit and some of the adjacent valleys are divided into castes, which are governed by strict laws as to intermarriage. The distribution of the different castes, as shown roughly in the following table, may help to give some clue to their different origins:—

*Table showing Distribution of Castes.*

| | Doms, Zumbil or Harijan. | Shin. | Dardish or Yeshkun. | Kramein, Dum, Shoin, and Unad. | Remarks. |
|---|---|---|---|---|---|
| Koli | None | 2nd per cent. | 4 per cent. | 15 per cent. | Exclusive of Nomenclass, but including under the head of Shins, Chilas, Gohars, Mahoons, and Saiewalks. |
| Palus | 5% | 98 " | 96 " | 10 " | |
| Pattus and Soo | 5% | 98 " | None | 10 " | |
| Dadeyes and Kandia | 5% | 70 " | 10 per cent. | 30 " | |
| Bisharad, Sasin | 5% | 70 " | 10 " | 33 " | Exclusive of Pakhans and Goojurs. |
| Tangir | 5% | 70 " | 10 " | 15 " | |
| Gurais | 5% | 70 " | 10 " | 16 " | |
| Chilas | 5% | 70 " | 10 " | 24 " | |
| Gohar | 5% | 70 " | 10 " | 5 " | |
| Kohistani | 5% | 70 " | 10 " | 10 " | |
| Kohistani | 5% | 70 " | 10 " | 5 " | |
| Gilgit | 6 per cent. | 70 " | 10 " | 4 " | Exclusive of Cashmeris and recent immigrants. |
| Hunza | 5 " | 70 " | 10 " | 15 " | |
| Nagyr | 5 " | 70 " | 10 " | 15 " | |
| Wakhi | A few families. | None | Greater part of the population. | A few families. | Exclusive of the ruling class. |
| Main valley above Punyal to Chanik | None | 33 per cent. | 30 per cent. | 13 per cent. | |
| Chitral Valley | 300 families | None | None | 200 families | Exclusive of the regular population of Chitral. |

At the risk of going over some ground that has already been traversed, a few remarks concerning them may not be out of place.

The most honoured caste is that of the Ronos, who rank next to the ruling family in every country in which they

~~Biddulph G-3 (1873-1878) 1880 AV3 Afghanistan AV3~~
4: AV3 Dard AV3
Burusho AV7

are found. The Wuzeers are generally, though not always, chosen from among the Rono families. They exist in small numbers in Nager, Gilgit, and Ponyal, gradually increasing in numbers as one travels westward through Yassin, Mastooch, and Chitral, in which places there are said to be altogether over 300 families. In Nager and Yassin they call themselves Hara and Haraiyo,[1] and in Chitral Zundra, but they claim to be all of the same stock. Some exist in Wakhan and Sirikol, where they are called Khaibar-khatar; and in Shighnan, where they are called Gaibalik-khatar. Wherever they exist they are held in great respect. They have two principal traditions concerning their origin, both of which may contain a germ of truth. One is that they are descended from three brothers, Zoon, Rono, and Harai, the sons of a certain Soomalik who ruled in Mastooch before the establishment of the Shahreis line. The other is that they are of Arab blood, and descended from Mahommed Hanifa, the son of Ali, the Prophet's son-in-law. Their small numbers, general distribution, and the universal estimation in which they are held, are evidence in favour of the first assertion, and it is possible that they may be descended from Arabs who settled in the upper part of the Chitral Valley at the time of the Arab conquest of Badakhshan, at the end of the seventh century. A claim to Arab descent is, however, very common among many sections of the inhabitants of these valleys, but it seems to rest on no real foundation. According to another version they came originally from Rajauri, near Poonch, and are descended from three brothers, Sirung, Sooroong, and Kunger Pùtool.

In appearance they are generally taller than the other inhabitants of the country, with rather high cheek bones, oval faces not thickly bearded, and fairly developed features. Some of them resemble in feature high-class Rajpoots. The esteem in which they are held is proved by the fact that they are alone to give their daughters in marriage to the ruling families, and children born of such marriages are qualified to succeed to all the honours of the father's family, and intermarry with other ruling families. They also give daughters in marriage to Syuds, of whom there are a few scattered about the country, but not to the inferior castes. They, however, take daughters in marriage from both Shins and Yeshkuns. Children born of these unions rank as Ronos, and, if daughters, can, as above stated, intermarry with ruling families. The Zundré of Chitral do not refuse their daughters to the Afghans of Dir. Excep-

[1] This name recalls the Hasoya of the Zendavesta.

4
AV3 Dard AV3

582 tional cases exist of Rono women being given to Shins and Yeshkuns when through immoral behaviour they cannot procure husbands of their own class. Rulers of Dard states give their daughters born of slaves or concubines to Ronos, but not those born of lawful wives.

564 Next to the Ronos, in order of consideration, come the Shins, who do not form the majority of the population anywhere except in Gor, Chilas, Tangir, the Indus Valley below Sazin, and the upper part of the Gilgit Valley above Ponyal, and are not found at all in the higher and less fertile parts, till one gets further up the Indus Valley beyond Haramosh. Although numerically inferior, they have established their language to the exclusion of others wherever they have penetrated, and there can be little doubt that they represent an alien race who at some time established themselves in the country by conquest. Amongst the many dialects of Shina now spoken, that of Gilgit, which was the seat of Shin rule, is still considered the most refined, but it is much mixed with Boorishki, and of late with Cashmeri owing to an immigration of Cashmeris which took place about a hundred years ago, at the same time as the formation of the Cashmeri colony in the Hodar Valley.

162
174
[117]

582 Shins give their daughters to Ronos and Syuds, but cannot marry the daughters of Ronos or Syuds in return. In the same way they marry Yeshkun women, but do not give their daughters to Yeshkuns in return. In the lower part of the Indus Valley they give daughters to the Neemchas. Owing to this system of mixed marriages they are, as Mr. Drew has pointed out, very far from being a pure race, and it is difficult to fix on any typical personal characteristics. The Shins of the Indus Valley below Sazin are small clean-limbed men, with dark complexion and eyes, and sharp features, of a type not uncommon in North-Western India. Above Sazin and about Gilgit they are of somewhat lighter complexion, but they do not show any marked type of feature.

142

[142] There is a rare type, which I have only noticed among Shins, which may be characteristic of the race. These are small slight men, with thin sharp features, prominent noses and narrow chins. Mr. Drew also notices this type as prevailing in the side valleys of the Indus near Rondu and Iskardo. I am inclined to think, however, that the true Shin type is only to be found in the Indus Valley below Sazin, and that this small narrow-chinned race are merely a deteriorated type produced by long intermarriage within narrow limits.

by them, not a single fowl is to be seen. These peculiarities are strictly confined to the Shin caste, and, together with other customs which will come under notice presently, afford good grounds for supposing that they were a race of Hindoos who came from the south, and, pressing up the Indus Valley, established a Hindoo state in these remote regions under the crest of the Hindoo Koosh.

The next in order and the most numerous caste are the Yeshkuns, who form the entire population of Hunza, Nager, and Ponyal, and nearly all the population of Yassin, besides being numerically superior in Gilgit, Sai, Darel, and Astor. In Hunza and Nager they do not call themselves Yeshkun, but Boorish; and in Yassin, Woorshik and Boorisho. The language spoken, in slightly varying dialects, in these three states is known as Boorishki, Boorishaski, or Woorishki. The term "Khajoona," applied by the Gilgitis to the language as spoken in Nager, is never used in that country, and the old name also lingers in Yassin, which is still known as Woorshigoom. This language, of which an account is given in Appendix A, differs markedly from all languages in the neighbouring valleys. It has, I believe, been pronounced on good authority to belong to the Turanian family of languages.

In the colder climate of Hunza and Yassin, the people of this caste have ruddy complexions, and fair and even red hair is not uncommon. The Boorish of Nager show a somewhat different type. Many of them are short, thick-set men, with prominent cheek-bones, thick features, and thin beards. These characteristics, joined to their unwarlike nature, are probably due to an infusion of Tartar blood from Iskardo, gained during the time that Nager was subject to the Makpon ruler of Iskardo. If the Boorish are originally of Turanian origin, they have received at some time so large an infusion of Aryan blood as to have almost entirely swamped their

strictions on their intermarriage with the Shins makes them the purer race of the two, and though these restrictions are not always closely observed, the Yeshkuns of Hunza and Nager would have little opportunity for profiting by their non-observance, so that their dash of Aryan blood must have been obtained before the appearance of the Shins. There does not appear to be any good foundation for Dr. Leitner's suggestion that the Yeshkuns are probably the product of intermarriage between the Shins and some aboriginal race. Considerable rivalry exists between the Shins and Yeshkuns,

125 Biddulph G-3 (1873-1878) 1880 ~~AUI-Afghanistan AUI~~
4
AV3 Dard AV3
Butasho AV7

Considerable rivalry exists between Shins and YeshKuns even in villages where they have lived side by side for generations. D 578 B 578

Living among them, in varying numbers, are Syuds, Krammins, Doms, Shotos, and Goojurs. All of these occupy an inferior position except the Syuds, who relate that they first settled in the country in the time of Tamerlane. They are treated with the highest respect, and receive in marriage daughters from the ruling families, but without reciprocity, for a Syud's daughter is given only to a Syud. There are none in Hunza, but elsewhere they are scattered through the country in small numbers. There is seldom more than one Syud's house in each village. D 564 B 564

The Krammins, who are millers and potters, are most numerous in Darel, and do not exist in Hunza or Nager. They do not intermarry with any other caste. Their name is probably derved from the Persian *kamin*, "mean," though Mr. Shaw, in his paper on "Stray Aryans in Thibet," suggests that the name is derived from *krum*, "work."

The Doms, who are musicians, blacksmiths, and leather-workers, are most numerous in Yassin, Nager, and Chilas, in which latter place they form a sixth of the population.

In Nager there is a caste called Shoto, which exists nowhere else; they work in leather, and rank below the Doms, who take daughters from them without giving in return.

Like the low caste of men of India, the men belonging to these inferior castes are of very dark complexion, coarse features, and inferior physique. Mr. Drew regards them as akin to the low castes of the Punjab, and accounts for their presence in these countries by suggesting that they are remnants of a pre-Aryan aboriginal race, who represent the earliest inhabitants of these valleys. I am more inclined to think that, like the Shins, they accompanied the Dards in their migration from the south, and that they were induced to settle in Shins, or they may have followed them, gradually spreading under the protection of the Shin rule. Their status is only consistent with the existence of the Hindoo religion, which I believe to have been introduced by the Shins, and it is worthy of notice that they are not found in the upper part of the Chitral Valley. D 142 174 B 142 174

In Gilgit itself there are a great number of Cashmeris, or, as they are called, Kashiroos, whose forefathers settled in the place in the time of Ahmed Shah Abdali, about 1760 A.D. They now form the largest section of the population, and the shrewdness which forms so distinctive a part of the D 162

~~32~~ Biddulph G-3 (1873-1878) 1880 ~~AU1 Afghanistan AU1~~
4: AV3 Dard AV3
Balti AV2

D 162 character of the ordinary Cashmeri, has suffered little by transplanting. Some are said to have penetrated into Chitral, where they have since become merged in the regular population. Those in Gilgit are weavers and carpenters, D [196] and are regarded with some contempt both by Shins and Yeshkuns.

D Their distinctive castes are Meer, Sheikh, Paiyr, Lon, 564 Suniyar (goldsmiths), Dar, Rawut, But, and Tatchon (carpenters); all of which castes are also found in Cashmere. They are all tillers of the soil, and the trades at which they work occasionally, such as weaving, are irrespective of caste, with the exception of the goldsmiths and carpenters. They intermarry without restriction among themselves, except the Tatchon, who give daughters to the other castes, but do not receive from them in return. They occasionally give daughters to Shins and Yeshkuns without reciprocity. With the Krammins and Doms they do not marry at all. In spite of the small estimation in which they are held, they form the most thriving and energetic part of the population, while at the same time they have lost some of the worst characteristics of true Cashmeris.

D In the valleys south of Gilgit, the Goojurs pasture their 564 cattle on the high lands, not mixing with the people of the 233 country in any way. In Tangir and Darel they are found in great numbers, and they count their herds by thousands. They attach themselves to no locality, though perhaps for a generation the same men frequent one pasture-ground, building rude hovels and making a poor pretence at cultivating small patches of ground; but a very small excuse seems to be sufficient to drive them, with their herds, in search of fresh pastures. A great number inhabit the upper part of the Dir and Swat Valleys, and a few have found their D [illegible] way into the Gilgit Valley. They all speak the dialect of [illegible] pectual to their caste. Like the Syuds, they [illegible] rank as a class rather than as a caste.

B Vigne, speaking of the existence of caste in Baltistan, 174 remarks that it may perhaps be considered as a proof of the D Hindoo origin of the natives of that country. Though the 174 Baltis have undoubtedly a considerable amount of Aryan blood in their veins, they must be classed as a Mongolian race; but the existence of a caste system among them, which will be mentioned further on, must be ascribed to Dard, or more particularly to Shin, influence; for it is to be noted that the caste distinctions above mentioned are only found in

# CHAPTER IV.

## BALTISTAN—THE BROKPAS.

D 564 197 A SURVEY of the Dard tribes of the Indus Valley would not be complete without a brief excursion into Baltistan.

Returning to the Indus Valley, the small district of Haramosh above Boonji calls for little remark. The inhabitants are principally Yeshkuns, and speak the Gilgiti dialect of Shina.

B 564 197 Above Haramosh a complete change takes place in the population, which thence upwards is almost entirely Balti,—that is, of Tartar blood,—and the language spoken is a dialect of Thibetan. Dwelling among the Baltis, in small numbers in the Rondu and Iskardo districts, and in a larger proportion in Khurmang and Himbaps,[1] are, as is shown in the accompanying table, Shins, Yeshkuns, and Doms who speak Shina.

| | Rondu. | Shin (Rom). | Yeshkun. | Dom. | Balti. |
|---|---|---|---|---|---|
| Haramosh | None | 8 per cent. | 84 per cent. | 8 per cent. | None. |
| Rondu | None | 1 ,, | 12 ,, | 1·3 ,, | 85·3 per cent. |
| Iskardo | None | 6·3 ,, | 1·3 ,, | A few houses | 90 ,, |
| Khurmang | None | 23 ,, | 12 ,, | 3 per cent. | 60 ,, |
| Himbaps | None | 52 ,, | 13 ,, | 1 ,, | 34 ,, |

But it must be noted that the dialect of Shina spoken in Rondu[2] and Iskardo is the Astori, while in the Khurmang [illegible]

B 174 563 people hold a position in the community inferior to that of the Baltis, who call them Brokpas, "highlanders," from the circumstance of their cultivating the higher and less fertile ground in the lateral valleys and on the mountain sides, while the lower—that is, the best—ground is in the hands of Baltis.

B 174 Mr. Drew, who overlooked this fact, accounts for the name

[1] The district drained by the Shingo River is included in the Khurmang district, and is chiefly inhabited by Brokpas. Himbaps is the name given by the Baltis to the Dras district, which by the Brokpas is called Hoomwat.

[2] The village of Dero is the only one in the Rondu district in which the Gilgit dialect of Shina is spoken.

Biddulph G-3 (1873-1878) 1880 ~~AU1 Afghanistan AU1~~
4: AV3 Dard AV3
Chitral

This estimate does not include the tributary tribe of Bushgali Kaffirs, or the subjects of the Yassin ruler, who is independent of Chitral, though the close relationship existing between the two families causes them to act in concert in all important matters. Both rulers pay a tribute of horses, hawks, and hounds to the Maharajah of Cashmere, to whom they acknowledge allegiance. Iron, copper, and orpiment of superior quality are found in Kashkar. Cotton carpets of an inferior kind, which have the peculiarity of being alike on both sides, are made for local use, and Chitral daggers and sword-hilts are in great demand in the neighbouring valleys. Amongst the people of Kashkar, Chitral is constantly pronounced and written Chitrar and Chitlal. This seems to arise from a curious inability[1] to distinguish between the letters *r* and *l*; in this way Koonur becomes Koonul, Punjkorah Punjkolah, the Lowri Pass the Rowli Pass, &c.

The population of Chitral is a curious and intricate ethnological puzzle. The largest section of the population are the Kho, who inhabit the whole of Kashkar Bala, the Ludkho and Arkari Valleys, and the main valley down to Darosh, and have penetrated across the watershed as far as Chashi. They call the country also Kho, dividing it into different sections under the names *Toori*kho (*Upper*), *Mool*kho (*Middle*), and *Lud*kho (*Great*), and their language Khowar. This is the language given by Dr. Leitner under the name of Arnyia, by which it is known to the Shins of Gilgit, who style the Yassin portion of Kashkar Bala Arinah. In sound it is soft and musical.[2] Unlike the Shins and other cognate tribes hitherto mentioned, the existence of these people in the localities in which we now find them appears to date from so far back as virtually to entitle them to be considered aboriginal. They may have once occupied a wider extent of country, but there is no trace of their having conquered or displaced any previous race of inhabitants. They were undoubtedly the owners of the country until a period not very remote, and they have suc-

who style them contemptuously "Fakir Mushkin." They are divided into classes of which a few are Toryié, Shiré, Darkhané, and Shohané. No caste distinctions exist among them.

Above them is a large privileged class, which is divided into clans like the Afghan Khels, and spread all over Kashkar.

[1] The *l* and *r* are scarcely distinguishable in the old Persian.—*Rawlinson's Ancient Monarchies*, Vol. III. p. 110.

[2] See Appendix H.

Chitral

Indus Valley, but their language differs a good deal. The Chitralis always speak of them as a bald race, and the few individuals I have seen had very scanty beards. The splendid flowing locks of the Kho would make them term bald any race less liberally endowed by nature than themselves. They are no doubt the Gebrek of Baber's Memoirs. Their language seems to link them with the Bushgalis on one side, and the tribes at the head of the Swat and Panjkorah Valleys on the other; but further examination may show that they have only borrowed words from their neighbours' languages. Several small valleys on the western side below Birkot are inhabited by Siah Posh of the Bushgali tribe, who retain their own religion and customs, though they have long been subject to Chitral. These broken tribes all belong to the "Fakir Mushkin" class. In Bailam, or, as they style it, Bargam, are a few Afghan families.

The origin of many of these tribes can be at present only a matter of conjecture, but it can hardly be doubted that this mixture of broken fragments could only have been produced by pressure from the south. The frequent occurrence of the names of Shoghoor, Shoogram, and Shogot, seems to point to the prevalence once of Shivaism, but there are no relics of ancient customs still existing to bear out the presumption that it was practised by any of the tribes now to be found in the valley. A tradition exists that the valley about Mastooch was at one time ruled over by Dangariks, who most probably were Shins from the Gilgit Valley, but there is nothing to show what religion was professed by the Kho before they embraced Islam.

As in the valleys to the eastward, manufactures are less esteemed than agriculture. In the valley below Chitral, are found, as in the Gilgit and [illegible] valleys, [illegible] called *Ustâds*, "artificers," and are divided into *Dertoché*, "carpenters," *Dergeré*, "wooden bowl makers," *Koolalé*, "potters," *Doms*, "musicians," and *Mochis*, "blacksmiths." The two latter only intermarry among themselves, and are looked down upon by all other castes and classes. The other three castes intermarry without restriction among themselves, and occasionally give daughters to the Fakir Mushkins, who are all agriculturists. No Ustâds are found in Kashkar Bala or in Ludkho. The ruling class recognise certain restrictions on intermarriages among themselves. The Shah Sangalié marry amongst themselves, and take daughters from the

Biddulph G-3 (1873-1878) 1880 AUS Afghanistan NWF
4 AV3 Dard AV3 Chitral

564 Zundré and Ashimadek, but do not give daughters in return, except to the Zundré, who, being descended from a former dynasty of rulers of the country, are regarded as of royal blood. All the rest, including the Zundré, intermarry without restriction, but never with the Fakir Mushkin class, from whom, however, they take daughters as concubines.

651 The regular revenue of the country is paid solely by the "Fakir Mushkin" class. Those who live by agriculture are assessed at a tenth of all produce, one sheep, one blanket, and 20 lbs. of honey from each house yearly. The pastoral community is assessed at four sheep, three woollen robes, and 30 lbs. of butter from each house yearly. A few villages, which are almost entirely employed in mining, pay 16 lbs. of mine produce yearly for each house. There is, however, very little regularity observed in collecting these imposts, and, in practice, as much is wrung from the subject population as possible. Considerable dues are collected from the merchants who trade between Badakhshan and the Punjab, and the Chitral ruler's revenue is further increased by the sale of hawks and falcons, of which great numbers are captured every year and sold to merchants, who take them to the Punjab.

643 The administration of justice is practically the will of the [671] ruler, though nominally the precepts of the Shar'yat are observed. In some cases the intervention of the Moollahs is 692 useful. In one case which came to my knowledge they intervened to save the life of a condemned man who had murdered a favourite follower of the Mihter, by pointing out that the Mihter's injustice in permitting his favourite to forcibly abduct the man's wife had led to the murder. Small cases are settled by the district Ataliks.

642 A somewhat elaborate administrative machinery exists 177 which was probably instituted by, or borrowed from, the Shin Ras of Gilgit. The names of many of the officials are the same, though their functions show that a new system has been grafted on to Shin ideas.

634 The country is divided into eight districts. At the head 651 of each is an Atalik, whose duty it is to collect the revenue of his district and to command the men of it in war. Like the Wuzeers of districts in Gilgit, he has the right of releasing one man in each village from military service. Out of the revenue of his district he receives 12 sheep, 12 measures of butter, 20 measures of wheat, and a proportion of the

1: Drew G-2 (1862-1872) 1871 AV1 Kashmir
Dard AV3

291 The dress of the Dárds is woollen, except among the higher people, who wear cotton clothes for the summer if they can get them; the dress consists of pyjamas, chogu (or gown-coat), a waistband to confine this, and lastly, a cap and chaussure, both of peculiar construction. The cap is a bag of woollen cloth half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head, round which the roll makes a protection from cold or from sun nearly as good as a turban. For their feet they have strips and scraps of leather put under and over and round the foot, and a long thin strip wound round and round to keep all these in place. The head-dress is thoroughly characteristic of the Dárds; wherever they are scattered, and with whomsoever they are mixed up—with the one exception of the Buddhist Dárds to be mentioned below—they keep that kind of ---

## CASTES.*

564 There are certain subdivisions of the Dárd race which may be called castes, since they are kept up by rules more or less stringent against the intermarriage of those who belong to different divisions. To trace these out is a matter of much importance, for they probably give indications, if one knew how to interpret them, of the sources from which the present community has been compounded, and of the order of successive occupations of the country, and of the supremacy of different nations.

According to my inquiries, the following are the important caste divisions in the order of their recognised rank:†

(1) Ronú. | (2) Yáshkun. | (3) Yeshkun.

As to the first, Ronú, I am not clear whether any importance may be attached to the division. In no other account have I seen the name mentioned, but in the Gilgit country it is certain that a

* The substance of this and the next division of the chapter was communicated in a paper which I read to the Oriental Congress that met in London in Sept., 1874.

† Besides these, I have in one village, Tashgám near Dáha, heard of a caste called Zon. I was unable to find out the extent or relative importance of this caste, or to enlarge it with the others.

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
David AV3

564 small number of families are of a caste called Ront, and that they are held higher even than the Shin. It is possible that this rank is derived from their having in former generations held some offices of power, hence the caste could not be wide-spread; as, however, it may be a clue worth following out, I record the fact.

The remaining four castes are of undoubted importance in an ethnographical view. These are the same divisions as are given in an account of the Chilâsis by Captain Ommaney, in the Punjâb Government Gazette, of Feb. 28, 1868, quoted in the Appendix to Dr. Leitner's work; and they are also spoken of as the four primary divisions by Dr. Leitner's informant, a Saiad; Dr. Leitner himself, by adding the names of many other castes (which I incline to think are subdivisions), makes less of this fourfold separation, and he inverts the positions of Kremin and Dôm.*

[513] Beginning with the lowest of the four; we find the *Dôms* acting as musicians, like the low-caste Mirâsis of the Punjâb and the Domes of other parts of India, and like also the Beros of Ladâkh and the Bâtals of Kashmir. It will be remembered, too, that the lowest caste at Jummoo—the entrants to whom was relegated the lowest kinds of work—is called Dôm, though there the musicians and dancers are not taken from among them. Thus all through these hills, in all the different nations, we find a lowest caste, one everywhere treated as unfit for ordinary social intercourse, corresponding in all the cases either in name or in occupation, or sometimes in both. It is true that in each nation that lowest caste has something of the general characteristics of the nation as a whole. In every case their language is the same as that of those they live with, and has no connection with that of the similar caste in the neighbouring nation. In form and features they are somewhat like and somewhat different from those who are in some measure their masters; we see that the Dôms of the Outer Hills differ in form and complexion from the men of the higher castes, and that the Bâtals of Kashmir by no means equal the ordinary type of Kashmiri. Of the Beros of Ladâkh and the Dôms of Dârdistân I hardly saw enough (for in truth they are few in number) to be able to

* 'Dardistân,' part i., p. 10, and part iii., p. 46.

La Drew G-3 (1862-1878) 1875 AVI Kashmir
Dard AV3

generalize about them in respect of this. But even a resemblance more or less complete would not, in my opinion, outweigh the probability derived from the other facts, that in all these cases we have remnants of the early, pre-Aryan, race that inhabited India. If this be so it is a new, and I think unexpected, fact, the existence of this race among the high mountains and in the snowy country. 544

The *Kremins* seem to correspond in function with the *Kahárs* of India (the *Dewars* of the Panjáb), for they act as potters, millers, curriers, &c. Thus they are analogous in position to the *Shúdras* of India, and it seems likely that they had an analogous origin, that they are descendants (with some intermixture of blood) of those of the aborigines who earliest and most easily coalesced with the nation that overcame them. I do not find the Kremins very numerous; certainly there are not many in Gilgit. [543]

The *Yashkun* is the most numerous of all the castes. In Gilgit and Astor they are the body of the people, whose chief occupation is, of course, agriculture. Dr. Leitner speaks of the Yashkun as "a caste formed by the intermixture between the Shin and a low (? aboriginal) race"; this view does not recommend itself to me; it is more likely that the Kremin had some such origin, but that the Yashkun, who follow all the same occupations as the Shin, and in physique and physiognomy are their equals, should have so originated is far less probable. I am inclined to think that they and the Shin together made up the race (which we may call Dard) that invaded this country and took it from the earlier inhabitants. What may have been the origin

point both curious and important,—a question which at present I see no way of solving. Dr. Leitner's information that a Shin may marry a Yashkun woman, while no Yashkun may marry a Shin woman, is highly interesting; this custom is just like that described in Chapter III. as followed by the Bájgiás in connection with the cultivating classes; here I would again point out the natural corollary to be drawn from it—that the higher race thus remains less pure (that is less separate) than the lower. [532]

[Dard castes — Kremins]

2: Drew G-8 (1862-1872) 1875 AVI Kashmir
Dard AVI

564 We now come to the Shin, the highest of the four generally-distributed castes. In some isolated places they make the majority, or even constitute the whole, of the community, but in Gilgit itself they are not so numerous as the Yashkun, nor are they so in Astor.

There is a peculiarity of manners most strange and curious attaching to some of the Dards. It belongs especially, perhaps even solely, to the Shin caste. Attention to the point is desirable, as it may, by comparison with customs that may be found in other races, enable us some day to trace out the origin of the tribe. [231] The thing is this: they hold the cow in abhorrence; they look on [262] it in much the same way that the ordinary Muhammadan regards a pig. They will not drink cow's milk, nor do they eat or make butter from it. Nor even will they burn cowdung, the fuel that is so commonly used in the East. Some cattle they are obliged to keep for ploughing, but they have as little as possible to do with them; when the cow calves they will put the calf to the udder by pushing it with a forked stick, and will not touch it with their hands.

A greater, more astonishing, contrast between their way of looking at a cow and the consideration which the Hindús give to the animal it would be impossible to conceive.

In some places I have found other customs accompanying this. For instance, at Dushkin, 13 miles below Astor, where [232] the people are Shin, they will not eat fowls nor touch them; [241] in this they approach the Hindús. Here, too, I was told that they have an objection to cultivating tobacco and red pepper; whether these last peculiarities attach to the Shin generally I cannot say.

I think that these restricting customs are already dying out, and that they exist mostly where there is a geographically isolated community of Shin without the other castes.

The table at the beginning of Chapter XX. shows in what countries the Shin caste is found and in what the Yashkun prevails. The Shin occur, mixed with Yashkun, along the Indus Valley and in those side valleys that immediately lead up from it.

Is Drew G-3 (1862-1872) 1875 AVI Kashmir
Dard AV3

The Yashkun without any Shia are found in more distant places, 564
in the upper parts of the valleys of the Indus tributaries, namely
in Nagar, Hunza, Ishkoman, Yasin, and Chitral.

## MUHAMMADANISM AMONG THE DARDS.

The Dards are now (with the exception that will be noted 779
farther on) Muhammadan.* Formerly they had some kind of
idolatry of which we know not much, nor do we know at what period
they were converted to Islam. At the time the Sikhs annexed
Gilgit and Astor the people of those places were in some respects
but very weak Muhammadans; it so happened that the Sikh
commander, Nathu Shah by name, was a Muhammadan and a
Syed; he acquired over these Dards a great influence, and he
exerted it to make "good Muhammadans" of them, to get them
to attend more carefully to the forms of their religion. It is a 764
fact that before Nathu Shah came (say in 1842) the Astor people
used to burn their dead, and not bury them as Muhammadans
should. A curious remnant of the custom still remains there—
when they bury they light a fire by the grave; it is true they
will now tell you that they light the fire to keep off jackals; this
may be in some sense true, that is to say they could hardly recon-
cile themselves to leaving the body in its grave undestroyed, so
they lit the fire as they had been used to, and this satisfied them
in giving some security as against the beasts of prey and at the
same time making a link with the past.

But it is not enough to say that these Dards are Muham- 795
madan; they are divided into three separate Muhammadan sects
—Sunni, Shia, and Molai.

Sunni and Shia require no description, as the division exists in
almost every part of the Muhammadan world. The Molai sect
corresponds very nearly, or it may be exactly, with that sect
called Nur Bakhsh which we found in Baltistan (see Chapter XVI.),
which was a modification of the Shia. The name must have its

* This must be taken without prejudice to the question of the relationship of the Kafirs to the Dards. It is true at all events of those who have as yet been definitely classed as Dards.

1: Drew G-8 (1862-1872) 1871 AVI Kashmir
David AVI

795 origin from the Arabic *Mumin*, God, they thus calling themselves "the Godly." In matters of prayer and fasting they follow the Sunî ways, but in creed (as regards the proper succession of Muhammad's successors to the Khalifat) they are Shîas.

• 564 The Molâis and Shîas will drink wine, the Sunîs will not. Of the different castes it would seem that the people of each may belong to any of the three religious sects; the religious differences do not depend on the caste, but are more geographical; this is illustrated by the table given in Chapter XX.

## BUDDHIST DARDS.

774 I have now to record some facts as to an outlying portion of
174 the Dârd race, which are of peculiar interest. In that narrow part of the Indus Valley which was described under the heading of "Central Ladâkh" (Chapter XIII.), are some villages inhabited by Dârds who follow the Buddhist faith; who, though remnants left by a wave of immigration from the direction of Gilgit, have so far amalgamated with the Bhots that they obey the Lâmas as spiritual leaders.

Muhammadan Dârds, whose locality is denoted on the map either as outlying or outstretching portions of the main area occupied by the Dârd race, reach up close to these Buddhist Dârds, but the villages of each are distinct. The following places —villages and hamlets—are inhabited by the Buddhist Dârds: Grugurdo, Sanâcha, Urdus, Darchik, Garkon, Dah, Phiaktir, Baldas, Hanû, Lower and Upper.[1]

That they did come from the direction of Gilgit they have a tradition, and many circumstances of language and manners show that in spite of their being Buddhists in religion they are one in origin with those Dârds we have been describing. But I think they belong to an earlier immigration; probably a small number reached their present seat and settled there, separated from the main mass of their tribe-brethren, at a time before the Dârds were converted to Muhammadanism, so that the transition from their ancient faith to Buddhism was not difficult. At that time the neighbouring Baltis also may still have been Buddhists. Later,

[1] [illegible]

when the Dárds had become Mohammedan, they spread again in this direction, and the newer comers have joined on with, or become next-door neighbours to, the earlier migrants.

The Race Map shows the area of these Buddhist Dárds under the same colour as all the rest of that race, while the Faith Map shows it under the same colour as the Ladákhis who are Buddhists. The Language Map shows a division of even this small area, for while in the greater number of villages above enumerated a truly Dárd language is spoken, in the Hanú side-valley the people have lost their original language, and speak only the Tibetan Ladákhi; in the Language Map, therefore, that valley is coloured with the rest of the country where the Tibetan tongue is spoken, while the other villages are classed as Dárd-speaking.†

These Buddhist Dárds have little or no trace of Tibetan in their faces; the two races have not mixed, or not much mixed; their face is Aryan, but not a fine stamp of Aryan; their noses are small, though often slightly hooked, their chin narrow.* In stature they are taller than the average Ladákhi, but they are not such fine men as the Dárds of Drás, Astor, or Gilgit. They wear the pigtail as the Ladákhis do, and their dress is the same as theirs, including the drooping cap figured at p. 280.

They are a dreadfully dirty people, far more so than any other tribe I have ever met with; their faces are blotched with black dirt, which they never think of removing. As a means of purifying, instead of washing, they burn twigs of pencil-cedar, and let the smoke and the scent from it come over them and inside their clothes; they do this before eating, not perhaps generally but on feast-days, and at other times when they think purification to be necessary. Their women, who are not shy of being seen, surpass even the men in dirtiness, and altogether are the most miserable of objects.

I could not hear that there was any distinction of castes among them; indeed what I heard made me think there was not. One

* Among the Mohammedan Dárds also, as in the upper part of the Shigar Valley at Khalti, I have found this narrow-chinned, low-bridged, form of face. It may also all be due to an admixture of blood, in this case with the Baltis.

might infer that they have, or have been, of the Shin caste, from the fact that all these customs concerning the sun, which we are to be characteristic of that caste, are held by these Buddhist Dards to an extreme degree.

It is curious to trace how in some respects they keep to the customs of the race they sprang from, and how in others they have adopted the customs of the Buddhists. There seems to be an instance of the former case in that their headmen of villages (at all events in the Hunza Valley) are elected for three years only, and even within that time are sometimes changed; this is usually a trace of the republican system, of which something will be said in Chapter xx. On the other hand, we see them following the Buddhist Ladákhis in the practice of polyandry, to which they are completely given; among these Buddhist Dards a woman has sometimes as many as five husbands.

Their religion, I think, lies very upon them; they are not so attentive to its ordinances as the Ladákhis are; and I do not think that any of their young men are trained up to be Lámas. Their dead they bury, and the bones of those they store away in holes in the cliff, closing up them with stones.

## Several Notes.

Leaving now the Buddhist Dards, we will note a few isolated facts concerning the race generally.

It has been seen from the map that the Dards have spread, driven by want, or by oppression, or by disturbances, from their own countries across certain ridges into valleys that were occupied by other races; in these they often live side by side with these other races—as with the Kashmiris and the Balti—sometimes in villages separate, sometimes occupying part of the same village.

At Drás the Dards nearly equal the Baltis; the two do not intermarry. At Skárdo also the two races are about half and half, but here they have intermarried, and the distinctiveness has been broken up. At Dard and at Sargin they are of those who do not drink cow's milk; these must be of the Shin caste.

# CHAPTER XIX.

## GARDIZES: GILGIT HISTORY.

CONTENTS: THE ORIGIN OF THE RAJAS IN 1842 — THE KING MASHKURRA; 1842 TO 1867 — THE SUCCESSION OF THE SHAHS; 1867 — THE USURPATION OF THE KHANS; 1892 — THE CONQUEST OF THE KHANS; 1892 — SHAH KHUSHWAKT; 1892 TO 1895 — REIGN OF KHAN; 1872 TO 1876.

### BEFORE THE ORIGIN OF THE RAJAS IN 1842.*

So far back as the time of any tradition that has reached us, Gilgit has been governed by Rajas; it has not been of those states ruled a democracy, such as, in connection with some neighbouring countries, we shall later describe. 175

The early Rajas of Gilgit were called Trakans; that was the name of their caste or family; this caste is now extinct, except that the present titular Raja has a slight strain of that blood from the female side. Tradition mentions as the founder of this royal family of Trakans one Trakan, a personage described as of miraculous powers. I was told the names of half-a-dozen rulers after him whom we still must count as outside the bounds of history; these are Amr, Jamdan, Khiman, Pardan, and Hakikan his son. It is worthy of note that most of these names are old Persian ones. The succeeding names I think we may depend upon, namely:

Girtiham.
Muhammad Khin, son of Girtiham.
Alan, brother to Muhammad Khin.

Of the name Girtiham the last syllable must be the same word "khan" which in the Khan language means "king" as

* I am not sure of this date to a year. J. D. Cunningham ("History of the Sikhs") says, "Towards the end of 1842 the secluded principality of Gilgit was overrun and annexed to Cashmere by the Sikhs." But my other information points to the year 1842.

# CHAPTER XX.

## DÁRDISTÁN: COUNTRIES AROUND GILGIT.

FRAGMENTS of information got from journey of countries that are inaccessible to me, when they can be verified by comparison, are not without value. I will therefore put down a few notes, which, so far as they go, are likely to be correct, on those parts of Dárdistán which cannot at present be reached by Europeans.

But first I will show, in a tabular form, the several divisions of Dárdistán which have in any way come within my notice, including those which have already been treated of. These divisions are in some cases separate valleys, in other cases parts of the same valley. The Table includes a statement of their form of government, of the races or castes that inhabit them, and of the sect or religion prevailing, as well as the practice that may hold as regards slavery.

DÁRDISTÁN.

| | Government. | Prevailing Caste or Tribe. | Religion. | Condition as regards Slavery. |
|---|---|---|---|---|
| Gilgit | Governed directly by the Maharaja's officers. | A few Shins; some Dúrg; most Yashkúns. | Half Sunni, half Shia. | To these subjects a Dúrg may sell, and may thence of old, either the party or their wife. |
| Ha | | Shins and Yashkúns | Mostly Sunni, a few Shia. | |
| Punyúmán | | Shins and Yashkúns | Shia. | |
| Kuniya | | Shins and Yashkúns | Sunni. | |
| Phanda | Ruled by Raja Yashkún, in the predecessor on the Shinaraja. (Raja's family is called Rámbu.) | Yashkúns | Shiás, and a few Sunni. | |
| Punial | Ruled by Raja Yashkún (Raja's family, Mughulbeg.) | Yashkúns | All Shia. | |

Dialects—continued.

| | | | | |
|---|---|---|---|---|
| Shinju | Called by Hajis (the men Khajis, men of Chaprote, Hajis, Kashtis) | Yashkun | All Shinju. | |
| Inhabitants of Chaprote | Belongs to Yasin | Yashkun | Shinju. | |
| Yasin | Called by Hajis (Kh'o, men of Yasin, Yasinis, Hajis, Kashtis) | Yashkun | Shinju and Yasin, the former gen. Yasinis being as Shinju. | Shinju change s into h, and Yasin to. |
| Chitrals and Mastuj | Called by Hajis (Kh'o, Kashtis, Kalash.) | Yashkun | Yasin. | |
| Gilgitis in Kohistan | Called by Hajis (Kh'o or Khajis of Punyal, Kashtis, Kalash.) | Wakhi* | Shinju. | |
| Chilas | Kashtis | Shin and Yashkun | Yasin. | In Chilas one dialect of Yasin is kept as above, Shinju being used generally. |
| Tangir | Kashtis | Shin and Yashkun | | |
| Dar | Kashtis | Shin and Yashkun | Yasin. | |
| Thorkhu | Kashtis | | | |
| Darel | Kashtis | Shin and Yashkun | | |
| Sazin | Kashtis | Shin and Yashkun | | |
| Palas | Kashtis | Shin and Yashkun | | |

The first five divisions I have already treated of as fully as I was able. We now come to the countries that surround Gilgit.

Hajar lies along the left bank of the Hunza-Nagar River, having Hunza opposite on the right bank. Since about 1867 it has paid a small tribute to the Mehtarjis, receiving in return a present of larger value; this cannot be considered more than a complement, and a mark of desire for friendly relations.

The people of Hajar are called Khajars.

Hunza is a more warlike country than Hajar. As shown in the last chapter, it has often been actively at enmity with the Mehtarjis, and it has generally been in a state of unfriendliness to him. In 1870 the Hunza Raja sent an agent to Srinagar to open friendly relations, who was well received; I do not know

* I have never met any of these people, but I believe them to be Wakhi. Gilgit is another name by which they are called; that is the territorial name, while Wakhi is the name used

The people of Astor and Gilgit would be surprised if they were told that they were Dards living in Dardistán, and their neighbours of Hunza-Nagar and Yásin would be equally astonished. If consulted, they would probably describe their country as Shináka, or the land of the Shins, where Shiná is the spoken language. They are an Aryan people, stoutly built, cheery, honest, frugal, and sober. They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head, round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure Shin village no one will eat fowls or touch them. They practise inoculation for small-pox, their one epidemic. The people of Astor are Mussalmán, two-thirds being of the Sunní persuasion, and the rest being either Shiáhs or Maulais. There is no religious intolerance in Astor.

Drew mentions the following caste divisions: Rons, Shins, Yashkun, Kromin, and Dums. As regards the Rons caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the RSR caste of Dardistán. The majority of the Astoris belong to the Yashkun caste, and the Shins are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shins, according to the Census, being 1,133. The Shins are regarded with great respect by the Yashkuns and the other castes. The Yashkuns claim the Shins as their forefathers. The Shins give their daughters to Rons and to Saiyids, but take wives from the Yashkuns. For away in Central Ladákh, in the Shayok valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they came and its Shiná dialect, but they wear the pigtail and the Ladákhi cap. It is said that, though Buddhist by name, they really worship local spirits and demons. They practise polyandry, but they will not eat with Tibetan Buddhists, and, like the Shins in Dardistán, they hold the cow in abhorrence.

In Gilgit, as in Astor, there are few social subdivisions, for

4s Durand G-3 (1888-92) 1900 AVI Kashmir
Dard AVJ

the country of Chitral, but were dispossessed by the Ronus, the most honoured caste amongst the Dards, and by various other privileged classes, among whom are certainly the offshoots of families from Badakshan, who followed the fortunes of the present ruling dynasty. These upper classes have absorbed all the power, and treat the Kho with contempt, calling them "Fakir Mishkin," which one might translate *les misérables*. The despised aborigines, however, have imposed their language on their superiors, and are interesting from the fact that they have no castes. This, I think, conclusively shows that they belong to the earliest Aryan race, and broke off from it before the acquisition of Hinduism; for in all other cases the Dard proper is emphatically a man with a caste. The principal caste is that of the Ronus, a small body held in the highest respect, always ranking next to royalty, and from whom the Wazirs are as a rule taken. Then come the Shins, below whom are the Yeshkuns, and lastly a collection of low castes, Kamins, Doms, etc., the millers, potters, and musicians of the community. There is one plainly marked rule about the three leading castes; they give their daughters in marriage to the caste above, never to the caste below. The Ronus give their daughters in marriage to the ruling families, and in return receive the illegitimate daughters of princes, but not a daughter born in wedlock. The Shins give their daughters to Ronus, the Yeshkun to Shins, but a lawful daughter is never given to a man of the lower caste.

It would seem from a study of the map, and of

district. The Doms are found in all districts of the Jammu Province, the highest number being in the Jammu district. The Gaddi predominates in the Jammu district. The Jolahas are confined to Reasi district. The Megha are most numerous in the Jammu and Udhampur districts. The Retals are generally found in Udhampur and Reasi districts. The Watal which is only another name for Chohra are found in Srinagar district only where also they represent immigrants.

K 564

**333. Variation in the Strength of Certain Castes.**—Subsidiary Table I contains figures of population of certain depressed castes for the last four Censuses and though the populations includes non-Hindu members of the castes as well, they are so few that the main results are not affected. The Barwalas show a decline of 32·4 per cent. during 1921-1931. They decreased in the previous decade 1911-1921 also by 23·6 per cent. Their community is thus loosing in numbers. The Chamars show an increase of 3·4 per cent. which is far below the general increase in the entire population of the State during the decade 1921-1931. The Doms reveal an increase of 12·1 which shows that the community is progressing satisfactorily. The Meghs who form the important caste have gone down in strength by 11·2 per cent. Compared to their population in 1901 the Barwalas register an increase of 138·1, the Chamars a negligible one of 1·4 per cent, the Doms show an unhappy decrease of 37 per cent. and the Meghs an increase of 17·6 per cent.; the decrease in some of these castes is due to the reclamation of some of their members by Arya Samaj and their consequent return under the new name 'Arya'.

K 161 564

**334. Criminal Tribes.**—Pernas and Sansis are the only tribes treated as criminal in the State and the last has recently been removed from the Habituals as a temporary measure subject to their good behaviour in future. The number of Pernas and Sansis in the State is only insignificant as the former number 42 and the latter 134 only. Pernas constitute a floating community who generally live by dancing and singing and have inter-marriage, while Sansis are adepts in horse-breeding.

K 162* 563

**335. Primitive Tribes.**—Shins and Tukhirias are the only two castes considered to be primitive though the Political Agent, Gilgit is inclined to class all the castes inhabiting the Agency under this head. The Shins are said to have descended from Hindus and do not drink cow's milk to the present day. These castes are mainly devoted to agriculture and have begun to come in contact with the outside world which is bringing about a change in their mode of living. Some aspects of their life as depicted by the Political Agent, Gilgit (in response to the questionnaire issued), where the tribes live a life more of their own than in the Gilgit district administered by the State, are given below and will be found of interest :—

D 564 ●

Part "A".

1. The tribes are not divided into different exogamous groups.

2. The people in the Agency are divided into various groups, details of which are given below :—

B [564]

(a) *Rooms.*—The most honoured caste next in small numbers to Shins, Gilgit and Punial, and become more numerous as one travels Westwards towards Yasin and Chitral.

They have two theories as to their origin :—one that they are descended from Sawaidh, a former ruler in Shatraj ; the other that they are of Arab blood and descendants of Mohammad Hanifa, son of Ali who was son-in-law of the Prophet.

(b) *Shins.*—The next most senior division are of Hindu origin and established themselves by conquest from the South. They consider themselves the aristocracy of the country, although they can show nothing to substantiate their claims. They are still Hindus(without the perverted views of Hinduism are still shown by their aversion from anything which is connected with cows or beefs.

6:India G-3 (1931)1933 AVI Kashmir
Dard AV3
Burusho AV7

B [564]
D 564

(c) *Yashkuns*—The most numerous of the lot—come next in importance and form almost the entire population of Hunza, Nagar and Punial; they also outnumber all other classes in the rest of the Agency. They are of Turanian origin but intermarriage with people of Tartar and Aryan descent has obliterated most of their original characteristics.

(d) *Sayids*—Who are thinly scattered through the Agency, declare that they first settled in the country when Tamerlane was king. They are greatly respected by all classes and receive the daughters of the ruling families in marriage. The daughter of a Sayid usually can marry only in the same class. Occasionally, however, they are married by kings and ruling chiefs, and also, in this district, by Akhoons and Mullahs.

B [564]

(e) *Kamins, Doms and Shins*—They are of an inferior caste. The Kamins who do not exist in Hunza and Nagar are millers and potters and are most numerous in Darel and Chilas. The Doms who are musicians, blacksmiths and cobblers, are found mostly in Yasin, Nagar and Chilas. The Shins are leather workers and exist only in Nagar.

(f) *Kashmiris*—Form the largest section of the population in Gilgit proper. They settled in the time of Ahmad Shah (about 1760) and are mostly weavers, goldsmiths and carpenters.

(g) *Gujjars*—Nomadic cattle owners form a floating population chiefly in the highlands separating Gilgit from the undemarcated territory of Tangir and Darel.

D 105

3. A chief comes from the aristocrat class and usually marries only one wife from that class the children of the union being recognized as heirs, to the exclusion of children by a wife of an inferior class.

B 105

4. The organization is autocratic in theory, in practice any important point is settled by a Jirga of headmen.

5. The origin of the tribes in the Gilgit Agency is conjectural. There would appear to have been three main movements—an invasion from the North as the inhabitants of Badakshan gradually expanded over the Hindu Kush; an invasion of the Shins from the South and the conquest by the Tartars from the East. There is also evidence that Tibet ruled in the past of the country for many generations.

Owing to the inaccessibility of the country, Hunza and Nagar seem to have been less affected by these movements than the rest of the Agency, and among the people living in the more isolated parts of these provinces, traces of Turanian descent can still be seen.

6. Most of the inhabitants are cultivators and all three types of cultivation are to be observed, depending entirely on the conformation of the ground. In hilly country terraced fields, often manured with stones, are the rule: where the country is open and flat ordinary plots are made.

Irrigation is carried out almost universally by water kuhls, some of which exceed along the precipitous faces of the mountains for many miles. Where possible small tunnels are hewn out of the rock; where the hill is too steep the water is conducted through hollowed tree trunks which are propped by wooden supports.

7. There are no sanguinive customs in the Agency.

Two Buddhist Stupas exist; one on the hillside about three miles east of Gilgit; the other on the road to Nagar, between Chalt and Minapin. There

Biddulph G-3 (1873-1878) 1880 Afgh-Afghanistan-Afgh
AVJ Dard AVJ Chitral

This estimate does not include the tributary tribe of Bushgali Kaffirs, or the subjects of the Yassin ruler, who is independent of Chitral, though the close relationship existing between the two families causes them to act in concert in all important matters. Both rulers pay a tribute of horses, hawks, and hounds to the Maharajah of Cashmere, to whom they acknowledge allegiance. Iron, copper, and orpiment of superior quality are found in Kashkar. Cotton carpets of an inferior kind, which have the peculiarity of being alike on both sides, are made for local use, and Chitral daggers and sword-hilts are in great demand in the neighbouring valleys. Amongst the people of Kashkar, Chitral is constantly pronounced and written Chitrar and Chitlal. This seems to arise from a curious inability[1] to distinguish between the letters *r* and *l*; in this way Koonur becomes Koonul, Punjkorah Punjkolah, the Lowri Pass the Rowli Pass, &c.

The population of Chitral is a curious and intricate ethnological puzzle. The largest section of the population are the Kho, who inhabit the whole of Kashkar Bala, the Ludkho and Arkari Valleys, and the main valley down to Darosh, and have penetrated across the watershed as far as Chashi. They call the country also Kho, dividing it into different sections under the names *Tourikho* (*Upper*), *Mastkho* (*Middle*), and *Ludkho* (*Great*), and their language Khowar. This is the language given by Dr. Leitner under the name of Arnya, by which it is known to the Shins of Gilgit, who style the Yassin portion of Kashkar Bala Arinah. In sound it is soft and musical.[2] Unlike the Shins and other cognate tribes hitherto mentioned, the existence of these people in the localities in which we now find them appears to date from so far back as virtually to entitle them to be considered aboriginal. They may have once occupied a wider extent of country, but there is no trace of their having conquered or displaced any previous race of inhabitants. They were undoubtedly the owners of the country until a period not very remote, and they have succeeded in imposing their language on the present ruling class, who style them contemptuously "Fakir Mashkin." They are divided into classes of which a few are Toryal, Shiel, Darkhand, and Shekand. No caste distinctions exist among them.

Above them is a large privileged class, which is divided into clans like the Afghan Khels, and spread all over Kashkar.

[1] The *l* and *r* are scarcely distinguishable in the old Persian.—Shahnameh's Ancient Monarchs, Vol. III, p. xxii.

[2] See Appendix M.

24a Biddulph G-8 (1875-1878) 1880 AUS-Afghanistan-AUS
4: AVJ Dard AVJ Chitral

First in rank comes the Sangallié, Rezaé, Mahomed Begé, and Khush Amadé, who are descended from the common ancestor and founder of the Katooré and Khushwakté families. They are generally spoken of as Shah Sangallié.[1] Next to them come the Zundré, or Ronos, of whom mention has already been made.[2] They are most numerous about Oyon. Below the Zundré comes a large class styled "Ashimadek." Their clans are— 565 644

| | |
|---|---|
| Kashé. | Shawké. |
| Atambegé. | Baiyaké. |
| Dushmanné. | Shighaié. |
| Ludiné. | Berchimark. |
| Bairambegé. | Mojé. |
| Kushialbegé. | Jikaré. |

The term Ashimadek, which signifies "food-givers," is applied to all of these on account of their being bound to supply the ruler and his retainers with food to the extent of eight sheep and eight kherwars of wheat from each house, whenever he passes through their villages. This is the only revenue of any description paid by them to the ruler, and those living in the more remote villages often remain for several years exempt from even this impost. The Shah Sangallié and Zundré are altogether exempt,—the former on account of their relationship to the present ruling family, and the latter because they are descended from a former race of rulers. 651

Among the Ashimadek, the Shighaié and Kashé claim respectively to come from Shighnan and Kash (Kishm?), a village close to Jirm, in Badakhshan. The names of many of the others show that they trace their descent from some individual, and there appears little doubt that they are the descendants of Tajiks from Badakhshan, who settled in Chitral at the time of the establishment of the present ruling dynasty, about the beginning of the seventeenth century, whose founder they probably accompanied and aided. Their present position is not, however, due to conquest, but they appear to have gradually grown up as a large privileged class. They speak the Khowar language and form the most warlike part of the population. 173 [563] [197]

In the upper part of the Ludkho Valley, above Drosnip, is a race who occupy the same position with regard to the Ashimadek as the Kho do in Kashkar Bala, and who are also styled 513 197

[1] See Khowar Genealogy. [2] See page 50.

1: Lettner L-S (1932-33) 1933? AV3 Dard AV3

ulterior plans of conquest of the Maharaja, our feudatory. Whilst the name of Wazir is now common for a "minister," we find the names of the subordinate offices of Tranggá, Yarfá, Zeytú, Gopá, etc., etc., which point to the reminiscences of Tibetan Government and a reference to the "Official Designations" in Part II. of my "Dardistan" will direct speculation on other matters connected with the subject.

I need scarcely add that under a Government, like that of Chitrál, which used to derive a large portion of its revenue from kidnapping, the position of the official slave-dealer (Diwánbigi)* was a high one. Shortly before I visited Gilgit, a man used to sell for a good hunting dog (of which animal the Dards are very fond), two men for a pony and three men for a large piece of pattú (a kind of woollen stuff). Women and weak men received the preference, it being difficult for them to escape once they have reached their destination. Practically, all the hillmen are republicans. The name for servant is identical with that of "companion;" it is only the prisoner of another tribe who is a "slave." The progress of Kashmir will certainly have the effect of stopping, at any rate nominally, the trade in male slaves, but it will reduce all subjects to the same dead level of slavery and extinguish that spirit of freedom, and with it many of the traditions, that have preserved the Dard races from the degeneracy which has been the fate of the Aryans who reached Kashmir and India. The indigenous Government is one whose occasional tyranny is often relieved by rebellion. I think the Dard Legends and Songs show that the Dards are a superior people to the Dogras, who wish to take their country in defiance of treaty obligations,* and I, for one, would almost prefer the continuance of present anarchy which may end in a national solution or in a *direct alliance* with the British, to the *sphinx* policy of Kashmir which, without shedding blood,‡ has drained the

* This designation is really that of the Minister of Finances.

* This was written in 1886.

‡ I refer only to the present rule of Kashmir itself and not to the conquests by Kashmir troops in Dardistan, of which details are given elsewhere.

L: Leitner L-3 (1866-68) 1867 A93 Dard A93

NOTE.—The Kirghiz are described by the Chilâsis as having flat faces and small noses and are supposed to be very white and beautiful, to be Nomads and to feed on milk, butter and mutton.

The Chilâsis call the people between Hunza and the Pamîr [our Pamir] on the Yarkand road = Gôjâl.

There are also other Gojâls under a Raja of Gojâl on the Badakhshân road.

The Chilâsis call the Siah Pôsh Kâfirs = Bashgali (Bashgul is the name of the country inhabited by this people who enjoy the very worst reputation for cruelty). They are supposed to kill every traveller that comes within their reach and to cut his nose or ear off as a trophy.*

The Chilâsis were originally four tribes; viz.:

The Bugoté of Buner.
The Kané of Takh.
The Boté of the Chilâs fort.
The Matshuké of the Matshukâi fort.

The Boté and the Matshuké fought. The latter were defeated, and are said to have fled into Asmar and Little Tibet territory.

A Foreigner is called "ôalo."

Fellow-countrymen are called "maiîki."

The stature of the Dards is generally slender and wiry and well suited to the life of a mountaineer. They are now gradually adopting Indian clothes, and whilst this will displace their own rather picturesque dress and strong, though rough, indigenous manufacture, it may also render them less manly. They are fairer than the people of the plains (the women of Yasin being particularly beautiful and almost reminding one of European women), but on the frontier they are rather mixed—the Chilâsis with the

* The two Kafirs in my service in 1866, one of whom was a Bashgali, seemed inoffensive young men. They admitted drinking a portion of the blood of a killed enemy or eating a bit of his heart, but I fancy this practice proceeds more from bravado than appetite. In "Davies' Trade Report" I find the following Note to Appendix XXX., page CCCLXIII. "The ruler of Chitral is in the habit of enslaving all persons from the tribes of Kafirs, Dangris and Bashgulis, (Infidels living in the Chitral territory."

St Lothian L-9 (1868-69) 1897 A93 Dard A93

173 Nasr-ud-din, Shin of Sazin; Mazun Khan, Shin of Sazin; Lala Khan, Yashkuns of Darayl; Jalâlu, Yashkuns of Darayl; Isnat, Shin of Phugrut (Darayl); Sultan, Shin of Sarsagil in Darayl; Mandar Khan (a great Sardar) Shin, Sarsagil; Lasto, Shin of Darsin; Mirza Khan, Shin, Darsin; Shah Mardan, Shin of Shalat; Kashish, Yashkuns of Shalat.

After a year had passed, the Chilasis and the Yaghistanis* assembled at Chilas with the intention of plundering Astor, whose Governor then was Jalal Khan and Wazir Gasband, a relative of Kashmir and of the Shah both, and therefore to object for the attack of orthodox Mussulmans (Sunnis). We were in all about 3,08,000 Yaghistanis (the ideas of number are very vague in these countries though not so vague as in Laghmani where there is not a separate name for a number above 400, and the foreign appellation of Asmir = 1,000 is the equivalent for 400. *Vide* Laghmani and Kunda Vocabularies in which numeration is by vigesimal). The Astoris were only 6,000, but we must in large numbers as we assumed on having to marry the Degree of Kashmir.

[902]

The following is the List of the confederate Yaghistanis: From Kuh, 1,000; Pulas, 4,000; Jalkot, 3,000; Sazin, 500; Shatial, 500; Harban, 1,000; Tokh, 1,000; Chilas, 3,000; Tor, 1,000; Tangir, 4,000; Darayl, 10,000; Gordjas, 3,000 (probably Gilgit); Gisa, 100; Punial, 100; Gurmin, 1,000 (probably auxiliaries from Gasbar-Amin, ruler of Yasin, popularly called Gurmin); Gilgit, 3,000; Sai, 3,000.

(This only brings the allied Host forces up to 48,000, perhaps only 15,000, as already explained. Since then the Chiefs have been more than decimated, and the destruction of Gilgit with all its traditions, etc., is one of the saddest results of the Kashmir frontier war. There are, however, Gilgit emigrants to be found in Yasin and other places.) We marched on to the mountain of Astor and Gasbar-Amin with 1,000 men stopped at Jalkot (1 as in French) in the Sir territory, I have by. He told us that when the Degree came up to assist Astor, he would at once advance with more troops to that place. When we came near Astor, the Governor was informed of our approach. Most of the Astoris fled, many having their property behind. The 6,000 fighting men remained; they had, however, sent most of their property away. The people of the Astor village, Hathkin, had just heard of our arrival; as we surprised it about midnight, killed 1 man and wounded 3—two men captured (men and women). We took for ransom, 300 goats, cloths to the value of 400 Rupees, 40 hatchets, 100 swords, and 100 muskets. Out of the house of the Wazir Gasband we got 8 rifles. There are many Yashkuns at Astor, three-fourths being of that race and the remainder being half Shins and the other half Kashmiris.† Our arrival at Astor was announced by a man whom with his companion we surprised seated at the bridge of Sagarkih. A man of Shatial killed the companion by throwing a stone at him; the other effected his escape and enabled the Astoris to get away with their property. The reason why we [illegible] as for was because we wanted to make the people our slaves, either

* "Yaghistanis" = [illegible] "wild" as "independent" country.

† For Kashmiris [illegible] Lawrence, see pages 60, 63.

[illegible]

In Lecture L-O (1889-90) 1892 A 93 Dard A 93

to keep or sell; being Kafirs their lives are forfeited to the Musalmans, but it is harder on them to be slaves than die and therefore we prefer to enslave them. Besides it is more profitable. In the morning a rumour of the approach of the Maharajah's troops reached us. We were greatly surprised at this and retired on to Shadu Ghar (probably the Sindu pir, a very high mountain which overlooks Darji, on the Kashmir side of the Indus) by the Bunderkhit road—a very difficult one—on the way to Chilás, which we reached only the 9th day after our retreat. We then divided the spoil. Some sold their slaves in Chilás. Myat took them to their homes. We did not lose any one in killed or wounded on this excursion. Jahar Khan of Astor then went to the Maharaja as a supplicant—saying he and his people were children and subjects of Kashmir and implored help against the marauders, who he urged, should themselves be attacked and punished. The Maharaja advised him to be quiet for a year, as he would then bring a large army. This was satisfactory for Jahar Khan, who was intent on revenge. In fact, 14 months later, when he and his minister with his then again presented themselves at Srinagar, in order to urge the fulfilment of the promise, 50,000 men (!!!) were sent to Chilás. I was then at Misor in the Gilgit territory, but my father and brother were into the war and it is from them that I have heard the following particulars. When the Sikh General (whose name I forget) reached the Kashmir river [the Kishenganga (?)] he divided the Army into two parts—one to go by way of Gurais, the other by the Dawar valley which goes straight to Chilás and actually reached Tilail. [From Tilail there are 2 valleys—the one of Tulbuwar; the other of Warangal.] The reason of the division of the forces was that the Kashmir troops feared to trust their whole body into mountainous country where they might all be cut up. Two days before the enemy came, we were at Sibil, below Tilail, 1,000 strong. The Tulbuwars were collecting at Chilás, but most were still on the roads or starting from their homes. The news of the approach of the Maharajah's troops had also frightened away most of the villas. Indeed there were only 300 besides the force at Sibil. The following came:—100 from Sazin, 100 from Harban, 40 from Chitral, 60 from Dawar, 40 from Jalkot, 100 from Tangir, 100 from Tôr, 40 from Shadu, 100 from Tilail, 100 from Shilar. Six had collected in Gilgit, but never came up, but were at Tulbuwar on the other side of the Indus, 3 kos from Chilás. The following Chiefs came:—Nasir Khan, Kasim and Wazir Khan of Sazin. The 2 former were Shins, the other a Yashkum. Kasim, a Yashkum of Harlal; Dar Khan, Kasim, of Harlal; Sangin, Kasim, of Harban; Taja Khan, Kasim, of Harban; Akbar Shams and Shatting of Dawar, Shins; Ameli, Yashkum, Jalkot; Kasim, Shin, Khanda, Yashkum, Tangir; Wazir Shah Shams, Adam Shah, Great Sirdars of Tôr Shins; Shahmard Kaka and his brother of Shadu, Shins; Akbar and Amil, Kasims, of Tilail; Kashish of Shilar, Yashkum; Sadar Khan, Yashkum, Gilgit; Wali Khan, Yashkum, Gilgit; Sarwan, Yashkum, Gilgit; Sultan ala Khan, Nasir Ali, and Shahzan Shah, Yashkums, Chilás.

When the Sikh troops came to the bridge of Sibil, 6 men [illegible] down). We were in ambush and rushed upon them sword in hand. There

Sr Lachman Lib (1809-60) 1860 AVS Dard AVS

000 they call a man "dishek" and for "go there" say "gaz yut" and "kaishmala gitra" (there is a mistake here) and for "hurry" say "simdish" and for "does he go or not" "yidd nith." "Son" they call "Mulman."

547 [Some of the [illegible] are Kashmiri.] I remember these words, having once known the language. [illegible] a woman of Khapal, called Miriam, had fallen to the lot of my brother in the division of the booty. A neighbour of mine also had a slave of the same place called Kalish, who used to come to see us. I was very young then and could converse with both. A year after, my brother, in consequence of his greed for money, took her to Kami, a village of Tangir and sold her to Nawab Shah, Sirdar, the son of Bahar Shah, for 8 tolas of gold (each tolah of the value of 9 Rupees 5 annas). This was a good price as she was very good-looking, but she should not have been sold.

---

173 When the Kashmir troops attacked Chilas, Lassu joined us secretly and although himself old and feeble told us what to do—but his two brothers and two nephews openly fought on our side in the battle of the valley of Chilas. Indeed at Sibil, Lassu fought himself and used to send the Sirdars forward with his instructions. In short, as far as he was able, he tried to injure the Sikhs. When the Sikhs had cut the water off the fort, he had arranged about putting only one man in charge of it and fixed the rate at which it should be distributed. He was ever ready with advice. He used to allow the Sikhs to beat up supplies in villages and then would cut them up while encamped with them. This is how we managed to be fed (the plundered supplies reaching us by a mountain road) for three months. A relative of Lassu was in the Sikh Camp and told the General about Lassu's doings. The attention of the besiegers was then directed towards capturing him, but in vain, and in both wars he escaped being taken prisoner or receiving a wound. His younger brother was shot in the palm of the hand. In short, after the conquest of Chilas, Lassu again resided with his brothers at Nayat and kept up his visits to Chilas. When the Sirdars arranged to offer their submission to the Maharaja at Jammu, they sent for Lassu and asked him to help them to recover their friends and relatives who had been taken prisoners to Kashmir. Lassu refused on the ground that he had left the Maharajah's service and had been his bitter enemy ever since and that therefore his life was not safe if he ventured into his presence. Finally, Lassu was prevailed upon to go. The following Sirdars went to Jammu to ask for forgiveness: Hashim Shah, Sattari, Baland Khan, and Daria Khan, of Chilas with 50 Boats (your people); Bayashal, Dost Khan, and His Highness Shir, son of Tikka; Tatari, Kamin, and Baghdar Shir, son of Tikka.

When the Maharaja saw the supplicants, and also noticed Lassu, it was as if an arrow had pierced him. He was greatly indignant, having heard everything from his General about Lassu often defeating his troops and being the origin of the wars and of the numerous plots by which his soldiers had been destroyed by thousands—for instance at the ambush at Sibil. Finally after a long talk, the Maharaja made the forgiveness of the Chilasis conditional on the execution of Lassu. The Chilasis said "By all means,

[illegible]

amongst the Afghans, and after a time the parties are brought together and made to swear peace on the Koran. The crime of murder is rare, and the readiness to spill blood on slight occasions so noticeable among the Afghans is unknown. No public measure can be carried out except by general agreement, the details being left for the Jushteros to arrange.

The communities in the lower part of Shinkari, being more exposed to Afghan influence, and having been longer converted to Mahommedanism, have lost many of their characteristic customs; but the remoter valleys of Chilas, Gor, Darel, and in a lesser degree Tangir, are probably little changed from what they were two hundred years ago. A very singular custom exists in these valleys, by which the sexes are kept strictly apart during the summer, from May till September. The custom is apparently very ancient, and any attempt to evade it is punished by fine; the old women of the family being specially charged with the responsibility of seeing that the rule is observed. Great difficulty is said to be experienced in rearing children in Chilas. The great mortality among them is ascribed to the climate, but it is more probably due to too close intermarriage.

Agriculture is left entirely to the women, with the exception of ploughing, which demands more strength than they can afford. In summer the men spin wool and attend to their flocks on the mountain pastures; but in winter the duty of caring for the herds is relegated to the women.

Slavery is a recognised institution in all the Shinkari republics—a matter in which they contrast unfavourably with the Afghans and Neemchas of the Indus Valley, among whom it is unknown. Prisoners taken in war, and the children born of slave parents, form the servile class.

Ella Biddulph G-3 (1873-1878) 1880 AVJ-Afghanistan AVJ
4 AVJ Dard AVJ

produce of any mines. His land is exempt from taxes, 634
and ten families are assigned to him as labourers. He also 651
receives a fee of one tilla, equal to 10 shillings, on each marriage. Next to the Atalik is the Charwêlo, who has charge of a group of villages. The country being much intersected by side valleys branching out of the main valley, the whole population of each of these is generally under one Charwêlo. He is directly responsible to the Atalik of his district, and has four families allotted to him for service. His "ishpin" is eight of each kind of produce. With a few exceptions the office is confined to the Ashimadek class.

Below the Charwêlo is the Baramoosh, or head of the 622
village. He is particularly charged with the maintenance of 651
roads, forts, and bridges, for which he receives a yearly "ishpin" of 10 sheep, 10 measures of butter, 10 measures of wheat, and a proportion of the produce of any mines with which he is connected. His land also is free from payment of taxes, and he has the right of releasing ten men of his village from military service.

To assist him he has an attendant "Charboo," whose duties are the same as those of the Zeytoo in Gilgit. He receives a woollen robe and five sheep yearly, and his land is exempt from taxation.

In Yassin territory, both on the Chitral and Woorshigoom sides, the system and titles of officials are the same as in Chitral, showing, perhaps more strongly, the mixture of two systems.

About the person of the Mihter are five Wuzeers, who, with 645
the exception of the Chief Wuzeer, have no fixed functions. The Chief Wuzeer is also styled Diwanbegi, and is the Mihter's slave agent. The practice of selling their own subjects has 567 ●
gained the rulers of Chitral and Yassin an unenviable noto- 651
riety, even among people who have not yet learned to regard slavery with the detestation in which it is held in Europe. The beauty of the Chitral (Kho) women has long been proverbial in Peshawur, Cabul, and Badakhshan, and female slaves still form not the least acceptable portion of the presents given by Chitral rulers to neighbouring princes. Chitral, therefore, has always been a favourite resort for slave-dealers from neighbouring countries, and a system grew up under which the rulers of Kashkar came to regard the sale of their subjects as a legitimate and ordinary way of eking out a scanty revenue. All who in any way fell under the displeasure of the Mihter, were consigned to the Diwanbegi, and his agents were always on the look-out for victims whose conduct

[illegible] G-3 (1873-1878) 1880 [illegible]
4 Av3 Bard Av3 Chitral

651 might have furnished a pretext for their being sold. Failing
567 an excuse of this sort, the requisite number was made up by forcible seizure. Of late years the market for the disposal of slaves has become circumscribed, and in Chitral the system is now limited to little more than the selling or giving away of female children to supply the harems of Cabul, Badakhshan, and Yaghestan. In Chitral the Ashimadek class can hold slaves without special permission, but none of the "Fakir Muskin" are allowed to do so.

804 The weights and measures in use are—

*Dry measure.*

4 cheirahs = 1 hattí.
8 hattis = 1 mun.
5 muns = 1 bel.

A cheirah equals about 1¼ lb. English.

*Long measure.*

A span = 1 gidz.
8 gidzis = 1 hast.
9 hasts = 1 gaz.

*Land measure.*

8 chooruns = 1 chakwurun.
4 chakwuruns = 1 tukt.

A chooruns is the extent of land which it takes three hattis, or about 15 lbs., of wheat to sow. The money in use is the Cabul coinage

by the Governor of Cashmere. They were at first repulsed, but advancing a second time they defeated Gohr Aman and installed Karim Khan as Ra of Gilgit under their protection in September 1842. Six years later Karim Khan was slain, together with the Sikh Governor, while invading Hunza. Eleven years later again his son Mahommed Khan dying childless, the nominal, as well as the actual, ownership of Gilgit devolved on the Dogras, who had succeeded the Sikhs in Cashmere. Not wishing to leave Gilgit without a nominal Ra, the Cashmere Government summoned from Nagar the present Ra, Alidad Khan, the infant son of the Nagar ruler, who, through his mother, was still held to represent the Trakhand line, and installed him when only one year old. A son of Asghar Ali is still living in Cashmere, but, being born of a slave mother, he was held incapable of succeeding.

Mr. Drew has given a succinct account of the events which led to the consolidation of the Hindoo power on the right bank of the Indus. Whatever the faults and shortcomings of Cashmere rule may be when judged by a European standard, it has undoubtedly conferred on this part of the country an amount of prosperity and security which could not have been attained under the Khushwakté family, in whose grasp it would otherwise have remained. Freedom from the liability to be sold as slaves alone outweighs the disadvantage of being ruled by men of a different faith. It is scarcely an exaggeration to say that, of the inhabitants of Gilgit over 40 years of age, nearly half have passed some portion of their lives in slavery. There is not a family of which one or more of their members have not been lost in this way. The stories of their wanderings told by many are full of interest, and many curious scenes occur on occasions of their return. On one occasion a young man arrived, who had been carried off when a child in arms. From his companions in slavery he had learned his name and that of his father, who received him with open arms; but, having been all the time at Seo, where the Shina language is not spoken, he could not converse with his father for several weeks except through an interpreter. On another occasion a "claimant" appeared from Badakhshan, avowing himself to be the brother of the Wuzeer, whose mother and brother had been sold into slavery thirty years before. His coming being notified beforehand, the fatted calf was killed, and great preparations made to receive him by his aged mother, who had herself been redeemed from slavery only two years before

• 567 Throwing herself on his neck she welcomed back the wanderer; but then being struck with suspicion, she looked steadily at him for a moment, pushed the hair off his temples to look for a scar remembered only by herself, and declared that he was not her son. The man protested vehemently that he was, till at last, overcome with confusion by the woman's positive manner, he confessed that he was not the man he pretended to represent, but his foster-brother. The two had lived as slaves under the same master till the death of the Wuzeer's son had suggested the possibility of the imposture as his regaining his freedom.

The following story, given me by one who was better able than most to give a connected account of his adventures, is a fair sample of the history of hundreds :—

THE STORY OF MIRA KHAN.

157 567 "I was born at Mizawar, near Gilgit. My father died when I was a boy, and Suleiman Shah killed my grandfather in Chor. When I was about sixteen years old, Suleiman Shah sent me with a hundred others of my family and village to Yassin as slaves. At the end of three years I escaped back to Gilgit. Azad Khan was then ruling there. After a time Azad Khan was killed by Tahir Shah of Nagar, who ruled in Gilgit about three years and then died. He was succeeded by his son Sekunder, who ruled for about six years. When Gohr Aman invaded the country, Sekunder came from Bagrot to meet him, and a fight took place at Gilgit, on the left bank of the river, in which Sekunder was killed. At the end of a year Gohr Aman returned to Yassin, taking with him 300 Gilgitis, among whom were my brothers and myself, and gave us both to Ibrahim Khan, the son of his cousin Kawar Khan, who took us to Yarkhoon. At the end of four months we two and another Gilgiti escaped by night. We reached the top of the mountain of Lot, on which was much snow, by morning. We descended into the valley of Tu-rikho, near three small villages. The people of Tooriko cultivate the hillside in the same manner as is done in the Sai Valley (i.e., in terraces rising above the road on both sides). Between Mastooch and Tooriko is a pass; the distance is three ordinary days' journey. To the west of Mastooch are Sonoghor, Awi, and Booni. Beyond Booni is Reshun. I once went as far as this before I escaped, but on this occasion I did not get beyond Shogram, where I was seized by the people of Aman-ool-Mulk who happened to be there at the time. By his order I was taken to Wakhan and given to Meer Futteh Ali Shah. In three days we arrived at Sorkhab-e-Wakhan. Between Tooriko and Sorkhab is a pass which has snow on it in summer, and part of it is difficult to travel over. At Punja I was sold by Futteh Ali Shah, in exchange for merchandise, to a merchant of Zebak, named Erbabah, who took me to Yarkund by way of Sirikol. We went in six days from Wakhan to Sirikol with a caravan of merchants. From Sirikol we went to Yarkund by the Kosherab road. As far as Kosherab the people are

Shigār (i.e., Gilgit). From Kondoosh we arrived at Yarkund in six easy marches. In Yarkund Gholaub sold me to a widow for one pashm and ten tangas in copper (about £1/1). This woman, who kept a shop, employed me for a year to carrying wood and water, and then sold me for the same money to Mir Rahim Bai, an Andijani merchant. This Mir Rahim Bai was the owner of much land, on which he employed fifteen slaves. Five other slaves were employed in his house. My business was to ride in attendance on him when he went out. At that time the Chinese ruled the country. Though they were not Mussulmans, except a few who were called Tungan (Tunganis), the call to prayers was not forbidden, and the precepts of the Shurzat were observed. We dates were bread, and if a man went on pilgrimage, assistance was given him. A youth at that time, in Yarkund, would fetch as a slave two pashmes, and a young man about the price I was sold for. A handsome young woman would sell for three pashmes (about £7/10). At the end of two years, with nine other slaves, I escaped from Yarkund, trying to reach Gilgit by way of Cogiar. We had a supply of baked bread with us, and only travelled by night, avoiding all habitations. We reached Cogiar after fifteen days, and had nearly arrived at the top of the range, when a fall of snow obliged us to halt in a valley. Five Moors saw us foreshalt overtook us, and as we had only one sword among us, we could not beat them off. I killed one man with the sword, and taking his gun shot another; one of our number also was killed, and the rest of us taken back to Yarkund. The journey back only took five days, and had we known the road as first, we should not have been taken. On our return we were taken before the Chinese Governor, who, however, did not punish us, but gave us back to our former masters. Mir Rahim Bai imprisoned me for one month, with a plank of wood fitted over my neck, and then made me work with chains on for a year, when he sold me to another Andijani merchant named Mahomed Yunus Bai, for the same price he had given for me. My employment with Mahommed Yunus Bai was to carry his loads of merchandise. At the end of two years I again escaped with four men and two women. In twelve days' travelling by night we reached Cogiar, and in six days more Urdukunlik, where we found some Kirghis. From this we travelled by night for two days towards Mastagh and Hunza with a kafila of Baltis, when we were attacked in a narrow place by a band of Kanjootis, who took us and also ten Baltis, and plundered the caravan; the rest of the Baltis escaped back to Yarkund. In four days we were taken to Shimshal, which is in the Hunza country. The road was difficult and mountainous. Horses cannot travel by it. There are two mountains covered with snow to be crossed, and it is uninhabited. The distance is about the same as from Gilgit to Astor. Shimshal is a small place with about forty houses; the village is on a plateau one foot above the river. From Shimshal to Mourkoon is two marches; the road is only fit for men on foot, but there is no snow in summer, and only a little in winter. There are ten houses and a small fort at Mourkoon. Between Mourkoon and Girtchah two small but steep mountains have to be crossed. The road is closed by snow for two months. At Girtchah is a small fort with twelve houses. Beyond Girtchah is Sooster. At Sooster I was imprisoned for a year, and then was sold for two horses to Mahommed Alim Khan, brother of the Meer Futteh Ali Shah of Wakhan. At

9 Acc. No. 4 Acc.

that time Ghazanfar Khan was ruler of Hunza. From Sumayar people go to Pisawar, from Pisawar to Gwalior, and thence to Hunza on the third day. I did not see the road, but was told it was mountainous and covered with snow. From Sumayar I was taken to Chaprawar, which contains twelve houses; the distance is about 12 miles. From Chaprawar I was taken to Sahagarandi, where there is a street, but no habitations. The road is difficult, and there is much snow in winter. Horses travel the road with difficulty. From Sahagarandi, crossing the mountain, we reached Sachial in Wakhan; the distance is so that from Gilgit to Sachial. When I arrived at Pargu, Faizab Ali Shah did not recognise me. Many merchants came, but none bought me. At last Faizab Ali Shah recognised me. I said to him, 'Oh Ameer, once do but kill a sheep more; you kill me twice.' I related to him the history of my being sold by him to Erbabak, and what had happened since. He said, 'This time I have nothing to do with you, you are in the hands of my brother Mahammad Alim Khan.' After some time Mahammad Alim Khan sold me to Sikander Shah, the Wazeer of the Rajahs of Jiru. At that time Mir Shah was ruler of Badakhshan. I remained in Jiru one winter, then I was sold to Nasrullah Bai of Sabdak, about 20 miles from Jiru. There are about thirty houses in Sabdak, and the people are Sunnees, as at Jiru. At New Jiru, close to Jiru, they are Shiahs Ismaili. After two years I escaped from Sabdak, and wandered in the mountains for three days, but could find no road, so returned to near Jiru, where I lay hid for three days in the house of a man who was friendly to me. On the fourth day he showed me the way to escape, and I arrived at Zebak in four stages, travelling only by night. On the way I crossed a high mountain, and avoiding Zebak in three stages more I reached Ishpan, where there is a small fort. There two men seized me and wanted to send me back to Badakhshan, but they could not agree among themselves. I told them that I was a servant of Adam Khan, who had lately visited Badakhshan, and that when he had left I was ill and could not travel with him. They believed me and showed me the road over the bridge opposite the fort. From there I travelled eastward up a valley, but found much snow and no way out, so turning back I followed a valley to the right, and at midday reached a great lake. From the lake I reached the top of a steep mountain. In winter nobody travels this road, but in summer very rarely and no organised caravans ever travel by it. Horses cannot use it. From the top of the mountain two roads go—one on the right, very narrow and bad, goes into the country of the Bashgali Kaffirs, the other, by the Laspur Valley, leads to Chitral. I travelled by this road to Shoghor. From Laspur to Shoghor is one long day's journey. Here I found a small fort belonging to Adam Khan, and no one lived here except his family. From Shoghor I arrived at Chitral in two days. I stayed there three months, and when Adam Khan, having made war against his father Shah Afzal, was defeated and fled to Dir, I accompanied him. At that time Ghazan Khan was the ruler of Dir. I remained there two months and then went to Swat, by the country of the Sultan Khel. I reached Sedan, where the Akhoond lives, and stayed there three days, after which I went by Mardan to Peshawar. There I travelled through Hazara and Muzaffarabad to Cashmere, where I lived for a year, and then at last was able to return to Gilgit."

The story of Rim Khan is a fair example of the history of scores of men and women in the Gilgit district. I have not chosen it for any special points, but Rim Khan, being a man of intelligence, is able to give a more connected narrative than most of the others I have spoken to. I have written down his tale exactly as he related it. In spite of some mistakes, his recollection of the places he visited in his wanderings is excellent.

In Store G-4 (1962-63) 1978 Kashmir
Box 6

and the pine-forest is less extensive, while spruce-fir has become rare. Birch is found nearly up to 12,000 feet, and *Picea smithiana* at 11,500. Some of the hill-sides have great stretches of bamboo, which, as I saw them in autumn, make a glorious blaze of yellow, from the valley-bottom far up the mountain, enveloping detached woods of dark pine.

Coming down the valley we reach traces of cultivation at the level of 10,000 feet. First are detached hamlets and small villages here, with no trees round them. Then, at Sarsit, are some apricot trees; at the next place are some small walnuts; while at Chogtan, which is 8500 feet, are many fine walnut trees, and from there onwards the villages are mostly well shaded by fruit-trees.

But in that upper part it is chiefly traces of former cultivation that one sees; they are enough to show that crops will grow and ripen; but the fields are waste, the hamlets deserted. In most of the mountain-tracts we have hitherto gone over the population has increased nearly up to the limit of land available; but here is room for hundreds of settlers. This state of things was brought about by the raids of the people of Chilas. The Chilasis are a Dard race inhabiting a long valley on the west of Diyâmir or Nanga Parbat. Until about 1850 they used to make occasional expeditions for plunder into this Astor Valley. Often they came over the Mazeno Pass to reach these higher parts, while for Astor itself, which they also attacked, they came round by the Burzil Pass and Dâtpân. The plunder they came for was cattle and people to make slaves of; their captives they do not sell, but they keep them for their own service, making use of them to take their flocks and herds to pasture. But since it would be almost impossible to keep grown men as their slaves at such work, where opportunities for escape would be plentiful, they used to kill the men and carry away only the women and the young people.

It was these raids that determined Maharaja Gulab Singh to send a punitive expedition against Chilas; this he did in 1851 or 1852, I am not sure which; one force went direct from Kashmir, and one advanced by this Mazeno Pass. The Dogrâs were in great straits for provisions, as the communications were

[i.e. Astor valley = Astôr]

# CHAPTER XX.

## DARDISTAN: CONDITIONS AFFECTING SLAVERY.

Fragments of information got from hearsay of countries that are inaccessible to one, when they can be verified by comparison, are not without value. I will therefore put down a few notes, which, so far as they go, are likely to be correct, on those parts of Dardistán which cannot at present be reached by Europeans.

But first I will show, in a tabular form, the several divisions of Dardistán which have in any way come within my notice, including those which have already been treated of. These divisions are in some cases separate valleys, in other cases parts of the same valley. The Table includes a statement of their form of government, of the races or castes that inhabit them, and of the sect or religion prevailing, as well as the practice that may hold as regards slavery.

DARDISTAN.

| | Government. | Prevailing Form of Faith. | Religion. | Conditions as regards Slavery. |
|---|---|---|---|---|
| Gilgit | Governed directly by the Maharaja's officers. | A few Sunni; some Shia; most Yadikhni. | Half Sunni, half Shia. | In these districts there is slavery both of men and women, but the latter is rare. |
| Ha | | Shia and Yadikhni | Mostly Sunni, a few Shia. | |
| Kuhistan, Kiarmu | | Shia and Yadikhni | Shia Sunni. | |
| Punial | Ruled by Raja Tak Nagbis, in the predominance of the Maharaja. (Tax's duty or fealty to ruled Russia.) | Yadikhni | Shiah, and a few Sunni. | |
| Ruksh | Ruled by Raja Sahib (Tax's fealty, Mogulais.) | Yadikhni | All Shia. | |

Diamirite—continued.

| | Government. | Prevailing Name of Tribe. | Religion. | Traditions as regards Migration. |
|---|---|---|---|---|
| Diamir | Ruled by Raja (Gha-zan Khan), son of Ghazanfar, Raja's family, Ayeshas. | Yashkun | All Shiah. | |
| Darkhut, or Chaprot-side | Belongs to Nagar | Yashkun | Shiah. | |
| Yasin | Ruled by Raja Mir Wali, son of Mir Sultan, Raja's family, Shahrai. | Yashkun | Shiah and Sunni, the former pre-dominating on Gilgit. | Have always been friendly with and built in. |
| Chanjut and Bushi | Ruled by Raja Jahan-ud-Din, Raja's family, Khatli. | Yashkun | Sunni. | |
| Gilgit in Extension | Chieftainship of the Mir or Prince of Nagar-Hunza (his tenure is doubtful). | Wakhi* | Shiah. | |
| Gilgit | Republic | Shin and Yashkun | Sunni. | In Gilgit are those of the men found as above, there being even parishes. |
| Punial | Republic | Shin and Yashkun | | |
| Gah | Republic | Shin and Yashkun | Sunni. | |
| Pingal | Republic | | | |
| Ganjut | Republic | Shin and Yashkun | | |
| Sai | Republic | Shin and Yashkun | | |
| Phuri | Republic | Shin and Yashkun | | |

The first five divisions I have already touched of as fully as I was able. We now come to the countries that surround Gilgit.

*Nagar* lies along the left bank of the Hunza-Nagar River, having *Hunza* opposite on the right bank. *Hunza* about 1867 it has paid a small tribute to the Maharaja, receiving in return a present of larger value; this cannot be considered more than a compliment, and a mark of desire for friendly relations.

The people of *Nagar* are called Khajuri.

*Hunza* is a more warlike country than *Nagar*. As shown in the last chapter, it has often been actively at enmity with the Maharaja, and it has generally been in a state of unfriendliness to him. In 1870 the Hunza Raja sent an agent to Srinagar to open friendly relations, who was well received; I do not know

* I have never met any of these people, but I believe them to be Dards. Gilgit is another name by which they are called; that is the territorial name, while Wakhi is the racial name.

each is free to pursue its own without severing the federal bond. Thus I have heard that some villages have joined with one power—have agreed to pay tribute—while others of the same valley have done the same to the rival power. But there must be some limit to this. They could not, of course, actively join an opposite side.

My knowledge of the working of these institutions is very incomplete; on the whole I incline to think that with the republics there is less of wars of ambition than with those valleys that are governed by an hereditary ruler, less of bloodshed on a large scale, such as is brought about by or for the dispossession of dynasties. But I do not think that the internal state is as secure and quiet as under a Raja; in the republics personal independence and liberty of action are so much the rule, that no one interferes to prevent even violence.

In the Table given at p. 656, the last column shows the custom of the various states with respect to slavery. There are three categories. The first includes Gilgit, Astor, Nagar, &c.; in these places not only is slavery unknown, now that some of them are under the rule of the Maharaja of Kashmir, but, according to my information, it was not the custom before.

Another category includes the Republics; in these, slaves when captured in a foray are kept as servants, as we saw was the case in Chilas with those they brought away from Astor; but they are not used as a commodity to be bought and sold.

Thirdly, in the Rajaships of Hunza, Yasin, and Chitral, slaves are openly bought and sold; the Rajas themselves are the chief dealers—that is to say, they are sellers—while merchants, generally from Badakhshán, are the buyers. The greater expense of sustaining these governments, as compared with the republics, has probably been the cause of the Rajas entering on this trade, in which they will sell, in default of others, their own subjects even. Many are the people, and of races various—Dárd and Dográ, Panjábí and Pathán—whom the fortune of war has allowed to fall into the hands of one or other of these rulers, and who, having been bartered by their avaricious captor, are passing their lives as exiles and slaves in Badakhshán or in Turkistán.

Dard A43
Chitral

159 ...the entertainment to by asking, after a pause in the conversation, during which he had been fixedly staring at Robertson, whether the latter was a really good doctor. You had to be prepared to receive any question or statement with an impassive face, a fact at first a little difficult, for Chitrali views of life were quaint.

517 691 652 Noor mentioned casually that he had sold forty of his people into slavery this year, and explained that he had selected them from houses in which there were several men, so that it would make no difference in cultivating the land, an arrangement which he seemed to think showed a good deal of consideration. Afzul, when discussing the slavery question later with me, pointed out that in India we could afford to keep up jails, but that in a poor country like Chitral this was impossible, and that selling into slavery answered to our penal servitude; it was the only way of punishing a man whom was too much of a scoundrel to be allowed at large. If selling into slavery had been ruled by these conditions, there might not have been so much to say against it in a country in the condition of Chitral, but this was not the case. The Mehtar and his sons looked upon selling men into slavery as a natural source of revenue, and they took every opportunity they could of making money in this way. The market value of an able-bodied man 517 652 was about a hundred rupees, a good-looking young woman ran up to two hundred or two hundred and fifty; a boy or a girl was usually worth a horse, and could be got for from forty to eighty-five rupees, an old man was worth a good sporting dog or a

G. Duncan G-2 (1000-02) 1000 AVI Gadsup
Dard A+3
Chitral

donkey, but I never heard the value of an old woman quoted. I lived in perpetual terror of being presented with a slave, and was prevented by this and other obvious considerations—one being that I did not want spies in my household—from attempting to start Chitrali servants, which was a loss when later I wanted to learn something of the language.

Throughout Chitral on this occasion I was not allowed to pay for any supplies. As my camp was very small this was no great tax, and I tried to make up for it by giving presents. I found that the ruler and his guests were always supplied with food and firewood, and that this levy really took the place of part of the land tax, and that in some places it was the sole one on land. In theory, it is a perfectly natural and harmless tax in a wild country like Chitral, but in practice it is bad, as the strong man in a village does not produce his own milk or sheep when the king's camp comes along and has to be fed, but takes those of his poorer neighbour, and presents them, with protestations of joy and loyalty. When I visited Chitral again, or officers under my orders did so in after years, it was always the rule that all supplies and carriage should be paid for by a British officer in person. In the case of coolies this ensured the right man getting the money, but with supplies one was never certain of paying the rightful owner, and, in any case, the strong man armed took his share. That we could not help, you cannot alter the immemorial East; all that we could do was to make it evident to the people that we wanted to pay honestly for whatever we took, and that we were not on the

and soon dared gainsay his commands. But his rule was not popular—far from it. His oppression extended in all directions: he sold large quantities of timber yearly to Peshawari merchants, and the whole of it was cut and conveyed to the streams by forced labour—of course unpaid for; he interfered in trade, and levied prohibitive taxes on merchandise passing through his country; he bought the goods of passing merchants, if he wanted them, at his own valuation; he sold his subjects into slavery, and sent presents of slave boys and girls to the Amir and to neighbouring chiefs. At the same time he had many good points. He was deeply religious according to his lights, yet he was no bigot. His view was that so long as a man was a good subject the ruler had no call to interfere with his religious opinions, and while I was in Chitral he soundly rated his son Murid for trying to enforce orthodoxy among his people. He was a kind and indulgent father, and devoted to his small sons, who used to form a pretty group round him when he came to see me, clustering about him with the fearlessness of affection. In a country where unnatural vices were rampant he was unstained. He had a religious horror of them, and attributed his success over the Kashkár chiefs to their depravity, against which God's wrath had kindled. He was much married, not "cursedly confined" to one wife, or for the matter of that, to some dozens of wives and concubines. Like David, he "scattered his Maker's image through the land," and at every village you found a small son or heard of a daughter. He had eighty children.

We tried to find our fairy-visiting friend in one of the Owir hamlets, but failed, I forget why.

Next day we crossed into another valley, and halted for breakfast at a place called Baren, the residence of a headman whose ancestors had been kings of this collection of valleys. He was a rich man, the possessor of over three hundred slaves.

All the four valleys of the Owir district are of the same type, and are remarkable for the outcrop of saltpetre, which reduces the soil available for cultivation. The Owir stream is formed by the junction of the waters from the four valleys, and runs out finally into the Chitral river, through the narrow gorge described above, up which no man can force his way. The march beyond Baren was terribly severe, in and out of a succession of steep ravines hundreds of feet deep, the last ascent of a thousand feet, up which our horses barely carried us, landing us on the watershed between the Owir and the Mastuj valley. The view back was indescribably grand, we were told: unfortunately for us, Tirich Mir veiled his face. Still it was very fine, a grand circle of snow-clad mountains fencing the valley, which is broken by the four main streams into a series of long promontories, the upper and flatter part of the amphitheatre one mass of cultivation and autumn colouring. After descending a few hundred feet the road turned north, and the view was again lovely; at one's feet the great gently sloping circle of the Lun valley cultivation, and in the distance the Mastuj, Turikho, and Murikho valleys.

The Lun valley is a replica of the Owir; Turikho

baggage, guard, etc., by single marches to Gilgit, and prepared to move myself in either direction, as the force might decide. I paid the usual ceremonious visits to the Mehtar at the fort, took my guard with me, had them put through their drill for the Mehtar's amusement, and made them fire volleys at a mark. Their firing impressed the local people very much; they were not accustomed to the Martini. The Mehtar offered to present me with a little Kafir girl "habited proper," but I declined the embarrassing offering.

All the time I was in Chitral I was waiting for the promised instructions as to my dealings with Umra Khan. They never came, my brother's illness having caused the question to be hung up, but I expected them every post, and awaited their arrival eagerly. I spent my time seeing all the leading men, amongst others whom I interviewed with much interest being Humayun, the refugee Wazir from Hunza. He gave me a good deal of information about Hunza, mostly erroneous, and calculated to show that he, and not his brother Dadu, was the man to make friends with. But much that he said was of value, and I knew enough of the effect of exile to sift the false from the true. He had a very strong party on his side, that I knew, but I could not fall in with his suggestion that he should compass the murder of the Thum. This man was, I think, after the Mehtar, by far the cleverest native gentleman I met in the Hindu-Kush. In some ways I think he was superior to the Mehtar; he seemed to take a more extended view of questions affecting the welfare of the frontier states. He belonged to a younger generation, and

[ie. of Chitral -- Analyst]

D.C. 663
C.S.P. 01

000 the latter was on his best behaviour, and was making all necessary preparations to speed him through his territory. This was so far satisfactory that it showed that the Thum for the present meant to abide by his engagements.

And so we passed out of Chitral territory, and left "the land of mirth and murder," as we named it in opposition to "the land of gold and apricots." I was not to see its capital again until my old friends had all gone. The Mehtar was the only one to die in peace and the fulness of years; six of his sons lie in bloody shrouds.

• 567 At Gakuch, Syud Shah, the Scripture reader from Peshawar Mission, met me, too late to accompany Robertson into Kafiristan. As it turned out this was probably for the best. He gave a harrowing description of the slave trade in Chitral, and told how women were torn from their husbands and children to be given to other men, families broken up, the boys and girls sent as presents to Kabul, and the rest sold to go to Yarkhand, small children exchanged for sporting dogs, and boys for horses. The slave trade was one of the things I most wished to see put an end to in this beautiful country, but it was not a question to be approached easily. In the end I am glad to think we had our way, but if we left the country to itself to-morrow the trade would flourish again.

000 Four days' halt at Gakuch rested the camp, and, knowing that accumulations of work were piling up for me at Gilgit, I pushed on, and regained the shelter of my house by the middle of November, well pleased with the result of my long tour. We

In Imperial Gazetteer G-8 (1909-10) 1908 A91 Custody
Drawer A19

the people are forced to depend on themselves for most wants of life. The language spoken is Shinā, though only a small percentage of the population is Shin. The religion is Islām, the Shiah sect preponderating. There is an entire absence of fanaticism. The national character is mild, and the men are amenable. The Gilgiti is attached to his home and his family, and is an industrious cultivator. Both men and women are strongly built, and of a fairer complexion than the people of India. The women paint their faces with a kind of thin paste to keep the skin soft and to prevent sunburn. They are fond of flowers, and decorate their caps with irises and roses.

The cultivation is of a high character. The fields are carefully tilled, heavily manured, and amply irrigated. In Gilgit itself good rice is grown; and crops of wheat, barley, maize, millet, buckwheat, pulses, rapeseed, and cotton are raised, while fruit is plentiful. There is very little grazing land, and cattle are scarce. Lucerne grass is largely cultivated for fodder. Agriculture.

In the cold dry climate of Astor cultivation is carried on to an elevation of 9,000 feet. It depends entirely on irrigation by little channels known as *kul*. The chief crops are wheat, barley, peas, maize, millet, and buckwheat. The people pay great attention to fodder and cultivate the lucerne grass. Cultivation is precarious in Astor, as the crops frequently do not ripen owing to the cold, and there are several vegetable pests in the shape of worms.

Many of the streams are rich in gold, especially those which flow from Hunza and Nagar, and also the Indus above Chilās. Gold-washing is carried on in the winter chiefly by the poorer members of the population, though the work is often remunerative. At Chilās whole families live by the work. The gold is of fair quality, the best being twenty carats. The Bagrot valley is celebrated for gold-washing, and contains many signs of mineral wealth. Minerals.

The only manufacture is the weaving of woollen cloth (*pattū*), but this is for home use and not for sale. Trade does not flourish. The local wants are few, and the only chance of Gilgit becoming an important commercial centre lies in the opening of a trade route to Yārkand. The chief staple of import is salt. Russian chintz is brought down from Yārkand, and is said to be more durable than the English article. Commerce and trade.

The most important roads are those leading to India. The 10-foot road over the Burzil and Rāj Diāngan passes has been Roads.

brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the fields at their work or at festive gatherings. Love declarations often take place on these occasions, but if any evil intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love." "pâk âshiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objection to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl may be of a lower caste than the bridegroom. In Astór it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attains his point by threatening to live in the family of the bride and become an adopted son. A "Shin" of true race at Astor may live in concubinage, with a girl of lower caste, but the

the top of the head for a space 2 inches broad in front, tapering to half an inch behind. Those who cannot boast of long locks, dress their hair into numerous small cork-screw ringlets all round the head.[1] On the approach of middle age the whole head is shaved, according to the orthodox Mahommedan fashion, and the beard is allowed to grow. In Chitral the effect of the long-flowing locks reaching to the waist is often extremely picturesque.

The mode of salutation between equals, on meeting after a prolonged absence, is graceful and pleasing. After clasping each other, first on one side then on the other, hands are joined, and each person in turn kisses the hand of the other. Superiors are greeted either by kissing the hand or touching the foot, both at meeting and parting. In Chitral, when the meeting is between two of unequal rank, the inferior kisses the hand of the superior, who in return kisses the former on the cheek. A similar practice is said to have existed among the ancient Persians.[2]

On the occasion of the visit of one chief to another, a rather curious ceremony called "Kobah" takes place. On arrival, the visitor is conducted to the Shawaran,[3] and the followers of both chiefs show their dexterity in firing at a mark set up on a tall pole, from horseback while galloping at speed. After this a bullock is led out before the guest, who draws his sword and does his best to cut its head off at a single blow, or deputes one of his followers to do so, and the carcase is given to his retinue. The custom exists in Shighnan, Badakhshan, Wakhan, Chitral, Yassin, Gilgit, Hunza, and Nager. In the latter place it is customary to slay the bullock with bow and arrow. Of late years the practice has become somewhat modified owing to the strict observance of Mahommedan customs, and it is more usual to give over the bullock alive to the guest, so that its throat may be cut in a more orthodox fashion; but occasionally a chief wishing to show off the strength of his arm and the temper of his blade, will adhere to the old custom.

Polygamy is of course practised, and the right of divorce is somewhat wantonly exercised. The marriage of very young children is not common, though occasionally practised. Girls are generally married between the ages of ten and four-

[1] Rawlinson mentions this as an ancient Persian fashion.—*Ancient Monarchies*, Vol. IV.

They must have been quite a brave people at one time and they still love to recount the deeds done by their forbears; in fact Dr. Francke says there are certain times when they like to forget that they are Ladakis, only remembering their Dardish descent. At such times they tell how siege was laid to one of their castles, food ran out, and it became a question of surrendering to the enemy or dying. Like brave men they decided on the latter. They all gathered in the large hall, and the oldest man was given the privilege of pushing away the stone on which stood the main pillar which supported the roof. Thus these courageous men passed into the Walhalla of the Dards. Or they tell how a Ladaki king wished to make his Dardish subjects do their share of forced labour, to which they objected. They therefore chose one of their old men to inform the king, that they never would be slaves, not even of a king. The old man received the reply that he himself would be the first who would be forced to work, but as he absolutely refused, they immured him. However his fellow countrymen were equally obstinate; so no forced labour could be extracted from any of them.

Now we meet our first representative of this race, who has come to welcome us from the village of Hanu. How quaint his greeting is! He takes off his hat and twirls it round one of his fingers, reminding us rather of an English hip-hip-hurrah. Of course his hat differs from any hat worn by anybody else in Ladak, where the hat is of great diagnostic value. It is not unlike the hat of the Ladaki, but the part which is turned up is not lined with lambskin, and is continuous all the way round. Those worn by the ladies are different again, the upper half being turned over somewhat like a billycock hat; the side turned over and uppermost is usually a veritable needle-case with rows of needles stuck into it. We asked them why they carried all these in their hats, to which they replied that each needle had been given by and represented a friend. The popular Brogpa woman should therefore not

here the Puniál Raja has a guard of six men, who, on signs of an enemy approaching, would light a signal fire; for this reason no cooking of food is allowed there, so the look-out party take a few days' provisions ready cooked, to last until their relief. To hold the position would require one or two hundred men. There are two roads past it, one of them only can be traversed by horses. At three other places is a guard kept. One on the left bank of the Gilgit River, a little lower down than Gákúj; one is on the left bank of the Ishkoman River (which falls in from the north above Gákúj) and one on its right bank, near, I think, its junction with the main stream; while in summer a guard is pushed nearly a day's march up the Ishkoman Valley. The object is to reach the best look-out place at each particular time of the year, and this must vary as the rivers become fordable or impassable. The Yásins have a guard at a place called Shedodas, on the left bank, opposite to Húpar.

It was in November, 1870, that I went through Puniál. The ruler is Raja Isá Bágdur (a name sometimes corrupted by strangers to Bahádur). We were together for several days; we travelled in company, and nearly every day I joined him in a game of polo; with such intercourse we naturally became well acquainted. He is a man who has long been at enmity with the Yásin family, and now entertains the most lively hatred of them; in the various tides of invasion he has had to flee from his territory and take shelter now in Gilgit, now in Chilás, and now in Kashmir. On the re-conquest of Gilgit by the Maharaja (which will be related in another chapter) he was replaced in his own country, which ever since he has held in faithful dependence on the Maharaja's Government, often under difficult circumstances. Though an old man he is strong and active; he is a capital, even a renowned, rider. In character he is both brave and politic, at the same time cautious and enterprising. He is much feared by his enemies and liked by his people; these obey him implicitly; it is their custom, on meeting him, to go up and kiss his hand; this, I believe, to be the general old custom in Dárdistán, or at all events in that part of it where the government is monarchical.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard A V3

The approach to Gilgit is rather fine. The road runs up the flank of a huge alluvial fan several hundred feet in depth, where it bursts out of the hillside, and which stretches a mile into the valley. From the east as you approached you saw then no trace of cultivation, only line after line of ruined terraced fields bare and brown. High up on the main hillside, visible for miles, stands a Buddhist tower, the land-mark which must for centuries have welcomed the traveller to Gilgit. The extraordinary dryness of the climate, with its average rainfall of under a couple of inches a year, has kept it, ancient as it is, in a state of almost perfect preservation.

From the highest point where the road crosses the fan there is a splendid view of the triple peaks of Rakapushi, the great mountain above Nagar to the north, and the Gilgit oasis bursts into view. This is a mass of cultivation five or six miles long by a mile wide at the widest, studded with villages and covered with fruit-trees, the whole irrigated and depending for its water on one stream which enters the valley at the western end.

I was met on the road at intervals by all the important men in Gilgit; the lower the status of the official the further he came out, according to Eastern custom, to receive me. The rajas of Punyal, the country tributary to Kashmir, which is the continuation of the valley of the Gilgit river towards Chitral, refugee princes from Yasin, driven out by the Mehtar of Chitral, local wazirs and Kashmir officials met me one after the other, the culminating point being my reception by the Governor of Gilgit and the officers of the Committee directing the operations on the

Dard AV3

D 643 frontier. It was a motley crowd and picturesque, but I was glad when, after passing the fort, we were conducted to the house built in Major Biddulph's day, and left there in peace.

D 643 K 704 The next few days were spent in making acquaintance with the Governor and the members of the Committee, which consisted of the General commanding at Gilgit, the General commanding the regular reinforcements, the Sunadés or officer commanding the irregular troops, and of a couple of high civil officials, the most important of all being Mehta Sher Singh, an old gentleman of high family and position in Kashmir. The ablest among these gentlemen was, perhaps, the Governor, who had held his post for eight years, was heartily sick of it, and was most anxious to settle matters with Hunza and Nagar somehow, and to be permitted to return to Kashmir. He was an adept at intrigue, the threads of all the frontier affairs were in his hand, and the puppets on both sides of the border generally danced at his bidding.

K 648 My position was difficult; I had distinct orders not to give advice, but I could see very well that, if the negotiations going on failed, the Committee would come to me for it, and that whatever decision they came to, the onus would be thrown on me. Every endeavour was of course made to throw dust in my eyes, and to prevent my getting information as to what had really happened, why the tribes had broken out, what was going on at the moment and as to the condition of the troops. I was told, however, and I knew the information was true, that between Astor and Nomal, the fort eighteen miles

159 His bearing was royal, his courtesy simple and perfect, he had naturally the "courtly Spanish grace" of a great hereditary noble, the dignity and ease of manner which is the birthright of every gentleman in the East, but which were none the less striking from the fact that the Mehtar had never left his mountain fastnesses. I had read several descriptions of the Mehtar; my lamented friend, Ney Elias, had put him down as in his second childhood, still full of cunning and intrigue, but unable to follow an idea or to keep the thread of a conversation, and had warned me that I should find him hopeless to do business with. I believe that the cause of this judgment was that Ney Elias had seen the Mehtar during the fast month, which was naturally very trying for an old man. Moreover, when passing through Chitral, Ney Elias had no official position, and the Mehtar may have thought there was nothing to gain by being attentive to his conversation. Any one more thoroughly competent to conduct affairs I never met.

[574] I saw a great deal of him; he used to drop into my camp after his morning's hawking expedition, or come in before his afternoon's ride, always waiting at the entrance of my camp to be invited in, for, by the etiquette of the country, the ground I occupied was my own. I used to have to keep a sharp look-out not to be caught *en déshabillé*, for I always met him at the entrance of the camp, and conducted him to my tent. He used to sit for hours discussing everything under the sun, drinking tea, and eating gingerbread nuts soaked in it, distributing pieces to his small sons, and occasionally to a favourite courtier. He would

643 organised hospital and dispensary at Chitral, under a
648 good native doctor; that this was to be at our expense
743 went without saying. I am glad to say I was able to arrange this, a hospital was established next year, and it has flourished and done much good in the country.

431 Before leaving Chitral I sent the Mehtar the pre-
[576] sents I had brought up for him. The local etiquette forbade the gifts being offered in public, as everything so received had at once to be given away. My presents, therefore, were taken to the Mehtar by my head orderly. They consisted of a double-barrel express rifle, a pair of shot guns, and a miscellaneous assortment comprising silver goblets, cutlery, gold cloth from Benares, silks and broadcloths; and as the ladies were to be propitiated, carefully-graduated collections of rich brocades, silks, embroidered muslins, looking-glasses, jewelled trinkets, and last, but not least, boxes of scented soap and cases of perfumery. I was careful to ascertain the proper proportion to be observed in graduating the presents for the Mehtar's leading wives, and had a solemn interview with his minister on the subject. The result was excellent, and to my surprise and satisfaction I found that the Mehtar was delighted with the presents, and valued them at considerably more than treble what they had cost in India, and that the ladies were extremely
[159] pleased with theirs. The Mehtar's appreciation of some of my gifts was amusing. He was much taken with a nest of silver cups in a case, the innermost of which was shaped like a champagne glass. He was delighted with this, and pointed out that it would be most useful as a spittoon when he chewed snuff. The

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

Hunza, they are using the services of Mullas in order to give a religious sanction to their predatory excursions. I have said that the Dards were generally Shiahs—perhaps I ought not to include the Shiah Hunzas among Dards as they speak a non-Aryan language unlike any other that I know*—and as a rule the Shiahs are preyed upon by Sunnis. Shiah children are kidnapped by Sunnis as an act both religious and profitable. Shiahs have to go through the markets of Bokhara denying their religion, for which deception, by the way, they have the sanction of their own priests.† Can we, therefore, wonder that the Mulái Hunzas make the best of both worlds by preferring to kidnap Sunnis to their own co-religionists? A very curious fact is the attachment of Shiahs to their distant priesthood. We know how the Indian Shiahs look to Persia; how all expect the advent of their Messiah, the Imám Mahdi; how the appointment of Kazis (civil functionaries) is made through the Mujtehid [a kind of high priest] and is ratified by the ruling power, rather than emanate direct from the secular authorities, as is the case with Sunnis. The well-known Sayad residing at Bombay, Agha Khan, has adherents even in Dardistan, and any command that may reach them from him [generally a demand for money] is obeyed implicitly. Indeed, throughout India and Central Asia there are men, some of whom lead an apparently obscure life, whose importance for good or evil should not be underrated by the authorities. [See my "Hunza and Nagyr Handbook, 1893."]

What we know about the religion of the Siah-Posh

them and solicitous about the reputation that their country had no shrine, killed him in order to have some place for pilgrimage. Similar stories are, however, also told about shrines in Afghanistan. My Sazini speaks of shrines in Nagyr, Chilâs and Yasin, and says that in Sunni Chilâs there are many Mullahs belonging to all the castes—two of the most eminent being Kramins of Shatiál, about 8 miles from Sazin. About Castes, *vide* page 62.

* I refer to the Khajuná, or Burishki, a language also spoken in Nagyr and a part of Yasin, whose inhabitants are Dards.

† I refer to the practice of "Taqqiah." In the interior of Kabul Hazara, on the contrary, I have been told that Pathan Sunni merchants have to pretend to be Shiahs, in order to escape being murdered.

539 776 173 soul. They agreed to lend a helping hand to Shamsher and to raise the subjects secretly against their merciless chief. On finding that the majority of the people had joined him, Shamsher fixed a date for accomplishing the deed by burning a large fire late at night round the fort of Shri Badat. A few days before the appointed day, he sent down Sakina to her father with instructions to keep the secret, while he himself went down to Danyore village to make his preparations. At about 3 A.M. on the night appointed for the purpose, all the people turned out of their homes with torches in their hands and a quantity of wood. Shri Badat's fort was situated about 200 yards east of the present Gilgit polo-ground on the site of the houses of the Bairai family. The people were still some way from the fort when Shri Badat's spirit began to feel uneasy. He therefore asked his daughter to go out and see what was the cause of his restlessness. This undutiful and faithless woman, who had a perfect knowledge of the conspiracy, went out and returned after some delay, in order to let the people come closer, and said that there was nothing to be feared outside the fort. But Shri Badat's increasing uneasiness brought him out of his room. He found himself in a very awkward position, having by this time been surrounded by the enemy, who had succeeded in planting large fires round the fort. In this predicament he had no time to consider the necessity of punishing his wicked daughter, but at once jumped up in the air and took wing towards Chotur Khan, a snowy tract in the Ishkoman Valley. He is said to have rested at Yashpur (a deserted village near about 12 miles west of Gilgit) Hinzil, where he requested somebody to bring him a cup of cold water. The village had a plentiful produce of grapes, and the inhabitants used to make wine from them. The man therefore brought out a cup of wine to Shri Badat, who refused, saying angrily that, seeing that he had come there after having escaped from a fire which had done great injury to his soul, it was improper for he man to give him wine instead of cold water, which was what he had asked for. But none would bring him water, and, being thus dissatisfied with the treatment of the villagers, he cursed the place, saying that it would be totally ruined and laid waste, so as to produce no grapes again. It happened in the following year that the glacier which afforded a supply of water for the village melted away, thus effectually destroying the village cultivation forever. From Yashpur Shri Badat went to Chotur Khan and hid himself there under a big glacier, where he is still said to have his abode. The people have a firm belief that he[1] 796 will re-appear at Gilgit to renew his rule over them with redoubled fury. Being afraid of his regaining the kingdom, the people are in the habit of burning big fires in their homes throughout the night of the anniversary in November on which Shri Badat was driven from Gilgit, in order to keep away his ghost if it return. On this night no one ventures to sleep, but to while away the time they are in the habit of dancing and singing round the big fires. This ceremony is called "Talino." There 578 is, however, a family of Kulchins (the kitchen servants of Shri Badat) who do not take part in the performance of the ceremony; for they are still loyal and faithful to their master, and are still desirous of his returning to his own. This is the only family now residing at Gilgit who are well-wishers of Shri Badat. It is curious that they should have escaped injury at the hands of the opposite party.

1 [i.e, Shri Badat. See CAT. 116 pp. 114-113---ANALYST]

Considerable rivalry exists between Shins and Yeshkuns even in villages where they have lived side by side for generations. D 578 B 578

Living among them, in varying numbers, are Syuds, Krammins, Doms, Shotos, and Goojurs. All of these occupy an inferior position except the Syuds, who relate that they first settled in the country in the time of Tamerlane. They are treated with the highest respect, and receive in marriage daughters from the ruling families, but without reciprocity, for a Syud's daughter is given only to a Syud. There are none in Hunza, but elsewhere they are scattered through the country in small numbers. There is seldom more than one Syud's house in each village. D 564 B 564

The Krammins, who are millers and potters, are most numerous in Darel, and do not exist in Hunza or Nager. They do not intermarry with any other caste. Their name is probably derived from the Persian *kamin*, "mean," though Mr. Shaw, in his paper on "Stray Aryans in Thibet," suggests that the name is derived from *krum*, "work."

The Doms, who are musicians, blacksmiths, and leather-workers, are most numerous in Yassin, Nager, and Chilas, in which latter place they form a sixth of the population.

In Nager there is a caste called Shoto, which exists nowhere else; they work in leather, and rank below the Doms, who take daughters from them without giving in return.

Like the low caste of men of India, the men belonging to these inferior castes are of very dark complexion, coarse features, and inferior physique. Mr. Drew regards them as akin to the low castes of the Punjab, and accounts for their presence in these countries by suggesting that they are remnants of a pre-Aryan aboriginal race, who represent the earliest inhabitants of these valleys. I am more inclined to think that, like the Shins, they have come from the south to settle in these valleys. It is possible that they accompanied the Shins, or they may have followed them, gradually spreading under the protection of the Shin rule. Their status is only consistent with the existence of the Hindoo religion, which I believe to have been introduced by the Shins, and it is worthy of notice that they are not found in the upper part of the Chitral Valley. D 142 174 B 142 174

In Gilgit itself there are a great number of Cashmeris, or, as they are called, Kashiroos, whose forefathers settled in the place in the time of Ahmed Shah Abdali, about 1760 A.D. They now form the largest section of the population, and the shrewdness which forms so distinctive a part of the D 162

563 will no doubt before long be eliminated. Greatly as they dislike the Afghans, their hostility seldom rises to active opposition, their usual attitude being one of passive resistance. The Afghan, on his part, penetrates fearlessly into the Kohistan for purposes of trade, disregarding black looks and cold welcome so long as he can discern a profit to be made. Many of the villages have Pushtoo as well as local names.
241 The Torwal country is rich and fertile, yielding below Chodgram two crops of great abundance yearly. This would show that the elevation of Chodgram is about 7,000 feet. The
233 people own enormous flocks of sheep, goats, and cattle, yielding great quantities of butter, much of which finds its way into the Peshawur market by the hands of Afghan traders. Iron also is found in Torwal.

779 The Torwalik have been too long converted to Islam and exposed to the preaching of Swat Moollahs to have retained
535 any customs connected with other religions. Like most of the other Dard tribes, they have retained their national dances.

162 Bushkar is the name given to the community which
361 inhabit the upper part of the Punjkorah Valley, whence they have overflowed into the upper part of the Swat Valley,
101 and occupied the three large villages of Otrote, Ushoo, and Kalam. They live on good terms with their Torwal neighbours, and number altogether from 12,000 to 15,000 souls. Their principal villages are Tull and Kalkot in the Punjkorah
511 Valley, containing respectively 1,500 families. They are the most degraded of all the Dard tribes, and, in spite of a fertile soil and abundant flocks and herds, live in great squalor.
● 577 Amongst themselves they are exceedingly quarrelsome, and are adepts in the use of the sling, by means of which they hurl
651 stones with great force and precision. Exposed as they are to raids from every side, they seem unable to offer any resistance; and, notwithstanding a payment of yearly tribute, they are subjected to frequent attacks for the sake of wringing additional payments from them. The three villages in the Swat Valley pay tribute to Yassin, and the three northernmost villages in the Punjkorah Valley pay a double tribute to Yassin and Chitral. Birkot, Biar, and Rashkot pay a double tribute to Chitral and Dir, and the five Bushkar villages below Rashkot pay tribute solely to Dir. Rashkot is better
563 known under its Pushtoo name of Patrak. There is also
197 a large Goojur population, which pays tribute to Dir. In recent years a considerable migration of Kho has taken place

Burushe AV7

This festival is celebrated in Yassin, Ponyal, Gilgit, Hunza, Nager, Astor, and Gor. In Hunza and Nager the bonfire portion is called *Tùm shelling*, "tree-scattering," and in Astor, *Lomi*. It is said to commemorate the death of a ruler who once tyrannised over Gilgit; but there seems good reason for supposing that it is a relic of fire-worship. In Chitral the festival is celebrated under the name of *Dushti*, without the bonfires, as also in Chilas and Darel, where it is called *Daiko*. In the villages of the tract of valley between Ponyal and Ghizr, where the population is almost entirely Shin, no language but Shina is allowed to be spoken on the day of the Nôs festival, and a sort of demonstration is made against the neighbouring Kho and Woorshik communities. Each family makes a bonfire of cedar wood on its own land, and a cry is raised, "To-day let all our enemes in the upper country remain above, and those in the lower country remain below. Let those who wear the 'kori' (the leather boots worn by the Kho people) perish, and let all who wear the 'towti' (the leather leg-wrappings worn by the Shins) increase and prosper." Any man who speaks Khowar or Woorshiki in the village on that day is beaten and ill-treated.

D 241 B 241 D 241 578

The next festival is the *Bazono*, which celebrates the beginning of spring and the appearance of the first green shoots of corn. On the occasion of this festival the people assemble on the Shawaran, and a lean miserable sheep is brought. It must not be a good one. The Tarangfah sacrifices it, and the blood is sprinkled on everybody's polo stick. The Tarangfah on horseback trundles the head along the ground for a short distance with his stick. Doms then tie a rope to the horns and drag the head along the whole length of the ground, taking the carcase as their perquisite. Polo and dancing conclude the day. In Hunza and Nager the ceremony of the sheep sacrifice is performed at the same time as the *Thumer Bopow* mentioned further on.

D 241 B [241]

*Bazono* literally means "leanness," referring to the miserable state of the cattle at the end of the winter. This festival is peculiar to Gilgit.

After the Bazono was a festival called Aiboi, which took place during the first week in March, but which is now no longer observed. This appears also to have been confined to Gilgit.

The evening before the festival a peculiar kind of plum-cake, called Jutchbut, was baked and eaten in every house. The gates of the fort were closed, and all probable absentees,

the girl reaches puberty, or perhaps rather the age when she is considered fit to be married. It may be mentioned here in general terms that those features in the ceremony which remind one of Indian customs are undoubtedly of Indian origin introduced into the country since the occupation of Astór by the Maharaja's troops. Gilgit which is further off is less subject to such influences, and whatever it may have of civilization is indigenous or more so than is the case at Astór, the roughness of whose manners is truly Chilâsi, whilst its apparent refinement in some things is a foreign importation.

When the marriage ceremony commences the young man, accompanied by twelve of his friends and by musicians, sits in front of the girl's house. The mother of the girl brings out bread and Ghi-cakes on plates, which she places before the bridegroom, round whom she goes three times, caressing him and finally kissing his hand. The bridegroom then sends her back with a present of a few rupees or tolas in the emptied plates. Then, after some time, as the evening draws on, the agent of the father of the boy sends to say that it is time that the ceremony should commence. The mother of the bride then stands in the doorway of her house with a few other platefuls of cakes and bread, and the young man accompanied by his bridesman ["Shunèrr" in Astóri and "Shamaderr" in Gilgiti,] enters the house. At his approach, the girl, who also has her particular friend, the "Shaneróy" in Astóri, and "Shamaderoy" in Gilgiti, rises. The boy is seated at her right, but both in Astór and in Gilgit it is considered indecent for the boy to turn round and look at her. Then a particular friend, the "Dharm-bhai"* of the girl's

585 brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

576 It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

584 It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the

831 fields at their work or at festive gatherings. Love declara-

[584] tions often take place on these occasions, but if any evil

[831] intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love," "pâk âshiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objec-

582 tion to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl may be of a lower caste than the bridegroom. In Astór it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attains his point by threatening to live in the family of the bride and

582 become an adopted son. A "Shin" of true race at Astor

628 may live in concubinage with a girl of lower caste, but the

relatives of the girl if they discover the intrigue revenge the insult by murdering the paramour, who, however, does not lose caste by the alliance.

The bridegroom dances as well as his twelve companions. The girl ought not to be older than 15 years; but at 12 girls are generally engaged.*

The Balti custom of having merely a *claim to dowry* on the part of the woman—the prosecution of which claim so often depends on her satisfaction with her husband or the rapacity of her relatives—is in spite of the intercourse of the Baltis with the Shin people never observed by the latter; not even by the Shin colonists of little Tibet who are called "Brokhpá."

When the bridegroom has to go for his bride to a distant village he is furnished with a bow. On arriving at his native place he crosses the breast of his bride with an arrow and then shoots it off. He generally shoots three arrows off in the direction of his home.

At Astór the custom is sometimes to fire guns as a sign of rejoicing. This is not done at Gilgit.

When the bridegroom fetches his bride on the second day to his own home, the girl is crying with the women of her household and the young man catches hold of her dress in front (at Gilgit by the hand) and leads her to the door. If the girl cannot get over embracing her people and crying with them quickly, the twelve men who have come along with the bridegroom (who in Astóri are called "hilalée" = bridegrooms and "garóni" in Gilgiti) sing the following song :—

INVITATION TO THE BRIDE.

| | | |
|---|---|---|
| *Nikàstali* | *qudray kusiki* | ("*astali*" *is added to* |
| Come out | hawk's daughter. | *the fem. Imp*). |
| *Nikastali* | *ke karantlè* | ("*balanile*," in Gilgiti). |
| Come out | why delayest thou! | |
| *Nikastali* | *màleyn* | *guttjo.* |
| Come out | (from) thy father's | tent. |

* The Turks say "a girl of 15 years of age should be either married or buried.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

121 197 771 171 from a common racial source these supernatural beings have been long enough in the possession of each to acquire independent existence in its language. This of course probably represents an inversion of the facts. It is safer on the whole to assume independent origins and gradual assimilation through contact and social fusion.

197 563 174 It appears to me not an impossible theory that of the two great sections into which the Shina-speaking population is divided, the socially inferior Yashkuns represent the earlier population who probably shared the language and culture of the surviving Burushaski-speaking peoples, while the Shins were an invading and conquering race who imposed on the Yashkuns their language and probably took over from them some of their beliefs.

● [582] The Khowar in the western districts is due probably to the extension of the Chitrali population beyond the political and natural borders of Chitral, reinforced by intermarriage which goes on at the present day, and in part to political domination in the past, which in quite recent times amounted to actual rule. Punial and Yasin are still governed by members of the Khushwakht family of Chitral whose mother tongue is Khowar.

128 In order to facilitate the arrangement and handling of the material with which we have to deal, it is necessary to adopt some system of classification of the Supernatural. I am not in a position to offer any scientific scheme, but a very rough grouping will suffice to serve our needs.

From one point of view we may regard the Supernatural as represented :—

1. By ANIMATE BEINGS possessing certain supernatural powers or qualities, e.g. demons, witches, etc.

2. By QUALITIES or VIRTUES pertaining to, or affecting inanimate objects, exhibited in magical or irrational processes and properties.

With the latter category, comprising examples of sympathetic and contagious magic, the working of the evil

4: AV3 Dard AV3
Burushe AV7

are found. The Wuzeers are generally, though not always, chosen from among the Rono families. They exist in small numbers in Nager, Gilgit, and Ponyal, gradually increasing in numbers as one travels westward through Yassin, Mastooch, and Chitral, in which places there are said to be altogether over 300 families. In Nager and Yassin they call themselves Hara and Haraiyo,[1] and in Chitral Zundra, but they claim to be all of the same stock. Some exist in Wakhan and Sirikol, where they are called Khaibar-khatar; and in Shighnan, where they are called Gaibalik-khatar. Wherever they exist they are held in great respect. They have two principal traditions concerning their origin, both of which may contain a germ of truth. One is that they are descended from three brothers, Zoon, Rono, and Harai, the sons of a certain Soomalik who ruled in Mastooch before the establishment of the Shahreis line. The other is that they are of Arab blood, and descended from Mahommed Hanifa, the son of Ali, the Prophet's son-in-law. Their small numbers, general distribution, and the universal estimation in which they are held, are evidence in favour of the first assertion, and it is possible that they may be descended from Arabs who settled in the upper part of the Chitral Valley at the time of the Arab conquest of Badakhshan, at the end of the seventh century. A claim to Arab descent is, however, very common among many sections of the inhabitants of these valleys, but it seems to rest on no real foundation. According to another version they came originally from Rajauri, near Poonch, and are descended from three brothers, Sirung, Soroong, and Kunger Pitool.

In appearance they are generally taller than the other inhabitants of the country, with rather high cheek bones, oval faces not thickly bearded, and fairly developed features. Some of them resemble in feature high-class Rajpoots. The esteem in which they are held is proved by the fact that they are able to give their daughters in marriage to the ruling families, and children born of such marriages are qualified to succeed to all the honours of the father's family, and intermarry with other ruling families. They also give daughters in marriage to Syuds, of whom there are a few scattered about the country, but not to the inferior castes. They, however, take daughters in marriage from both Shins and Yeshkuns. Children born of these unions rank as Ronos, and, if daughters, can, as above stated, intermarry with ruling families. The Zundré of Chitral do not refuse their daughters to the Afghans of Dir. Excep-

[1] This same results the Horeye of the Zundrawata.

Jm Biddulph C-9 (1873-1876) 1880 AVJ Dard AVJ

382 tional cases exist of Rono women being given to Shins and Yeshkuns when through immoral behaviour they cannot procure husbands of their own class. Rulers of Dard states give their daughters born of slaves or concubines to Ronos, but not those born of lawful wives.

564 Next to the Ronos, in order of consideration, come the
168 Shins, who do not form the majority of the population any-
174 where except in Gor, Chilas, Tangir, the Indus Valley below Sazin, and the upper part of the Gilgit Valley above Ponyal, and are not found at all in the higher and less fertile parts, till one gets further up the Indus Valley beyond Haramosh. Although numerically inferior, they have established their language to the exclusion of others wherever they have penetrated, and there can be little doubt that they represent an alien race who at some time established themselves in the [197] country by conquest. Amongst the many dialects of Shina now spoken, that of Gilgit, which was the seat of Shin rule, is still considered the most refined, but it is much mixed with Boorishki, and of late with Cashmeri owing to an immigration of Cashmeris which took place about a hundred years ago, at the same time as the formation of the Cashmeri colony in the Hodar Valley.

582 Shins give their daughters to Ronos and Syuds, but cannot marry the daughters of Ronos or Syuds in return. In the same way they marry Yeshkun women, but do not give their daughters to Yesh[illegible]s in return. In the lower part of the Indus Valley they [illegible]e daughters to the Neemchas.
142 Owing to this system of mixed marriages they are, as Mr. Drew has pointed out, very far from being a pure race, and it is difficult to fix on any typical personal characteristics. The Shins of the Indus Valley below Sazin are small clean-limbed men, with dark complexion and eyes, and sharp features, of a type not uncommon in North-Western India. Above Sazin and about Gilgit they are of somewhat lighter complexion, but they do not show any marked type of feature.

[142] There is a rare type, which I have only noticed among Shins, which may be characteristic of the race. These are small slight men, with thin sharp features, prominent noses and narrow chins. Mr. Drew also notices this type as prevailing in the side valleys of the Indus near Rondu and Iskardo. I am inclined to think, however, that the true Shin type is only to be found in the Indus Valley below Sazin, and that this small narrow-chinned race are merely a deteriorated type produced by long intermarriage within narrow limits.

4 Biddulph G-3 (1873-1878) 1880 AV3 Dard AV3
Burusho AV7

D 302 the top of the head for a space 2 inches broad in front, tapering to half an inch behind. Those who cannot boast of long locks, dress their hair into numerous small cork-screw ringlets all round the head.[1] On the approach of middle age the whole head is shaved, according to the orthodox Mahommedan fashion, and the beard is allowed to grow. In Chitral the effect of the long-flowing locks reaching to the waist is often extremely picturesque.

D 576 The mode of salutation between equals, on meeting after a prolonged absence, is graceful and pleasing. After clasping each other, first on one side then on the other, hands are joined, and each person in turn kisses the hand of the other. Superiors are greeted either by kissing the hand or touching the foot, both at meeting and parting. In Chitral, when the meeting is between two of unequal rank, the inferior kisses the hand of the superior, who in return kisses the former on the cheek. A similar practice is said to have existed among the ancient Persians.[2]

D 644 B 644 On the occasion of the visit of one chief to another, a rather curious ceremony called "Kobah" takes place. On arrival, the visitor is conducted to the Shawaran,[3] and the followers of both chiefs show their dexterity in firing at a mark set up on a tall pole, from horseback while galloping at speed. After this a bullock is led out before the guest, who draws his sword and does his best to cut its head off at a single blow, or deputes one of his followers to do so, and the carcase is given to his retinue. The custom exists in Shighnan, Badakhshan, Wakhan, Chitral, Yassin, Gilgit, Hunza, and Nager. In the latter place it is customary to slay the bullock with bow and arrow. Of late years the practice has become somewhat modified owing to the strict observance of Mahommedan customs, and it is more usual to give over the bullock alive to the guest, so that its throat may be cut in a more orthodox fashion; but occasionally a chief wishing to show off the strength of his arm and the temper of his blade, will adhere to the old custom.

B 575 582 587 Polygamy is of course practised, and the right of divorce is somewhat wantonly exercised. The marriage of very young children is not common, though occasionally practised. Girls are generally married between the ages of ten and four-

B D [562] B 595 582 587 D 595 582 587

teen. Wives are regarded as the absolute property of the husband and his heirs. On a man's death his brother can claim to marry all his widows, and no widow can marry again without the consent of her husband's brothers. Frequently, if a man leaves several widows as well as several brothers, the latter apportion the former among themselves. So strictly is the rule observed that, should there be only one surviving brother and he an infant, the widow cannot remarry elsewhere till he is old enough to say whether he will marry her or not; On the other hand, it is considered disgraceful to refuse to marry a brother's widow, so that it is not uncommon for a boy of ten years old to marry a woman more than twice his age. So absolute is the custom, that a woman cannot refuse to marry her deceased husband's brother, and her own parents have no voice in the matter. This often leads to two sisters being wives to the same man simultaneously, though the practice is forbidden by Mahommedan law. In Chitral, marriage with a husband's brother, though common, is not compulsory on the woman. Among the Afghans of Dir, if a widow should refuse to marry her husband's brother, he has the power of selling her, as she is regarded in the light of family property, which has been purchased and paid for. Among the Shin caste the marriage of first cousins or other relations within that degree (such as uncle and niece) is strictly prohibited, though allowed by Mahommedan law. In Torwal and Bushkar the marriage of first cousins is allowed, but marriages such as of uncle and niece or niece's daughter are forbidden.

B 595 601 D 595 601

In none of the Dard languages are there terms distinctive of polygamous relationship. All wives are of equal rank, priority of marriage not conferring any claim. In the Shina and Boorishki languages, uncles on the father's side are styled "great father" or "little father," according to their age in comparison with that of the speaker's father; but there is a distinct term for an uncle on the mother's side. In the same way the term "aunt" is only applied to those on the father's side, the mother's sisters being all styled "mother." There is no specific term either for nephew and niece, who are styled "son" and "daughter." In the same way cousins are styled "brother" or "sister." This would seem to point to the former existence of communal marriage, such as still exists in some parts of India. In the Khowar language the term "uncle" is applied to the brothers of both father and mother without distinction; but aunts on the mother's side are styled "mother,"

4: Biddulph G-3 (1873-1878) 1880 AV3 Dard AV3
Burusho AV7

In Gor, rings are exchanged at marriage. In the ruling families of Hunza and Nager, it is the custom, when a daughter is married, for the bridegroom to present her at betrothal with a gold and silver needle. In Yassin, when, as not unfrequently happens, the bridegroom is too poor to pay the required price, the young couple elope, with the consent of the bride's parents. At the end of ten days the bridegroom comes to them and asks forgiveness, promising to pay the required sum by degrees. A little scene is acted, forgiveness is granted, the neighbours are summoned to the feast which has been already prepared, and the wedding is celebrated. This is to save the credit of the bride's family in not having received a sufficient price for her.

The old marriage barriers between the castes are beginning to be broken down under the levelling influence of Mahommedanism, and in a few generations will probably disappear altogether. The birth of a son is always a matter of general rejoicing. The friends of the happy father at once make it an excuse to stop work for the day, and seizing their matchlocks keep up a general *feu-de-joie* till their powder flasks are empty. The village band is summoned, and dancing kept up round the door for the rest of the day. No notice is taken of the birth of daughters. In the Oxus Valley and in Sirikol, when a son is born, all the father's friends hang their weapons on the walls of his house, so as to accustom the infant to martial sights. After seven days the weapons are returned to the owners, except those belonging to near relations, who receive special presents in exchange.

After the birth of a child a woman is esteemed unclean, and no one will eat from her hand for seven days. North of the Hindoo Koosh this period is extended to forty days, and for the first seven the infant is not allowed to suckle its mother.

I have elsewhere discussed the old custom of disposing of the dead by burning. Now the common form of Mussulman interment is used. A small flat slab of earth about two feet long is neatly plastered over the graves, and a light is kept burning at night by newly-made graves, under the pretence of keeping away wild beasts till the earth has hardened; but, as Mr. Drew has remarked, this is more probably a relic of the old practice of cremation. No attention or care is paid to old graves, which constantly present a most unpleasant appearance, owing to the falling-in of the arched roof. I remarked in Sirikol the same want of attention to old graves

1; Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

generalise about them in respect of this. But even a resemblance more or less complete would not, in my opinion, outweigh the probability derived from the other facts, that in all these cases we have remnants of the early, pre-Āryan, race that inhabited India. If this be so it is a new, and I think unexpected, fact, the existence of this race among the high mountains and in the snowy country. 564

The *Kremins* seem to correspond in function with the *Kahārs* of India (the Jīwars of the Panjāb), for they act as potters, millers, carriers, &c. Thus they are analogous in position to the Sūdras of India, and it seems likely that they had an analogous origin, that they are descendants (with some intermixture of blood) of those of the aborigines who earliest and most easily coalesced with the nation that overcame them. I do not find the Kremins very numerous; certainly there are not many in Gilgit. [463]

The *Yashkun* is the most numerous of all the castes. In Gilgit and Astor they are the body of the people, whose chief occupation is, of course, agriculture. Dr. Leitner speaks of the Yashkun as "a caste formed by the intermixture between the Shīn and a low (? aboriginal) race"; this view does not recommend itself to me; it is more likely that the Kremin had some such origin, but that the Yashkun, who follow all the same occupations as the Shīn, and in physique and physiognomy are their equals, should have so originated is far less probable. I am inclined to think that they and the Shīn together made up the race (which we may call Dārd) that invaded this country and took it from the earlier inhabitants. What may have been the origin of that (probably previous) division into Shīn and Yashkun is a point both curious and important,—a question which at present I see no way of solving. Dr. Leitner's information that a Shīn may marry a Yashkun woman, while no Yashkun may marry a Shīn woman, is highly interesting; this custom is just like that described in Chapter III. as followed by the Rājpūts in connection with the cultivating classes; here I would again point out the natural corollary to be drawn from it—that the higher race thus remains less pure (that is less separate) than the lower. [582]

[A Dard caste -- Analyst]

1; Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3
Balti AV2

D 167 795 B 563 795 D 174 101

At Drās the Dārds (who here are Sunīs) form more than half the community, the others being Baltīs, who are Shīas.

Wherever the Dārds are in contact with Baltīs or with Bhots, these others call them (whether they be Muhammadan or Buddhist Dārds) *Brokpā* or *Blokpā*. The word Brok or Blok means in Tibetan a high pasture-ground, and Brokpā or Blokpā must mean a "highlander." The origin of this appellation for the Dārds I take to be this, that they first came in contact with the Baltīs by coming over the Passes and settling in the higher parts of the valleys, parts that perhaps had been left unoccupied.

D 563 582

There is a colony of Kashmīrī among the Dārds at Gilgit, or rather there is an infusion of Kashmīrī blood in a certain section of the Gilgit people; many generations back there must have been a settlement of Kashmīris, who took unto themselves Gilgitī wives. The descendants have quite lost the language and the ways of Kashmir, and to a stranger's eye they are quite Gilgitī, but the Dārds themselves distinguish, and, as to intermarrying, keep separate from them.

D 174 B 174 142

In one or two higher valleys of Baltistān I have noticed a difference in the people, as compared with the ordinary Baltī, which may perhaps be due to some admixture of Dārd blood, although the fact is not noticed or known by the people themselves. Thus, at Pakora in Brāldū the men were much better looking than the ordinary Baltīs; they had well-shaped features, and had a manly bearing; I noted this at a time when I knew less about the Dārds than afterwards; now, it seems to me likely that some of that race came over the difficult Passes from Nagar and made a settlement among the Baltīs. Again, in the Turmik Valley, many villagers have a high and broad forehead, and hooked nose, though they call themselves Baltī; I have little doubt that here too is Dārd blood, the immigrating Dārds having become absorbed into the community of Baltīs, but still making a mark. These two cases I have not represented on the Race Map, not thinking them distinct enough for that; the area of Turmik and of Brāldū is coloured for Baltī alone.

000

There is one other peculiarity belonging to a class, which may

186 The people of Astor and Gilgit would be
101 surprised if they were told that they were Dards living in Dardistān, and their neighbours of Hunza-Nagar and Yāsīn would be equally astonished. If consulted, they would probably describe their country as Shīnāka, or the land of the Shīns, where Shīnā is the spoken language. They are an
517 Aryan people, stoutly built, cheery, honest, frugal, and sober.
291 They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head,
342 round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain
784 side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure
751 Shīn village no one will eat fowls or touch them. They
795 practise inoculation for small-pox, their one epidemic. The people of Astor are Musalmāns, two-thirds being of the Sunni persuasion, and the rest being either Shiahs or Maulais.
564 There is no religious intolerance in Astor.

162 Drew mentions the following caste divisions: Ronu, Shīns, Yashkun, Kremins, and Dums. As regards the Ronu caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the Rājā caste of Dardistān. The majority of the Astoris belong to the Yashkun caste, and the Shīns are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shīns, according to the Census, being 7,733. The Shīns are regarded
● [582] with great respect by the Yashkuns and the other castes. The
563 Yashkuns claim the Shīns as their forefathers. The Shīns give their daughters to Ronus and to Saiyids, but take wives from the Yashkuns. Far away in Central Ladākh, in the Hanu valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they
[771] came and its Shīnā dialect, but they wear the pigtail and the Ladākhi cap. It is said that, though Buddhist by name, they
[595] really worship local spirits and demons. They practise poly-
[784] andry, but they will not eat with Tibetan Buddhists, and, like the Shīns in Dardistān, they hold the cow in abhorrence.
000 In Gilgit, as in Astor, there are few social subdivisions, for

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

174 the country of Chitral, but were dispossessed by the
563 Ronus, the most honoured caste amongst the Dards, and by various other privileged classes, among whom are certainly the offshoots of families from Badakshan, who followed the fortunes of the founder of the present ruling dynasty. These upper classes have absorbed all the power, and treat the Kho with contempt, calling them "Fakir Múshkin," which
564 one might translate *les misérables*. The despised aborigines, however, have imposed their language on their superiors, and are interesting from the fact that they have no castes. This, I think, conclusively shows that they belong to the earliest Aryan race, and broke off from it before the acquisition of Hinduism; for in all other cases the Dard proper is emphatically a man with a caste. The principal caste is that of the Ronus, a small body held in the highest respect, always ranking next to royalty, and from whom the Wazirs are as a rule taken. Then come the Shins, below whom are the Yeshkuns, and lastly a collection of low castes, Krámins, Doms, etc., the millers, potters, and musicians of the com-
[582] munity. There is one plainly marked rule about the three leading castes; they give their daughters in marriage to the caste above, never to the caste below. The Ronus give their daughters in marriage to the ruling families, and in return receive the illegitimate daughters of princes, but not a daughter born in wedlock. The Shins give their daughters to Ronus, the Yeshkun to Shins, but a lawful daughter is never given to a man of the lower caste.

174 It would seem from a study of the map, and of

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

## D. MARRIAGE.

584 In Gilgit it appears to be a more simple ceremony than in Chilâs and Astór. The father of the boy goes to the father of the girl and presents him with a knife about 1½ feet long, 4 yards of cloth and a pumpkin filled with wine. If
585 the father accepts the present the betrothal is arranged. It is generally the fashion that after the betrothal, which is named: "*Shéir qatar wíye, ballí píye*, = 4 yards of cloth and a knife he has given, the pumpkin he has drunk," the marriage takes place. A betrothal is inviolable, and is only dissolved by death so far as the woman is concerned. The young man is at liberty to dissolve the contract. When the marriage day arrives the men and women who are acquainted with the parties range themselves in rows at the house of the bride, the bridegroom with her at his left sitting together at the end of the row. The Mulla then reads the prayers, the ceremony is completed and the playing, dancing and drinking begin. [583] It is considered the proper thing for the bridegroom's father, if he belongs to the true Shín race, to pay 12 tolas of gold of the value [at Gilgit] of 15 Rupees Nanakshahi (10 annas each) to the bride's father, who, however, generally, returns it with the bride, in kind—dresses, ornaments, &c., &c. The 12 tolas are not always, or even generally, taken in gold, but oftener in kind—clothes, provisions and ornaments. At Astór the ceremony seems to be a little more complicated. There the arrangements are managed by third parties; an agent being appointed on either side. The father of the young man sends a present of a needle and three real (red) "múngs" called "lújum" in Chilâsi, which, if accepted, establishes the betrothal of the parties. Then the father of the bride demands *pro formâ* 12 tolas [which in Astór and Chilâs are worth 24 Rupees of the value of ten annas each.]

All real "Shín" people must pay this dowry for their wives in money, provisions or in the clothes which the bride's father may require. The marriage takes place when

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

relatives of the girl if they discover the intrigue revenge the insult by murdering the paramour, who, however, does not lose caste by the alliance.

The bridegroom dances as well as his twelve companions. The girl ought not to be older than 15 years; but at 12 girls are generally engaged.*

The Balti custom of having merely a *claim to dowry* on the part of the woman—the prosecution of which claim so often depends on her satisfaction with her husband or the rapacity of her relatives—is in spite of the intercourse of the Baltis with the Shin people never observed by the latter; not even by the Shin colonists of little Tibet who are called "Brokhpá."

When the bridegroom has to go for his bride to a distant village he is furnished with a bow. On arriving at his native place he crosses the breast of his bride with an arrow and then shoots it off. He generally shoots three arrows off in the direction of his home.

At Astór the custom is sometimes to fire guns as a sign of rejoicing. This is not done at Gilgit.

When the bridegroom fetches his bride on the second day to his own home, the girl is crying with the women of her household and the young man catches hold of her dress in front (at Gilgit by the hand) and leads her to the door. If the girl cannot get over embracing her people and crying with them quickly, the twelve men who have come along with the bridegroom (who in Astóri are called "hilalée" = bridegrooms and "garóni" in Gilgiti) sing the following song :—

INVITATION TO THE BRIDE.

| | | |
|---|---|---|
| *Nikàstalì* | *quáray kusúni* | ("*astali*" *is added to* |
| Come out | hawk's daughter. | *the fem. Imp*). |
| *Nikastali* | *ke karantlìè* | ("*balantle*," in Gilgiti). |
| Come out | why delayest thou! | |
| *Nikastali* | *máleyn* | *gutljo.* |
| Come out | (from) thy father's | tent. |

* The Turks say "a girl of 15 years of age should be either married or buried.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

251 their houses, and of which they alone have any knowledge. The Maharajah's troops when invading Gilgit often suffered severely from want of food when, unknown to them, large stores of grain of every kind, butter, ghi, etc., were buried close to them. The Gilgitis and other so-called rebels, generally, were well off, knowing where to go for food. Even in subject Astor it is the custom to lay up [584] provisions in this manner. On the day of birth of anyone in that country it is the custom to bury a stock of provisions which are opened on the day of betrothal of the [262] young man and distributed. The ghi, which by that time turns frightfully sour, and [to our taste] unpalatable and the colour of which is red, is esteemed a great delicacy and is said to bring much luck.

186 The chalk used for cementing the stones is called "San Bàtt." Grapes are called "Djatsh," and are said, together with wine, to have been the principal food of Ghazanfar, the Rajah of Hunza, of whom it is reported that when he heard of the arrival of the first European in Astor (porbably Vigne) he fled to a fort called Gojal and shut himself up in it with his flocks, family and retainers. He had been told that the European was a great sorcerer, who carried an army with him in his trunks and who had serpents at his command that stretched themselves over any river in his way to afford him a passage. I found this reputation of European sorcery of great use, and the wild mountaineers looked with respect and awe on a little box which I carried with me, and which contained some pictures of clowns and soldiers belonging to a small magic lantern.

273 The Gilgitis consider the use of wine as unlawful; probably it is not very long since they have become so religious and drink it with remorse. My Gilgitis told me that the Mughullí—a sect living in Hunza, Gojal, Yassen and Punyal*—considered the use of wine with prayers to be rather meritorious than otherwise. A Drunkard is called "Máto."

* These are the strange sect of the Muláis about whom more in my "Handbook of Hunza, Nagyr and a part of Yasín."

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

## D. MARRIAGE.

584 In Gilgit it appears to be a more simple ceremony than in Chilâs and Astór. The father of the boy goes to the father of the girl and presents him with a knife about 1½ feet long, 4 yards of cloth and a pumpkin filled with wine. If 585 the father accepts the present the betrothal is arranged. It is generally the fashion that after the betrothal, which is named: "*Shéir qatar wíye, ballí píye*, = 4 yards of cloth and a knife he has given, the pumpkin he has drunk," the marriage takes place. A betrothal is inviolable, and is only dissolved by death so far as the woman is concerned. The young man is at liberty to dissolve the contract. When the marriage day arrives the men and women who are acquainted with the parties range themselves in rows at the house of the bride, the bridegroom with her at his left sitting together at the end of the row. The Mulla then reads the prayers, the ceremony is completed and the play- [583] ing, dancing and drinking begin. It is considered the proper thing for the bridegroom's father, if he belongs to the true Shín race, to pay 12 tolas of gold of the value [at Gilgit] of 15 Rupees Nanakshahi (10 annas each) to the bride's father, who, however, generally, returns it with the bride, in kind—dresses, ornaments, &c., &c. The 12 tolas are not always, or even generally, taken in gold, but oftener in kind—clothes, provisions and ornaments. At Astór the ceremony seems to be a little more complicated. There the arrangements are managed by third parties; an agent being appointed on either side. The father of the young man sends a present of a needle and three real (red) "múngs" called "lújum" in Chilâsi, which, if accepted, establishes the betrothal of the parties. Then the father of the bride demands *pro formâ* 12 tolas [which in Astór and Chilâs are worth 24 Rupees of the value of ten annas each.]

All real "Shín" people must pay this dowry for their wives in money, provisions or in the clothes which the bride's father may require. The marriage takes place when

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

585 brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

576 It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

584 It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the 831 fields at their work or at festive gatherings. Love declara- [584] tions often take place on these occasions, but if any evil [8:6] intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love." "pâk âshiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objec- 582 tion to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl may be of a lower caste than the bridegroom. In Astór it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attains his point by threatening to live in the family of the bride and 582 become an adopted son. A "Shin" of true race at Astor 628 may live in concubinage with a girl of lower caste, but the

443 There are no regular Bazárs even
286 in the large villages; but the arrival of a merchant from India is generally hailed throughout the country. The woollen cloth which they use generally is manufactured by them.

584 *Marriage.*—Very lately there was a custom amongst them that the young
177 man was allowed to court any girl he wished; but now, from their contact with the Afghans, the system of "betrothal" at a very early age is introduced, and the boy does not go till his marriage to that part of the village in which the girl betrothed to him lives. The Kohistanis say that they have learned three things from the Afghans:—

[291]
[41]

(1) The use of leathern shoes,
(2) The use of long swords and guns,
(3) The system of betrothal.

000

## III. A ROUGH SKETCH OF KHATLÁN (KOLÁB) AND ADJOINING COUNTRIES.*

By MAULVI NAJMUDDIN, a Theologian and Poet from Koláb.

NAMES OF MANZILS (STATIONS) FROM KOLAB TO THE PUNJAB.

کولاب (1) Kolab.

صیاد (2) Sayad. Situated on this side of the Amoo, and belongs to Badakhshan.

ین قلع (3) Yan-Qalá.

چاهیاب (4) Chahyáb. Governed then (18 years ago) by Sultan Azdahar, son of Yusuf Ali Khán.

دشت سبز (5) Dashti-sabz. A halting-place.

رستاق (6) Rustáq. Governed then by Ismail Khán, son of Yusuf Ali Khán.

قزل دره (7) Kizil Dara.

ال کاشان (8) Elkáshán. The Himalaya begins.

اتین جلب (9) Átin Jalab. Here the river *Kokcha* † is crossed.

دشت سفید (10) Dasht-e-sufed.

فیض اباد (11) Faizabad. Capital of Badakhshan; governed then by Jahandár Shah; is situated on the river Kokchá.

رباط (11) Rubát.

دشت فراخ (12) Dashti Farákh.

وردوج (13) Wardúj. Contains a mine of sulphur.

(14) } Names are forgotten.
(15) }

زیباق (16) Zibáq. Peopled by *Shi'as* (or rather Muláis).

ده گول (17) Deh Gôl. The frontier village of Badakhshán; only a kind of inn.

* Burns, in his travels to Bukhárá, points out the locality of the province of Koláb in the south of the Amu (Oxus), and calls it by the name of Gawalan, which I think is a corruption of Khatlan; but Najmuddin asserts with certainty that it is situated on the northern bank and is a part of Ma-vara-un-nahr (the country on that side of the river) (Transoxiana). Najmuddin is No. 2 of the group at the beginning of this paper.

† This river is formed by three tributaries (1) coming from Sarghalan (has a mine of rubies); (2) from Wardúj (sulphur mines); (3) یمغان Yamghan (iron mine). It flows through the territory of Badakhshan, and joins the Amu.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3 Kand

851 When a son is born, a musket is fired off, and the father of the new-born son gives an ox as a present to the people, to be slaughtered for a general festival.

847 Infanticide is wholly unknown.

584 MARRIAGE.—The father of the boy does not go himself, as in Gilgit, to the father of the girl, but sends a man with 5 or 6 rupees, which he offers as a present. If the present is accepted, the betrothal (lóli) is arranged. As far as the woman is concerned the "lóli" is inviolable. The usual sum of dowry paid in cash is 80 rupees.

A bride is called "zhiyán," and the bridegroom "zhiyán lo."

197 LANGUAGE.—On account of the want of intercourse between the tribes the language of Kohistan is broken into numerous dialects; thus the structure of the dialects spoken in Kandiá, *i.e.*, in Gabriál and Patan, differs from that of the language spoken in Chilás and Palus, *i.e.*, in the countries situated on this side of the Indus. Harifullah, a Gabriáli, did not understand any language except his own; but Ahmad Shah, an inhabitant of Jalkót (situated in the southern part of Chilás), understood Gabriáli, as he had been there for a time. Ghulam Mohammad, our Gilgiti man, who had been captured in an excursion, and had lived as a slave in Chilás, also thoroughly understood Jalkóti.

The language of Kohistan (as Chilás, Kandiá, etc., are also called) is divided into two dialects, called *Shénd* and *Shúthun* respectively. In the countries situated on that side of the Indus, that is in Kandiá, Shúthun is spoken.

539 The following pages are devoted to *Ballads*, *Proverbs*, *Riddles*, and *Dialogues* in the Shúthun dialect.

*Songs*=Gíla. Meshón gíla=men's songs; Gharón gíla=female songs.

1. AN ELEGY.

Fifteen years ago a battle was fought between *Arslán Khan* of *Kali*, and *Qamar Ali Khan* of *Pálus*, in which 300 men were killed on both sides. *Phaju*, on whose death the elegy is written by his sister, was one of the killed. The inhabitants of Palus are called "Sikhs," in reproach.

i.

*Rugé níle, jimátyán-kachh-dúkánt,*
In a green place, next a mosque, in a sitting (resting) place,
*Chá chápár gála mazé, shahzada marégil*
In a surrounded fort within, the prince was killed
*Rugé níle, jimátyán kachh, dúkánt*
In a green place, next a mosque, in a resting place
*Sheú wále, bathri, sóh viráti walégil.*
Bring the bier, lay it down, (so that) that heirless one may be brought to his home.

ii.

*Rúge níle, wo Shérkot shar hogaí,*
In the green place, that Sherkot, where the halting-places of guests
*Diri Sikáno qatle karégil.*
Are deserted, the Sikhs (infidels, that is the Pálusis) slaughter committed (did).

527
539

(4) Katawâl, Batawâl ai Barakat deh.
(5) Gilit Malik ai Barakat deh.
(6) Sharo ai Rat ai lo bu sing Barakat deh.
(7) Owal ai sur ai Barakat deh.
(8) Jakun ai shing nikheh sang Barakat deh.
(9) Gogo ai dayin o sang Barakat deh.

Translation :—

(1) In thy name, O merciful Lord, give us abundance!
(2) Give us abundance like Oosum and Doosum (remarkable men of ancient times)!
(3) Give us abundance like the brave Kharki (Kharki, the people say, was 4½ yards tall)!
(4) Give us abundance like Katawall and Batawall (also ancient heroes)!
(5) Give us prosperity like Malik, the Raja of Gilgit!
(6) Give us abundance, so that we may carry our grain home throughout the long night of autumn till it is dawn!
(7) Give us abundance like the long day of summer!
(8) Give us abundance till horns grow out of the ass!
(9) Give us abundance till a beard grows from the rocks!

[526] After gathering their crops the inhabitants celebrate a festival called "Duma Nikha," an expression of their feeling of freedom from all agricultural labour, and indulge in recreations and games, the chief of which is polo. A goat is killed and roasted and the meat eaten at the place where they perform their dances, which continue late into the night. They also add to their enjoyment by shooting at a mark, after which the assembly breaks up.

## III.

### Marriage.

584
431

When a boy reaches 16 or 17 years of age, his parents begin to search for a wife for him, and as soon as they hear of a likely girl, they summon the headmen of their own village, to whom they give food, and request them to ask such and such a person to give his daughter in marriage. The headmen carry this message to the father of the girl, who entertains them for one or two days. During this time he summons his relatives and the headmen of his own village, in order to consult them in the matter. In the case of consent being given, a prayer is read by both the parties as sealing the promise. The boy's father now presents the following things to the girl's father in token of their new relationship :—

| | | |
|---|---|---|
| Cloth | ... | 5 yards. |
| Needle | ... | 1 |
| Knife | ... | 1 |
| Rope | ... | 1 |

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

A period is also fixed for celebrating the marriage, and the party returns. About a fortnight before the appointed time the father or guardian of the boy starts for the girl's village, with three tuloos of gold (1 tuloo = 8 mashas), which is given to her father, and fixes the number of individuals to join the procession, as well as the exact date of arrival. Returning home he makes all necessary arrangements and sends four seers of *ghi* called "tão ai ghi" (*ghi* of the pan). The "Tão" (pan) ceremony cannot be performed until this *ghi* reaches the party, so that should there be any delay in sending it, the side in fault pays one tuloo of gold as a fine for being late. The "Tão" ceremony is performed before a number of the village people at 8. P.M., the night before marriage. A large iron pan is placed in the middle of the assembly, and a man of the Katchati or Babusi family rushes forth with some *ghi*, *atta*, and seeds of wild rue or leaves of *chili*; and, putting these things into the pan, burns a little fire under it till the contents begin to smoke. To fumigate all the air in the room he holds the pan by its brim and, lifting his hands above his head, commences to dance to the accompaniment of the band, while the people applaud and sing this song :—

(1) Tung tao Bair Gul yao
Tung tao Jet Tanya na diayam
Tung tao aki Tananam.
(2) Tung tao Gilit Malika
Tung tao Jet Tanya na diayam
Tung tao aki Tananam.
(3) Tung tao Rajat ai yashki, etc.
(4) Tung tao Romot ai yashki, etc.
(5) Tung tao Kashir Shah Mira, etc.
(6) Tung tao polo Maqpuna, etc.
(7) Tung tao beero Moghlota, etc.
(8) Tung tao uzir Khana Ra, etc.
(9) Tung tao Suchyo Girkina, etc.
(10) Tung tao Maryo Machotya, etc.
(11) Tung tao Neelo But ajih, etc.

Translation—

(1) The pan belongs to Bair Gul.
I will never let anyone place this pan on the hearth,
I will place it there myself.
(2) The pan belongs to Malik, the chief of Gilgit.
I will never let any other place this pan on the hearth,
I will place it there myself.
(3) The pan is worthy of belonging to kings, etc.
(4) The pan is worth being kept by a family, etc.
(5) The pan belongs to Shah Mir, the chief of Kashmir, etc.
(6) The pan belongs to Maqpun, the chief of Skardu, etc.
(7) The pan belongs to Mughlot, the chief of Nagir, etc.

584
539

(8) The pan belongs to Khana, the Raja of Yasin, etc.
(9) The pan belongs to righteous Girkis (the ruler of Hunza).
(10) The pan belongs to Maryo, the son of Machat (a celebrated person of the Rose family), etc.
(11) The pan is placed on Nushe But, etc.

At the same time the women recite the following song :—

(1) Thoki loocham Bair Gul yao
Thoki loocham Jot Mirjoiki na diyan
Thoki loocham aki Mooman.
(2) Thoki loocham Gilit Malika
Thoki loocham Jot Mirjoiki na diyan
Thoki loocham aki Mooman.
(3—11) Etc. etc. etc.

Translation :—

(1) A large coral grain belongs to Bair Gul.
I will never let another string this on a thread.
I will string it myself.
(2) A large coral grain belongs to Malika, the chief of Gilgit.
I will never let another string this.
I will string it myself.
(3—11) Continues on the lines of above song till its end.

The Kanhata then places the pan on the hearth for a moment, and then, lifting it up again, commences to dance and sing in the above manner. Once more he repeats his performance (the one which closes this "Dehan" ceremony), and then bringing out a maiden from the crowd, employs her to cook, without assistance, some small cakes on the pan. When four or five cakes are ready she hands over her task to other women, who readily take it up. Leaving the women to cook a dinner for them, the men go to another room, where they make merry by dancing and singing throughout the night, which is called after this ceremony "Tho ai Rat" (the night of the pan). If the procession has to go to a village at some distance, the bridegroom is bathed at dawn. Then, wearing as neat and clean clothes as they can afford, the retinue starts with the following song, which is recited by the bridegroom :—

"Anno rake ar go wonsai dadai ajuk ar salam ik thoom."

Translation :—

I will go into my house and salute my dearest mother, whose milk I have sucked.

Herewith he proceeds to his home to salute his mother, and, on his return, the party recites the following poem :—

(1) Agnaroo bai la agnaroo but
(2) Ash to she dar ik sis agnaroo bai la agnaroo but
(3) Nah but sonai tulishi agnaroo bai la agnaroo but

## OF THE PARTY AND FOLKLORE OF GILGIT.

MS 524 539

Translation —

(1) Grow heavy, O stone, grow heavy!
(2) A blessed day has come to-day.
Grow heavy, O stone, grow heavy!
(3) This stone will be weighted with gold.
Grow heavy, O stone, grow heavy!

At evening, when the party approaches their destination, a merry shout makes known their arrival and is echoed from the opposite party. Both parties, on entering the bride's house, compete with each other in reciting songs boasting of the noble and heroic deeds of their ancestors and their chiefs; and then, having taken their food, they continue dancing till late in the night. The next morning a mullah, who always 585 accompanies the procession with the bridegroom, reads the marriage service. The girl's 539 father then brings the ornaments, clothes and utensils, etc., for his daughter. If he is a well-to-do man he presents the above things without charging their price to her husband. If this be done, his son-in-law cannot, through all his life, lay any claim to the property, which is always considered to be that of his wife, and she can marry anyone she pleases on her husband's death. But if the girl's father, being in straitened circumstances, cannot afford to give the things without recovering their cost, the boy's father has to pay their equivalent at the time, in cattle or clothes, etc., or whatever amount the arbitrators may decide, and in this case the bridegroom has full control over the property; on his death his wife cannot marry anyone without obtaining the consent of his relatives. This custom is called *badal mahal*.

When the ceremonies are over, the bridegroom's party makes its preparations to return. To entice the damsel out of her home the people recite the following song —

(1) Nikha mal ai billi to ke khiarwini.
(2) Nikha char ai barai to ke khiarwini.
(3) Nikha sonda jaka to ke khiarwini.
(4) Nikha gare achai to ke khiarwini.
(5) Nikha mukhallo doni to ke khiarwini.

Translation —

(1) Come out, O beloved of your mother, why are you delaying?
(2) Come out, O water sprite, why are you delaying?
(3) Come out, O possessor of golden locks, why are you delaying?
(4) Come out, O mistress of charming eyes, why are you delaying?
(5) Come out, O owner of pearly teeth, why are you delaying?

On this she is brought out. She weeps bitterly at the separation from her relatives, and the assembly sings the following song —

(1) Phonar ai mukai ae nai os Tikky rong bajai.
(2) Hun khiv ajab bajai mukai ae Tikky rong bajai.
(3) Thy kiyo dija ae nai'os mukai ae Tikky rong bajai.

4th Biddulph G-3 (1873-1878) 1880 AIII Afghanistan AIII
AV3 Dard AV3
Burusho AV7

Marriage is the occasion for much ceremony, which differs slightly in each locality. Though the young people often arrange a marriage between themselves, it is more usual for the match to be arranged by the parents. After determining by private negotiation the conditions of the match, the bridegroom's father proceeds to make a formal proposal. Dressed in his gayest clothes, and accompanied by his friend, he visits the bride's family, who are assembled to meet him, taking with him certain presents, such as a cow or sheep, beads, clothes, and a sword or gun. The formal demand for the bride having been made and assented to, an interchange of presents takes place. In Chitral, Wakhan, and Sirikol the bride has a bracelet of beads placed on her arm by the bridegroom's father. In Gilgit, cedar branches are burnt, and the bride's parents are presented with a knife, a rope, a few yards of cloth, and a leather bag for holding grain; the bridegroom's father receives in return some wool and a gourd. This interchange of gifts is apparently emblematical. In Torwal the price of the bride is paid over at this time, and the bridegroom's father is accompanied by men dressed as women, who dance and sport to the assembled company. In some places it is not etiquette for the bridegroom to be present. The betrothal being completed, the marriage may not follow for some time, but it generally takes place within the following year. For convenience marriages generally take place in January and February. There is then no agricultural work to occupy the men, and the houses are well stored with meat. So firmly established is the custom in Nager, that a heavy fine is inflicted on marriages held at any other season.

The fixing of the day for the marriage now rests with the bridegroom's parents. After giving private notice, a smartly-dressed friend of the bridegroom is sent to announce formally that he will arrive on a certain day to claim his bride. Certain prescribed presents are interchanged on the occasion. On the appointed day the bridegroom, surrounded by his friends and equipped with bow, arrows, and battle axe, sets out for the bride's house. The bride remains in the inner apartments, dressed in her gayest clothes with a fillet of cowrie shells bound on her head. This decoration is said to have been introduced by the Shins, and is obligatory among them. On entering the house branches of cedar are burned in an iron dish and waved about over the bridegroom's head, and the party is sprinkled with flour. In Wakhan and Sirikol the bridegroom is met and sprinkled with flour

## D. MARRIAGE.

584 In Gilgit it appears to be a more simple ceremony than in Chilâs and Astór. The father of the boy goes to the father of the girl and presents him with a knife about 1½ feet long, 4 yards of cloth and a pumpkin filled with wine. If
585 the father accepts the present the betrothal is arranged. It is generally the fashion that after the betrothal, which is named: "*Shéir qatar wíye, ballí píye*, = 4 yards of cloth and a knife he has given, the pumpkin he has drunk," the marriage takes place. A betrothal is inviolable, and is only dissolved by death so far as the woman is concerned. The young man is at liberty to dissolve the contract. When the marriage day arrives the men and women who are acquainted with the parties range themselves in rows at the house of the bride, the bridegroom with her at his left sitting together at the end of the row. The Mulla then reads the prayers, the ceremony is completed and the play-
[583] ing, dancing and drinking begin. It is considered the proper thing for the bridegroom's father, if he belongs to the true Shín race, to pay 12 tolas of gold of the value [at Gilgit] of 15 Rupees Nanakshahi (10 annas each) to the bride's father, who, however, generally, returns it with the bride, in kind—dresses, ornaments, &c., &c. The 12 tolas are not always, or even generally, taken in gold, but oftener in kind—clothes, provisions and ornaments. At Astór the ceremony seems to be a little more complicated. There the arrangements are managed by third parties; an agent being appointed on either side. The father of the young man sends a present of a needle and three real (red) "múngs" called "lújum" in Chilâsi, which, if accepted, establishes the betrothal of the parties. Then the father of the bride demands *pro formâ* 12 tolas [which in Astór and Chilâs are worth 24 Rupees of the value of ten annas each.]

All real "Shín" people must pay this dowry for their wives in money, provisions or in the clothes which the bride's father may require. The marriage takes place when

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

The marriage takes place when [582]
the girl reaches puberty, or perhaps rather the age when she is considered fit to be married. It may be mentioned here in general terms that those features in the ceremony which remind one of Indian customs are undoubtedly of Indian origin introduced into the country since the occupation of Astór by the Maharaja's troops. Gilgit which is further off is less subject to such influences, and whatever it may have of civilization is indigenous or more so than is the case at Astór, the roughness of whose manners is truly Chilâsi, whilst its apparent refinement in some things is a foreign importation. [585] [177]

When the marriage ceremony commences the young man, accompanied by twelve of his friends and by musicians, sits in front of the girl's house. The mother of the girl brings out bread and Ghi-cakes on plates, which she places before the bridegroom, round whom she goes three times, caressing him and finally kissing his hand. The bridegroom then sends her back with a present of a few rupees or tolas in the emptied plates. Then, after some time, as the evening draws on, the agent of the father of the boy sends to say that it is time that the ceremony should commence. The mother of the bride then stands in the doorway of her house with a few other platefuls of cakes and bread, and the young man accompanied by his bridesman ["Shunèrr" in Astóri and "Shamaderr" in Gilgiti,] enters the house. At his approach, the girl, who also has her particular friend, the "Shaneróy" in Astóri, and "Shamaderoy" in Gilgiti, rises. The boy is seated at her right, but both in Astór and in Gilgit it is considered indecent for the boy to turn round and look at her. Then a particular friend, the "Dharm-bhai"* of the girl's

585 brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

576 It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

584 It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the 831 fields at their work or at festive gatherings. Love declara- [584] tions often take place on these occasions, but if any evil [8:6] intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love," "pâk âshiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objec- 582 tion to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl may be of a lower caste than the bridegroom. In Astór it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attains his point by threatening to live in the family of the bride and 582 become an adopted son. A "Shîn" of true race at Astor 628 may live in concubinage with a girl of lower caste, but the

relatives of the girl if they discover the intrigue revenge the insult by murdering the paramour, who, however, does not lose caste by the alliance.

The bridegroom dances as well as his twelve companions. The girl ought not to be older than 15 years; but at 12 girls are generally engaged.*

The Balti custom of having merely a *claim to dowry* on the part of the woman—the prosecution of which claim so often depends on her satisfaction with her husband or the rapacity of her relatives—is in spite of the intercourse of the Baltis with the Shin people never observed by the latter; not even by the Shin colonists of little Tibet who are called "Brokhpá."

When the bridegroom has to go for his bride to a distant village he is furnished with a bow. On arriving at his native place he crosses the breast of his bride with an arrow and then shoots it off. He generally shoots three arrows off in the direction of his home.

At Astór the custom is sometimes to fire guns as a sign of rejoicing. This is not done at Gilgit.

When the bridegroom fetches his bride on the second day to his own home, the girl is crying with the women of her household and the young man catches hold of her dress in front (at Gilgit by the hand) and leads her to the door. If the girl cannot get over embracing her people and crying with them quickly, the twelve men who have come along with the bridegroom (who in Astóri are called "hilalée" = bridegrooms and "garóni" in Gilgiti) sing the following song:—

INVITATION TO THE BRIDE.

| | | |
|---|---|---|
| *Nikàstalì* | *quáray kusúni* | ("*astali*" *is added to* |
| Come out | hawk's daughter. | *the fem. Imp*). |
| *Nikastali* | *ke karantlìè* | ("*balantle*," in Gilgiti). |
| Come out | why delayest thou! | |
| *Nikastali* | *máleyn* | *guttjo.* |
| Come out | (from) thy father's | tent. |

* The Turks say "a girl of 15 years of age should be either married or buried.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

585 *Nikastali ke karanílič.*
537 Come out why delayest thou.
*Né ro tsharéyn baráye.*
Do not weep waterfall's fairy.
*Né ro teyn róng boje.*
Do not weep thy colour will go.
*Né ro jaro shidati.*
Do not weep brethren's beloved.
*Né ro téy róng boje.*
Do not weep thy colour will go.
*Né ro maleyn shidati.*
Do not weep father's beloved.
*Né ro téy róng boje.*
Do not weep thy colour will go.

*Translation.*

Come out, O daughter of the hawk!
Come out, why dost thou delay?
Come forth from thy father's tent,
Come out and do not delay.
Weep not! O fairy of the waterfall!
Weep not! thy colour will fade;
Weep not! thou art the beloved of us all who are thy brethren,
Weep not! thy colour will fade.
O Weep not! thou beloved of fathers, [or "thy father's darling."]
For if thou weepest, thy face will grow pale.

Then the young man catches hold of her dress, or in Gilgit of her arm, puts her on horseback, and rides off with her, heedless of her tears and of those of her companions.

## E. FUNERALS.

764 Funerals are conducted in a very simple manner. The custom of eating grapes at funerals I have already touched upon in my allusion to Dureyl in the chapter on "Wine." Bread is commonly distributed together with Ghi, etc., three days after the funeral, to people in general, a custom which is called "Nashí" by the Astóris, and "Khatm" by the

Translation :—

(1) Grow heavy, O stone, grow heavy!
(2) A blessed day has come to-day.
Grow heavy, O stone, grow heavy!
(3) This stone will be weighted with gold.
Grow heavy, O stone, grow heavy!

At evening, when the party approaches their destination, a merry shout makes known their arrival and is echoed from the opposite party. Both parties, on entering the bride's house, compete with each other in reciting songs boasting of the noble and heroic deeds of their ancestors and their chiefs; and then, having taken their food, they continue dancing till late in the night. The next morning a mullah, who always accompanies the procession with the bridegroom, reads the marriage service. The girl's father then brings the ornaments, clothes and utensils, etc., for his daughter. If he is a well-to-do man he presents the above things without charging their price to her husband. If this be done, his son-in-law cannot, through all his life, lay any claim to the property, which is always considered to be that of his wife, and she can marry anyone she pleases on her husband's death. But if the girl's father, being in straitened circumstances, cannot afford to give the things without recovering their cost, the boy's father has to pay their equivalent at the time, in cattle or clothes, etc., or whatever amount the arbitrators may decide, and in this case the bridegroom has full control over the property; on his death his wife cannot marry anyone without obtaining the consent of his relatives. This custom is called *kalak malak*.

585
539

When the ceremonies are over, the bridegroom's party makes its preparations to return. To entice the damsel out of her home the people recite the following song:—

(1) Nikha mal ai bilili to ke khiaranini.
(2) Nikha char ai barai to ke khiaranini.
(3) Nikha sonelo jako to ke khiaranini.
(4) Nikha garo achiai to ke khiaranini.
(5) Nikha mukhailo doni to ke khiaranini.

Translation :—

(1) Come out, O beloved of your mother, why are you delaying?
(2) Come out, O water sprite, why are you delaying?
(3) Come out, O possessor of golden locks, why are you delaying?
(4) Come out, O mistress of charming eyes, why are you delaying?
(5) Come out, O owner of pearly teeth, why are you delaying?

On this she is brought out. She weeps bitterly at the separation from her relatives, and the assembly sings the following song:—

(1) Phonar ai molai ae nai ro Thhy rong bujai.
(2) Hun khin ajeh bujai molai ae Thhy rong bujai.
(3) Thy hiyo dija ae na'ro molai ae Thhy rong bujai.

585
539
Translation :—

(1) Do not weep, O flower-like girl, thy complexion will turn pale!
(2) Thou wilt go on a lofty hill, O girl, thy complexion will turn pale.
(3) Thou wilt (by weeping) burn your heart, thy complexion will turn pale.

In Shinaki there is a custom called "Kao." If a young man has determined to marry a certain girl but her parents are not willing to give her to him, the young man either calls out in an assembly of the village headmen:—"The girl is mine, and I will perform 'Kao' if she is not given to me." Sometimes in order to assemble the people he fires a gun outside the village and utters the same words in the presence of those who collect; or if he gets an opportunity he tears the girl's shirt slightly in the presence of some other men and says to her:—"You are mine." When this has been done, the parents are obliged to marry the girl to him, but they can demand from him whatever they like up to the limit of his means. If they marry the girl to anyone else, the young man will murder the girl as well as her husband as soon as he gets an opportunity.

[682]

## IV.

### The Ceremony of "Seelo-ai-Thali" (Seat of Chastity).

887
831
796
This ceremony was performed for old women, who have been virtuous and chaste throughout their lives. These women were called "Seelo," and their descendants were very proud of them, so that on the occasion of family quarrels they used to say to the opposite party, "What have you to say to us? Our mother is "Seelo," while yours is not." To accomplish this rite, an elevated stone platform, about five yards each in length and breadth and a yard in height, was erected by the woman's nearest relatives. On the day appointed all her kinsmen came to the place, with a white she-goat as a sacred judge, to decide the fate of the old woman. The latter was clad in silk and placed on a bench. The eldest of the family bound a silk turban on his head, as well as on that of the goat; and, placing the goat below the bench with its face westward, addressed it in the following manner:—

"O thou white goat, if my daughter" (or whatever relative the woman was to the speaker) "has throughout her life lived an honest, virtuous and pious life and has remained clear of the sins and crimes of falsehood, theft, debauchery and treachery, be pleased to salute this bench for the sake of such a righteous and godly woman." In the case of the woman having led a blameless life, the goat by touching the bench approved her virtue. The assembled crowd then broke forth in cheers, and as an expression of their joy the relatives killed several goats and fed the people present. But if it happened otherwise, and the goat instead of performing what was considered an obeisance to the bench, ran round it bleating, then a great shame took hold of all the woman's kinsmen, and they ran away to their homes, never to speak to her again during the remainder of her life.

D 584 B 584 Marriage is the occasion for much ceremony, which differs slightly in each locality. Though the young people often arrange a marriage between themselves, it is more usual for the match to be arranged by the parents. After determining by private negotiation the conditions of the match, the bridegroom's father proceeds to make a formal proposal. Dressed in his gayest clothes, and accompanied by his friend, he visits the bride's family, who are assembled to meet him, taking with him certain presents, such as a cow or sheep, beads, clothes, and a sword or gun. The formal demand for the bride having been made and assented to, an interchange of presents takes place. In Chitral, Wakhan, and Sirikol the bride has a bracelet of beads placed on her arm by the bridegroom's father. In Gilgit, cedar branches are burnt, and the bride's parents are presented with a knife, a rope, a few yards of cloth, and a leather bag for holding grain; the bridegroom's father receives in return some wool and a gourd. This interchange of gifts is apparently emblematical. In Torwal the price of the bride is paid over at this time, and the bridegroom's father is accompanied by men dressed as women, who dance and sport to the assembled company. In some places it is not etiquette for the bridegroom to be present.

D 585 B 585 The betrothal being completed, the marriage may not follow for some time, but it generally takes place within the following year. For convenience marriages generally take place in January and February. There is then no agricultural work to occupy the men, and the houses are well stored with meat. So firmly established is the custom in Nager, that a heavy fine is inflicted on marriages held at any other season.

The fixing of the day for the marriage now rests with the bridegroom's parents. After giving private notice, a smartly-dressed friend of the bridegroom is sent to announce formally that he will arrive on a certain day to claim his bride. Certain prescribed presents are interchanged on the occasion. On the appointed day the bridegroom, surrounded by his friends and equipped with bow, arrows, and battle axe, sets out for the bride's house. The bride remains in the inner apartments, dressed in her gayest clothes with a fillet of cowrie shells bound on her head. This decoration is said to have been introduced by the Shins, and is obligatory among them. On entering the house branches of cedar are burned in an iron dish and waved about over the bridegroom's head, and the party is sprinkled with flour. In Wakhan and Sirikol the bridegroom is met and sprinkled with flour

D
585
B
585

at some distance from the bride's house. All being seated, a large platter full of bread is presented to the bridegroom, who distributes it to all the company, after which he places his gun or sword on the platter and it becomes the perquisite of the dish-bearer. In Gilgit two of the bride's and two of the bridegroom's friends are seated face to face, and a cake of bread is passed across; each of the bride's friends breaks off a piece, which is left in the dish, and the bridegroom's men place their turbans or caps in it as a token that their heads are at the bride's disposal. The dish is carried in to the bride, who sends back the turbans. In former days the eating of bread together, at this stage, by the bride and bridegroom, was considered to complete the marriage. The idea was that, whoever managed first to eat a morsel would have the mastery in wedded life, and this always caused a scramble. At every stage a prescribed interchange of presents, which have all been carefully stipulated for beforehand, takes place. Meanwhile the friends of both families have been spending the day outside the house in singing and dancing, and this is kept up all night also. The price of the bride, and the presents agreed upon, having been made over to her family, the Moollah appears and reads the marriage service according to the Sharyat. In Chitral the bridegroom then starts for his home with his bride. In Wakhan and Sirikol he is conducted to the bride, and does not take her away till next day; the women of her family resist his entering the room in which she is until he pacifies them with presents. In Gilgit the two still remain apart, and next day the "Kalak Malak," which is peculiar to Gilgit, takes place. This constitutes the ratification of the marriage, and is the assessment of all the presents given from first to last. Two friends of each side meet and appraise all the presents given by the bridegroom. Three toloos of gold-dust, equal to twenty-four rupees, represent the price of the bride herself. Her father then produces a large cooking-pot, a bed, jewels, clothes, dishes, and other articles needful for setting up house. The bride is summoned and allowed to select any two of the articles, which are given with her free. The assessors then price the rest, not forgetting to value the presents given and received since the betrothal, and the price of the balance is paid over at once by the bridegroom or his father.

All being satisfactorily settled, preparations are made for bringing out the bride. The bridegroom and his friends

Balti AV2

D
585 stand round the door, and everybody is sprinkled with flour. In Chitral the bride is led out by her mother, who hands her over to the bridegroom, receiving a present in exchange. In Gilgit the women of the bride's family follow the party, assailing the bridegroom with abuse and pelting him with mud and filth, feigning anger. After going a mile in this way, the bridegroom gives a present to the bride's mother, and is then allowed to depart in peace. This is no doubt a relic of the practice of marriage by capture. Sometimes on leaving the house a goat is slaughtered in front of the couple. The flour-sprinkling is practised everywhere and at different stages, but I cannot ascertain what the custom denotes. In Gilgit it is called Doobun.

Bo
585

After a few days it is customary for the bride's parents to visit the newly-married couple, when they are received with flour-sprinkling, which is repeated on the first occasion of the bride revisiting her father's house. In some places it is customary for the couple to go and stay for several months with the bride's parents soon after marriage.

In Wakhan and Chitral, after leading out the bride the bridegroom returns alone and deposits a present of a gun or a sword on the hearth. In Munjan and Ludkho the couple are accompanied to their homes by all the women of the villages, dancing and singing. They are left alone in the house for seven days, during which food is conveyed to them, but nobody enters, nor are they allowed to leave.

In Torwal the bridegroom's party is accompanied by men dressed as women, who dance and jest, and the whole village take part in the entertainment of the bridegroom's friends. The day after marriage the bride is visited by the women of her husband's family, to whom she must show proofs of her not having brought "a cracked teacup" into the family. She is then congratulated and praised; but should she fail to show the requisite proofs, she is ever after treated with contempt.

Bi
585

In Baltistan, according to Vigne, the husband goes in person to see the bride instead of sending a friend or relation to do so, and if he please he may refuse her, and on the marriage day the bride comes to his house instead of his going to fetch her.

Though the young people often arrange a marriage among themselves before asking the consent of their parents, they are not allowed to meet after it has been agreed upon. Should they meet out of doors by accident, etiquette demands that they should pass with averted eyes and without speaking.

4: Biddulph G-3 (1873-1878) 1880 AV3 Dard AV3
Burusho AV7

In Gor, rings are exchanged at marriage. In the ruling families of Hunza and Nager, it is the custom, when a daughter is married, for the bridegroom to present her at betrothal with a gold and silver needle. In Yassin, when, as not unfrequently happens, the bridegroom is too poor to pay the required price, the young couple elope, with the consent of the bride's parents. At the end of ten days the bridegroom comes to them and asks forgiveness, promising to pay the required sum by degrees. A little scene is acted, forgiveness is granted, the neighbours are summoned to the feast which has been already prepared, and the wedding is celebrated. This is to save the credit of the bride's family in not having received a sufficient price for her.

The old marriage barriers between the castes are beginning to be broken down under the levelling influence of Mahommedanism, and in a few generations will probably disappear altogether. The birth of a son is always a matter of general rejoicing. The friends of the happy father at once make it an excuse to stop work for the day, and seizing their matchlocks keep up a general *feu-de-joie* till their powder flasks are empty. The village band is summoned, and dancing kept up round the door for the rest of the day. No notice is taken of the birth of daughters. In the Oxus Valley and in Sirikol, when a son is born, all the father's friends hang their weapons on the walls of his house, so as to accustom the infant to martial sights. After seven days the weapons are returned to the owners, except those belonging to near relations, who receive special presents in exchange.

After the birth of a child a woman is esteemed unclean, and no one will eat from her hand for seven days. North of the Hindoo Koosh this period is extended to forty days, and for the first seven the infant is not allowed to suckle its mother.

I have elsewhere discussed the old custom of disposing of the dead by burning. Now the common form of Mussulman interment is used. A small flat slab of earth about two feet long is neatly plastered over the graves, and a light is kept burning at night by newly-made graves, under the pretence of keeping away wild beasts till the earth has hardened; but, as Mr. Drew has remarked, this is more probably a relic of the old practice of cremation. No attention or care is paid to old graves, which constantly present a most unpleasant appearance, owing to the falling-in of the arched roof. I remarked in Sirikol the same want of attention to old graves

4
AD3 Dard AV3

000 in the colloquial. Dr. Leitner has collected a large number of Shina songs.

538 Oral traditions and genealogies are also preserved in families to whom this duty is assigned, and carefully handed down from father to son.

411 The ancient weapons were bow and arrows, battle-axe and round leather shield. Those able to afford it also wore a shirt of mail and a steel cap. The bow and battle-axe have been replaced by matchlock and sword, but are not yet quite obsolete. Though powder is easily made, the tribes have to depend on Cashmere and Badakhshan for matchlock barrels, so Robin Hood's weapon is still used in the chase. The bows are made of strips of ibex horn, softened in water and bound together, and are very tough, powerful weapons. The battle-axes are of different shapes, according to locality, some of them being inlaid with silver, or having engraved [585] patterns on them. The old weapons are carefully preserved and produced on the occasion of weddings, which would not be thought complete without them. A bridegroom presenting himself at the house of his father-in-law elect without a battle-axe would be sent away to get one, and if unable to do so would have to make an extra payment. In the present day the men of Chitral are noted for their swordsmanship, which has gained many a victory over matchlocks. In 1852 a regiment of Goorkhas in the Maharajah of Cashmere's service were cut to pieces by Chitral and Yassin swordsmen within 3 miles of Gilgit, though they formed square, and tried to reach the fort from which they had been cut off, in that formation.

726 Dard warfare is, however, seldom of a very resolute nature, and their records are full of accounts in which two or three days' skirmishing has led to the defeat of one party or the [713] other with the loss of a few men only. Every village has one or more forts according to the number of inhabitants, in which all can take refuge in case of need. Owing to the easily defensible nature of the country, surprise is absolutely necessary to success. An attack having been determined on, every effort is made to throw the enemy off his guard, and then, by a succession of forced marches, possession is gained of the pass or the narrow part of the valley which forms the key of his country. Should these be gained, the inhabitants of the invaded country take refuge in their forts. Their defence then depends almost entirely on the state of their supplies. Sometimes their water-supply is

The precepts and observances of the sect are difficult to ascertain, one of their sayings being that "a man should conceal his faith and his women;" and the little I have been able to ascertain is from Maulais who have proselytized, and those only men of no education. D 795 B 795

Soonnees speak of them as "Kaffirs" and "Rafizi," but they themselves do not refuse to pray or eat with Soonnees. They are sometimes accused of worshipping Ali, the son-in-law of the Prophet, and accordingly styled "Ali-purust," and they undoubtedly esteem Ali, who, they say, was born of Light as superior to the Prophet Mahommed, and an incarnation of the deity. They reject the idea of a future state, believing in the transmigration of souls. Evil deeds are punished by the spirit being translated into a dog or other mean animal. Good actions are rewarded by a future incarnation as a great or holy man. They claim little in common with other sects of Mahommedans, saying, the Soonnee is a dog and the Shiah is an ass. They question the divine character of the Koran, though they say that it was entrusted to the Angel Gabriel to give to Ali, but that he gave it by mistake to Mahommed.

They use in place of the Koran a book called the Kalam-i-Pir, a Persian work, which is shown to none but men of their faith. The precept most commonly quoted by them is, that a man should blind himself, so that he should not be moved with envy at sight of his neighbour's prosperity; he should weaken his hands, so that they can grasp nothing belonging to others; and lame himself, that he may be unable to disobey the commands of his Pir. Cattle that have strayed into standing crops are not to be driven out till they have satisfied themselves. A good Maulai is already as one dead, prayers therefore are unnecessary, as also is fasting. If any forcible attempt should be made to cause a Maulai to fast, he should resist it by devouring a pinch of dust. The only pilgrimage enjoined is to the living head of their faith, who is styled the Imam-i-Zeman, or Sahib-i-Zeman. Marriage can be performed by any man whose beard is white. Seating himself with the bridegroom on his right hand and the bride on his left, he takes a few pieces of roasted sheep's liver in both hands, and crossing his arms gives them to the man with his left hand and to the woman with his right. Then taking a cup of water he gives half to the woman, and after he has said a few words out of the Kalam-i-Pir, the ceremony is completed. The form of the Maulai Kalima is D B [792] D B [778] D. B [545]

D 105 Marraiges are arranged for auspicious days and hours which are ascertained on each occasion from the village priest.

B 105 *Temporary unions* are allowed by Shias only.

Free access is not allowed before marriage generally.

No caste prohibits remarriages of widows. Moral laxity prevails to a certain extent.

8. *Death.*—The head of the dead points North but the face is turned to the West towards Mecca, the religious centre of Muslims. When a death occurs food is not cooked in that house for three days and cooked food is sent by relatives for that period. On the third, seventh and fortieth day alms are given to avert calamities, also on the first anniversary after the death.

Indigenous drugs are used for medicines and almost every one knows the medicinal properties of certain local plants and use them when required.

9. *Amusements.*—Swimming, polo playing, racing, wrestling, tug of war, arcery, dancing, singing, etc., are some of the amusements indulged in; women do not participate in the sport undertaken by men. They hold their own separate congregation on occasions of rejoicings such as Id and indulge in singing and dancing away from the eyes of the men.

*Festival occasions.*—Id-ul-Fittar, Id Haj, Id Ghadir and Nauroz are the chief occasions on which rejoicings are made by dancing, singing, polo playing, running and wrestling etc. Dancing is held in a circle to the beat of drum.

D 585 539 10. Before a number of the village people after sunset on the night before the marriage the following song is sung at the bridegroom's house in the following manners:—

B 585 539 A large iron pan is placed in the middle of the assembly and a man of the Katchate or Babuse family rushes forth with some ghee, atta, and seeds of wild rue or leaves of chili, and, putting these things into the pan burns a little fire under it till the contents begin to smoke. To fumigate all the air in the room he holds the pan by its brim and lifting his hands above his head, commences to dance to the accompaniment of the band, while the people applaud and sing a song of which the following is a translation:—

(1) The pan belongs to Bair Gul.

I will never let any one place this pan on the hearth.

I will place it there myself.

(2) The pan belongs to Malik, the Chief of Gilgit.

I will never let any other place this pan on the hearth.

I will place it there myself.

(3) The pan is worthy of belonging to kings, etc.

(4) The pan is worth being kept by a family, etc.

(5) The pan belongs to Shah Mir, the Chief of Kashmir, etc.

(6) The pan belongs to Maqpun, the Chief of Skardu, etc.

(7) The pan belongs to Mughlot, the Chief of Nagar, etc.

Dard AV3
Burusho AV7

(8) The pan belongs to Khana, the Raja of Yasin, etc.

(9) The pan belongs to righteous Girkis (the ruler of Hunza).

(10) The pan belongs to Maryo the son of Machat (a celebrated person of the Rono family).

(11) The pan is placed on Neelo But etc. At the same time the women who are in an inner room recite the following song :—

D 585 539

B 585 539

*Translation.*

(1) A large coral grain belongs to Bair Gul.

I will never let another string this on a thread.

I will string it myself.

(2) A large coral grain belongs to Malik, the Chief of Gilgit.

I will never let another string this.

I will string it myself.

After the marriage ceremony the following song is sung at the house of the bride :—

*Translation.*

(1) Come out, O beloved of your mother, why are you delaying?

(2) Come out, O water sprite, why are you delaying?

(3) Come, O possessers of golden locks, why are you delaying?

(4) Come out, O mistress of charming eyes, why are you delaying?

(5) Come out, O owner of pearly teeth, why are you delaying?

On this she is brought out. She weeps bitterly at the separation from her relatives, and the assembly sings the following song :—

*Translation.*

(1) Do not weep, O flower-like girl, thy complexion will turn pale.

(2) Thou wilt go on a lofty hill, O girl, thy complexion will turn pale.

(3) Thou wilt (by weeping) burn your heat, thy complexion will turn pale.

the top of the head for a space 2 inches broad in front, tapering to half an inch behind. Those who cannot boast of long locks, dress their hair into numerous small cork-screw ringlets all round the head.[1] On the approach of middle age the whole head is shaved, according to the orthodox Mahommedan fashion, and the beard is allowed to grow. In Chitral the effect of the long-flowing locks reaching to the waist is often extremely picturesque.

The mode of salutation between equals, on meeting after a prolonged absence, is graceful and pleasing. After clasping each other, first on one side then on the other, hands are joined, and each person in turn kisses the hand of the other. Superiors are greeted either by kissing the hand or touching the foot, both at meeting and parting. In Chitral, when the meeting is between two of unequal rank, the inferior kisses the hand of the superior, who in return kisses the former on the cheek. A similar practice is said to have existed among the ancient Persians.[2]

On the occasion of the visit of one chief to another, a rather curious ceremony called "Kobah" takes place. On arrival, the visitor is conducted to the Shawaran,[3] and the followers of both chiefs show their dexterity in firing at a mark set up on a tall pole, from horseback while galloping at speed. After this a bullock is led out before the guest, who draws his sword and does his best to cut its head off at a single blow, or deputes one of his followers to do so, and the carcase is given to his retinue. The custom exists in Shighnan, Badakhshan, Wakhan, Chitral, Yassin, Gilgit, Hunza, and Nager. In the latter place it is customary to slay the bullock with bow and arrow. Of late years the practice has become somewhat modified owing to the strict observance of Mahommedan customs, and it is more usual to give over the bullock alive to the guest, so that its throat may be cut in a more orthodox fashion; but occasionally a chief wishing to show off the strength of his arm and the temper of his blade, will adhere to the old custom.

Polygamy is of course practised, and the right of divorce is somewhat wantonly exercised. The marriage of very young children is not common, though occasionally practised. Girls are generally married between the ages of ten and four-

[1] Rawlinson mentions this as an ancient Persian fashion.—*Ancient Monarchies*, Vol. IV.

[2] Strabo Book XV., Chapter 3, Section 20.

[3] The Shawaran answers all the purposes of the village green in England, being used for all gatherings and games.

[562] teen. Wives are regarded as the absolute property of the husband and his heirs. On a man's death his brother can
B claim to marry all his widows, and no widow can marry again
595 without the consent of her husband's brothers. Frequently,
582 if a man leaves several widows as well as several brothers,
587 the latter apportion the former among themselves. So strictly
D is the rule observed that, should there be only one surviving
595 brother and he an infant, the widow cannot remarry elsewhere
582 till he is old enough to say whether he will marry her or not;
587 On the other hand, it is considered disgraceful to refuse to marry a brother's widow, so that it is not uncommon for a boy of ten years old to marry a woman more than twice his age. So absolute is the custom, that a woman cannot refuse to marry her deceased husband's brother, and her own parents have no voice in the matter. This often leads to two sisters being wives to the same man simultaneously, though the practice is forbidden by Mahommedan law. In Chitral, marriage with a husband's brother, though common, is not compulsory on the woman. Among the Afghans of Dir, if a widow should refuse to marry her husband's brother, he has the power of selling her, as she is regarded in the light of family property, which has been purchased and paid for. Among the Shin caste the marriage of first cousins or other relations within that degree (such as uncle and niece) is strictly prohibited, though allowed by Mahommedan law. In Torwal and Bushkar the marriage of first cousins is allowed, but marriages such as of uncle and niece or niece's daughter are forbidden.

B In none of the Dard languages are there terms distinctive
595 of polygamous relationship. All wives are of equal rank,
601 priority of marriage not conferring any claim. In the Shina and Boorishki languages, uncles on the father's side are styled
D "great father" or "little father," according to their age in
595 comparison with that of the speaker's father; but there is a
601 distinct term for an uncle on the mother's side. In the same way the term "aunt" is only applied to those on the father's side, the mother's sisters being all styled "mother." There is no specific term either for nephew and niece, who are styled "son" and "daughter." In the same way cousins are styled "brother" or "sister." This would seem to point to the former existence of communal marriage, such as still exists in some parts of India. In the Khowar language the term "uncle" is applied to the brothers of both father and mother without distinction; but aunts on the mother's side are styled "mother,"

St Lorimer L-3 (1920-34) 1929 AV3 Dard AV3

stay we'll throw you down from the mountain.' They thus 776
put me in great fear and then *I* promise to stay." So far, however, he had apparently successfully evaded either staying or being thrown down from the mountain.

Of the common motif of a man marrying a fairy wife I 776
have only one example, and it does not contain the usual 539
feature of the fairy wife imposing a prohibition on the man which he breaks to his undoing. In the Ghizr story the parties are more equally matched than usual, for the husband is a Daiyál. Still he had the worst of it in the long run.

A Daiyál of Henkimosh bewitched a peri and casting a spell on her hair tied it all up in knots. Then he married her and in due course they had a daughter. When the daughter grew up her father instructed her that if her mother ever asked her assistance in dealing with the population of her hair she should give it, but on no account should she undo the knots. One day when the mother and daughter were out with the goats the anticipated situation arose and the girl played her part. The mother then explained that her husband had been angry with her and had tied her hair in knots and she appealed to the girl as her daughter to undo them. In a moment of sympathy and forgetfulness the girl performed the service. Immediately the Peri slew all the goats and flew away carrying her daughter with her. The Daiyál, on discovering his treble loss, remained where he was weeping and beating his breast.

I think it was in 1922 that Rájá Shfat Bahádur, Governor 776
of Yasin, married a peri lady, presumably in aberetif, but 588
doubtless with all due ceremony. I believe that to his intimates he claimed to have seen her, but a youth, who was probably an epileptic and certainly a scoundrel, acted as go-between and the Peri's agent in the affair. The Rájá cannot have proved a wholly acceptable husband, as shortly after the wedding he had a fall at polo and broke some ribs. Later, I think, he damaged his knee, and before two years were out he was assassinated in Independent Territory.

2: Lorimer L-3 (1920-34) 1929 AV3 Dard AV3

I have recorded instances of human-peri marriages in Chitrāl, but that lies outside our present beat.

## RĀÇṬ

The term rāçḥ, cf. the Sanskrit root *rakṣ-*, "to protect," is usually applied to material objects, which exercise protective powers over human beings. Among such objects are included articles worn as talismans. It is also said, however, that everyone has a guardian spirit in the form of a small girl—Rāçḥe Mulai.i, or Rāçḥi. There may be two of them. These Rāçḥi communicate with the Pashū or Anti-witch when their protégés are in danger.

Again, if a bad woman rides on a horse the horse's Rāçḥi is depressed. Here the Rāçḥi was explained as the *sitāra*, "star" or "fortune", but it is not therefore to be assumed that it is an impersonal abstraction. The conception of a man's "luck" or "fortune" as a living being who is sometimes asleep and sometimes awake is very common.

In a Burushaski story there are three women who are the "Guardians" (rāçḥakūyo) of a king of Irān. They know his fate beforehand and how he can escape it, but are not in direct communication with him. This story, however, is obviously of foreign origin, at least in its existing form, and the guardian women are an integral part of it and could hardly have been introduced as an afterthought.

## ÇḤÈÇḤ

We now pass to a very active and vital group of the Living Supernatural—the Çḥèçḥ. The name is not identifiable as a foreign loan-word and has all the appearance of being good Ṣhina. If I am right in believing the ch's to be cerebral, they would ordinarily correspond to Sanskrit kṣ or tr, but I cannot suggest a derivation.

Çḥèçḥ appear to me to present features of interest and originality, but they may be commonplace to the instructed folklorist. I shall first mention some of the chief characteristics and then illustrate them by specific examples.

13: Heber and Heber D-3 (1914-25) 1926 AJ4 W. Tibetans
Dard AV3

be difficult to recognize, that is if those who are less so are scrupulously honest! Although they now speak a dialect of Tibetan they must at one time have had a language of their own of which one sometimes strikes peculiar remnants. At Kalatse, for instance, the branches of the pencil cedar are freshly put on one of their *lhatos* at the New Year, accompanied by the mumbling of phrases which they do not understand themselves, but which are usually remains of their own Dardish language.

Nothing, however, can be more strange than their religious arrangements. As has already been mentioned, the *Brogpa* of Hanu and also of the village of Da, which is quite near-by, is a Buddhist, but often in a Buddhist family one member must of necessity be a Mohammedan. Of a similar, but converse arrangement, a most striking example is told. We passed through the village of Bot Kharbu on our way up to Leh. Here there lives a family of Mohammedan Brogpas, but one member of this family must always be a Buddhist priest of the neighbouring monastery of Lamayuru. Now the Mohammedan is only allowed to eat the meat of an animal that has been *hallalled*, that is to say has had its throat cut, whilst the butcher says "Bismillah—it is the will of God," whereas the Buddhist eats meat killed in any way, so long as he himself has not taken the life of the animal. This family avoids such complications by the simple expedient of cooking all the meat in one pot, irrespective of how the animal has been killed, then inserts a bit of stick into the cooking pot, which is said to separate off *hallalled* meat from *unhallalled*, and all the Mohammedan has to be careful about is that he shall not take meat from the wrong side of the stick. Another method they have of keeping on good terms with the spirit powers of both religions is to make members of successive generations of the same family belong to the religion of Mahomet and the lamas in turn. Thus the Brogpa supplies us with another version of the Vicar of Bray story. Some authorities account

13: Heber and Heber D-3 (1914-25) 1926 AJ4 W. Tibetans AJ4
Dards AV3

for this extraordinary arrangement by the fact that originally the Dards were Mohammedans, and presumably have not been able entirely to throw off this allegiance. It is stated that in one of their villages, they actually found a burial ground; sure proof to them of a Mohammedan ancestry, for the Buddhist burns his dead, whilst it is the Mohammedan that inters. This may be a satisfactory explanation of their religious ideas, but from whence have they derived all their taboos? Thus the Brogpa must not raise fowl, nor may he eat their eggs. The cow may be employed for the ploughing of his fields, but the gods would most certainly be displeased were he to drink their milk, or even use the butter which is made from the same. In other villages the eating of fish is taboo, and by the look and smell of them washing surely must be also. In fact they avow that it is "Krims med" not the custom. For some time it almost seemed to us as if vaccination was also on their list of prohibitions, for, although they had actually begged us to come for this very purpose, it took the three of us quite a long time cajoling, threatening, entreating and advising them, before they would undergo this fearful operation. At last one faced it, soon to be followed by the others, so that eventually we had quite a busy morning vaccinating. A week later this must have been a sore village, where most of the people wished vaccination had been taboo, but by then we were well away with the knowledge that, should smallpox attack Hanu, it would find the defences fairly strong.

Now let us pay a visit to the Khampas, although it wants a George Borrow to describe these gipsies of Western Tibet. Kham, from whence they come, is a province of Tibet, but when we see the numbers of them who wander over the Indian parts of the Himalayas, we begin to wonder whether any of them are left "at home." Evidently the Khampa finds it more lucrative to wander like our own gipsies than to stay on his native soil. As the bazar in Leh provides most of the things needed by the people who inhabit the upper valley of

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3 Kandia

for many years a slave in Chilás, as Ahmad Shah reports). The Gabriális were converted to Muhammadanism by a saint named *Bábáji*, whose shrine is in Gabriál, and is one of the most frequented places by pilgrims. The Gabriális say that this saint lived six or seven generations ago. Mir Abdulla (who is really of Afghanistan, but now lives in Gabriál,) says that the Gabriális were converted to Islám about 150 years ago. Lately, this religion has made great progress among the people of Kandiá generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attached to them, which are generally crowded by students from every caste. In Gabriál, the Mullahs or priests are, for the most part, of the Shîn caste, but men of every caste are zealous in giving education to their sons. Their education is limited to Muhammadan law (of the Hanifite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and caligraphy, that great Oriental art; so little, indeed, that Harifullah and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the caligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Punjab.

The most accomplished scholar in Kandiá is the high priest and chief of Patan, named Hazrat Ali, who is a Shîn.

The people generally are peaceful, and have a fair complexion and erect bearing. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the usual punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (wadán), but is seldom found among the common people.

GOVERNMENT.—Every village or town is governed by a Council of elders, chosen from among every tribe or "taífa." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shîns or Yashkun. No Kamîn can be elected an elder, though he may become a Mullá, but a Mulla-kamîn also cannot be admitted to the Council.

The reigning Council of Gabriál consists of 12 persons, of whom 9 are Shins and 3 Yashkuns. Patshé Khân is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influential of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose operation is limited to inter-tribal feuds.

CUSTOMS AND MANNERS.—Hockey on horseback, which is called "lughât" in Gabriál, is played on holidays; and the place where they meet for the sport is called "lughât-kárin-jha."

Guns are called "nâli" in Gabriál, and are manufactured in the town by blacksmiths.

Dancing is not practised generally, as in the other Shin countries. Only "Doms" dance and sing, as this is their profession; they play on the "surúi" (pipe), rabáb (harp), and shaṇdo (drum).

The "purdá" system, or "veiling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

4: Biddulph G-3 (1873-1878) 1880 AV3 Dard AV3
Burusho AV7

D 302 the top of the head for a space 2 inches broad in front, tapering to half an inch behind. Those who cannot boast of long locks, dress their hair into numerous small cork-screw ringlets all round the head.[1] On the approach of middle age the whole head is shaved, according to the orthodox Mahommedan fashion, and the beard is allowed to grow. In Chitral the effect of the long-flowing locks reaching to the waist is often extremely picturesque.

D 576 The mode of salutation between equals, on meeting after a prolonged absence, is graceful and pleasing. After clasping each other, first on one side then on the other, hands are joined, and each person in turn kisses the hand of the other. Superiors are greeted either by kissing the hand or touching the foot, both at meeting and parting. In Chitral, when the meeting is between two of unequal rank, the inferior kisses the hand of the superior, who in return kisses the former on the cheek. A similar practice is said to have existed among the ancient Persians.[2]

D 644 On the occasion of the visit of one chief to another, a rather curious ceremony called "Kobah" takes place. On arrival, the visitor is conducted to the Shawaran,[3] and the followers of B 644 both chiefs show their dexterity in firing at a mark set up on a tall pole, from horseback while galloping at speed. After this a bullock is led out before the guest, who draws his sword and does his best to cut its head off at a single blow, or deputes one of his followers to do so, and the carcase is given to his retinue. The custom exists in Shighnan, Badakhshan, Wakhan, Chitral, Yassin, Gilgit, Hunza, and Nager. In the latter place it is customary to slay the bullock with bow and arrow. Of late years the practice has become somewhat modified owing to the strict observance of Mahommedan customs, and it is more usual to give over the bullock alive to the guest, so that its throat may be cut in a more orthodox fashion; but occasionally a chief wishing to show off the strength of his arm and the temper of his blade, will adhere to the old custom.

B 595 582 587 Polygamy is of course practised, and the right of divorce is somewhat wantonly exercised. The marriage of very young children is not common, though occasionally practised. Girls are generally married between the ages of ten and four-

which would point to polygamy, and not to communal marriage, as an ancient institution in the Chitral Valley. In the Bushkarik language the terms point towards polyandry.

Cases of infidelity are extremely common, and the men show none of the jealousy of their wives usual in older Mahommedan communities. In cases of adultery the injured husband has the right to slay the guilty couple when he finds them together; but should he slay one and not the other, he is held guilty of murder. This practice is followed in Sirikol and Wakhan as well as south of the Hindoo Koosh. It is said that the Afghans of Swat, Dir, and Asmar take no notice of a wife's infidelity if, when it comes to their knowledge, they are able to disguise the knowledge from others; but should they learn it through a third person, a bloody vengeance is inflicted. In cases where conclusive proof is wanting, and which are brought for settlement before the ruler or Wuzeer, guarantee is taken for the future by the accused placing his lips to the woman's breast. She thenceforth is regarded as his foster-mother, and no other relations but those of mother and son can exist between them. So sacred is the tie thus established esteemed, that it has never been known to be broken, and the most jealous husband ceases to suspect even though a confession of previous guilt may have been made. In such a case a sheep and a toloo of gold are placed at the feet of the husband by the offender, who humbly sues for forgiveness.

It would appear that morals were more lax formerly than they are now. In Hunza, where the community approaches most nearly to its pre-Mahommedan state, infidelity is not regarded as an offence, and custom requires that a man shall place his wife at his guest's disposal, as in Hazara. The *droit de seigneur* was exercised by the father of the present ruler, and though the custom has been allowed to fall into disuse, it is evident from the accounts given of weekly orgies held by Ghazan Khan that the right is only held in abeyance and not formally renounced. In Nager things are but slightly better, and a man considers himself highly honoured if his wife attracts the attention of the Thum. Islam has not yet brought about the seclusion of the women, who mix freely with the men on all occasions Young men and maidens of different families eat and converse together without restraint, and great liberty is allowed to young women, with frequent evil results. Infanticide arising from illicit connections is common, and is not considered a crime.

Dard AV3
Balti AV2

One might infer that they[1] are, or have been, of the Shīn caste, from the fact that all those customs concerning the cow, which we saw to be characteristic of that caste, are held by these Buddhist Dārds to an extreme degree.

It is curious to trace how in some respects they keep to the customs of the race they sprang from, and how in others they have adopted the customs of the Buddhists.[1] There seems to be an instance of the former case in that their headmen of villages (at all events in the Hanū Valley) are elected for three years only, and even within that time are sometimes changed; this is certainly a trace of the republican system, of which something will be said in Chapter XX. On the other hand, we see them following the Buddhist Ladākhīs in the practice of polyandry, to which they are completely given; among these Buddhist Dārds a woman has sometimes as many as five husbands.

Their religion, I think, lies easy upon them[1]; they are not so attentive to its ordinances as the Ladākhīs are; and I do not think that any of their young men are trained up to be Lāmās. Their dead they burn, and the bones of them they stow away in holes in the cliff, closing up these with stones.

## SUNDRY NOTES.

Leaving now the Buddhist Dārds, we will note a few isolated facts concerning the race generally.

It has been seen from the map that the Dārds have spread, driven by want, or by oppression, or by disturbances, from their own countries across certain ridges into valleys that were occupied by other races; in these they often live side by side with those other races—as with the Kashmīrīs and the Baltīs—sometimes in villages separate, sometimes occupying part of the same village.

At Rondū the Dārds nearly equal the Baltīs; the two do not intermarry. At Bāsho also the two races are about half and half, but here they have intermarried, and the distinctiveness has been broken up. At Dorū and at Satpūr they are of those who do not drink cow's milk; these must be of the Shīn caste.

[1] [Ie Buddhist Dards living ...

8: Imperial Gazetteer G-3 (1889-95) 1909 AV1 Kashmir
Dard AV3

186 The people of Astor and Gilgit would be
101 surprised if they were told that they were Dards living in Dardistān, and their neighbours of Hunza-Nagar and Yāsīn would be equally astonished. If consulted, they would probably describe their country as Shīnāka, or the land of the Shīns, where Shīnā is the spoken language. They are an
517 Aryan people, stoutly built, cheery, honest, frugal, and sober.
291 They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head,
342 round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain
784 side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure
751 Shīn village no one will eat fowls or touch them. They
795 practise inoculation for small-pox, their one epidemic. The people of Astor are Musalmāns, two-thirds being of the Sunni persuasion, and the rest being either Shiahs or Maulais.
564 There is no religious intolerance in Astor.

162 Drew mentions the following caste divisions: Ronu, Shīns, Yashkun, Kremins, and Dums. As regards the Ronu caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the Rājā caste of Dardistān. The majority of the Astoris belong to the Yashkun caste, and the Shīns are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shīns, according to the Census, being 7,733. The Shīns are regarded
[582] with great respect by the Yashkuns and the other castes. The
563 Yashkuns claim the Shīns as their forefathers. The Shīns give their daughters to Ronus and to Saiyids, but take wives from the Yashkuns. Far away in Central Ladākh, in the Hanu valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they
[771] came and its Shīnā dialect, but they wear the pigtail and the Ladākhi cap. It is said that, though Buddhist by name, they
● [595] really worship local spirits and demons. They practise polyandry, but they will not eat with Tibetan Buddhists, and, like
[784] the Shīns in Dardistān, they hold the cow in abhorrence.
000 In Gilgit, as in Astor, there are few social subdivisions, for

Chitral

643 The Mehtar ruled his country with a rod of iron
651 and none dared gainsay his commands. But his
567 rule was not popular—far from it. His oppression
159 extended in all directions: he sold large quantities of timber yearly to Peshawari merchants, and the whole of it was cut and conveyed to the streams by forced labour—of course unpaid for; he interfered in trade, and levied prohibitive taxes on merchandise passing through his country; he bought the goods of passing merchants, if he wanted them, at his own valuation; he sold his subjects into slavery, and sent presents of slave boys and girls to the Amir
159 and to neighbouring chiefs. At the same time he
[798] had many good points. He was deeply religious according to his lights, yet he was no bigot. His view was that so long as a man was a good subject the ruler had no call to interfere with his religious opinions, and while I was in Chitral he soundly rated his son Murid for trying to enforce orthodoxy among his people. He was a kind and indulgent father, and devoted to his small sons, who used to form a pretty group round him when he came to see me, clustering about him with the fearlessness of affection. In a country where unnatural vices were rampant he was unstained. He had a religious horror of them, and attributed his success over the Kushwakt chiefs to their depravity, against which
• [595] God's wrath had kindled. He was much married, not "cursedly confined" to one wife, or for the matter of that, to some dozens of wives and concubines. Like David, he "scattered his Maker's image through the land," and at every village you found a small son or heard of a daughter. He had eighty children.

B D [562] teen. Wives are regarded as the absolute property of the husband and his heirs. On a man's death his brother can B 595 claim to marry all his widows, and no widow can marry again 582 without the consent of her husband's brothers. Frequently, 587 if a man leaves several widows as well as several brothers, the latter apportion the former among themselves. So strictly D 595 is the rule observed that, should there be only one surviving 582 brother and he an infant, the widow cannot remarry elsewhere 587 till he is old enough to say whether he will marry her or not; On the other hand, it is considered disgraceful to refuse to marry a brother's widow, so that it is not uncommon for a boy of ten years old to marry a woman more than twice his age. So absolute is the custom, that a woman cannot refuse to marry her deceased husband's brother, and her own parents have no voice in the matter. This often leads to two sisters being wives to the same man simultaneously, though the practice is forbidden by Mahommedan law. In Shina, marriage with a husband's brother, though common, is not compulsory on the woman. Among the Afghans of Dir, if a widow should refuse to marry her husband's brother, he has the power of selling her, as she is regarded in the light of family property, which has been purchased and paid for. Among the Shin caste the marriage of first cousins or other relations within that degree (such as uncle and niece) is strictly prohibited, though allowed by Mahommedan law. In Torwal and Bushkar the marriage of first cousins is allowed, but marriages such as of uncle and niece or niece's daughter are forbidden.

B In none of the Dard languages are there terms distinctive 595 of polygamous relationship. All wives are of equal rank, 601 priority of marriage not conferring any claim. In the Shina and Boorishki languages, uncles on the father's side are styled D "great father" or "little father," according to their age in 595 comparison with that of the speaker's father; but there is a distinct term for an uncle on the mother's side. In the same • 601 way the term "aunt" is only applied to those on the father's side, the mother's sisters being all styled "mother." There is no specific term either for nephew and niece, who are styled "son" and "daughter." In the same way cousins are styled "brother" or "sister." This would seem to point to the former existence of communal marriage, such as still exists in some parts of India. In the Khowar language the term "uncle" is applied to the brothers of both father and mother without distinction; but aunts on the mother's side are styled "mother,"

which would point to polygamy, and not to communal marriage, as an ancient institution in the Chitral Valley. In the Bushkarik language the terms point towards polyandry.

Cases of infidelity are extremely common, and the men show none of the jealousy of their wives usual in older Mahommedan communities. In cases of adultery the injured husband has the right to slay the guilty couple when he finds them together; but should he slay one and not the other, he is held guilty of murder. This practice is followed in Sirikol and Wakhan as well as south of the Hindoo Koosh. It is said that the Afghans of Swat, Dir, and Asmar take no notice of a wife's infidelity if, when it comes to their knowledge, they are able to disguise the knowledge from others; but should they learn it through a third person, a bloody vengeance is exacted. In cases where conclusive proof is wanting, and which are brought for settlement before the ruler or Wuzeer, guarantee is taken for the future by the accused placing his lips to the woman's breast. She thenceforth is regarded as his foster-mother, and no other relations but those of mother and son can exist between them. So sacred is the tie thus established esteemed, that it has never been known to be broken, and the most jealous husband ceases to suspect even though a confession of previous guilt may have been made. In such a case a sheep and a toloo of gold are placed at the feet of the husband by the offender, who humbly sues for forgiveness.

It would appear that morals were more lax formerly than they are now. In Hunza, where the community approaches most nearly to its pre-Mahommedan state, infidelity is not regarded as an offence, and custom requires that a man shall place his wife at his guest's disposal, as in Hazara. The *droit de seigneur* was exercised by the father of the present ruler, and though the custom has been allowed to fall into disuse, it is evident from the accounts given of weekly orgies held by Ghazan Khan that the right is only held in abeyance and not formally renounced. In Nager things are but slightly better, and a man considers himself highly honoured if his wife attracts the attention of the Thum. Islam has not yet brought about the seclusion of the women, who mix freely with the men on all occasions. Young men and maidens of different families eat and converse together without restraint, and great liberty is allowed to young women, with frequent evil results. Infanticide arising from illicit connections is common, and is not considered a crime.

1r Leitner L-3 (1866-93) 1893? AV3 Dard AV3

## C. BIRTH CEREMONIES.

As soon as the child is born the father or the Mulla repeats the "Bâng" in his ear "Allah Akbar" (which an Astóri, of the name of Mirza Khan, said was never again repeated in one's life!). Three days after the reading of the "Bâng" or "Namáz" in Gilgit and seven days after that ceremony in Astor, a large company assembles in which the father or grandfather of the newborn gives him a name or the Mulla fixes on a name by putting his hand on some word in the Koran, which may serve the purpose or by getting somebody else to fix his hand at random on a passage or word in the Koran. Men and women assemble at that meeting. There appears to be no purdah whatsoever in Dardu land; and the women are remarkably chaste.* The little imitation of purdah amongst the Ranis of Gilgit was a mere fashion imported from elsewhere. Till the child receives a name the woman is declared impure for the seven days previous to the ceremony. In Gilgit 27 days are allowed to elapse till the woman is declared pure. Then the bed and clothes are washed and the woman is restored to the company of her husband and the visits of her friends. Men and women eat together everywhere in Dardu land. In Astór, raw milk alone cannot be drunk together with a woman unless thereby it is intended that she should be a sister by faith and come within the prohibited degrees of relationship. When men drink of the same raw milk they thereby swear each other eternal friendship. In Gilgit this custom does not exist, but it will at once be perceived that much of what has been noted above belongs to Mussulman custom generally. When a son is born great rejoicings take place, and in Gilgit a musket is fired off by the father whilst the "Bâng" is being read.

* This is said to be no longer the case, except in those Dard republics, where foreigners have not yet interfered. In monarchical Yasin, and, above all, in Hunza, sexual laxity has ever been great. Where Sunni rulers have substituted dancing-boys for the dancing of men (formerly both men and women danced together), a worse evil has been introduced. A most sacred relationship is the one created by the foster-mother. The linguistic portion of "The Hunza-Nagyr Handbook," as also of Parts I. and II. of "Dardistan" solves the questions of whether and where polygamy, endogamy, etc., existed among the Dards, who, in appearance and sentiment as regards women, as also in legendary love, are very "European," but whom invasion will convert into strict Muhammadans and haters of the "Firenghi."

Lt Letter L-5 (1890-98) 1897 AVS Dard AVS

The marriage rites take place when
the girl reaches puberty, or perhaps rather the age when [51:]
she is considered fit to be married. It may be mentioned 58:
here in general terms that those features in the ceremony
which remind one of Indian customs are undoubtedly of [177]
Indian origin introduced into the country since the occupation
of Astór by the Maharaja's troops. Gilgit which is further off
is less subject to such influences, and whatever it may have of
civilization is indigenous or more so than is the case at Astór,
the roughness of whose manners is truly Chilási, whilst its
apparent refinement in some things is a foreign importation.

When the marriage ceremony commences the young man, accompanied by twelve of his friends and by musicians, sits in front of the girl's house. The mother of the girl brings out bread and Ghi-cakes on plates, which she places before the bridegroom, round whom she goes three times, caressing him and finally kissing his hand. The bridegroom then sends her back with a present of a few rupees or tolas in the emptied plates. Then, after some time, as the evening draws on, the agent of the father of the boy sends to say that it is time that the ceremony should commence. The mother of the bride then stands in the doorway of her house with a few other platefuls of cakes and bread, and the young man accompanied by his bridesman ["Shunérr" in Astóri and "Shamaderr" in Gilgiti,] enters the house. At his approach, the girl, who also has her particular friend, the "Shaneróy" in Astóri, and "Shamaderoy" in Gilgiti, rises. The boy is seated at her right, but both in Astór and in Gilgit it is considered indecent for the boy to turn round and look at her. Then a particular friend, the "Dharm-bhai"* of the girl's

575 brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

576 It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

577 It must, however, not be imagined that the sexes are excluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the fields at their work or at festive gatherings. Love declarations often take place on these occasions, but if any evil intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love," "pák ishiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objection to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl *may* be of a lower caste than the bridegroom. In *Asmir* it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attains his point by threatening to live in the family of the bride and become an adopted son. A "Shin" of true race at *Astor* may live in concubinage with a girl of lower caste, but the

The most curious custom which I know of
prevents these countries to make relationship in nursing, where 853
a nurse and all her relations come not only within the prohibited 608
degrees, which is against the spirit of Mohammedanism, but also
create the only real bond of true attachment that I have seen in
Dardistan, where other relations respect always engaged in
murdering one another.

Nearly all the chiefs in Dardistan give their children to
persons of low degree to nurse, and these and the children of
the nurse become attached to them throughout life and are their 609
only friends. But this foster-relationship is also taken in order
to get rid of the consequences, say, of crime; for instance, in the
case of adultery, or supposed adultery, the suspected person who
declares that he enters into the relationship of a son to the
woman with whom he is suspected, after a certain penalty, is
easily accepted in that position, and the trust is in no case
betrayed. It is the only kind of forgiveness which is given in [514]
Dardistan generally to that sort of transgression; but, further
than that, drinking milk with some one, or appointing some one
as foster-father, which is done by crossing two canes of milk,
creates the same relationship, except amongst the noble caste of
Shins, who were expelled by the Brahmins from India or Kash-
mir, and who hold the cow in abhorrence as one of their religious
dogmas, whereas, in other ways, they are really Brahmins, among
whom we find Hindooism peeping out through the thin crust of
Mohammedanism.

The subject of caste, by the way, is also one which is generally 000
misunderstood, and which, if developed on Christian lines, would
give to the perfection of human society, and solve many of the
problems with which we are dealing in Europe in more advanced
civilizations. I have just read with concern some remarks
against caste by Sir John Petheram, who has been in India some
three or four years. I think that before people speak on subjects
of such intricacy, they should take the position of students of
the question, learn at least one of the classical and one of the
vernacular languages of India, and then alone assume the role of
teachers whilst continuing to be learners; even in regard to such
subjects of infant-marriage and the prohibition of widow re-
marriage, there is a side of the question which has not yet been
put sufficiently before the British public. Infant-marriage, when

764 as exists south of the Hindoo Koosh, and Wood remarked the same in Kundooz. In Darel and Tangir a piece of roughly-carved wood is placed at each end of the grave, which is neatly plaistered over, and small pieces of white spar are placed along the ridges between the pieces of wood, which are about 8 feet apart. In Chitral, instead of wood, flat pieces of stone or slate, 3 or 4 feet long, are used.

428 All that concerns the division and inheritance of land is naturally of great consequence among a people who live almost entirely by agriculture. In Gilgit and the adjacent valleys, on a man's death his land is not divided equally among his sons, as is prescribed in the Sharyat, but in equal portions between his wives' families; for instance, should a man leave one son by one wife and three by another, the one son inherits half land, and the other three the other half, which again is sub-divided between them. Should one wife have sons, and the other only daughters, the land is divided among the former, the daughters being only entitled to a marriage-portion out of the land. Should a man die leaving only daughters, the land goes to the nearest male heir of the deceased; but a curious exception is made in the case of a man leaving only a single daughter, who is allowed to take the whole land as her marriage-portion. The practice is always spoken of as a favour, and not a right, but it seems to be a relic of a custom by which the succession of women was once recognised. The history of these countries shows several instances of the succession of female rulers in default of male heirs. In Wakhan and Sirikol daughters share equally in everything except land, which is divided among the sons. In Chitral and the Swat Valley the law of the Sharyat, by which all sons have equal shares, is followed. Daughters are entitled to a dowry out of the paternal land on marriage. In Torwal, women inherit the father's land in equal shares with the sons.

• 608 The custom of foster relationship is maintained among all the ruling families, and its ties seem more stringent than those of blood kinship. On the occasion of a son or daughter being born, the child is assigned to a foster-mother, in whose house it is brought up, so that frequently the father does not see his children till they are six or seven years old, and the whole family of the nurse place themselves at the disposal of their foster-child, with whom, for the rest of their lives, their fortunes are unalterably bound up. Whatever are a man's misfortunes or crimes in after-life, his good and bad fortunes are equally shared. Should exile be his lot,

Biddulph G-3 (1873-1878) 1880 ~~AUI Afghanistan AUI~~
4 AV3 Dard AV3

his foster kindred accompany him. On the other hand, if he rises to influence, his foster-father is generally his most confidential adviser, and his foster-brothers are employed on the most important missions. 608

The custom of cementing friendship by the milk connection seems a favourite one. Should a woman dream that she has adopted any person as a son, or should any man dream that he has been adopted by a certain woman, the connection is carried out in the same way as the forced adoption before mentioned, and nobody would think of refusing to recognise it. The practice is now falling somewhat into disuse, but it was extremely common not many years ago. Milk from a woman's breast is esteemed a sovereign remedy for cataract and other eye-diseases. A resort to it also establishes the milk-tie for ever afterwards. [787] [757]

It is sometimes customary for a young couple, at the time of marriage, to induce a mutual friend to become their foster-father. The tie is ratified at the time of eating bread together. Bride and bridegroom being seated opposite to one another, the foster-father elect seats himself between them, and taking a piece of bread in each hand crosses his arms, observing to keep the right one uppermost, and puts the bread into their mouths. From that time he is regarded as their father.

The foster relationship is regarded as so close, that marriage between foster relations would be looked upon as incestuous, and, in spite of the precepts of the Koran, it would be impossible for a man to marry the widow of his foster-son. [835]

The formation of these ties is practised in a peculiar way among the Ashimadek clans of Chitral. It is customary for every infant to be suckled in turn by every nursing mother of the clan; consequently there is a constant interchange of infants going on among the mothers, for the purpose of strengthening tribal unity. [953]

The Shins are noted for their miserly habits, which they sometimes carry to great extremes. Every man has a secret hiding place in the mountains, where he conceals his money, metal pots, wife's jewels, and all his most valuable property. Occasional stealthy visits are paid to the treasure, which is never taken out for use except on festive occasions. No feeling of honour seems to exist as to the appropriation of another's treasure should it by chance be discovered, and frequent quarrels arise from this cause. Treasures are frequently lost altogether by the sudden death of the owner, 454 [685]

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

mountains with their palaces and songs. Again, it is not Islam that tells them of the regeneration of their country by fairies—that places these lovely beings on the top of the Himalayas and makes them visit, and ally themselves to, mankind. The fairies too are not all good, as the Yatsh are not all bad. They destroy the man who seeks to surprise their secrets, although, perhaps, they condone the offence by making him live for ever after in fairy-land. Indeed, the more we look into the national life of the Dards the less do we find it tinctured by Muhammadan distaste of compromise. Outwardly their customs may conform to that ceremonial, but when they make death an opportunity for jokes and amusement we cannot refuse attention to the circumstance by merely explaining it away on the ground that they are savages. I have noticed the prevalence of caste among them, how proud they are of their Shîn descent, how little (with the exception of the more devout Chilâsis) they draw upon Scripture for their personal names, how they honour women and how they like the dog, an animal deemed unclean by other Muhammadans. The Dards had no hesitation in eating with me, but I should not be surprised to hear that they did not do so when Mr. Hayward visited them, for the Hinduized Mussulman servants that one takes on tours might have availed themselves of their supposed superior knowledge of the faith to inform the natives that they were making an improper concession to an infidel. A good many Dards, however, have the impression that the English are Mussulmans—a belief that would not deter them from killing or robbing a European traveller in some districts, if he had anything "worth taking." Gouhar-Amán [called "Gôrmán" by the people] of Yasin used to say that as the Koran, the word of God, was sold, there could be no objection to sell an expounder of the word of God, a Mulla, who unfortunately fell into his hands. I did not meet any real Shîn who was a Mulla,* but I have no doubt that, especially in

* I have already related that a foreign Mulla had found his way to Gilgit, and that the people, desirous that so holy a man should not leave

41 AV3 Dard AV3
Chitral

This estimate does not include the tributary tribe of Bushgali Kaffirs, or the subjects of the Yassin ruler, who is independent of Chitral, though the close relationship existing between the two families causes them to act in concert in all important matters. Both rulers pay a tribute of horses, hawks, and hounds to the Maharajah of Cashmere, to whom they acknowledge allegiance. Iron, copper, and orpiment of superior quality are found in Kashkar. Cotton carpets of an inferior kind, which have the peculiarity of being alike on both sides, are made for local use, and Chitral daggers and sword-hilts are in great demand in the neighbouring valleys. Amongst the people of Kashkar, Chitral is constantly pronounced and written Chitrar and Chitlal. This seems to arise from a curious inability[1] to distinguish between the letters *r* and *l*; in this way Koonur becomes Koonul, Punjkorah Punjkolah, the Lowri Pass the Rowli Pass, &c.

The population of Chitral is a curious and intricate ethnological puzzle. The largest section of the population are the Kho, who inhabit the whole of Kashkar Bala, the Ludkho and Arkari Valleys, and the main valley down to Darosh, and have penetrated across the watershed as far as Chashi. They call the country also Kho, dividing it into different sections under the names *Toori*kho (*Upper*), *Mool*kho (*Middle*), and *Lud*kho (*Great*), and their language Khowar. This is the language given by Dr. Leitner under the name of Arnyia, by which it is known to the Shins of Gilgit, who style the Yassin portion of Kashkar Bala Arinah. In sound it is soft and musical.[2] Unlike the Shins and other cognate tribes hitherto mentioned, the existence of these people in the localities in which we now find them appears to date from so far back as virtually to entitle them to be considered aboriginal. They may have once occupied a wider extent of country, but there is no trace of their having conquered or displaced any previous race of inhabitants. They were undoubtedly the owners of the country until a period not very remote, and they have succeeded in imposing their language on the present ruling class, who style them contemptuously "Fakir Mushkin." They are divided into classes of which a few are Toryié, Shiré, Darkhané, and Shohané. No caste distinctions exist among them.

Above them is a large privileged class, which is divided into clans like the Afghan Khels, and spread all over Kashkar.

[1] The *l* and *r* are scarcely distinguishable in the old Persian.—*Rawlinson's Ancient Monarchies*, Vol. III. p. 110.

[2] See Appendix H.

Biddulph G-3 (1873-1878) 1880 ~~AVJ Afghanistan AVJ~~
4: AVJ Dard AVJ Chitral

First in rank comes the Sangallié, Rezaé, Mahomed Begé, and Khush Amadé, who are descended from the common ancestor and founder of the Katooré and Khushwakté families. They are generally spoken of as Shah Sangallié.[1] Next to them come the Zundré, or Ronos, of whom mention has already been made.[2] They are most numerous about Oyon. Below the Zundré comes a large class styled "Ashimadek." Their clans are—

| | |
|---|---|
| Kashé. | Shaooké. |
| Atambegé. | Baiyeké. |
| Dushmunné. | Shighnié. |
| Ludimé. | Borshintek. |
| Bairambegé. | Majé. |
| Koshialbegé. | Jikané. |

The term Ashimadek, which signifies "food-givers," is applied to all of these on account of their being bound to supply the ruler and his retainers with food to the extent of eight sheep and eight kherwars of wheat from each house, whenever he passes through their villages. This is the only revenue of any description paid by them to the ruler, and those living in the more remote villages often remain for several years exempt from even this impost. The Shah Sangallié and Zundré are altogether exempt,—the former on account of their relationship to the present ruling family, and the latter because they are descended from a former race of rulers.

Among the Ashimadek, the Shighnié and Kashé claim respectively to come from Shighnan and Kash (Kishm?), a village close to Jirm, in Badakhshan. The names of many of the others show that they trace their descent from some individual, and there appears little doubt that they are the descendants of Tajiks from Badakhshan, who settled in Chitral at the time of the establishment of the present ruling dynasty, about the beginning of the seventeenth century, whose founder they probably accompanied and aided. Their present position is not, however, due to conquest, but they appear to have gradually grown up as a large privileged class. They speak the Khowar language and form the most warlike part of the population.

In the upper part of the Ludkho Valley, above Drooshp, is a race who occupy the same position with regard to the Ashimadek as the Kho do in Kashkar Bala, and who are also styled

364 A. H. Francke—*A language map of West Tibet with notes.* [No. 4.

T 197 194 In the Shayog-valley a development from type No. I to type No. IV can be observed which is very similar to that of the Indus valley.

The dialect of Zangskhar is related to type No. I; only the north-western districts show traces of type No. III.

The dialect of Rubshu is of an entirely different character altogether; it is closely related to the Central Tibetan dialects and exhibits the Tibetan tone system in its full development (compare my article on Amundsen's and the native grammarian's tone system in Z. D. M. G., Vol. 57, p. 285.) But the tone system has not yet become quite extinct in the Indus valley, although the bad Tibetan of Indian and Yarkandi traders has done much harm to it.

*Conclusion*: From the above tables of dialects it becomes evident that the farther we advance towards north-west, down the Indus-valley, the more the pronunciation of the dialects is in agreement with the written language; or, in other words, the north-western dialects represent a more archaic state of the Tibetan language.

T D 174 *The Dard question of West-Tibet.* Other researches have shown me that the north-western portions of Ladakh, at least as far up as *Saspola* in the Indus-valley, were once peopled by Dard tribes which have been tibetanized only recently. The reasons are: (1) the historical recollections of the people. (2) The Dard names of many *pha-spun*ships. (3) Remnants of the Dard language in those districts. (4) Dard customs in those districts.

Thus it can be shown, for instance, that Khalatse (Khalsi or Khalchi of the maps) used to be a Dard village in ancient times, although now-a-days at first sight it appears to be thoroughly Tibetan.

(1) According to the historical recollections of its present inhabitants Khalatse used to be a Dard colony from Gilgit.

T D 174 614 (2) The *pha-spun*ships. *Pha-spun* means 'father-brothers.' The members of a *pha-spun*ship have to burn the dead in their own *pha-spun*ship. My explanation of this is the following: In the ancient times the near relatives (father, brothers, etc.) had to bury the dead. All the members of a *pha-spun*ship of the present day go back to one and the same family of ancient times.

The *pha-spun*ships of Khalatse are the following:

(*a*) Brushalpa: It comprises the following six families: Khrolepa, rGyamthsopa, Sherabpa, Ralupa, Gongmapa, bKrashis bsamphelpa.

(*b*) Pakorapa: It comprises the following nine families: Sabipa sNumpa, Bhandrepa, rKangchagpa, Grong dponpa, Dragchospa, Grambucanpa, Byabapa, rKyallupa.

NOTE.—The Kirghiz are described by the Chilâsis as having flat faces and small noses and are supposed to be very white and beautiful, to be Nomads and to feed on milk, butter and mutton.

The Chilâsis call the people between Hunza and the Pamêr [our Pamir] on the Yarkand road = Gójál.

There are also other Gojáls under a Raja of Gojál on the Badakhshán road.

The Chílâsis call the Siah Pôsh Kâfirs = Bashgalí (Bashgal is the name of the country inhabited by this people who enjoy the very worst reputation for cruelty). They are supposed to kill every traveller that comes within their reach and to cut his nose or ear off as a trophy.*

The Chilâsis were originally four tribes; viz.:

The Bagoté of Buner.
The Kané of Takk.
The Boté of the Chilâs fort.
The Matshuké of the Matshukó fort.

The Boté and the Matshuké fought. The latter were defeated, and are said to have fled into Astor and Little Tibet territory.

A Foreigner is called "ósho."

Fellow-countrymen are called "malêki."

The stature of the Dards is generally slender and wiry and well suited to the life of a mountaineer. They are now gradually adopting Indian clothes, and whilst this will displace their own rather picturesque dress and strong, though rough, indigenous manufacture, it may also render them less manly. They are fairer than the people of the plains (the women of Yasin being particularly beautiful and almost reminding one of European women), but on the frontier they are rather mixed—the Chilâsis with the

* The two Kafirs in my service in 1866, one of whom was a Bashgali, seemed inoffensive young men. They admitted drinking a portion of the blood of a killed enemy or eating a bit of his heart, but I fancy this practice proceeds more from bravado than appetite. In "Davies' Trade Report" I find the following Note to Appendix XXX., page CCCLXII. "The ruler of Chitrál is in the habit of enslaving all persons from the tribes of Kalásh, Dangini and Bashghali, idolaters living in the Chitrál territory."

101 from the Burzil Pass to the Sharot village, a distance of 143 miles from south-east to-
131 wards north-west with its small surrounding valleys of Kamri, Tarsing, Parising, Sai, Haramosh and Bagrot; and along the Hunza river from Gilgit to Guech, with its adjacent valley of Naltar, a distance of 24 miles.

125 The country was first conquered in 1846 by the troops of His Highness the Maha-
631 raja of Kashmir under Syed Nathe Shah from Gauhar Aman, the Khushwakti Chief of Yasin, who had usurped the district from Sikander Khan and his brother Karim Khan, the rightful rulers of Gilgit. Karim Khan had escaped to Kashmir to ask for help, and returned with a large force under Syed Nathe Shah. Hearing the news of their approach, Gauhar-Aman fled to Yasin, leaving the country to be possessed by them without bloodshed. The country was restored to the rightful rulers, but some later events lead the Maharaja of Kashmir to keep the district under the direct jurisdiction of
[648] his own officials. The British Agency was established in 1889. The Political Agent, an officer of the Government of India, and the Wazir-i-Wazarat, an official of His Highness the Maharaja of Kashmir, have their headquarters at Gilgit proper. The latter has jurisdiction over the district only, while the former, in addition to his control over Gilgit, has political relations with the surrounding states of Hunza, Nagir, Punial, Ishkuman, Yasin, Ghizr and the Chilas republic, which all acknowledge the surerainty of the Kashmir Durbar. Gilgit is garrisoned by Kashmir Imperial Service Troops under a General Officer Commanding appointed by His Highness the Maharaja of Kashmir. The troops are relieved every two years.

491 A good pony road runs between Srisagar, Gilgit, Chitral and Hunza, remaining
205 open for traffic from June to October. It is closed from November to May, owing to the
206 heavy fall of snow on the Tragbal (Rajdagan) and the Burzil passes. However, the ordinary letter post is carried across the passes at favourable opportunities by local runners. Kashmir, Gilgit and Chitral are also connected by a telegraph line.

162 The present inhabitants of the country are all Muhammadans, chiefly of the Shia
795 sect, with a few Sunnis and Maulais. The principal tribes are Ronos, Shins, Yeshkuns
619 Kashmiris, Kramins, Dums and Gujars. They are again divided into several families
101 called after the names of distinguished ancestors. I am of the opinion that the
[174] Kramins are the original inhabitants of Gilgit, while the Yeshkuns, Shins and Ronos came afterwards in the above order and conquered the former inhabitants.

101 The Yeshkuns are probably an Aryan race, having arrived from Central Asia *viâ*
619 the Hindu Kush. Being stronger than the aborigines, they succeeded in conquering
523 these districts, made the original inhabitants their servants and named them "Kramins" (attendants).

101 The Shins profess to be the descendants of Arabs. They are probably Jews, and
[795] have come *viâ* Afghanistan from either Persia or Turkey. They prefer a style of self-
619 government, and endeavour wherever they settle to continue this form of their original government. It is of interest to note, however, that before embracing Islam the Shins, in this resembling the Hindus, disliked meat, milk or even *ghi* made from cow's milk, disapproved of the keeping of fowls and regarded even a fish diet with aversion. If a Shin had taken two wives, one of his own tribe and the other of the Yeshkun tribe, the children

of the former would be Shins and those of the latter would be Yeshkuns. This shows that their family system takes the mother into consideration. 101 619

The Ronos are said to have come from Rajauri, a district in Kashmir, where they belonged to a ruling family of the district.

The Gujars have recently come to these parts and speak the same dialect as in India. [197]

Besides these, there is another family of the former Muhammadan rulers of the country called "Ra." They originally came from Skardu about three centuries ago, and professed to be the descendants of Alexander the Great. The inhabitants considered [563] them to have been born of a fairy, and this idea leads the people to think that their rulers [174] were of a superior race touching on the divine, and that therefore it was necessary to honour and obey them.

The people live very simply, and their requirements are few. Each one is himself 511 a cultivator, a weaver, a carpenter, etc. Their dress, which they weave from the 291 wool of sheep and ibex, includes the *shuka* (cloak), woollen pantaloons, a woollen shirt and 286 a rolled cap. The women wear loose trousers, a shirt and a cap, with a few silver 463 ornaments and shell brooches. They wear on their feet a kind of leather socks called *pukkhe*, made either of ibex skin or of cow hide. For hill journeys they wrap their feet in pieces of goat or ibex skin which they call *thanti*.

The chief amusement of the people is polo, which they play with the utmost zest, and 526 shooting markhor, ibex and oorial with their matchlocks for the sake of meat, skin and 224 wool. 411

The former language of the people was Sanskrit, but the dialect now spoken is 197 generally called "Shina," though the Chitralis call it "Dangrik." It contains many Sanskrit as well as Persian words.

Such are the tribes to whom the folklore and customs appertain, but they have lived 171 together for such a long period under the Buddhist and Muhammadan rulers that it is now 791 difficult to know which of the ceremonies was originally observed by each separate tribe.

## I.*

### The Festival of "Shino Bascoo."

The advent of spring in the Gilgit country brings with it the quaint festival of 776 "Shino Bascoo," which corresponds to the English May-day. It lasts about fifteen days, 252 beginning in the middle of February and ending about the beginning of March. As indicating that the long cold winter is at an end with all its accompanying hardships, and that spring is nigh, bringing with it warmth and life and a renewal of the scanty stock of provisions which has run dangerously low during the past months, the festival is hailed with much rejoicing by the simple Gilgit folk. In order to observe this feast rightly, the people, twelve days before its commencement, put ten seers of wheat into a wooden basin. They fill this up with water and keep the mixture wet for five days, after which they take it out and place it in a small pit dug for the purpose in the ground, over which stones are heaped. The wheat is left in this pit for four days, after which the grain is sent

*[See also p. 108, para. 104.]

AV3 Dard AV3

from Ghizr to Ushoo, where Khowar is in consequence beginning to be spoken. The Bushkarik proper are divided into three clans, the Moolanor, Kootchkhor, and Joghior. They say that they have been Mussulmans for nine generations, and the peculiar customs still common among the Shins do not exist among them. Till somewhat recently they used to expose their dead in coffins on the tops of hills. The Bushkar dialect[1] approaches more nearly to modern Punjabi than any other of the Dard languages; but in some respects seems to show some affinity to the dialects of the Siah Posh.

The Bushkarik intermarry with the Torwalik, but not with their other neighbours. Forts are not in use among them, but their villages are built in a peculiar fashion for safety. A hill side with a suitable slope is selected, against which the houses are built in a succession of terraces rising one above the other, so that the flat roof of each house is on a level with the floor of the one above it. The whole are connected by an outer wall, within the confines of which is a labyrinth of passages, and the site is often selected so that a stream of water runs through the mass of buildings. All the houses are built of wood, and those on the outside of the village have no parapets. Bushkar is said to be very thickly wooded, and the trees are said to grow to an unusual size.

tutelary deity of Chilas whose worship was practised in former times. 173

The system of government is the same in all these small republics, and differs somewhat from what obtains among the Afghans. Each village, according to its size, has a certain number of Jushteros, or elders, who are appointed according to the general estimation in which they are held for bravery, liberality, and eloquence. They receive no benefit from their office, and are more the servants than the leaders of those they represent. Each village manages its own affairs irrespective of its neighbours, and it is in the superintendence of these details that the Jushteros are mostly occupied. All matters affecting the village are discussed in public. A meeting for this purpose is called *Sigar*. At the Sigas all who please join in the discussion, the Jushteros apparently encouraging individuals to give their advice, and when the general opinion has thus been elicited, the Jushteros announce the decision they have formed. At a Sigas of several villages, a single Jushtero is appointed by each village at a meeting previously held. At the close of the general discussion, which is open as before, a loud whistle is given, after which none but the representative Jushteros are allowed to speak. If war with a neighbouring valley is determined on, the Jushteros settle the way in which those they represent shall take part in it; but beyond their personal influence they have little voice in determining the general policy to be pursued. It is for them to decide who shall stay at home and who shall take the field, and in the innumerable disputes about land their decision is respected; but should the dispute involve men of another village, they are expected to do their best for their own townsmen. In more serious disputes the whole valley makes common cause against its neighbours; but this does not prevent all the communities combining, when threatened by an external foe. Criminal offences are not dealt with by the Jushteros, but by the Moollahs, who profess to administer the law according to the Sharyat; this is, however, set aside in many instances in favour of ancient custom, which is very strong in some communities, and the prompt redress of grievances depends greatly on the personal influence of the aggrieved. Murder is regarded as a personal matter to be avenged by the nearest relative; but should the case be of a very wanton nature, and the family of the murdered individual have sufficient influence with the community, reparation is enforced by general consent. Blood feuds are not permitted to last for an indefinite period, as

631 622 623 622 [721] 692 793 727 000

4 A43 Dard A43 Chitral

produce of any mines. His land is exempt from taxes, and ten families are assigned to him as labourers. He also receives a fee of one tilla, equal to 10 shillings, on each marriage. Next to the Atalik is the Charwélo, who has charge of a group of villages. The country being much intersected by side valleys branching out of the main valley, the whole population of each of these is generally under one Charwélo. He is directly responsible to the Atalik of his district, and has four families allotted to him for service. His "ishpin" is eight of each kind of produce. With a few exceptions the office is confined to the Ashimadek class.

Below the Charwélo is the Baramoosh, or head of the village. He is particularly charged with the maintenance of roads, forts, and bridges, for which he receives a yearly "ishpin" of 10 sheep, 10 measures of butter, 10 measures of wheat, and a proportion of the produce of any mines with which he is connected. His land also is free from payment of taxes, and he has the right of releasing ten men of his village from military service.

To assist him he has an attendant "Charbon," whose duties are the same as those of the Zeytoo in Gilgit. He receives a woollen robe and five sheep yearly, and his land is exempt from taxation.

In Yassin territory, both on the Chitral and Wourshigoom sides, the system and titles of officials are the same as in Chitral, showing, perhaps more strongly, the mixture of two systems.

About the person of the Mihter are five Wuzeers, who, with the exception of the Chief Wuzeer, have no fixed functions. The Chief Wuzeer is also styled Diwanbegi, and is the Mihter's slave agent. The practice of selling their own subjects has gained the rulers of Chitral and Yassin an unenviable notoriety, even among people who have not yet learned to regard slavery with the detestation in which it is held in Europe. The beauty of the Chitral (Kho) women has long been proverbial in Peshawur, Cabul, and Badakhshan, and female slaves still form one of the most acceptable [illegible] ents given by Chitral rulers to neighbouring princes. Chitral, therefore, has always been a favourite resort for slave-dealers from neighbouring countries, and a system grew up under which the rulers of Kashkar came to regard the sale of their subjects as a legitimate and ordinary way of eking out a scanty revenue. All who in any way fell under the displeasure of the Mihter, were consigned to the Diwanbegi, and his agents were always on the look-out for victims whose conduct

might infer that Gurjars, or have been, of the Shin caste, from the fact that all those customs concerning the cow, which we are to be characteristic of that caste, are held by these Buddhist Dards to an extreme degree.

It is curious to trace how in some respects they keep to the customs of the race they sprang from, and how in others they have adopted the customs of the Buddhists. There seems to be an instance of the former case in that their headmen of villages (at all events in the Hunza Valley) are elected for three years only, and even within that time are sometimes changed; this is certainly a trace of the republican system, of which something will be said in Chapter XX. On the other hand, we see them following the Buddhist Ladákhis in the practice of polyandry, to which they are completely given; among these Buddhist Dards a woman has sometimes as many as five husbands.

Their religion, I think, lies very upon them; they are not so attentive to its ordinances as the Ladákhis are; and I do not think that any of their young men are trained up to be Lámas. Their dead they burn, and the bones of them they store away in holes in the cliff, closing up them with stones.

## Brown Races.

Leaving now the Buddhist Dards, we will note a few isolated facts concerning the race generally.

It has been seen from the map that the Dards have spread, driven by want, or by oppression, or by disturbances, from their own countries across certain ridges into valleys that were occupied by other races; in these they often live side by side with these other races—as with the Kashmiris and the Baltis—sometimes in villages separate, sometimes occupying part of the same village.

At Drás the Dards nearly equal the Baltis; the two do not intermarry. At Dáchu also the two races are about half and half, but here they have intermarried, and the distinctiveness has been broken up. At Dort and at Sargún they are of those who do not drink cow's milk; these must be of the Shin caste.

G Stacks G-3 (1888-92) 1895 A71 Reading

Dard A43

which the juice had poured, were still in their places.

For several miles the road runs up the narrow gulley between what was a lateral moraine and the hillside, not a drop of water is passed, not a tree or glimpse of vegetation is to be seen, not a sound is heard save the ring of one's horse's hoofs on the burning rock, for the stream forty a thousand feet below; not a sign of life is there, but perhaps the passing shadow of an eagle. I had been riding slowly on, lost in a reverie, my horse picking his own way, when there came a sudden change. There was a sharp turn in the path which led into a deep ravine cut by a side stream, and then rose in sharp zigzags to gain the crest of the opposite bank. The moment I turned the corner a shot rang out, the edge of the cliff "sprung to life with armed men," and a rapid *feu de joie* rippled along the crest above me. Arrived at the top I was met by the village elders, who crowned with the smoke from a platter of burning cedar twigs, and presented with a flat unleavened cake soaked in clarified butter, the local variant for bread and salt. As I broke a piece and ate it, I noticed that the bread itself was apparently consecrated, sprays of the sacred cedar lying on the dish on which it was carried.

I must now [illegible] making friends with the people, and visiting every part of their wonderful town, which was, as usual, a monument of patient skill. To carry water channels across the face of perpendicular conglomerate cliffs cut out of moraine by the action of a stream which rages below, sometimes impinging on one bank, sometimes on the other, is no easy

[illegible] the Cagayet valley — Analyst

for many years a slave in Chilás, as Ahmad Shah reports). The Gabriális were converted to Muhammadanism by a saint named *Bábá*, whose shrine is in Gabriál, and is one of the most frequented places by pilgrims. The Gabriális say that this saint lived six or seven generations ago. Mir Abdulla (who is really of Afghán extraction, but now lives in Gabriál,) says that the Gabriális were converted to Islám about 150 years ago. Lately, this religion has made great progress among the people of Kandiá generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attached to them, which are generally crowded by students from every caste. In Gabriál, the Mullahs or priests are, for the most part, of the Shin caste, but men of every caste are zealous in giving education to their sons. Their education is limited to Muhammadan law (of the Hanifite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and caligraphy, that great Oriental art; so little, indeed, that Hamfullah and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the caligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Punjab.

The most accomplished scholar in Kandiá is the high priest and chief of Patan, named Hazrat Ali, who is a Shin.

The people generally are peaceful, and have a fair complexion and erect bearing. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the usual punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (*ewáin*), but is seldom found among the common people.

GOVERNMENT.—Every village or town is governed by a Council of elders, chosen from among every tribe or "taifa." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shins or Yashkun. No Kamin can be elected an elder, though he may become a Mulla, but a Mulla-kamin also cannot be admitted to the Council.

The reigning Council of Gabriál consists of 12 persons, of whom 9 are Shins and 3 Yashkuns. Faiziá Khán is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influential of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose operation is limited to inter-tribal feuds.

CUSTOMS AND MANNERS.—Hockey on horseback, which is called "ughlik" in Gabriál, is played on holidays; and the place where they meet for the sport is called "ughlik-kuro-jha."

Guns are called "sáli" in Gabriál, and are manufactured in the town.

Dancing is not practised generally, as in the other Shin countries. Only "Doms" dance and sing, as this is their profession; they play on the "surái" (pipe), rabáb (harp), and dhapdu (drum).

The "purdá" system, or "veiling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

628 Blood feuds are not permitted to last for an indefinite period as amongst the Afghans, and after a time the parties are brought
674 together and made to swear peace on the Koran. The crime of murder is rare, and the readiness to spill blood on slight
● 623 occasions so noticeable among the Afghans is unknown. No public measure can be carried out except by general agreement, the details being left for the Jushteros to arrange.

178 The communities in the lower part of Shinkari, being more exposed to Afghan influence, and having been longer converted to Mahommedanism, have lost many of their characteristic customs; but the remoter valleys of Chilas, Gor, Darel, and in a lesser degree Tangir, are probably little changed from
834 what they were two hundred years ago. A very singular custom exists in these valleys, by which the sexes are kept strictly apart during the summer, from May till September. The custom is apparently very ancient, and any attempt to evade it is punished by fine; the old women of the family being specially charged with the responsibility of seeing that
165 the rule is observed. Great difficulty is said to be experienced in rearing children in Chilas. The great mortality among them is ascribed to the climate, but it is more probably due to too close intermarriage.

462 Agriculture is left entirely to the women, with the exception of ploughing, which demands more strength than they can afford. In summer the men spin wool and attend to their flocks on the mountain pastures; but in winter the duty of caring for the herds is relegated to the women.

567 Slavery is a recognised institution in all the Shinkari republics—a matter in which they contrast unfavourably with the Afghans and Neemchas of the Indus Valley, among whom it is unknown. Prisoners taken in war, and the children born of slave parents, form the servile class.

131 A few miles below Kolī is Batera; beyond that Dārdistān
101 ends and the Pathān country, where the Pashtū language prevails, begins. The Kolī people are Dārds; they know both the Dārd and Pashtū languages.

642 Many places have been put down as republics; what I have
646 been able to find out about the way of their government will apply to them generally. There is a general assembly of the people, called Sigās, which decides on almost every matter.
[562] It is called together by beat of drum; men, old and young, attend it, but not women; none who have the right to attend are allowed to be absent, under pain of fine. In this assembly the rights of a minority are carefully guarded. I have been told that if even one man, supposing him to be of any consideration, object to a policy, it cannot be carried out; the assembly is adjourned for a few days, and in the interval effort is made either to convince the objector or to modify the proposal; then meeting, they may perhaps have again to adjourn; but in time something or other is sure to be arranged.

643 The executive consists of a few men, may be five or six, chosen by the people in their assembly. These are called *Joshtero* in the Dārd language. They are chosen for their wisdom; but here as elsewhere wealth seems to have influence to convince the people of the wisdom of those who possess it. The office of Joshtero is not hereditary; the Joshteros must be in general accord with the assembly else they will be displaced. The Joshteros deliberate together on a policy, but cannot carry it out without the consent of the assembly of the people, which they themselves call
[692] together. The Joshteros are also arbitrators to settle disputes of water and wood, and what not.

623 Where the valley is large, like, for instance, Dārel, each village has its own Sigās, or assembly, which settles the particular affairs of that village, while for matters of more general policy the Joshteros of all the villages first meet, and make among themselves a plan to propose, and then a general parliament is called; that is, the people themselves of all the villages together meet to hear and decide. If all of the villages cannot agree on one policy, then

D 623

each is free to pursue its own without severing the federal bond. Thus I have heard that some villages have joined with one power—have agreed to pay tribute—while others of the same valley have done the same to the rival power. But there must be some limit to this. They could not, of course, actively join on opposite sides.

D 642 626

My knowledge of the working of these institutions is very incomplete; on the whole I incline to think that with the republics there is less of wars of ambition than with those valleys that are governed by an hereditary ruler, less of bloodshed on a large scale, such as is brought about by or for the dispossession of dynasties. But I do not think that the internal state is so secure and quiet as under a Raja; in the republics personal independence and liberty of action are so much the rule, that no one interferes to prevent even violence.

D 567

In the Table given at p. 456, the last column shows the custom of the various states with respect to slavery. There are three categories. The first includes Gilgit, Astor, Nagar, &c.; in these places not only is slavery unknown now that some of them are under the rule of the Maharaja of Kashmir, but, according to my information, it was not the custom before.

Another category includes the Republics; in these, slaves when captured in a foray are kept as servants, as we saw was the case in Chilás with those they brought away from Astor; but they are not used as a commodity to be bought and sold.

B 567

Thirdly, in the Rajaships of Hunza, Yásin, and Chitrál, slaves are openly bought and sold; the Rajas themselves are the chief dealers—that is to say, they are sellers—while merchants, generally from Badakhshán, are the buyers. The greater expense of sustaining these governments, as compared with the republics has probably been the cause of the Rajas entering on this trade, in which they will sell, in default of others, their own subjects even. Many are the people, and of races various—Dárd and Dográ, Panjábi and Pathán—whom the fortune of war has allowed to fall into the hands of one or other of these rulers, and who, having been bartered by their avaricious captor, are passing their lives as exiles and slaves in Badakhshán or in Turkistán.

Dard AV3

At evening, the people, who have been occupied in their fields during the day, all come with their cattle within the walls and the gates are closed; all night sentries watch on the towers, and every half hour the "All's well" resounds through the stillness, though it may get less frequent towards the sleepy hours of morning. At dawn an armed party go forth and make the round of all places that might possibly harbour an enemy, and not until their search has proved that the village is clear do others issue for their ordinary avocations. At the time I marched up the valley the Maharaja's relations with the Yâsîn chief were in a doubtful state, on account of the murder of Mr. Hayward, for which we were trying to get reparation; these precautions, therefore, may have been more than usually attended to. I did not myself lodge within the forts, but, having an escort of 200 men from Gilgit, we were able to keep such a look-out as effectually to prevent any surprise.

The highest point in the valley that I went to was Gâkûj. This is the last village in Puniâl; it is the farthest in this north-west corner to which the Maharaja's power or influence extends—and here it is the farthest to which the influence of the Government of India reaches. Gâkûj is, by my observations, 6940 feet above the sea; it is on a knob of rock behind which is a sloping plain, all this being 700 feet above the river. It is a cold windy place; snow falls there in winter to a depth varying from 6 inches to 1 foot 6 inches, and it stays three months; here only one crop is grown, while near the level of the river, 600 feet down, two crops are got from the land.

There is a strong fort at Gâkûj, containing within it a spring of water; the garrison is composed of the villagers—about fifty fighting-men. Part of the plain is cultivated, but beyond that part stretches a narrow stony plain backed by mountains 3000 feet or so high, their sides dotted with pencil-cedar bushes with pine-forest above; this strip of plain extends some eight miles up the valley, at which distance a spur from the mountains comes down and juts against the river, making a natural barrier. This spot, called Hûpar, is the extreme point of the Maharaja's territory;

487

described in the article on KASHMÍR. By that route Gilgit lies at a distance of 390 miles from the present railway base at Rāwalpindi. An alternative line has been opened over the Babusar pass, which brings Gilgit within 250 miles of the railway at Hassan Abdāl. This line, besides being shorter, has the advantage of crossing only one snow pass, instead of two, or practically three, if the winter snow at Murree be taken into consideration. The routes to the north are mere tracks, when the military roads connecting Gilgit with the outposts at Gupis and Hunza have been passed.

205 648 Post and telegraph offices.

There is a daily postal service with India by the Burzil pass and Kashmír, and the telegraph line follows the same route. Both services work well in spite of heavy snow and destr ctive avalanches, and are maintained by the Government of India. There is a weekly postal service from Gilgit to Chilās and Gupis, and a fortnightly post between Gilgit and Kashgar via the Kilik pass in the summer, and the Mintaka in the winter.

643 704 Administration, &c.

The Gilgit Wazārat is in charge of a Wazír Wazārat. Crime is slight; there is no jail and no police organization. Police duties are carried out by the levies and a few soldiers of the Kashmír regular troops. There is little litigation; and the chief business of the Wazír is the provision of supplies to the garrison at Gilgit, now effected by an excellent system of transport from Kashmír. In 1891–2, at the time of the Hunza-Nagar expedition, the garrison had a force of 2,451; in 1895, when the Chitrāl disturbances broke out, it consisted of 3,373; and the present garrison numbers 1,887, including a mountain battery, two infantry Imperial Service regiments, and Kashmír sappers and miners. A school is maintained at Gilgit.

651 Land revenue.

A land revenue settlement of Astor and Gilgit has been made. It was found impossible to introduce a purely cash assessment, owing to the State's requirements in grain; but many inequalities and abuses were removed, and, on the whole, the condition of the villagers is satisfactory.

631 Political relations.

A British Political Agent resides at Gilgit. He exercises some degree of supervision over the Wazír of the Kashmír State, and is directly responsible to the Government of India for the administration of the outlying districts or petty States of Hunza-Nagar, Ashkuman, Yāsín, and Ghizar, the little republic of Chilās, and also for relations with Tangír and Darel, over which valleys the Puniāl Rās and the Mehtarjaos of Yāsín have partially acknowledged claims. These States acknowledge the suzerainty of Kashmír, but form no part of its territory. They pay an annual tribute to the Darbār-

such as traders and travellers, were put under surveillance. 241 The next morning a party was sent round by the Ra to bring every man in the place inside the fort. Some would make a pretence of hiding, but in time all were hunted out and brought in. The women of the place had meanwhile assembled and formed a double line from the inner castle to the outer gate of the fort, each being provided with a stout willow stick. When all was ready, the Ra rode out, as if to leave the fort. On arriving at the head of the line, a cry was raised for a present, which he promptly complied with and then rode on between the lines. All the men were then 241 bound to follow him, one by one. The Wuzeers and mem- 626 bers of the Ra's family were allowed to ransom themselves like the Ra, but the rest had to run the gauntlet and get through as best they might. The women plied their sticks with hearty good will, and unpopular members of society came off badly.

On the following day the men again assembled in the fort, and formed themselves into two parties, one under the Ra inside the castle, and the other under the Wuzeer in the outer fort. Both sides were provided with wood-ashes and dust which had previously been collected for the occasion, and a sham fight ensued. The Wuzeer's party tried to storm the castle, while the Ra's men showered earth and ashes on them. Sometimes the assailants were successful, and the Ra was made a prisoner in his own castle. After an hour or two he consented to pay a ransom, which was fixed at a bullock and three sheep for the victors, and a robe of honour for their leader. If, on the contrary, the Wuzeer's party were defeated, every man had to give a present to the Ra. The parts of both days not occupied in the performances were spent in feasting, polo, dancing, and consulting the Dainyals.

[177] This curious festival, which was said to mark the time for pruning vines and the first budding of the apricot trees, was discontinued when the advent of Sikh troops introduced a stricter observance of Mahommedan forms,[1] and forced women to remain in greater seclusion. A trace of it still exists in Ponyal, where the women are privileged on that day to address abusive remarks, in jest, to the Ra when he first comes out of his house. The whole festival appears to show some connection with that of the Holi, which takes place in India about the same time.

[1] The first Governor appointed under the Sikhs was a Mahommedan, who did much towards introducing a more orthodox type of the faith.

When the water arrived, an old man pronounced a long incantation over the gourd containing it, then handed it to the woman, who, after drinking a little of it, began again her weary wanderings, sprinkling the water as she went round the circle. And so it went on, the Dainyal occasionally chewing a piece of the sacred cedar as an additional help, until all the subjects she had learnt up, or thought of interest to her hearers, were exhausted. She prophesied various things in our favour, and gave vent to one or two shrewd sayings about local abuses, which seemed to please her audience immensely. No doubt in the old days public opinion could often only reach a chief in this manner, and full advantage seems to have been occasionally taken of the opportunity, which the performance of the Dainyal afforded, of enlightening the mind of an unpopular ruler. Finally, when it was evident to all that the source of inspiration had for the day run dry, a couple of men came into the ring, and one of them stooping down and giving the Dainyal a back, she took a run and flying leap on to it, and was so gracefully carried out of the circle. A few minutes' rest in a neighbouring house, and a sprinkling of water, enabled her to come to. The whole performance was extremely curious, and there is no doubt whatever that the onlookers firmly believed in the woman being inspired.

The ceremony of initiation is unpleasant; we fortunately were spared seeing it. If any one, man or woman, claims to be inspired by the fairies, they have to go through the rites described above with a recognised Dainyal. At the end of the performance a goat is brought in and decapitated, and the novice

Even then they would never push an attack home, it is always an affair of a ring of stone breastworks drawn tighter and tighter round the invested body, of incessant fire and perhaps mining, never of a stern open assault such as Pathans would deliver. From the soldier's point of view they are certainly not first-class fighting men. Their rulers alone are bloodthirsty, and that really from the accident of birth and of religion. Even among them, though you might find instances of ruthless severity such as must accompany succession in a Mahomedan state, you but very rarely found the cruelty of the savage who delights in the torture of his victim. It was generally a case of a short sharp shrift. Among the people murders are very rare, and are almost invariably the result of a slip on the part of a lady. By their own laws the resulting punishment, if inflicted under certain circumstances, is perfectly lawful, so that it can scarcely be called murder.

D 726

D 181

D 627

The great difference between the Dard and the Pathan cannot be better illustrated than by the condition of Hunza and Nagar after our fighting there in the year 1891. Within a day of the last fight which decided the short campaign, officers could and did traverse the country unarmed: Conway's mountaineering party wandered all over it six months later without the semblance of an escort, and not one single shot was fired at us after the power of the tribesmen had been broken. They "took their licking," and bore no malice, and within a year, from the very men who had fought against us, I had organised local levies who were ready to fight on our side, who turned out without hesitation

B 727

when called on, and who did excellent work.

In Lenore (1900-01) 1050? AV3 Dard AV3

575 brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

576 It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

577 It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the fields at their work or at festive gatherings. Love declarations often take place on these occasions, but if any evil intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love." "pāk ishkiṣ." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objection to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl may be of a lower caste than the bridegroom. In Astor it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attain his point by threatening to live in the family of the bride and become an adopted son. A "Shin" of true race at Astor may live in concubinage with a girl of lower caste, but the

relatives of the girl if they discover the intrigue revenge the insult by murdering the paramour, who, however, does not lose caste by the alliance.

The bridegroom dances as well as his twelve companions. The girl ought not to be older than 15 years; but at 12 girls are generally engaged.*

The Balti custom of having merely a *claim to dowry* on the part of the woman—the prosecution of which claim so often depends on her satisfaction with her husband or the capacity of her relatives—is in spite of the intercourse of the Baltis with the Shin people never observed by the latter; not even by the Shin colonists of little Tibet who are called "Brokhpá."

When the bridegroom has to go for his bride to a distant village he is furnished with a bow. On arriving at his native place he crosses the breast of his bride with an arrow and then shoots it off. He generally shoots three arrows off in the direction of his home.

At Astór the custom is sometimes to fire guns as a sign of rejoicing. This is not done at Gilgit.

When the bridegroom fetches his bride on the second day to his own home, the girl is crying with the women of her household and the young man catches hold of her dress in front (at Gilgit by the hand) and leads her to the door. If the girl cannot get over embracing her people and crying with them quickly, the twelve men who have come along with the bridegroom (who in Astóri are called "hilalée" = bridegrooms and "garóni" in Gilgiti) sing the following song :—

INVITATION TO THE BRIDE.

4 Ar3 Dard Ar3 Pakistan

languages, who differ considerably amongst themselves. As, however, there is no one name which will properly apply to the peoples and countries in question, it will be perhaps convenient to retain the names of Dard and Dardistan when speaking collectively of the tribes in question and the countries they inhabit.

The first 50 miles of the Kohistan of the Indus Valley is inhabited by tribes of cognate race, who still speak a variety of dialects and languages. Their distribution seems to show that they represent tribes who formerly lived apart, but have been forced by circumstances into contiguity. In addition to their own languages, Pushtoo is universally spoken, and they present the appearance of a decadent race in process of absorption by one of greater vigour. The country is somewhat poorer and less fertile than that already described. Long intervals of barren sand intervene between the patches of cultivation, the villages are smaller, much cultivable land lies idle, and all agriculture is of a slovenly description. The men are small and clean-limbed, with dark complexions, quick eye and sharp features. Women are not secluded from the public gaze. Men shave their heads in a manner more suggestive of Hindoos, and many strange customs still linger amongst them, showing that Mahommedan fanaticism is not incompatible with ignorance of the Koran. In some of the more inaccessible villages idolatry can hardly yet be said to be extinct. Instead of the loose ample garments of the Pathan, the men wear tight-fitting clothes, like the natives of Hindustan.

Some 15 miles above the mouth of the Kanra-Ghorband Valley, on the right bank of the Indus, is the extensive but thinly-populated valley of Doobeyr, which extends nearly due north for a distance of about 40 miles. Five miles from the Indus the village of Ranooliyah, 200 houses, is reached; above this the habitations are scattered broadcast over the whole valley, instead of being collected into villages. The only village of any size is Jarg, 100 houses, 6 miles above Ranooliyah. From the head of the valley a road leads into the Swat Valley near Payeteh, and another into Kandia. The valley can furnish about 1,500 fighting men, and the ground, where cultivable, is said to yield excellent crops.

On the opposite bank of the Indus and above the mouth of the Doobeyr Valley are the neighbouring and rival communities of Koli and Palus, which are often spoken of as forming a single tribe. They were formerly close allies, but a feud, arising out of a dispute concerning some land to which

† [i.e. the country of the Pathans - Khaliq]

629 both lay claim, has existed between them for several years past. It is seldom that two or three months pass without a raid from one side or the other.

[Koli.] Koli proper consists of three villages—Shoinkot or Barkuli, 200 houses, Batangai, 200 houses, and Kirkot or Kowkuli, 100 houses.[1] In local feuds the inhabitants of the Kohistan villages on the left bank of the Indus, below Koli, side with 633 the people of Koli against Palas. Land is scarce in Koli, and a considerable number of the people are forced to support themselves by trade. A large settlement of Koli people exists in Gilgit, being favoured by certain privileges conferred on them by the Cashmere Government, in recognition of services performed in the wars which led to the establishment of the Dogras in that district. They carry on a large trade as pedlars between the Punjab and Gilgit, whence they occasionally find their way into Yasin, Chitral, and the Panjkorah Valley, where the ground is chiefly occupied by Kaka Khel traders from Peshawar. The Nowochas of the Alai, Nandiar, Pakli, and Agror Valleys make common cause with the people of Koli. On occasions of great emergency, Koli can furnish about 3,000 fighting men.

199 Within the Koli limits four dialects founded on Sanscrit 201 are spoken, in addition to Pushtoo. In the small village of 162 Batera, consisting of 120 houses, a language peculiar to this village only is spoken.[2] In Pitu, Shimkot, Mahein, and Jamrah, about 300 houses in all, the people speak a dialect known as Gowro,[3] and call themselves Gowari, or Gohari: they are sometimes also called Maheras, from their principal village. According to their traditions, they came originally from Khelang in Swat.

561 Scattered through the different villages are about 200 families, who are called Chilas by their neighbours, but Galos by themselves. They have a tradition that their home was originally in Bonyar, whence they emigrated to Swat to escape being forced to become Mussulmans. Being further persecuted, they resolved to stake their all on a battle, after which, if defeated, they would consent to embrace the religion of Islam. They were defeated, but a certain number of them, clinging to their old faith, migrated to the Indus Valley. This did not, however, save them from being forced later to become Mahommedans, but they no longer form a

[1] Many of the villagers in this part have a Pushtoo as well as a Shuhi name.
[2] This I have not yet succeeded in obtaining.
[3] See Appendix F.

amongst the Afghans, and after a time the parties are brought together and made to swear peace on the Koran. The crime of murder is rare, and the readiness to spill blood on slight occasions so noticeable among the Afghans is unknown. No public measure can be carried out except by general agreement, the details being left for the Justmens to arrange.

The communities in the lower part of Shinkáí, being more exposed to Afghan influence, and having been longer converted to Mahommedanism, have lost many of their characteristic customs; but the remoter valleys of Chilas, Gor, Darel, and in a lesser degree Tangir, are probably little changed from what they were two hundred years ago. A very singular custom exists in these valleys, by which the sexes are kept strictly apart during the summer, from May till September. The custom is apparently very ancient, and any attempt to evade it is punished by fine, the old women of the family being specially charged with the responsibility of seeing that the rule is observed. Great difficulty is said to be experienced in rearing children in Chilas. The great mortality among them is ascribed to the climate, but it is more probably due to too close intermarriage.

Agriculture is left entirely to the women, with the exception of ploughing, which demands more strength than they can afford. In summer the men spin wool and attend to their flocks on the mountain pastures, but in winter the duty of caring for the herds is relegated to the women.

Slavery is a recognised institution in all the Shinkáí republics—a matter in which they contrast unfavourably with the Afghans and Nuristánis of the Indus Valley, among whom it is unknown. Prisoners taken in war, and the children born of slave parents, form the servile class.

CONFIDENTIAL

from the Darcil Pass to the Shawar village, a distance of 141 miles from south-east to north-north-west with its small surrounding valleys of Kamri, Tarring, Parkang, Sai, Harsamosh and Bagrot; and along the Hunza river from Gilgit to Gaschi, with its adjacent valley of Nalter, a distance of 29 miles.

The country was first conquered in 1846 by the troops of His Highness the Maharaja of Kashmir under Syed Nadir Shah from Gauhar Aman, the Khushwakt Chief of Yasin, who had usurped the district from Sikander Khan and his brother Karim Khan, the rightful rulers of Gilgit. Karim Khan had escaped to Kashmir to ask for help, and returned with a large force under Syed Nadir Shah. Hearing the news of their approach, Gauhar Aman fled to Yasin, leaving the country to be possessed by them without bloodshed. The country was restored to the rightful rulers, but some later events lead the Maharaja of Kashmir to keep the district under the direct jurisdiction of his own officials. The British Agency was established in 1889. The Political Agent, an officer of the Government of India, and the Wazir-i-Wazarat, an official of His Highness the Maharaja of Kashmir, have their headquarters at Gilgit proper. The latter has jurisdiction over the district only, while the former, in addition to his control over Gilgit, has political relations with the surrounding states of Hunza, Nagir, Punial, Ishkoman, Yasin, Chitar and the Chitar republic, which all acknowledge the suzerainty of the Kashmir Durbar. Gilgit is garrisoned by Kashmir Imperial Service Troops under a General Officer Commanding appointed by His Highness the Maharaja of Kashmir. The troops are relieved every two years.

A good jeep road runs between Srinagar, Gilgit, Chitral and Hunza, remaining open for traffic from June to October. It is closed from November to May, owing to the heavy fall of snow on the Tragbal (Razdiangan) and the Burzil passes. However, the ordinary letter post is carried across the passes at favourable opportunities by local runners. Kashmir, Gilgit and Chitral are also connected by a telegraph line.

The present inhabitants of the country are all Mohammedans, chiefly of the Shia sect, with a few Sunnis and Maulais. The principal tribes are Hunza, Shina, Yeshkuns Kashmiris, Kiranias, Dums and Gujars. They are again divided into several families called after the names of distinguished ancestors. I am of the opinion that the Kiranias are the original inhabitants of Gilgit, while the Yeshkuns, Shins and Hunza came afterwards in the above order and subjugated the former inhabitants.

The Yeshkuns are probably an Aryan race, having arrived from Central Asia via the Hindu Kush. Being stronger than the aborigines, they succeeded in conquering these districts, made the original inhabitants their servants and named them " Kiranias " (attendants).

The Shins profess to be the descendants of Arabs. They are probably Jews, and have come via Afghanistan from either Persia or Turkey. They prefer a style of self-government, and endeavour wherever they settle to continue this form of their original government. It is of interest to note, however, that before embracing Islam the Shins, as this resembling the Hindus, disliked meat, milk or even ghi made from cow's milk, disapproved of the keeping of birds and regarded even a fish diet with aversion. If a Shin trail takes two wives, one of his own tribe and the other of the Yeshkun tribe, the children

road already mentioned leading into Kandia. Another road leads into the Swat valley and is a favourite route for traders.

Tangir and the neighbouring valley, Darel, are celebrated for the number and fine quality of their flocks and herds. Large numbers of sheep are here annually reared for sale to the inhabitants of the neighbouring valleys. Being somewhat scattered for summer pasture, the people of Tangir have long been in the habit of driving their flocks across the watershed to the Yasin country. In return for permission to graze, they pay to the ruler of Yasin a fixed tribute of salt and tobacco from each village. Besides this tribute, they give sheep and goats in varying numbers as a free gift. These payments have led to the Yasin rulers claiming the nominal allegiance of Tangir; but they make no attempt to exercise authority in the valley, which is to all intents and purposes a republican community like others in the Kohistan. Any attempt by the Yasin rulers to enter Tangir is resisted by force of arms, but the connection between the two communities has led to Tangir being regarded as the place of refuge for Yasin princes in misfortune. The people of Tangir pride themselves on giving asylum to all such who claim it, and it is seldom that the valley is long without some exiled member of the Khushwakt family. On such occasions the inhabitants contribute to his support as if he were their legitimate ruler, and if any attempt is made to seize him by force, they take up arms for a matter which they account their own. Many a deposed ruler of Yasin has found a welcome in Tangir, where in the days of his power he would have been opposed by force of arms. Though Muhammadanism is of comparatively recent introduction, the people of Tangir are more heretical than any of their neighbours except those of Chilas, owing probably to their more intimate relations with Swat. They say of themselves that they have been Musalmans for six generations. They marry with Yasin women, but refuse to give daughters in return, on account of the slave-selling practised by Yasin rulers.

The river above the mouth of the Tangir stream, the Darel Valley joins the Indus. Though small, this valley is extremely fertile and well populated. From its head, roads lead into Tangir, Yasin, Punial and Gilgit. The principal villages are Bindori (Yat), five houses; Chodoktor (Yat) ten houses, in the Yamargal district; Warshil (Yat), ten houses; Rachmal (Yat), ten houses, in the Jaglot district; and Gulrai (Yat), ten houses. The whole community, including the dependent

Ayb Raleigh C-8 (1875-1876) 1880
AV3 Dard AV3

tutelary deity of Chilas whose worship was practised in former times. 173

The system of government is the same in all these small republics, and differs somewhat from what obtains among the Afghans. Each village, according to its size, has a certain number of Jushtoros, or elders, who are appointed according to the general estimation in which they are held for bravery, liberality, and eloquence. They receive no benefit from their office, and are more the servants than the leaders of those they represent. Each village manages its own affairs irrespective of its neighbours, and it is in the superintendence of these details that the Jushtoros are mostly occupied. All matters affecting the village are discussed in public. A meeting for this purpose is called *Sigao*. At the Sigao all who please join in the discussion, the Jushtoros apparently encouraging individuals to give their advice, and when the general opinion has thus been elicited, the Jushtoros announce the decision they have formed. At a Sigao of several villages, a single Jushtoro is appointed by each village at a meeting previously held. At the close of the general discussion, which is open as before, a loud whistle is given, after which none but the representative Jushtoros are allowed to speak. If war with a neighbouring valley is determined on, the Jushtoros settle the way in which those they represent shall take part in it; but beyond their personal influence they have little voice in determining the general policy to be pursued. It is for them to decide who shall stay at home and who shall take the field, and in the innumerable disputes about land their decision is respected; but should the dispute involve men of another village, they are required to do their best for their own townsmen. In more serious disputes the whole valley makes common cause against its neighbours; but this does not prevent all the communities combining, when threatened by an external foe. Criminal offences are not dealt with by the Jushtoros, but by the Mullahs, who profess to administer the law according to the Shuryat; this is, however, set aside in many instances in favour of ancient custom, which is very strong in some communities, and the prompt redress of grievances depends greatly on the personal influence of the aggrieved. Murder is regarded as a personal matter to be avenged by the nearest relative; but should the case be of a very wanton nature, and the family of the murdered individual have sufficient influence with the community, reparation is enforced by general consent. Blood feuds are not permitted to last for an indefinite period, as

# CHAPTER XX.

## DÂRDISTÂN: COUNTRIES AROUND GILGIT.

FRAGMENTS of information got from hearsay of countries that are inaccessible to one, when they can be verified by comparison, are not without value. I will therefore put down a few notes, which, so far as they go, are likely to be correct, on those parts of Dárdistán which cannot at present be reached by Europeans.

But first I will show, in a tabular form, the several divisions of Dárdistán which have in any way come within my notice, including those which have already been treated of. These divisions are in some cases separate valleys, in other cases parts of the same valley. The Table includes a statement of their form of government, of the races or castes that inhabit them, and of the sect or religion prevailing, as well as the practice that may hold as regards slavery.

DÂRDISTÂN.

| | Government. | Prevailing Caste or Class. | Religion. | Condition as regards Slavery. |
|---|---|---|---|---|
| Chilas .. | Governed directly by the Maharaja's officers | A few Rajas, some Shins, most Yashkuns. | Half Sunni, half Shia. | In these valleys there are many slaves of all colours, either the issue of slave parents or slaves recently imported. |
| Ha .. .. | | Shins and Yashkuns | Mostly Sunni, a few Shia. | |
| Kohistan, Kamba .. | | Shins and Yashkuns | Shia. | |
| | | Shins and Yashkuns | Sunni. | |
| Punyal .. | Ruled by Raja Yadgar Khan, in the persistence of the Maharaja. (Boy's name or family is called Shamba.) | Yashkuns .. .. | Shias, and a few Sunni. | |
| Gilgit .. | Ruled by Raja Suleh (Boy's family, Magistrate.) | Yashkuns .. .. | All Shia. | |

1; Drew G-S (1862-1878) 1875 AV1 Kashmir

Dinnerie—continued.

| | Government. | Prevailing Name or Caste. | Religion. | Condition as regards Slavery. |
|---|---|---|---|---|
| Hunza .. | Ruled by Raja Ghazan Khan, son of Ghazanfar. (Raja's family, Ayesha.) | Yashkun .. .. | All Mahl. | |
| Immenan, or Chalosatto | Belongs to Tisita | Yashkun .. .. | Mahl. | |
| Tisita .. | Ruled by Raja Mir Wali, son of Ghazi Rahmat. (Raja's family, Bubbin.) | Yashkun .. .. | Mahl and Sunt, the former predominating on Sinin. | Here slaves are both kept and dealt in. |
| Capraik and Mastik. | Ruled by Raja Imba-ul-Mulk. (Raja's family, Kutur.) | Yashkun .. .. | Sunt. | |
| Gulabi, in Buroosho | Dependent on the Mir or Prince of Nushkuhan (tributary to Kutur). | Wakhi* .. .. | Mahl. | |
| Dinin .. | Republic .. .. | Shin and Yashkun | Sunt. | In these regions some of our slaves are kept as above; others dealing with Gilgit generally. |
| Yasin .. | Republic .. .. | Shin and Yashkun | | |
| Gur .. .. | Republic .. .. | Shin and Yashkun | Sunt. | |
| Yasinkin .. | Republic. | | | |
| Chilas .. | Republic .. .. | Shin and Yashkun | | |
| Kuni .. .. | Republic .. .. | Shin and Yashkun | | |
| Pirsh .. | Republic .. .. | Shin and Yashkun | | |

The first five divisions I have already treated of as fully as I was able. We now come to the countries that surround Gilgit.

*Nagar* lies along the left bank of the Hunza-Nagar River, having Hunza opposite on the right bank. Since about 1867 it has paid a small tribute to the Maharaja, receiving in return a present of larger value; this cannot be considered more than a compliment, and a mark of desire for friendly relations.

The people of *Nagar* are called Khajuri.

*Hunza* is a more warlike country than Nagar. As shown in the last chapter, it has often been actively at enmity with the Maharaja, and it has generally been in a state of sullenness to him. In 1870 the Hunza Raja sent an agent to Srinagar to open friendly relations, who was well received; I do not know

* I have never met any of these people, but I believe them to be Dards. Gulabi is another name by which they are called; that is the territorial name, while Wakhi is the race name.

B 135

washing are wasteful, and with better appliances the industry might give a large return. Arsenic is met with, and sulphur abounds. Copper is found in Ronda, and white nitre exists in several places, but is not collected.

B 439

There is very little trade. Tea, cloth, sugar, and rice are imported, and there is a small business in salt from Ladákh. The most considerable export is that of apricots and apricot kernels, but raisins are also exported to Kashmír. A special manufacture is a very close thick black *patti* (*frekkan*), resembling the cloth of which pilot-jackets are made. A curiosity is the *sakri-mora*, a green soft stone like an inferior jade found in the Shigar valley. Cups and plates are made of it, and in Kashmír and the Punjab it is used as an antidote to poison and as a cooling lotion in eye diseases. Commerce and trade.

B 286 135 415

Communications are of the worst description, and money judiciously spent in road-making would add greatly to the comfort and prosperity of the Baltis. Several routes connect Baltistán with Kashmír, Ladákh, and Astor, and one dangerous track leads to Gilgit. Of the Kashmír routes, one passes over the Deosai plains. These lie at an elevation of 13,000 feet, and are surrounded by a ring of lofty mountains. For most of the year they are under snow, and even in the summer the cold at nights is intense. The so-called plains are mournful stretches of grass and stones, with many a bog difficult to cross, and uninhabited but for the marmots, an occasional bear, and swarms of big black gnats. The absence of wood for fuel, the distance from human habitations, and local superstitions regarding 'the devil's place' prevent the people from using the pastures of Deosai. Roads.

B 487 132

Baltistán has recently been placed under the charge of the Wazír Wazírat of Ladákh. His local deputies are the *nebabdárs* of Skárdu and Kargil. Both *nebabs* have recently been settled by a British officer, and it is probable that the long-suffering and patient Balti may look for better days. The ex-Rájás, or Gialpos, still exercise some authority over the people, and a definite sum out of the several collections has now been alienated in favour of each family. The total land revenue assessed at the recent settlement of the *nebabs* of Skárdu and Kargil was 1·4 lákhs. Of this about a fourth is taken in kind. Administration, &c.

B 631 642 651

Gilgit.—Head-quarters of a wazárat district or Wazárat of the Kashmír State, situated in 35° 55′ N. and 74° 25′ E., at an elevation of 4,890 feet above sea-level. The Wazárat stretches south to Astor and the northern slopes of the Burzil, follows Description.

D

the Astor river to its junction with the Indus, and then runs north along the Indus to Bunji. It was once a flourishing tract, but has never recovered from the great flood of 1841, when the Indus was blocked by a landslip below the Hatto Pir, and the valley was turned into a lake. Opposite Bunji is the valley of Sai, and 6 miles farther up the Gilgit river falls into the Indus. Gilgit is about 24 miles from the Indus, and has a considerable area of fertile irrigated land. The Wazárat now includes the tract known as Haramush on the right bank of the Indus, and numerous valleys leading down to the Gilgit river. To the north the boundary reaches Gunch Pari on the Hunza road, and up the Kargah nullah as far as the Bhaldi mountain to the south in the direction of Darel. From Gilgit itself mountain roads radiate into the surrounding valleys, and its geographical position now, as in ancient times, renders the fort on the right bank of the Gilgit river an important place. A suspension bridge connects Gilgit with the left bank, which is here as barren as the right bank is fertile. The ancient name of the site under its Hindu Rás was Sargin. Later it was known as Gilit, which the Sikhs and Dográs corrupted into Gilgit, but to the country people it is familiar still as Gilit or Sargin Gilit. It lies in the most mountainous region of the Himálayas. Within a radius of 63 miles there are eleven peaks ranging from 18,000 to 20,000 feet; seven from 20,000 to 22,000 feet; six from 22,000 to 24,000 feet; and eight from 24,000 to 26,600 feet. At their bases the mountains are barren and repellent, but at 7,000 feet there are fine forests of juniper and fir. Higher up grows the silver birch, and above all vegetable growth lie sweep after sweep of glacier and eternal snow.

Botany. The pencil cedar is found from 14,000 feet down to 6,000 feet, and sometimes reaches a girth of 30 feet. *Pinus excelsa* grows between 9,500 and 11,000 feet. The edible pine is common in Astor, ranging from 7,000 to 10,000 feet. The useful birch-tree is common, and grows as high as 11,500 feet. The tamarisk does well in the barren valleys up to 6,000 feet. Roughly speaking, the upper limit of vegetation round Gilgit is 16,000 feet; above this the rocks are stained with lichens.

Fauna. Here are found the ibex and markhor (*Capra sibirica* and *C. falconeri*), and their deadly foe, the beautiful snow ounce (*Felis uncia*), and occasionally the wild dog (*Cyon dukhunensis*). The red bear (*Ursus arctos* or *isabellinus*), the snow cock (*Tetraogallus himalayensis*), and the grey partridge are common; and many of the migratory birds of India, wild geese,

2c Imperial Gazetteer G-3 (1889-98) 1909 AV1 Kashmir
Dard AV3

duck, and quail, pass up and down in the autumn and spring. Below the forest, on the lower and more barren hills, numerous flocks of wild sheep (*Ovis vignei* and *O. nahura*) are met with.

The climate is healthy and dry. At Gilgit itself it is never very cold, and snow seldom lies for more than a few hours. In the summer it is hot owing to the radiation from the rocky mountains, but it is cool compared with the climate of Northern India. The rainfall is very light.

The remains of ancient stone buildings and Buddhist carvings suggest that Gilgit was once the seat of a Buddhist or Hindu dynasty, while traces of abandoned cultivation point to the fact that the population in early times was far larger than it is at present. For many centuries the inhabitants of Gilgit have been Muhammadans, and nothing definite is now known of their Hindu predecessors. Tradition relates that the last of the Hindu Rās, Sri Badat, known as Adam-Khor, the 'man-eater,' was killed by a Muhammadan adventurer, who founded a new dynasty known as Trakhane. Sri Badat's rule is said to have extended to Chitrāl, and the introduction of Islām seems to have split up the kingdom into a number of small states carrying on a fratricidal warfare and incessant slave-raiding. The Trakhane dynasty is now extinct, though it is claimed that the present titular Rā of Gilgit has a slight strain of Trakhane blood. In the early part of the nineteenth century we find Yāsin giving a Rā to Gilgit. He was killed by the ruler of Punial, who in turn was killed by Tair Shāh, chief of Nagar. Tair Shāh was succeeded by his son, who was killed by Gauhar Aman, ruler of Yāsin. For the subsequent history of Gilgit, see Kashmīr. The history of Astor, or, as the Dogrās call it, Haramu, is intimately connected with that of Skārdu. More than 300 years ago Ghāzi Mukhpun, a Persian adventurer, is said to have married a princess of the Skārdu reigning family. The four sons born of this union became Rās of Skārdu, Astor, Rondu, and Khaiwang respectively, and from them are descended the families of the present chiefs of those places. The independence of Astor ceased at the Dogrā conquest. The present titular Rā of Astor is the lineal descendant of Ghāzi Mukhpun. The Dogrā rule has secured peace to the people, but it will be long before the country recovers entirely from the desolating slave-raids of Chilās.

The Wazārat contains 264 villages, and the population, according to the Census of 1901, is 60,885. The pressure on the cultivated area is great, the density being 1,033 persons per square mile. The people of Astor and Gilgit would be

The people.

487

described in the article on KASHMÍR. By that route Gilgit lies at a distance of 390 miles from the present railway base at Rāwalpindi. An alternative line has been opened over the Babusar pass, which brings Gilgit within 250 miles of the railway at Hassan Abdāl. This line, besides being shorter, has the advantage of crossing only one snow pass, instead of two, or practically three, if the winter snow at Murree be taken into consideration. The routes to the north are mere tracks, when the military roads connecting Gilgit with the outposts at Gupis and Hunza have been passed.

205 698 Post and telegraph offices.

There is a daily postal service with Indus by the Burzil pass and Kashmīr, and the telegraph line follows the same route. Both services work well in spite of heavy snow and destructive avalanches, and are maintained by the Government of India. There is a weekly postal service from Gilgit to Chilās and Gupis, and a fortnightly post between Gilgit and Kashgar via the Kilik pass in the summer, and the Mintaka in the winter.

693 704 Administration, &c.

The Gilgit Wazārat is in charge of a Wazīr Wazārat. Crime is slight; there is no jail and no police organization. Police duties are carried out by the levies and a few soldiers of the Kashmīr regular troops. There is little litigation; and the chief business of the Wazīr is the provision of supplies to the garrison at Gilgit, now effected by an excellent system of transport from Kashmīr. In 1891-2, at the time of the Hunza-Nagar expedition, the garrison had a force of 2,451; in 1895, when the Chitrāl disturbances broke out, it consisted of 3,273; and the present garrison numbers 1,887, including a mountain battery, two infantry Imperial Service regiments, and Kashmīr sappers and miners. A school is maintained at Gilgit.

651 Land revenue.

A land revenue settlement of Astor and Gilgit has been made. It was found impossible to introduce a purely cash assessment, owing to the State's requirements in grain; but many inequalities and abuses were removed, and, on the whole, the condition of the villagers is satisfactory.

628 649 651 Political relations.

A British Political Agent resides at Gilgit. He exercises some degree of supervision over the Wazīr of the Kashmīr State, and is directly responsible to the Government of India for the administration of the outlying districts or petty States of Hunza-Nagar, Ashkoman, Yāsin, and Ghizar, the little republic of Chilās, and also for relations with Tangir and Darel, over which valleys the Punial Rāja and the Mehtarjaos of Yāsin have partially acknowledged claims. These States acknowledge the suzerainty of Kashmīr, but form no part of its territory. They pay an annual tribute to the Darbār.

Hunza and Nagar in gold, Chilás in cash (Rs. 1,608), Ashkuman, Yásin, and Ghizar in grain, goats, and ghi. The relations of the Political Agent with the outlying States are eminently satisfactory. No undue interference takes place in the administration, and the people are encouraged to maintain their customs and traditions intact. Besides the military garrison, furnished by the Kashmír State, there is a small but extremely efficient force of local levies armed with Snider carbines. They are drawn from Hunza, Nagar, Punial, Sai, and Chilás.

**Shinákí.**—A group of small republics in the valley of the Indus, lying west of Kashmír and south of Gilgit. The territory extends from the junction of the Astor river with the Indus to Seo on the right bank and Jalkot on the left bank of the latter river. Within this area the people are grouped in communities inhabiting one or more mullahs, each community forming a separate republic. Starting from the junction at Rámghát these are, in order: on the right bank, Gor, Kinergah, and Hodar; and on the left bank, Bonar, Thak, Butergah, Gicho, and Thor. They constitute the area known as the Chilás subdivision of the Gilgit Agency, while Chilás proper includes Kinergah, Butergah, and Gicho. Lower down the river are Darel, Tangir, Khili, and Seo on the right bank, and Harban, Sazin, and Jalkot on the left bank.

After the conquest of Chilás by Kashmír in 1851, the Maháráját imposed a tribute in gold-dust, and arranged for the administration of the country as part of the Gilgit district. A British Agency was re-established at Gilgit in 1889, which included, among other territory, the Chilás subdivision described above except Thor. In 1892 a British mission to Gor was attacked by the Chilásis, which led to the occupation of their country and the appointment of a Political officer at Chilás. The right of the Kashmír Darbár to construct roads and station a limited number of troops in the territory was secured, but the autonomy of the Chilásis was guaranteed. Under the revised arrangements made in 1897 the republics pay small food cums to the Maháráját, and in 1899 Thor was incorporated in Chilás. Darel has rendered a tribute of gold-dust to Kashmír since 1866, when the Maháráját's troops raided the country. The tribute is now paid through the Punial governor. Tangir pays a small tribute to the governor of Yásin. The remaining communities have no political relations with either Kashmír or British India, except Jalkot, which from its position dominates Thor and the head of the Kághán valley in the North-West Frontier Province.

[illegible] G-3 (1873-1879) 1880 [illegible]
4 AV3 Dard AV3

are apart from several other families of hereditary cooks to the later rulers, who still render service to the present Ra of Gilgit. 657

The country was divided into districts, for each of which a Wuzeer was responsible. Wuzeers were obliged to be of good family, and are still chosen only from the three principal castes, *viz.*, Rono, Shin, or Yeshkun. The office was not hereditary, but was held for life. On the appointment of a Wuzeer, three pieces of land were taken from among the peasants' holdings, and assigned to him in addition to his own family possessions. Four families were appointed to manage the whole cultivation of his land and furnish him with one household servant, in return for which they were exempt from all dues of personal service to the Ra. The Wuzeer was responsible for the peace and welfare of his district, and for leading the men of it in war. When the population was called to arms, the Wuzeer had the right of releasing one man in each fortified village from military service, in return for which he received from the man so released two "baghaloos" of gold-dust on the return of the army. If, however, the expedition returned without having fought, only half the fee was paid. On the occasion of a marriage taking place, a cake of leavened bread was sent to the Wuzeer of the district by the father of the bride. 651 654

In each village was a "Tarangfal" appointed by the Ra, who acted under the orders of the Wuzeer within his own limits. In time of war he had the right to release three men of his village from military service, from whom he received the same dues as the Wuzeer. He also received a fee of three shillings on each marriage taking place in his village, and had three families assigned to him for service, who were exempt from all other tax or service. He further received sixteen yards of cotton cloth yearly from the village weavers, and was especially charged with the management and preservation of the irrigation arrangements.

The dues paid to all officials are called "Lungik."

Next in rank to the Tarangfak, but with totally different duties, came the Yerlak, who had charge of all the private lands of the Ra, to whom he filled the office of steward. He was responsible for everything connected with the cultivation of the Ra's lands in each district, and received six kharwars of grain out of each crop. As *lungik*, four families in Gilgit, and one in each outlying village in which the Ra owned land, were assigned to him, whose duty it was

to furnish him each with a yoke of oxen for ploughing his own lands. This service he could commute if he pleased for one bughalaw of gold for each yoke of oxen. He was also responsible for the collection of the "Koodkoul" tax, but no authority could be exercised over him by the Wazeero or Turonglahs.

Next to the Turonglah among the district officials was the Charbon, who acted as an assistant to the Turonglah in each village. His *bopté* consisted in exemption from all taxes, and two of the ruler's fees on marriage a year; it being part of his duty to collect the "Gust tobo" tax. He also received a certain amount of the meat tribute. To help him in his work he was allowed four men called "*Zeyzon*," who only served for a year as peons to the Charbon, and were paid by an impost of 10 lbs. of grain from each house, which was divided among them.

Dr. Leitner suggests that these names of officials are of Tartar origin. None of them now exist in Bultistan except Wazeer and Turonglah (Turonglah). If it be the case that they are originally Tartar titles, it may be taken as a proof of the influence which the Iskardo rulers once exercised in Dardistan.

Justice was administered by the Wazeero in their own districts. Cases which principally arose out of disputes about land were generally settled by a fine of cattle, sheep, or gold-dust. Any case involving a larger fine than one bughalaw of gold-dust was heard by the Ra. Serious crimes, such as murder or treason, were punished by the destruction of the whole family of the offender. His house was razed to the ground, and his relations reduced to slavery, and sold or distributed according to the will of the Ra.

The dues above mentioned are still paid, some of them to the Cashmere Government, and some to the present Ra of Gilgit.

The same system exists in Hunza and Nagar, and in some respects in Wakhan. The following measures are in common use; in some cases they differ only in name, in others they differ slightly in amount:—

*Dry measure.*

| | | |
|---|---|---|
| 1 kuje | = eight English | Hunza. |
| 8 kuje | = 1 kut | |
| 1 kutjuwan | = 8 double handfuls, about 1 lbs. | Nagar. |
| 8 kutjuwan | = 1 kuntuk | |

564 Zundé and Ashmaleh, but do not give daughters in return, except to the Zundé, who, being descended from a former dynasty of rulers of the country, are regarded as of royal blood. All the rest, including the Zundé, intermarry without restriction, but never with the Fakir Mushkin class, from whom, however, they take daughters as concubines.

651 The regular revenue of the country is paid solely by the "Fakir Mushkin" class. Those who live by agriculture are assessed at a tenth of all produce, one sheep, one blanket, and 20 lbs. of honey from each house yearly. The pastoral community is assessed at four sheep, three woollen robes, and 20 lbs. of butter from each house yearly. A few villages, which are almost entirely employed in mining, pay 16 lbs. of mine produce yearly for each house. There is, however, very little regularity observed in collecting these imposts, and, in practice, as much is wrung from the subject population as possible. Considerable dues are collected from the merchants who trade between Badakhshan and the Punjab, and the Chitral ruler's revenue is further increased by the sale of hawks and falcons, of which great numbers are captured every year and sold to merchants, who take them to the Punjab.

642 The administration of justice is practically the will of the ruler, though nominally the precepts of the Shurrut are observed. In some cases the intervention of the Mullahs is useful. In one case which came to my knowledge they intervened to save the life of a condemned man who had murdered a favourite follower of the Mihtar, by pointing out that the Mihtar's injustice in permitting his favourite to forcibly abduct the man's wife had led to the murder. Small cases are settled by the district Atalike.

643 177 A somewhat elaborate administrative machinery exists which was probably instituted by, or borrowed from, the Shin Rao of Gilgit. The names of many of the officials are the same, though their functions differ, and the presence of extra officials with Uzbek titles shows that a new system has been grafted on the old one.

639 651 The country is divided into eight districts. At the head of each is an Atalik, whose duty it is to collect the revenue of his district and to command the men of it in war. Like the Wazeers of districts in Gilgit, he has the right of releasing one man in each village from military service. Out of the revenue of his district he receives 12 sheep, 12 measures of butter, 20 measures of wheat, and a proportion of the

A43 David A43
Chitral

produce of any mines. His land is exempt from taxes, and ten families are assigned to him as labourers. He also receives a fee of one tilla, equal to 10 shillings, on each marriage. Next to the Atalik is the Charwelo, who has charge of a group of villages. The country being much intersected by side valleys branching out of the main valley, the whole population of each of these is generally under one Charwelo. He is directly responsible to the Atalik of his district, and has four families allotted to him for service. His "ishpin" is eight of each kind of produce. With a few exceptions the office is confined to the Ashimadak class. 634 651

Below the Charwelo is the Buromosh, or head of the village. He is particularly charged with the maintenance of roads, forts, and bridges, for which he receives a yearly "ishpin" of 10 sheep, 10 measures of butter, 10 measures of wheat, and a proportion of the produce of any mines with which he is connected. His land also is free from payment of taxes, and he has the right of releasing ten men of his village from military service. 622 651

To assist him he has an attendant "Churbun," whose duties are the same as those of the *Zeytoo* in Gilgit. He receives a woollen robe and five sheep yearly, and his land is exempt from taxation.

In Yassin territory, both on the Chitral and Wurshigum sides, the system and titles of officials are the same as in Chitral, showing, perhaps more strongly, the mixture of two systems.

About the person of the Mihtar are four Wuzeers, who, with the exception of the Chief Wuzeer, have no fixed functions. The Chief Wuzeer is also styled Diwanbegi, and is the Mihtar's slave agent. The practice of selling their own subjects has gained the rulers of Chitral and Yassin an unenviable notoriety, even among people who have not yet learned to regard slavery with the detestation in which it is held in Europe. The beauty of the Chitral (Kho) women has long been proverbial in Peshawur, Cabul, and Badakhshan, and female slaves still form not the least acceptable portion of the presents given by Chitral rulers to neighbouring princes. Chitral, therefore, has always been a favourite resort for slave-dealers from neighbouring countries, and a system grew up under which the rulers of Kashkar came to regard the sale of their subjects as a legitimate and ordinary way of eking out a scanty revenue. All who in any way fell under the displeasure of the Mihtar, were consigned to the Diwanbegi, and his agents were always on the look-out for victims whose conduct 645 567 651

The *Khajunak* dialect is spoken by the people of Hunza and Nagar.

The *Arnaya* is spoken in Yasin and Chitrál.

These dialects have little in common with each other, and are widely different from those of the surrounding people.

*Astor* is situated on the left bank of the Indus, below Makpon-i-Shang-Rong. It has an area of about 1,600 square miles. Its chief claims descent from Ali Sher of Baltí, and takes the title of Makpon.

*Gilgit** is situated on the right bank of the Indus, along the lower course of the Gilgit river. It is about 100 miles long from north to south, with a mean breadth of twenty-six miles. Its area is therefore about 2,500 square miles. The chief takes the title of Trakhna, from an ancestor.

The districts of Chilas, Darél, Kohli, and Pálas, lie along both banks of the Indus below Gilgit and Astor.

*Hunza-Nagar* is a small tract of country on the upper course of a large feeder of the Gilgit river. It is named from two towns situated close to each other, on opposite banks of the river. The two districts have an area of 1,672 square miles. The chief of Hunza is called Girkhis, and the chief of Nagar is called Mírzalo. The former name is no doubt the same as the Kirghis, who inhabit the steppes of Pamer to the north of Hunza-Nagar beyond the Kárákoram. I presume that this district was formerly inhabited by the Dards, and that they were displaced by the Kirghis nomads. The chiefs of Shigar who take the Khajunak title of Tham, must also be Kirghis.

Yasin is a large district on the upper course of the

133 be coming to a *cul-de-sac*, a broad low hill, the terminal moraine of a glacier, which must have filled the valley to the west, completely barring it from side to side. Above this lay the Pandur Lake. Below this hill the valley stretches away well cultivated, the foreground filled with low masses of rock and small hills, whose rounded tops and smooth and polished rocks tell of a glacier action. 243 Here and during the next march I saw splendid crops of bearded wheat, the finest we had yet come across.

634 We were met at Chashi by Rahim-ut-Ullah Khan, the Mehtar's Governor of the Ghizar district, a fine-looking, tall man, with dignified manners. He was one of the Mehtar's most trusted adherents, but he had a deservedly evil reputation. He was the man said to have been employed in the murder of poor Hayward. The tradition as to the latter's death is, that finding he was in danger he sat up all night armed, with his rifle on the table before him, and that, overcome with sleep, he dozed about dawn, with his head on his arms. His enemies at once rushed in and overpowered him; he asked for a few moments, walked to the top of a mound by his tent, took his last look at the rising sun, and then quietly faced his murderers, who despatched him. One object in his murder was plunder; there were others, but it is unnecessary to enquire who prompted the deed, one of the foulest which stains the annals of the frontier. I 157 634 always hated the sight of Rahim-ut-Ullah, and found it difficult to be civil to him, but on the frontier you must deal with men as you find them: half my most intimate friends were murderers, and the standard to judge them by is not ours. Amongst an avaricious

157 race, one and all from the highest to the lowest
634 shameless beggars, Rahim-ut-Ullah was about the most barefaced in his attempts to wheedle money out of the passing stranger.

133 The Pandur lake when we passed it was very beautiful, a sheet of water about six miles in length by a mile in width. The shores are quite bare, the mountain to the north coming sheer down into the lake, while the southern shore, along which runs the road, is formed by very steep-sided flat-topped spurs jutting out from the mountains which lie some way back. The view was lovely, the water, which was of a peculiar opal tint, taking the most beautiful colouring from sky and cloud, and giving perfect reflections of the hills and islands. The wild duck on it floated double, duck and shadow, and kept carefully out of
133 shot. Above the Pandur lake, and close to Ghizr, the
487 road was prettier than anything since Kashmir; the river was here the picture of a small salmon river, and occasionally you rode over excellent turf. Again, at Ghizr has the valley been blocked by a moraine, through which the river has cut a gorge some hundreds of feet deep. The road runs out of the Ghizr cultivation up a narrow gully, possibly the original outlet of the lake above, or the grip between the end of the moraine and the mountain side, over a confused mass of rock of all sizes constantly being added to
133 from the crags above. The whole of this part of the country shows unmistakable signs of ice action. Polished and ice-marked rocks, *roches moutonnées*, the remains of dead and gone glaciers, glacial lakes like the Pandur, and stretches of flat land of lacustrine formation meet you at every turn. There is a good

Zundé and Ashmatáh, but do not give daughters in return, except to the Zundé, who, being descended from a former dynasty of rulers of the country, are regarded as of royal blood. All the rest, including the Zundé, intermarry without restriction, but never with the Faki Maulái class, from whom, however, they take daughters as concubines.

The regular revenue of the country is paid solely by the "Faki Maulái" class. Those who live by agriculture are assessed at a tenth of all produce, one sheep, one blanket, and 20 lbs. of honey from each house yearly. The pastoral community is assessed at four sheep, three woollen robes, and 30 lbs. of butter from each house yearly. A few villages, which are almost entirely employed in mining, pay 16 lbs. of mine produce yearly for each house. There is, however, very little regularity observed in collecting these imposts, and, in practice, as much is wrung from the subject population as possible. Considerable dues are collected from the merchants who trade between Badakhshan and the Punjab, and the Chitral ruler's revenue is further increased by the sale of hawks and falcons, of which great numbers are captured every year and sold to merchants, who take them to the Punjab.

The administration of justice is practically the will of the ruler, though nominally the precepts of the Shurrut are observed. In some cases the intervention of the Maulána is useful. In one case which came to my knowledge they intervened to save the life of a condemned man who had murdered a favourite follower of the Mihtar, by pointing out that the Mihtar's injustice in permitting his favourite to forcibly abduct the man's wife had led to the murder. Small cases are settled by the district Atalíks.

A somewhat elaborate administrative machinery exists which was probably instituted by, or borrowed from, the Shin Ras of Gilgit. The names of many of the officials are the same, though their functions differ, and the presence of extra officials with Uzbek titles shows that a new system has been grafted on the old one.

The country is divided into eight districts. At the head of each is an Atalík, whose duty it is to collect the revenue of his district and to command the men of it in war. Like the Wuzeers of districts in Gilgit, he has the right of releasing one man in each village from military service. Out of the revenue of his district he receives 12 sheep, 12 measures of butter, 20 measures of wheat, and a proportion of the

## Punial.

From below above the village and fort of Gilgit the valley narrows; still there is generally a bit of alluvial plateau on one side or other of the river; a few villages are passed and also of deserted villages. For a day's march up one is still in the district of Gilgit, which is conterminous with the old Rajaship of Gilgit. Between the villages of Sharot and Gulpite this district ends and Punial begins.*

Punial is a part of the valley which had long been held by separate Rajas, sometimes I think independent, sometimes depending on one or other of their neighbours—Yasin and Gilgit. The last result of the wars and disturbances that for some generations so much affected these valleys has been to leave Punial to a ruler of the line of its old Rajas, but under the protection of and in close dependence on, and, in those matters in which interference might be called for, in obedience to, the Maharaja of Kashmir. The district thus held is simply the line of the main valley, all along narrow, from Gulpite up to the village and fort of Gahkuch. This is a length of some 25 miles; within it there are nine villages and two or three outlying patches of ground cultivated from the current; these villages vary in altitude from 5500 feet to nearly 7000 feet; the chief place is Sher, on the left bank, where the Raja dwells. A characteristic of this part of the valley is that often, after every few miles, one comes to a place where the space is narrowed for a short distance by spurs coming down, so that the passage along is extremely difficult; the name given to these places is darband, or "shut-door"; they are of much importance from a military point of view, since at each of them a few might stop an army for a time; but there are usually two roads by which they can be passed—a very difficult one, fit only for agile foot-passengers, along the cliff, and a bridle-path that

* I believe that originally Gulpite itself was under the Gilgit Raja, and that it was granted to Punial in dowry of one of the daughters of the house. The present actual boundary between Gilgit and Punial is the stony and sandy plain between Sharot and Gulpite.

# CHAPTER XX.

## DARDISTAN: COUNTRIES ADJOINED GILGIT.

Fragments of information got from hearsay of countries that are inaccessible to one, when they can be verified by comparison, are not without value. I will therefore put down a few notes, which, so far as they go, are likely to be correct, on those parts of Dárdistán which cannot at present be reached by Europeans.

But first I will show, in a tabular form, the several divisions of Dárdistán which have in any way come within my notice, including those which have already been treated of. These divisions are in some cases separate valleys, in other cases parts of the same valley. The Table includes a statement of their form of government, of the races or castes that inhabit them, and of the sect or religion prevailing, as well as the practice that may hold as regards slavery.

DÁRDISTÁN.

| | Government. | Prevailing Races or Castes. | Religion. | Condition as regards Slavery. |
|---|---|---|---|---|
| Gilgit .. | Governed directly by the Maharaja's officers. | A few Kunár; some Shín; most Yashkun. | Half Sunní, half Shía. | In these territories there are many slaves of old, either domestic or slave-traders. |
| Sai .. .. | | Shín and Yashkun | Mostly Sunní, a few Shía. | |
| Kandiá and Kunár .. | | Shín and Yashkun | Shía. | |
| | | Shín and Yashkun | Sunní. | |
| Puniál .. | Ruled by Raja Yadgár Khán, in dependence on the Maharaja. (Raja's caste or family is called Bursha.) | Yashkun .. .. | Shía, and a few Sunní. | |
| Nagar .. | Ruled by Raja Zafar. (Raja's family, Mughulán.) | Yashkun .. .. | All Shía. | |

what there has occurred, but there seemed to me to be an likelihood of close friendship.

The people of Hunza are called Hunzija.

The people of Nagar, or Chalt'ar, are called Nagarmatija, or Chalt'arum.

As to Yasin, the most that we know of it has been told by Mr. Hayward*; I can add little to that. The people of Yasin are called Yasu.

Here are some notes, taken from hearsay, of the roads that lead out of Yasin:

### *Yasin to Mastuj; Three Roads.*

(1) By Shawar, five or six marches; it can be traversed by men all the year round; for horses it is difficult in winter, but is not altogether closed for them, or if it is, then only for fifteen days or so at a time, until the snow has hardened; also it is bad for horses for a fortnight in spring.

(2) By Tui, three marches; the Pass crossed the second day.

(3) By Nasho, three marches; the Pass crossed the second day.

Both these are closed for traffic by the end of October.

Probably the marches are of 20 miles each.

### *Yasin by Shawar and Tangir to Gilgit;*

A five days' journey they say; but I think these are long marches: it may be 120 miles.

### *Yasin to Badakhshan.*

This road is the one which Mr. Hayward was taking when he met with his death.

The Pass closes for horses at the end of October, while for two months it remains closed for all traffic. There is a glacier on the north side, but horses can go over it, avoiding the crevasses.

The people of Chitral are called Kstoro.

*Diral.* This has seven fort-villages in a valley about a mile and a half wide; the cultivation, I was told, is continuous along

* Proceedings Royal Geographical Society, 1870.

the whole length of it. Vineyards abound. Rice and grain are plentiful. Deodar, pine, and oak grow on the hill-sides. Most of the people during summer time live up on the hills, where pasture is to be found. This is a feudal republic; but the federal bond seems weak. The people are called by their neighbours Dárdu.

*Yasin*, a republic. It has of old been tributary to Tíráh; but there is no close connection.

*Gor*, a republic; it has three forts or villages. It sends a few goats to the Maharaja by way of tribute, and leaves hostages in Astor, but it is practically independent. The people are called Gárjis.

*Thalichi*; a small village of seven houses. It is the smallest independent state that I have ever heard of. Its government is republican.

*Chilás*. This is one of the largest of these republics; its people are called by the other Dárdu "Dárdu." Some account of the way in which the Chilásis used to make raids on their neighbours has been given in Chapter XVII. The Sikhs sent an expedition to Chilás under one Sújá Singh, but it was repulsed; this was when Hári Singh was the Sikh Governor of Kashmír, about the year 1842. The expedition sent by Maharaja Gulab Singh (in 1850 or '51), and its good effects, have already been spoken of. Since that time the Chilásis have been in a sense tributary; they now pay yearly to the Maharaja a tribute of 100 goats and about two ounces of gold-dust; otherwise they are free.

Beyond these, down the Indus Valley, are some places of which I know almost nothing but the names, they are—

Hodur, whose people are called Hodurs.
Dosar.

| | | | |
|---|---|---|---|
| Tisk, | . | . | Khaor. |
| Harban, | . | . | Shilp. |
| Thor, | . | . | Thorjo. |

Shátu.

| | | | |
|---|---|---|---|
| Koh, | . | . | Kolticha. |
| Palus, | . | . | Palúcho. |

A few miles below Kuli is Dainu; beyond that Dardistan
proper and the Pushto country, where the Pushtō language pre-
vails, begins. The Kuli people are Dārds; they know both the
Dārd and Pushtō languages.

Many places have been put down as republics; what I have
been able to find out about the way of their government will
apply to them generally. There is a general assembly of the
people, called Sigāh, which decides on almost every matter.
It is called together by beat of drum; men, old and young,
attend it, but not women; none who have the right to attend
are allowed to be absent, under pain of fine. In this assembly
the rights of a minority are carefully guarded. I have been told
that if even one man, supposing him to be of any consideration,
object to a policy, it cannot be carried out; the assembly is ad-
journed for a few days, and in the interval effort is made either
to convince the objector or to modify the proposal; then meeting,
they may perhaps have again to adjourn; but in time something
or other is sure to be arranged.

The executive consists of a few men, may be five or six, chosen
by the people in their assembly. These are called *Jushtaw* in the
Dārd language. They are chosen for their wisdom; but here as
elsewhere wealth seems to have influence to convince the people
of the wisdom of those who possess it. The office of Jushtaw is
not hereditary; the Jushtaws must be in general accord with the
assembly else they will be displaced. The Jushtaws deliberate
together on a policy, but cannot carry it out without the consent
of the assembly of the people, which they themselves call
together. The Jushtaws are also arbitrators to settle disputes of
water and wood, and what not.

Where the valley is large, like, for instance, Dārēl, each village
has its own Sigāh, or assembly, which settles the particular affairs
of that village, while for matters of more general policy the Jush-
taws of all the villages first meet, and make among themselves
a plan to propose, and then a general parliament is called; that
is, the people themselves of all the villages together meet to hear
and decide. If all of the villages cannot agree on one policy, then

each is free to pursue its own without severing the federal bond. Thus I have heard that some villages have joined with one power—have agreed to pay tribute—while others of the same valley have done the same to the rival power. But there must be some limit to this. They could not, of course, actively join an opposite side.

My knowledge of the working of these institutions is very incomplete; on the whole I incline to think that with the republics there is less of wars of ambition than with those valleys that are governed by an hereditary ruler, less of bloodshed on a large scale, such as is brought about by or for the dispossession of dynasties. But I do not think that the internal state is so secure and quiet as under a Rajo; in the republics personal independence and liberty of action are so much the rule, that no one interferes to prevent even violence.

In the Table given at p. 606, the last column shows the custom of the various states with respect to slavery. There are three categories. The first includes Gilgit, Astor, Nagar, &c.; in these places not only is slavery unknown now that some of them are under the rule of the Maharaja of Kashmir, but, according to my information, it was not the custom before.

Another category includes the Republics; in these, slaves when captured in a foray are kept as servants, as we saw was the case in Chilas with those they brought away from Astor; but they are not used as a commodity to be bought and sold.

Thirdly, in the Rajaships of Hunza, Yasin, and Chitral, slaves are openly bought and sold; the Rajas themselves are the chief dealers—that is to say, they are sellers—while merchants, generally from Badakhshán, are the buyers. The greater expense of sustaining these governments, as compared with the republics, has probably been the cause of the Rajas entering on this trade, in which they will sell, in default of others, their own subjects even. Many are the people, and of races various—Dárd and Dográ, Panjábi and Pathán—whom the fortune of war has allowed to fall into the hands of one or other of these rulers, and who, having been bartered by their avaricious captor, are passing their lives as exiles and slaves in Badakhshán or in Turkistán.

## GILGIT

washing are wanted, and with better appliances the industry might give a large return. Arsenic is met with, and sulphur abounds. Copper is found in Kondia, and white mica quite in several places, but is not collected.

Commerce and trade.

There is very little trade. Tea, cloth, sugar, and rice are imported, and there is a small business in salt from Leh. The most considerable export is that of apricots and apricot kernels, but raisins are also exported to Kashmir. A special manufacture is a very close thick black *pattu* (*pashm*), resembling the cloth of which pilot-jackets are made. A curiosity is the *sabri-sang*, a green soft stone like an inferior jade found in the Shigar valley. Cups and plates are made of it, and in Kashmir and the Punjab it is used as an antidote to poison and as a cooling lotion in eye diseases.

Roads.

Communications are of the worst description, and money judiciously spent in road-making would add greatly to the comfort and prosperity of the State. Several routes connect Baltistán with Kashmir, Ladákh, and Astor, and one dangerous track leads to Gilgit. Of the Kashmir routes, one passes over the Deosai plains. These lie at an elevation of 13,000 feet, and are surrounded by a ring of lofty mountains. For most of the year they are under snow, and even in the summer the cold at nights is intense. The so-called plains are mournful stretches of grass and stones, with many a bog difficult to cross, and uninhabited but for the marmots, an occasional bear, and swarms of big black gnats. The absence of wood for fuel, the distance from human habitations, and local superstitions regarding 'the devil's place' prevent the people from using the pastures of Deosai.

Administration, &c.

Baltistán has recently been placed under the charge of the Wazir Wazárat of Ladákh. Its local deputies are the *subdivisions* of Skárdu and Kargil. Both *subdivs* have recently been settled by a British officer, and it is probable that the long-suffering and patient Balti may look for better days. The ex-Rájás, or Gialpos, still exercise some authority over the people, and a definite sum out of the several collections has now been alienated in favour of each family. The total land revenue assessed at the recent settlement of the *subdivs* of Skárdu and Kargil was 1·4 lakhs. Of this about a fourth is taken in kind.

Gilgit.

**Gilgit.**—Head-quarters of a scattered district or Wazárat of the Kashmir State, situated in 35° 55′ N. and 74° 23′ E., at an elevation of 4,890 feet above the level. The Wazárat stretches south to Astor and the northern slopes of the Deosai, follows

Hunza and Nagar in gold, Chilas in cash (Rs. 2,000), Astor, Yasin, and Ghizar in grain, goats, and gilt. The relations of the Political Agent with the outlying States are eminently satisfactory. No undue interference takes place in the administration, and the people are encouraged to maintain their customs and traditions intact. Besides the military garrison, furnished by the Kashmir State, there is a small but extremely efficient force of local levies armed with breech-loaders. They are drawn from Hunza, Nagar, Punial, Ishkuman, and Chilas.

**Khunjeb**.—A group of small republics in the valley of the Indus, lying west of Kashmir and south of Gilgit. The territory extends from the junction of the Astor river with the Indus to Sazi on the right bank and Jalkot on the left bank of the latter river. Within this area the people are grouped in communities inhabiting one or more villages, each community forming a separate republic. Starting from the junction at Rampur these are, in order: on the right bank, Gor, Kiyorgah, and Hardar; and on the left bank, Sumar, Thak, Butorgah, Gichu, and Thor. They constitute the area known as the Chilas subdivision of the Gilgit Agency, while Chilas proper includes Kiyorgah, Butorgah, and Gichu. Lower down the river are Darel, Tangir, Khili, and Sazi on the right bank, and Harban, Sazin, and Jalkot on the left bank.

After the conquest of Chilas by Kashmir in 1852, the Maharaja imposed a tribute in gold-dust, and arranged for the administration of the country as part of the Gilgit district. A British Agency was re-established at Gilgit in 1889, which included, among other territory, the Chilas subdivision described above except Thor. In 1892 a British mission to Gor was attacked by the Chilasis, which led to the occupation of their country and the appointment of a Political officer at Chilas. The right of the Kashmir Darbar to construct roads and station a limited number of troops in the territory was secured, but the autonomy of the Chilasis was guaranteed. Under the revised arrangements made in 1897 the republics pay small feud sums to the Maharaja, and in 1899 Thor was incorporated in Chilas. Darel has rendered a tribute of gold-dust to Kashmir since 1868, when the Maharaja's troops raided the country. The tribute is now paid through the Punial governor. Tangir pays a small tribute to the governor of Yasin. The remaining communities have no political relations with either Kashmir or British India, except Jalkot, which from its position dominates Thor and the head of the Kohis valley in the North-West Frontier Province.

Dard A43
Chitral

# CHAPTER III

## A MONTH IN CHITRAL

Meh-tar Aman-ul-Mulk was a very remarkable man. For forty years he had been the chief personality on the frontier; even in his father's time he had made his mark. It would be wearisome to attempt to unravel the long story of battle and murder, treachery and intrigue, formed by his life. Suffice it to say that he ruled a united Chitral, extending from the borders of Punyal on one hand, to the borders of Kafiristan and Dir on the other, and that the watershed of the Hindu-Kush was his northern boundary. He was tributary to Kashmir, and received from that State a subsidy, which had been doubled a few years before our meeting, for his assistance when Gilgit was besieged by the then ruler of Yasin.

A brief account of this incident will give a good idea of the Mehtar's methods. Yasin was ruled by the Kushwakt family, descended from Shah Kushwakt, the brother of Shah Kattár, the founder of the Chitral royal family. The families of course frequently intermarried, and were closely connected. In the year 1880, Pahlwán Bahadur, the Kushwakt

Kafirs [whom I include in the name "Dards"] is very little. My informants were two Kafir lads, who lived for some weeks in my compound and whose religious customs had, no doubt, been affected on their way down through Kashmir. That they go once a year to the top of a mountain as a religious exercise and put a stone on to a cairn; that the number of Muhammadan heads hung up in front of their doors indicates their position in the tribe; that they are said to sit on benches rather than squat on the ground like other Asiatics; that they are reported to like all those who wear a curl in front; that they are fair and have blue eyes; that they drink a portion of the blood of a killed enemy—this and the few words which have been collected of their language is very nearly all we have hitherto known about them. What I have been able to ascertain regarding them, will be mentioned elsewhere.*

II. FORMS OF GOVERNMENT AMONG THE DARDS.

Chilás, which sends a tribute every year to Kashmír for the sake of larger return-presents rather than as a sign of subjection, is said to be governed by a council of elders, in which even women are admitted.† When I visited Gilgit, in 1866, it was practically without a ruler, the invading troops of Kashmír barely holding their own within a few yards of the Gilgit Fort—a remarkable construction which, according to the report of newspapers, was blown up by accident in 1876, and of which the only record is the drawing published in the *Illustrated London News* of the 12th February 1870.‡ There is now (1877) a Thanadar of Gilgit, whose rule is probably not very different from that of his rapacious colleagues in Kashmír. The Gilgitis are kept quiet by the presence of the Kashmír army, and

* Since writing the above in 1867, a third Kafir from Kafiristán has entered my service, and I have derived some detailed information from him and others regarding the language and customs of this mysterious race, which will be embodied in my next volume. [This note was written in 1872.]

† I have heard this denied by a man from Sazín, but state it on the authority of two Chilásis who were formerly in my service.

‡ My Sazíni says that only a portion of the Fort was blown up.

by the fact that their chiefs are prisoners at Srinagar, whose other representatives of once reigning houses are also under surveillance. Mansur Ali Khan, the supposed rightful Raja of Gilgit is there he is the son of Asghar Ali Khan, son of Raja Khan, son of Gorman Khan—but legitimate descent has little weight in countries that are constantly disturbed by violence, except in Hunza, where the supreme right to rob is hereditary.* The Gilgitis, who are a little more united than their neighbours to the West, North and South, and who possess the most refined Dardu dialect and traditions, were constantly exposed to marauding parties, and the late ruler of Yasin, Gauhar-Amin, who had conquered Gilgit, made it a practice to sell them into slavery on the pretext that they were Shiahs and infidels. Yasin was lately ruled by Mir Wali, the supposed murderer of Mr. Hayward, and is a dependency of Chitral, a country which is ruled by Amin-ul-mulk.

The Hunza people are under Ghazan Khan, the son of Ghazanfar,† and seem to delight in plundering their Kirghiz neighbours, although all travellers through that inhospitable region, with the exception of Badakhshan merchants, are impartially attacked by these robbers, whose depredations have caused the nearest pass from Central Asia to India to be almost entirely deserted (1866). At Gilgit I saw the young Raja of Nagyr, with a servant, also a Nagyri. He was a most amiable and intelligent lad, whose articulation was very much more refined than that of his companion, who prefixed a guttural to every Khajuná word beginning with a vowel. The boy was kept a prisoner in the Gilgit Fort as a hostage to Kashmir for his father's good behaviour,

* *Vide* "History of Dardistan" for details of the contending dynasties of that region, pages 67 to 111.

† Major Montgomery remarks "the coins have the word Gajanfar on them, the name, I suppose, of some emblematic animal. I was however unable to find out its meaning." The word is غضنفر, Ghazanfar [which means in *Arabic*: lion, hero] and is the name of the former ruler of Hunza whose name is on the coins. In Hunza itself, coined money is unknown. [For changes since 1866, see "Hunza and Nagyr Handbook, 1893."]

718 [illegible] town once in Peninsula, who was a servant of everybody. On this the Nadu was "Dead" to the well, and he came with him to the ruler of the Nadu. The object was explained to him and he said that a bird called Garui Pasan, who lived on the snows on the Lotus Mountains, should be sent for to save. Provision was first made the messenger, but the bird declined to come, whereupon Trees was sent to him and he came to see Rajam Nadi and Vanda Kai Singh. Rajam Nadi now sent for a mouse which lived close to his house. When everything was ready the well gave orders that Vanda Kai Singh should stand in water as a pillar upon which Garui Pasan should spread his wings, while the mouse by the making a hole into the bird should bring out and spread all the soil over the wings of Garui Pasan. The orders were obeyed and the wings of the bird covered all the water, while the mouse brought out all the soil which was beneath the water. In this way the earth was raised over the water.

X.°

"Omma Bin" (The Stone Stone).

(47) 718 There used to be at Gilgit a blue stone called "Omma Bin," about a yard square, where the present telegraph office is situated. No king was acknowledged in the country unless he had resorted to it and prostrated himself before the stone. There and then the people showered his head with a crown, swore fealty and tendered their allegiance. This was the day when all the better class would gather to see the new "Rai" perform all the ceremonies, and undergo all obligations considered necessary to the office of leader of the nation. This was done in order to secure their confidence by a man who was to become sole director over their destinies, among them being many who had taken an active part in bringing him to the throne and proclaiming him their chief.

When the ceremonies were over, all came one by one to kiss his hands, to receive his blessings and to bless him in return. They would then dance to the beating of drums, make merry, sing praises and recite poems describing the heroic deeds already performed by the Raj, his ancestors and others whose lives had become endeared to all by self-sacrifice in the cause of their country.

[719] The *dama* (soothsayer) was not left out on this occasion, for it was necessary to foretell the future of the king and his courtiers, and to exhibit the case of victory that accompanies prophecy by the soothsayer. Before being dismissed at night all present partook of a feast; some were gratified with handsome titles and other distinctions; some gratified by a gesture of kindliness.

The Caretakers of Shiri Bai.

719 716 [illegible] 782 Shiri Bai is the name of a goddess who, as the people say, lived on a rock at Nangam, a village in the Astore district. The rock too is called Shiri Bai, and is always kept covered with branches of juniper, while an attendant called "Bab Bai" resides there to look after it. Barren women used to sacrifice goats to and pray before the sacred stone in the hope of progeny. In the hot weather, when the people had gathered their

the soil, and not to the ruler or the ruling class, who threaten in time to efface the original inhabitants. By them the local name of Boorishé has been converted into Woorshik, from which also the valley takes its name. I am unable to say to what language the term *goom* belongs, but it evidently means either "valley" or "country," as there are several instances of its application to signify the place inhabited by certain people, as Kalashgoom, the country of the Kalash. In Hunza, Nager, and Gilgit, Yassin is sometimes called Azair, which may be the ancient name of the valley, but is more likely a corruption of the name Ghizr, a district of some importance further to the westward. The people of both Yassin and Chitral are also sometimes styled by their eastern neighbours Poré, and their country Poriaki, from *loor*, "the west." The fixed population of Woorshigoom is, owing to oppression and misgovernment, very small, probably not exceeding 3,000 souls. The soil is particularly rich and fertile, though the climate will not permit of its yielding more than one crop in the year. The ruling family are styled Khushwakté, from an ancestor named Khushwakt, and the title assumed is the Persian one of "Mihter." Reminiscences of the more ancient rulers exist in the names of certain spots, such as *Thum rai*, "the Thum's seat." The present Mihter, Gholam Mohi-oodeen, is better known by his nickname of Peihlowan Bahadoor. He is a young man of twenty-nine years of age, and of manly and energetic character, inherited from his father, Gohr Aman, whose cruelties in Gilgit have been related by Mr. Drew, but who with all his cruelty of disposition was undoubtedly an able and energetic soldier. Peihlowan Bahadoor succeeded his brother Meer Wulli, when the latter was forced to fly from the country after the murder of Mr. Hayward. The princes of the Khushwakté family rule over a considerable part of Upper Chitral as well as Yassin, but generally prefer the latter as their place of residence.

From Yassin two roads lead to the Chitral Valley. By the Toowi Pass, Mastooch can be reached in five days: this route, however, can only be used in summer, when it is the one most frequented, as by it the numerous river-crossings, which constitute the chief difficulty to be encountered, are avoided. The pass is a high one, probably not less than 16,000 feet, and a difficult piece of glacier has to be traversed. The second and easier, though longer, route is by Ghizr and Laspoor.

This road runs from the mouth of the Woorshigoom Valley

Biddulph G-3 (1873-1878) 1880 A103 Afghanistan A103
4 Av3 Dard Av3
Chitral

increases in density. Forty miles below Chitral a route leads from the main valley past Ashuret over the Lowri Pass to the Afghan state of Dir. Twenty miles lower down, at Birkot, is the mouth of the valley inhabited by the Siah Posh of the Bushgali tribe, the upper end of which is entered from the Dorah Pass. Several smaller valleys are inhabited by Siah Posh, who have lost their independence, and at Bailam the southernmost Kashkar village is passed, and the Afghan state of Asmar is reached. The boundary between Kashkar and Asmar is marked by a wall built across the valley on the right bank between Bailam and Nawakali, and on the left bank by the small stream below Saoo. The valley for many miles above the boundary is reputed to be extraordinarily fertile.

Chitral, which is the seat of the ruler of Kashkar, comprises six large villages, which extend for 3 miles along both sides of the river at an elevation of about 4,000 feet. Its name has gradually come to be applied to the whole country. On the right bank is the fort in which the Mihter, or Badshah, —for he is known by both titles,—resides. Half a mile above the fort is an excellent wooden bridge protected by a stone tower at each end. All the forts in Kashkar differ in construction from those inhabited by the Shin and Boorish races, having inordinately high towers rising 18 feet above the ramparts, which are themselves 30 feet high. Their distribution also gives evidence of a more secure state of society. Instead of every village having one, and sometimes two, forts sufficient to hold all the inhabitants, as is the case in the valleys draining directly into the Indus, the only forts in Kashkar are the abodes of rulers of districts, or persons nearly related to the ruler.

The ruling family are styled Katooré, from Shah Katoor, brother of Shah Khushwakt, the ancestor of the reigning family of Yassin; but the name Kator seems to have been applied to the country in former times, before the existence of the present dynasty of rulers. The present Mihter, Aman-ool-Mulk, is about 58 years of age, and notorious for his astute and deceitful character. The number of the population he rules over can only be roughly computed, and probably amounts to less than 200,000 souls. These numbers would appear scanty for so large an extent of country, but the population is wholly agricultural, and, as in all these very mountainous countries, the habitations are, with few exceptions, confined to a narrow strip along the sides of streams.

Biddulph G-3 (1873-1878) 1880 ~~AU3 Afghanistan AU3~~
4 AV3 Dard AV3 Chitral

564 Zundré and Ashimadek, but do not give daughters in return, except to the Zundré, who, being descended from a former dynasty of rulers of the country, are regarded as of royal blood. All the rest, including the Zundré, intermarry without restriction, but never with the Fakir Mushkin class, from whom, however, they take daughters as concubines.

651 The regular revenue of the country is paid solely by the "Fakir Mushkin" class. Those who live by agriculture are assessed at a tenth of all produce, one sheep, one blanket, and 20 lbs. of honey from each house yearly. The pastoral community is assessed at four sheep, three woollen robes, and 30 lbs. of butter from each house yearly. A few villages, which are almost entirely employed in mining, pay 16 lbs. of mine produce yearly for each house. There is, however, very little regularity observed in collecting these imposts, and, in practice, as much is wrung from the subject population as possible. Considerable dues are collected from the merchants who trade between Badakhshan and the Punjab, and the Chitral ruler's revenue is further increased by the sale of hawks and falcons, of which great numbers are captured every year and sold to merchants, who take them to the Punjab.

643 [671] 692 The administration of justice is practically the will of the ruler, though nominally the precepts of the Sharyat are observed. In some cases the intervention of the Moollahs is useful. In one case which came to my knowledge they intervened to save the life of a condemned man who had murdered a favourite follower of the Mihter, by pointing out that the Mihter's injustice in permitting his favourite to forcibly abduct the man's wife had led to the murder. Small cases are settled by the district Ataliks.

642 177 A somewhat elaborate administrative machinery exists which was probably instituted by, or borrowed from, the Shin Ras of Gilgit. The names of many of the officials are the same, though their functions differ, and the presence of extra officials with Usbek titles shows that a new system has been grafted on the old one.

634 651 The country is divided into eight districts. At the head of each is an Atalik, whose duty it is to collect the revenue of his district and to command the men of it in war. Like the Wuzeers of districts in Gilgit, he has the right of releasing one man in each village from military service. Out of the revenue of his district he receives 12 sheep, 12 measures of butter, 20 measures of wheat, and a proportion of the

Dard AV3

right side of the snowy Pass, and is always ready to advance to Gilgit if required. I know very little of the history of Astor. Bernier, who wrote about the year 1660, in enumerating the countries that border Kashmir, speaks of the territories of *Raja Gamon*. Now from geographical position I infer that this was the ruler of Astor. When the Sikhs held Kashmir, the Astor Raja was tributary to them; he had become so without any force having been sent; for a time he remained in quiet. But a curious thing happened. When Wazir Lakpat (who was lieutenant of Zuráwar Singh, who was servant of Raja Gulâb Singh, who was a tributary of the Sikhs) was victorious in Skárdú, he came over the Harpo Lá and invaded Astor. Lakpat besieged the Astor fort for four months; at the end of which time it was given up for want of provisions, and the Raja was taken away prisoner to Skárdú; and this though he was on terms of friendship and (in a degree) dependent on the Sikh Governor of Kashmir. At last, representations on the subject went to Lâhor, and from there Gulâb Singh received directions to desist from interfering with Astor, so the Raja was sent back. But not long afterwards the Sikhs themselves from Kashmir required a passage through the Astor territory on their way to Gilgit (as will be related in Chapter XIX.), and not only so, but they required to make their communications sure; with this object a Sikh post was placed at Astor, and from that time the independence of the Raja diminished; now there is a titular Raja, for whose subsistence some provision is made, whether by pension or from land I do not know.

At Astor and for many miles on there is one general character of the valley; at the bottom it is very narrow; the river is quite confined between the ends of great spurs from the lofty mountain-ridges on both sides; the cultivation is on very small spaces, usually some hundreds of feet above the valley-bottom. The hill-sides are partly broken into cliffs and partly of a smooth surface, grown over with grass in tufts, and with bushes of pencil-cedar scattered over, while in parts sheltered from the sun *Pinus*

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

131 A few miles below Koli is Batera; beyond that Dārdistān
101 ends and the Pathān country, where the Pashtū language prevails, begins. The Koli people are Dārds; they know both the Dārd and Pashtū languages.

642 Many places have been put down as republics; what I have
646 been able to find out about the way of their government will apply to them generally. There is a general assembly of the people, called Sigās, which decides on almost every matter.
[562] It is called together by beat of drum; men, old and young, attend it, but not women; none who have the right to attend are allowed to be absent, under pain of fine. In this assembly the rights of a minority are carefully guarded. I have been told that if even one man, supposing him to be of any consideration, object to a policy, it cannot be carried out; the assembly is adjourned for a few days, and in the interval effort is made either to convince the objector or to modify the proposal; then meeting, they may perhaps have again to adjourn; but in time something or other is sure to be arranged.

643 The executive consists of a few men, may be five or six, chosen by the people in their assembly. These are called *Joshtero* in the Dārd language. They are chosen for their wisdom; but here as elsewhere wealth seems to have influence to convince the people of the wisdom of those who possess it. The office of Joshtero is not hereditary; the Joshteros must be in general accord with the assembly else they will be displaced. The Joshteros deliberate together on a policy, but cannot carry it out without the consent of the assembly of the people, which they themselves call
[692] together. The Joshteros are also arbitrators to settle disputes of water and wood, and what not.

623 Where the valley is large, like, for instance, Dārel, each village has its own Sigās, or assembly, which settles the particular affairs of that village, while for matters of more general policy the Joshteros of all the villages first meet, and make among themselves a plan to propose, and then a general parliament is called; that is, the people themselves of all the villages together meet to hear and decide. If all of the villages cannot agree on one policy, then

487

described in the article on KASHMĪR. By that route Gilgit lies at a distance of 390 miles from the present railway base at Rāwalpindi. An alternative line has been opened over the Babusar pass, which brings Gilgit within 250 miles of the railway at Hassan Abdāl. This line, besides being shorter, has the advantage of crossing only one snow pass, instead of two, or practically three, if the winter snow at Murree be taken into consideration. The routes to the north are mere tracks, when the military roads connecting Gilgit with the outposts at Gupis and Hunza have been passed.

205 648 Post and telegraph offices.

There is a daily postal service with India by the Burzil pass and Kashmīr, and the telegraph line follows the same route. Both services work well in spite of heavy snow and destr ctive avalanches, and are maintained by the Government of India. There is a weekly postal service from Gilgit to Chilās and Gupis, and a fortnightly post between Gilgit and Kashgar via the Kilik pass in the summer, and the Mintaka in the winter.

643 704 [605] Administration, &c.

The Gilgit Wazārat is in charge of a Wazīr Wazārat. Crime is slight; there is no jail and no police organization. Police duties are carried out by the levies and a few soldiers of the Kashmīr regular troops. There is little litigation; and the chief business of the Wazīr is the provision of supplies to the garrison at Gilgit, now effected by an excellent system of transport from Kashmīr. In 1891–2, at the time of the Hunza-Nagar expedition, the garrison had a force of 2,451; in 1895, when the Chitrāl disturbances broke out, it consisted of 3,373; and the present garrison numbers 1,887, including a mountain battery, two infantry Imperial Service regiments, and Kashmīr sappers and miners. A school is maintained at Gilgit.

651 Land revenue.

A land revenue settlement of Astor and Gilgit has been made. It was found impossible to introduce a purely cash assessment, owing to the State's requirements in grain; but many inequalities and abuses were removed, and, on the whole, the condition of the villagers is satisfactory.

631 643 651 Political relations.

A British Political Agent resides at Gilgit. He exercises some degree of supervision over the Wazīr of the Kashmīr State, and is directly responsible to the Government of India for the administration of the outlying districts or petty States of Hunza-Nagar, Ashkuman, Yāsīn, and Ghizar, the little republic of Chilās, and also for relations with Tangir and Darel, over which valleys the Puniāl Rās and the Mehtarjaos of Yāsīn have partially acknowledged claims. These States acknowledge the suzerainty of Kashmīr, but form no part of its territory. They pay an annual tribute to the Darbār-

3: Imperial Gazetteer G-3 (1889-95) 1909 AV1 Kashmir
Dard AV3

Hunza and Nagar in gold, Chilās in cash (Rs. 2,628), Ashkuman, Yāsīn, and Ghizar in grain, goats, and *ghī*. The relations of the Political Agent with the outlying States are eminently satisfactory. No undue interference takes place in the administration, and the people are encouraged to maintain their customs and traditions intact. Besides the military garrison, furnished by the Kashmīr State, there is a small but extremely efficient force of local levies armed with Snider carbines. They are drawn from Hunza, Nagar, Puniāl, Sai, and Chilās.

**Shināki.**—A group of small republics in the valley of the Indus, lying west of Kashmīr and south of Gilgit. The territory extends from the junction of the Astor river with the Indus to Seo on the right bank and Jalkot on the left bank of the latter river. Within this area the people are grouped in communities inhabiting one or more nullahs, each community forming a separate republic. Starting from the junction at Rāmghāt these are, in order: on the right bank, Gor, Kinergah, and Hodar; and on the left bank, Bunar, Thak, Butogah, Giche, and Thor. They constitute the area known as the Chilās subdivision of the Gilgit Agency, while Chilās proper includes Kinergah, Butogah, and Giche. Lower down the river are Darel, Tangir, Khilli, and Seo on the right bank, and Harban, Sazīn, and Jalkot on the left bank.

After the conquest of Chilās by Kashmīr in 1851, the Mahārājā imposed a tribute in gold-dust, and arranged for the administration of the country as part of the Gilgit district. A British Agency was re-established at Gilgit in 1889, which included, among other territory, the Chilās subdivision described above except Thor. In 1892 a British mission to Gor was attacked by the Chilāsis, which led to the occupation of their country and the appointment of a Political officer at Chilās. The right of the Kashmīr Darbār to construct roads and station a limited number of troops in the territory was secured, but the autonomy of the Chilāsis was guaranteed. Under the revised arrangements made in 1897 the republics pay small fixed sums to the Mahārājā, and in 1899 Thor was incorporated in Chilās. Darel has rendered a tribute of gold-dust to Kashmīr since 1866, when the Mahārājā's troops raided the country. The tribute is now paid through the Puniāl governor. Tangir pays a small tribute to the governor of Yāsīn. The remaining communities have no political relations with either Kashmīr or British India, except Jalkot, which from its position dominates Thor and the head of the Kāgān valley in the North-West Frontier Province.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV 3
Astor

country, and close under whose shadow we were marching,—magnificent views, giving an overpowering impression of towering height. Locally it* is called Deomir, "the mountain of the gods," a fitting name.

The last few marches showed miles of terraced land out of cultivation, the result of the incursions of the murderous Chilasis who raided from the Indus valley. In a country where every foot of cultivation has to be won with heavy toil from nature, nothing appeals so to your heart as the sight of deserted land and ruined homesteads.

Finally, after thirteen days' marching, we reached Astor, which used to be the capital of a kingdom important enough in a small way in the Hindu-Kush. The Sikhs absorbed it, all that remains of its former glories being a fort now held by the Dogras.

Astor boasts of a bazaar, the first met with since leaving Kashmir; beyond it there are only two, at Gilgit and Chitral. Most of the trade was at this time done by itinerant traders from Koli and Palas in the Indus valley, who brought goods from India, taking back gold-dust and products of Central Asia, and who penetrated into the remotest glens. The more peaceful state of things which we introduced has given a start to Gilgit, which is now becoming the emporium of this portion of the Hindu-Kush.

I here made the acquaintance of Bahadur Khan, Raja of Astor, the representative of the old ruling race, an old gentleman whose honesty, intimate knowledge of the country, and connection with all the local rajas were to be of the greatest value to me on more than one occasion. Deprived of his kingdom and very poor, living on a small grant of land

* [Nanga Parbat mountain -- Analyst]

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Astor

given to him by the Durbar, treated with contempt by the Kashmiri Governor of Gilgit, under whom is the valley of Astor, he had the loyalty and respect of his former subjects, who reserved for their Kashmiri rulers the hatred, fear, and contempt begotten of oppression.

We saw at Astor for the first time polo as it is played in what is either the home of its birth or the land of its earliest adoption. In very few places does flat open ground exist; consequently the polo grounds are merely terraces annexed from the cultivation, through which, as a rule, the main road into the village runs. The Astor ground is about a hundred and fifty yards long by twenty yards wide, and it is one of the best. Any number of men play, the usual limit is ten-a-side, and at the beginning of the game both sides assemble at one of the goals. When all is ready the captain of one side, usually the local raja or the most important guest, dashes down the ground at full speed, carrying the ball and followed by the whole mob of players, all shouting madly; the band, which is seated outside the boundary wall at the centre of the ground, plays its loudest, the lookers-on yell and whistle in a way a London street boy might be proud of, and, without checking his speed for a moment, the holder of the ball throws it into the air and hits it as it falls. The hit should be made from the centre of the ground, and a good man will often hit a goal. A man who is inclined to be a bit too sharp will gallop well beyond the centre before hitting, and gain an unfair advantage. One of my worst enemies, who murdered his brother because he was a friend of ours, who gave me endless trouble, and

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

The approach to Gilgit is rather fine. The road runs up the flank of a huge alluvial fan several hundred feet in depth, where it bursts out of the hillside, and which stretches a mile into the valley. From the east as you approached you saw then no trace of cultivation, only line after line of ruined terraced fields bare and brown. High up on the main hillside, visible for miles, stands a Buddhist tower, the land-mark which must for centuries have welcomed the traveller to Gilgit. The extraordinary dryness of the climate, with its average rainfall of under a couple of inches a year, has kept it, ancient as it is, in a state of almost perfect preservation.

From the highest point where the road crosses the fan there is a splendid view of the triple peaks of Rakapushi, the great mountain above Nagar to the north, and the Gilgit oasis bursts into view. This is a mass of cultivation five or six miles long by a mile wide at the widest, studded with villages and covered with fruit-trees, the whole irrigated and depending for its water on one stream which enters the valley at the western end.

I was met on the road at intervals by all the important men in Gilgit; the lower the status of the official the further he came out, according to Eastern custom, to receive me. The rajas of Punyal, the country tributary to Kashmir, which is the continuation of the valley of the Gilgit river towards Chitral, refugee princes from Yasin, driven out by the Mehtar of Chitral, local wazirs and Kashmir officials met me one after the other, the culminating point being my reception by the Governor of Gilgit and the officers of the Committee directing the operations on the

4: Durand G-3 (1888-93) 1900 AV1 Kashmir AV1
Dard AV3

frontier. It was a motley crowd and picturesque, but I was glad when, after passing the fort, we were conducted to the house built in Major Biddulph's day, and left there in peace.

The next few days were spent in making acquaintance with the Governor and the members of the Committee, which consisted of the General commanding at Gilgit, the General commanding the regular reinforcements, the Sunadés or officer commanding the irregular troops, and of a couple of high civil officials, the most important of all being Mehta Sher Singh, an old gentleman of high family and position in Kashmir. The ablest among these gentlemen was, perhaps, the Governor, who had held his post for eight years, was heartily sick of it, and was most anxious to settle matters with Hunza and Nagar somehow, and to be permitted to return to Kashmir. He was an adept at intrigue, the threads of all the frontier affairs were in his hand, and the puppets on both sides of the border generally danced at his bidding.

My position was difficult; I had distinct orders not to give advice, but I could see very well that, if the negotiations going on failed, the Committee would come to me for it, and that whatever decision they came to, the onus would be thrown on me. Every endeavour was of course made to throw dust in my eyes, and to prevent my getting information as to what had really happened, why the tribes had broken out, what was going on at the moment, and as to the condition of the troops. I was told, however, and I knew the information was true, that between Astor and Nomal, the fort eighteen miles

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

000 acquaintance of Raja Akbar Khan, the Chief of Punyal, and his brothers and cousins. Fine fellows, magnificent mountaineers, who were later, under us, to prove "tall men of their hands."

The climate was perfect after Gilgit. We were camped in an apricot orchard, at an altitude of seven thousand feet and over, and the delicious air soon set us up.

[361] 133 Gakuch fort and its cultivation stand high, seven hundred feet or so above the river bed. The formation is curious; the hills, in one fine slope from the snows, sweep out till they finish in an almost sheer cliff into the river, the last few hundred yards before the cliff is reached being comparatively flat. Through this level portion project great rounded masses of rock, water-worn and full of "pot-holes," the remains of glacial action. It looks as if, at some remote period, a huge glacier had flowed down the Ishkuman, and [136] had swept to its left down the Gilgit valley. These rounded hillocks were full of chikor, the mountain partridge, which gave us good sport. In one of them is a cave reputed to be fathomless—really, I suppose, about twenty feet deep—heaped up with human bones. It was said to have been filled by a former ruler of Yasin, and a terror to his neighbours, whose bloodthirsty nature gained him the title of Adam khor, "the man-eater."

• 643 681 During my halt at Gakuch, Sirdar Nizam-ul-Mulk, the Mehtar's eldest son, who ruled Yasin, and who was to meet me just across the border, bombarded me with letters, and a curious incident occurred with one of his letter carriers. When I handed this man my answer to Nizam's letter, I gave him, as

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 usual, a present, in this case a small round looking-
681 glass in a brass cover, a thing much prized in these parts. He declined to receive it, and said the last man had got five rupees and a knife, and that he would not take less. It would have been impossible to carry on if I allowed myself to be rushed for presents in this way, so I dismissed him, and sending for the Mehtar's half-brother, who was accompanying me, explained the man's impertinence to him. The result was startling; the old gentleman was furious, said that, had we been in Chitral territory, he would have cut the man to pieces at once, and that the Mehtar would certainly, if he heard of it, kill the man and sell his wife and children for slaves. I interceded for him, and he got off without punishment, but it gave one an idea of how the Mehtar ruled, and why he was obeyed as he was.

159 Nizam-ul-Mulk met us the first march across the border, and was with us a couple of days. He was a handsomer man than his brother, but had the same heavy under-lip. His manners were charming, but his morals, like those of almost every leading man in the country, excepting the Mehtar, Afzul, and one or two others, left much to be desired. He [644] was a worse governor than Afzul, a mixture of cruelty, indolence, and good-nature, but he was popular too in his way, being a fine shikari. He was always accompanied by his dancing and singing boys, without whom he would move nowhere, and he was consequently an intolerable nuisance on the march, as they kept up their music right through the night. During his first interview with me he

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

gather the wild flowers as he passed them, and stick them into his turban. As a race they are slight and wiry; there were only half a dozen tall men in the country, and I never saw a fat one. This is no doubt partly due to the fact that there is no superabundance of food available, but the result is good. The children were really a joy to see; they had bright rosy cheeks and well-shaped faces; and the small girls, who were not kept within doors, were in many cases extremely pretty.

As we neared Chitral we were met by an increasing number of grandees, of regularly increasing rank. Eight miles from Chitral itself my old friend Raja Bahadur Khan, the Mehtar's half-brother, received me. I never understood how he had acquired a Hindu title, but in the Hindu-Kush they are not very particular. Half a mile further on, after passing through the narrowest part of a gorge along a path a foot wide, pegged on to the rock—one of the few places not even a Chitrali would ride over—a mass of armed men met us. One of them presented me from the Mehtar with a horse most gorgeously caparisoned with gold embossed head-stall, high demi-pique saddle—instrument of torture for an Englishman accustomed to the familiar Whippy—and prettily embroidered and spangled body cloth. Another half mile and the river leaves the gorge, and on the opposite side there is an isolated rocky mound, along the top of which were ranged some two hundred men, who fired a wild *feu de joie* as we passed. A mile or so further we emerged into the plain, and saw the Mehtar sitting surrounded by a brilliant crowd. Dismounting when about one hundred and fifty yards from him, I

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 walked forward, the Mehtar walking to meet me half way. It was an interesting moment for both of us, as we shook hands and looked into each other's eyes. 159 The Mehtar was a big man, and heavy, about sixty-five years of age, with a very strong and clever face, but the mouth was spoilt by the loss of his front teeth.

644 After a few words of welcome we mounted our 291 horses, and rode off. The Mehtar was surrounded by his court, Afzul-ul-Mulk and various other sons were there, and representative nobles from all parts of the country. The scene was one of the most brilliant and striking it is possible to imagine. It could not compare with the more ordered magnificence of the court of an Indian prince, but what was lost in splendour and numbers was made up by its wild picturesqueness. The Mehtar, dressed in green silk (he was a most devout Mahomedan), riding a big horse covered with brilliant silver trappings, moved off, with me on his right hand, the centre of a crowd of hundreds of horsemen and footmen in the brightest array. Cloth of gold, the rich silks of Central Asia, the most superb velvet coats, the colour almost hidden by the gold embroidery, the brightest English and Chinese silks in all colours, scarlets and blues, crimsons and purple, plain and brocaded, chogas of plain whole-coloured velvets, or of English broadcloths, flaring cottons, and the dull, brown haircloth of the country were all mingled without the semblance of order in inextricable confusion. The only appearance of uniform was in the Mehtar's *corps de ballet*, all the men and boys of which were dressed alike in blue sleeveless coats over white muslin shirts covered with

# CHAPTER III

## A MONTH IN CHITRAL

643
159

MEHTAR AMAN-UL-MULK was a very remarkable man. For forty years his had been the chief personality on the frontier; even in his father's time he had made his mark. It would be wearisome to attempt to unravel the long story of battle and murder, treachery and intrigue, formed by his life. Suffice it to say that he ruled a united Chitral, extending from the borders of Punyal on one hand, to the borders of Kafiristan and Dir on the other, and that the watershed of the Hindu-Kush was his northern
[642] boundary. He was tributary to Kashmir, and received from that State a subsidy, which had been doubled a few years before our meeting, for his assistance when Gilgit was besieged by the then ruler of Yasin.

A brief account of this incident will give a good idea of the Mehtar's methods. Yasin was ruled by the Kushwakt family, descended from Shah Kushwakt, the brother of Shah Katúr, the founder of the Chitral royal family. The families of course frequently intermarried, and were closely connected. In the year 1880, Pahlwán Bahadur, the Kushwakt

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

ruler of Yasin, and a nephew of Aman-ul-Mulk, who had had an adventurous and stormy career, took it into his head to invade Punyal and to expel the Dogras from Gilgit. The Mehtar encouraged him in every way, promised him assistance, and urged him to the enterprise. Pahlwán started and laid siege to Cherkilla, the chief fort of Punyal. The moment he was well committed to his adventure the Mehtar, who had secretly collected his forces, occupied Yasin. The unfortunate Pahlwán was at once deserted by his people, and threw himself on his uncle's mercy. It was of the usual kind, and he died suddenly.

The Mehtar was steeped to the lips in treachery; his hands were crimson with the blood of his nearest relations; two out of his three brothers he had murdered; the third was in exile in Kabul; his Kushwakt cousins had equal cause to rue his name. He was continually plotting to get his refugee relations to return to his country, with small success, for they well knew theirs would be but a short shrift. But such a character cannot be judged by our standards: in wild Mahomedan states it is always, and must always be, a case of kill or be killed amongst the sons of a ruling chief after their father's death. Polygamy, and the pernicious habit of parcelling out a kingdom into governorships during a ruler's lifetime among his sons, invariably lead to civil war; and when one brother falls into the hands of the other there can be but one result, and that as much in the interest of the state which is saved from war as in that of the conqueror, for "stone dead hath no fellow."

The Mehtar ruled his country with a rod of iron,

4: Durand G-° '1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 The Mehtar ruled his country with a rod of iron
151 and none dared gainsay his commands. But his
567 rule was not popular—far from it. His oppression
159 extended in all directions: he sold large quantities of timber yearly to Peshawari merchants, and the whole of it was cut and conveyed to the streams by forced labour—of course unpaid for; he interfered in trade, and levied prohibitive taxes on merchandise passing through his country; he bought the goods of passing merchants, if he wanted them, at his own valuation; he sold his subjects into slavery, and sent presents of slave boys and girls to the Amir
159 and to neighbouring chiefs. At the same time he
[598] had many good points. He was deeply religious according to his lights, yet he was no bigot. His view was that so long as a man was a good subject the ruler had no call to interfere with his religious opinions, and while I was in Chitral he soundly rated his son Murid for trying to enforce orthodoxy among his people. He was a kind and indulgent father, and devoted to his small sons, who used to form a pretty group round him when he came to see me, clustering about him with the fearlessness of affection. In a country where unnatural vices were rampant he was unstained. He had a religious horror of them, and attributed his success over the Kushwakt chiefs to their depravity, against which
[595] God's wrath had kindled. He was much married, not "cursedly confined" to one wife, or for the matter of that, to some dozens of wives and concubines. Like David, he "scattered his Maker's image through the land," and at every village you found a small son or heard of a daughter. He had eighty children.

4: Durand G-3 (1888-92) 1900 AVI Kashmir

Chitral

159 wander apparently aimlessly from subject to subject, but you had to be very careful of what you said or admitted, for, like lightning, would shoot out some sudden searching question about the matter on which his mind was really working. It was his little way, practised I imagined originally as an art, but which had become second nature.

•643 The moment was an interesting one to be in
648 Chitral: Mahomed Ishák had invaded Afghanistan
159 from Russian Turkestan, Afghan Turkestan had fallen into his hands, the old princes of Wakhan, who had taken refuge in Chitral territory from the Amir, had been summoned by him, and momentarily reinstated in their country, his emissaries were passing through Chitral, and going to Dir, Bajaur, and Swat, endeavouring to raise trouble for the Amir. The Mehtar was very anxious; he was between the devil and the deep sea; he feared the Amir, and rightly, and hated him with a bitter and deadly hatred; he was afraid of the consequences if he espoused Mahomed Ishák's cause, for the success of which he prayed incessantly, and the latter failed in his attempt. On the other hand, Mahomed Ishák made great promises, and, if successful, might be a good friend; he could scarcely be a more dangerous and unpleasant enemy than Abdur Rahman. Altogether, it was a very difficult question, and he came and discussed it with me. I advised him, in what were the interests of Government as well as his own, not to stir up strife: a war once kindled on the frontier spreads frequently in unexpected directions. I pointed out that the Amir was our ally, that we did not desert our allies, and that Government would not be best pleased if the Mehtar

4c Durand G-3 (1888-92) 1900 AV1 Kashmir
Dard AV3
Central

started a conflagration. In the end, whether my counsel had anything to do with it or not, the old gentleman decided to sit on the fence and do nothing. 643 648 159

The Mehtar's views on the condition of frontier affairs were interesting, and his knowledge of men and matters varied and wide. A man does not rule a frontier state forty years for nothing. He saw that, so far as his dynasty and country were concerned, safety lay in alliance with us, danger in any closer intercourse with Afghanistan. For this reason he was delighted to have an unconquered Kafiristan on his flank as a buffer between him and the "God-given Government." He might occasionally, in retaliation for too numerous murders on the part of the Kafirs, raid their country with the object of getting some slaves, but he had no desire to see it conquered, and he was delighted that the Kafirs made the road down towards Asmar, and up the Ashreth valley to the Lowari pass, their happy hunting-ground, and murdered stray Pathans. The more dangerous the road was, the more isolated and safe his state. We discussed many questions, to which I cannot refer, with daily increasing interest and amusement on my part. Some of his ideas with all his shrewdness were very quaint; one of his most persistent demands was that, given any agreement with Government, it should be engraved on a sheet of copper. Some ruffian had persuaded him that no treaty would be binding on us if only written on paper. [721]

My state visit to the Mehtar was most ceremonious. A deputation of his courtiers came and escorted us to the fort, at the gate of which the Mehtar met us, and conducted us to a dais outside, 644

4a Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

The chorus at the Mehtar's durbar was composed of all his men off duty, men from all the neighbouring villages who had come to see the fun, a stray Kafir or two who grinned in a friendly way at us, all the heterogeneous rabble possible to collect in Chitral. The price they paid for being present and looking at the dancing was continued applause, shouts of encouragement to the dancers, in which they were led by an official who was described as the head of the Mehtar's household. He was a very wild-looking creature, who rushed along the ranks of the spectators dressed in a scarlet cloth choga, and armed with a big ornamented stick, with which he belaboured any of the crowd who did not shout loud enough. After we had sat through the performance for some time the Mehtar rose, and, taking me by the hand, escorted me along a narrow path made by laying down cotton cloth, white and coloured, and stuffs of various kinds, finishing in a strip of sham kinkob, all of which became the perquisite of my servants after I had passed over it. The path led along the faces of the fort to the private garden, from which there was a door leading to the household offices and ladies' apartments. In the garden we found a tent pitched, into which we entered, followed by three or four of the Mehtar's most important sons and nobles.

Directly we had sat down the Mehtar began an oration which lasted an hour, with interruptions to drink iced water, and to rub snuff on his gums, the Chitrali way of taking this most seductive form of the weed. The upshot of his discourse was that

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 he was a faithful servant of the British Government, and that he wanted various things, mostly
648 rifles and money. Some of his remarks were
159 amusing, as when looking a Kashmiri officer full in the face he said that he had been in the habit, in the old days, of beating the Kashmiris and looting them, but that out of consideration for us he had abandoned this source of revenue. All this time I was getting horribly hungry; we generally breakfasted about eleven, and had been fetched away from camp just before our breakfast was ready, and it was long past two before the Mehtar showed signs of having talked himself out. There was nothing for me to say beyond the usual diplomatic *banalités* about the assurances I had received from the Viceroy's and the Foreign Secretary's lips of the interest felt by the Government in the welfare of Chitral, and of their personal regard for the renowned chief who ruled its destinies. The whole thing was a sort of full-dress debate, the object of which, on the Mehtar's part, was to let it be known throughout Chitral, and in the adjacent Pathan countries, Asmar, Dir, and Bajour, that he was definitely putting himself on the side of the British Government, and under its powerful protection.

644 The Mehtar, having thoroughly talked himself out,
262 departed, leaving Afzul-ul-Mulk to do host. The dinner was excellent of its kind, and we were introduced to various famous royal dishes, about the best being large flat unleavened cakes of bread full of minced meat, and sweet omelets made with honey.

000 I remained some time in Chitral, seeing the

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

time, their rapidity in movement, and intimate knowledge of their country, and its capabilities for defence, would make them dangerous enemies to a small invading force, and valuable auxiliaries while on the winning side.

Events proved the justness of the opinion then formed and recorded. A few years later saw Chitral in the throes of civil war, and a Mehtar in possession one day, ousted and flying the next, after the fall of a position attended with the loss of one man. The feeble resistance made to Colonel Kelly's advance by the Chitralis, though holding splendidly defensible positions, the secondary part played by the Chitralis in the memorable siege of Chitral, when all the real fighting was done by Umra Khan's Pathans, and the skill they showed in cutting off small parties of Sikhs, all went to prove that, though not wanting in courage and endurance, they lack the tenacity and grit which is wanted to enable men to face severe loss and to make real soldiers. As Napoleon says, "*Un homme ce n'est pas un soldat.*" The Chitrali is wanting in the something which makes a soldier.

I found that the Mehtar had no conception of our real strength, no standard by which to judge our power. He undervalued our troops, his only idea of a standing army being taken from the old Kashmir regulars, a body with whose name disaster was associated, and some of which he had himself defeated, driven into the fort of Gilgit, and besieged there. His sons and leading men who had been to India had not seen enough of our troops for their reports on them to impress him. One thing I found he was most anxious to have, and that was a properly

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 organised hospital and dispensary at Chitral, under a
648 good native doctor; that this was to be at our expense
743 went without saying. I am glad to say I was able to arrange this, a hospital was established next year, and it has flourished and done much good in the country.

431 Before leaving Chitral I sent the Mehtar the pre-
[576] sents I had brought up for him. The local etiquette forbade the gifts being offered in public, as everything so received had at once to be given away. My presents, therefore, were taken to the Mehtar by my head orderly. They consisted of a double-barrel express rifle, a pair of shot guns, and a miscellaneous assortment comprising silver goblets, cutlery, gold cloth from Benares, silks and broadcloths; and as the ladies were to be propitiated, carefully-graduated collections of rich brocades, silks, embroidered muslins, looking-glasses, jewelled trinkets, and last, but not least, boxes of scented soap and cases of perfumery. I was careful to ascertain the proper proportion to be observed in graduating the presents for the Mehtar's leading wives, and had a solemn interview with his minister on the subject. The result was excellent, and to my surprise and satisfaction I found that the Mehtar was delighted with the presents, and valued them at considerably more than treble what they had cost in India, and that the ladies were extremely
[579] pleased with theirs. The Mehtar's appreciation of some of my gifts was amusing. He was much taken with a nest of silver cups in a case, the innermost of which was shaped like a champagne glass. He was delighted with this, and pointed out that it would be most useful as a spittoon when he chewed snuff. The

D 132 361 K 712

It was the middle of August before we left Gilgit, and the heat was very great. The first march to Nomal presented nothing but the normal difficulties, and was on the whole good. The fort, which had been besieged the year before, was a fairly strong one, but was commanded on three sides by modern rifle fire, and was as usual insanitary and crowded.

D [487]

The next two marches to Chalt, the actual frontier post, were very trying; the road ran between great cliffs in a narrow gorge worn by the raging river, and the heat was intense. The parris were the worst we had seen, so bad indeed that we could not take our horses with us. The Chaichar Parri, the last before we reached Chalt, was a famous position, the outpost to the Hunza-Nagar valley, and one which had never been forced. No horse had ever been taken over the cliff, which had been purposely left in its impassable state, the path running across a hideous precipice on the narrowest possible shelf only a few inches wide. Biddulph describes this piece of road as worse than any ground he had ever crossed when stalking in the mountains, and it certainly was pretty bad. We were met on the far side by a deputation from Nagar, with horses for our use. The Chalt fort had only been held on sufferance by the Kashmir troops; it was a miserable square enclosure, with no proper command over its water-supply, and was dominated by another fort occupied by the Nagar people, and situated within a couple of hundred yards.

D [361]

D 643

I was joined on my march by Raja Bahadur Khan of Astor, who was closely connected by marriage with both the Hunza and Nagar ruling families, and by Raja Akbar Khan of Punyal. I was anxious to show

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Burusho AV7

D 643 that it was our policy to be on good terms with the natural leaders of the people of the country, and the Kashmir frontier officials had mismanaged their affairs so hopelessly, and were so distrusted, that I did not wish to have them as intermediaries. In the end Raja Bahadur Khan proved of the greatest service, and his tact and knowledge of the local conditions helped to avert what might have been a very serious disaster.

B 131 648 642 The position of the small States of Hunza and Nagar, which I was about to visit, is unique; as Biddulph says, "they probably present the spectacle of a race living under almost the same conditions now as their forefathers did fourteen centuries ago." Shut in by a girdle of practically impassable mountains, they had maintained their independence for centuries, though both States apparently had at different times acknowledged the suzerainty of the rulers of Gilgit, and latterly had bound themselves to respect that of Kashmir, and to pay it tribute.

B 648 The relations of Hunza to Kashmir, and through that State with the Government of India, were complicated by the fact that the Chief of Hunza also recognised the suzerainty of China, paid a nominal tribute to, and received presents in return from its ruler.

B 186 The two States, which are divided only by a river which runs in a bed six hundred feet wide between cliffs three hundred feet high, are inhabited generally by people of the same stock, speaking the same language, professing the same form of the Mahomedan religion, and are ruled by princes sprung from the same family. Notwithstanding all this, or more correctly perhaps because of it, they have been

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

ever count with certainty as to the succession. You may sometimes strengthen a vigorous ruler with advantage; to bolster up a weak one is, in the end, almost always useless.

The visit to Dir hinged on that to Bajour, and both now had to be abandoned. Preparations were at once made for the return march to Gilgit. Several posts reached me during my last few days in Chitral, and some had been tampered with and parcels stolen. I reported the matter to the Mehtar, who was furious, and who caused instant enquiries to be made, and a man sent for from each of the houses which had furnished the runners. The culprits were tracked, and the Mehtar proceeded to order condign punishment. The men were to be sold into slavery, but escaped at my intercession. The old Chief said it was no use he knew to offer me the wives and children of the robbers, but that he thought my Pathans would appreciate the gift. I had much difficulty in persuading him to leave the unfortunates in peace. But if no one suffered very severe pains and penalties, the fuss made had the desired result, and our posts were sacred for the future.

My last days in Chitral were full of business, and the evenings were spent as usual round a camp fire watching the dancing, and listening to the boys singing. Three Kafirs joined the circle one night, one of them having the most revolting type of face I ever saw, and danced badly for some time. Nizam then asked them for the chaunt which is sung when a successful raiding party arrives near its own village. They refused to sing it unless a goat was given them to eat, so one was brought and presented

4: Durand G-3 (1888-93) 1900 AV1 Kashmir AV1
Dard AV3
Chitral

K 563 631 offensive, and much in fear of the Chilasis, who in any raids in the Gilgit direction had to pass through their territory. The fighting force of Gor was insignificant, and the little state was tributary to Kashmir. The next republic was Darel; it was K [701] more important than Gor, and could turn out from a thousand to fifteen hundred men. The Durbar troops had in 1866 penetrated into the country, the people of which had made submission, and every year hostages were sent in to Kashmir, and a small tribute paid. Tangir, which lay next, was about equal in importance to Darel, and paid tribute to the rulers of Yasin. Below these tribes stretched a band of country inhabited by Kohistanis of different clans until the Pathan border was reached.

I found on my arrival at Gilgit that the Gor headmen had expressed their anxiety to come more directly under the protection of Kashmir. They were anxious to avoid being drawn into trouble should the Chilasis, as seemed likely, create disturbances, and to throw in their lot openly with Kashmir seemed to offer them the best chance of security. In a few days their representative deputation arrived, and after listening to their views I dismissed them to their homes with suitable presents, pointing out that they had nothing to fear from our side.

D ● 643 159 648 Rather disturbing news now began to come from Chitral. Umra Khan of Jandol had moved over his border, and occupied a portion of Chitral territory, and Afzul-ul-Mulk clamoured for the despatch of the mission. The arrival of a mission and his recognition as Mehtar by the Government of India would

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 strengthen his hands, and would tend to prevent
159 aggression from the neighbouring powers. To my
648 disgust but not surprise, for I knew the little savage well, he had signalised his acquisition of the throne by wholesale murders of his elder brother's adherents, and had killed three of his brothers in cold blood. However it was no business of mine to interfere, and I could only watch from a distance. Robertson was very anxious to reciprocate the advances made by the Gor people, and I suggested to the Government of India that the wishes of their representative should be acceded to, and that he should visit the country. Sanction was accorded to the proposal, and early in November Robertson started for Gor.

643 The day he was to leave Bunji came a messenger
721 in frantic haste, bearing the news that Sher Afzul, a brother of the old Mehtar, who had been in exile for years in Afghanistan a pensioner of the Amir's, had crossed the frontier by the Dorah, surprised and killed Afzul-ul-Mulk in his fort of Chitral, and proclaimed himself Mehtar. This was bad, but the most serious news was that he had proclaimed a religious war against us, that our native agent and doctor were in danger of their lives, and that troops were being collected and hurried towards Yasin, the
000 tract of Chitral just beyond our borders. Later in the day the late Mehtar's minister and the Governor of Mastuj rode up to my door. I could hardly recognise in the haggard travel-stained man, carrying his favourite son on his saddle-bow, who swung himself off his horse and stood broken with hard riding before me, the picturesque, cheery gentleman,

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

000 Although the period may be past in which a great English Journal could ask, "*what* is Gilgit?" the contradictory telegrams and newspaper accounts which we receive regarding the countries adjoining Gilgit show that the Press has still much to learn. Names of places, as far apart as Edinburgh and London, are put within a day's march on foot. Names of men figure on maps as places and the relationships of the Chiefs of the region in question are invented or confounded as may suit the politics of the moment, if not the capacity of the printer. The injunctions of the Decalogue are applied or misapplied, extended or curtailed, to suit immediate convenience, and a different standard of morality is constantly being found for our friends of to-day or our foes of to-morrow. The youth Afzul-ul-Mulk was credited with all human virtues and with even more than British manliness, as he was supposed to be friendly to us. He had given his country into our hands in order to receive our support against his elder brother, the acknowledged heir of the late Aman-ul-Mulk of Chitrál, but that elder brother, Nizám-ul-Mulk, was no less friendly to English interests, although he has the advantage of being a man of capacity and independence. The sudden death of Aman-ul-Mulk coincided with the presence of our protégé at Chitrál, and the first thing that the virtuous Afzul-ul-Mulk did, was to invite as many brothers as were within reach to a banquet when he murdered them. No doubt, as a single-minded potentate, he did not wish to be diverted from the task of governing his country by the performance of social duties to the large circle of acquaintances in brothers and their families which Providence bestows on a native ruler or claimant in Chitrál and Yasin. A member of the Khushwaqtia dynasty of Yasin, which is a branch of the Chitrál dynasty, told me when I expressed my astonishment at the constant murders in his family: "A real relative in a high family is a person whom God points out to one to kill as an obstacle in one's way, whereas a foster-relative (generally

644
661

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3
chitral

of a lower class) is a true friend who rises and falls with one's own fortune" (it being the custom for a scion of a noble house to be given out to a nurse.)

---

The dynasty of Chitrál is said to have been established by Baba Ayub, an adventurer of Khorassan. He adopted the already existing name of *Katór*, whence the dynasty is called Katoré. The Emperor Baber refers to the country of Katór in his Memoirs and a still more ancient origin has been found in identifying Katór with "Kitolo, the King of the Great Yuechi, who, in the beginning of the 5th century, conquered Balkh and Gandhara, and whose son established the Kingdom of the Little Yuechi, at Peshawur." (See Biddulph's "Tribes of the Hindoo Koosh," page 148.) General Cunningham asserts that the King of Chitrál takes the title of Shah Kator, which has been held for nearly 2,000 years, and the story of their descent from Alexander may be traced to the fact that they were the successors of the Indo-Grecian Kings in the Kabul valley. If Katór is a corruption of Kaisar, then let it not be said that the remnant of the Katoré exclaimed with the Roman gladiator: "Ave, Kaisar-i-Hind, morituri te salutant."

Amán-ul-Mulk, the late ruler of Chitrál, was, indeed, a terrible man, who to extraordinary courage joined the arts of the diplomatist. He succeeded his elder brother, surnamed Adam-Khôr or "man-eater." His younger brother, Mir Afzul, is said to have been killed by him or to have committed a convenient suicide; another brother, Sher Afzul, who is now in possession of Chitrál, was long a fugitive in Badakhshan whence he has just returned with a few Afghans (such as any pretender can ever collect) and a hundred of the Chitráli slaves that used to be given in tribute to the Mir of Badakhshan, which itself never paid a tribute to Kabul before the late Sher Ali of Afghanistan installed Mahmud Shah, who expelled his predecessor Jehandar Shah, the friend of Abdur-Rahman, the present Amir of Afghanistan. Another brother of Aman-ul-Mulk

4 AV3 Dard AV3
Chitral

increases in density. Forty miles below Chitral a route leads from the main valley past Ashuret over the Lowri Pass to the Afghan state of Dir. Twenty miles lower down, at Birkot, is the mouth of the valley inhabited by the Siah Posh of the Bushgali tribe, the upper end of which is entered from the Dorah Pass. Several smaller valleys are inhabited by Siah Posh, who have lost their independence, and at Bailam the southernmost Kashkar village is passed, and the Afghan state of Asmar is reached. The boundary between Kashkar and Asmar is marked by a wall built across the valley on the right bank between Bailam and Nawakali, and on the left bank by the small stream below Saoo. The valley for many miles above the boundary is reputed to be extraordinarily fertile.

Chitral, which is the seat of the ruler of Kashkar, comprises six large villages, which extend for 3 miles along both sides of the river at an elevation of about 4,000 feet. Its name has gradually come to be applied to the whole country. On the right bank is the fort in which the Mihter, or Badshah, —for he is known by both titles,—resides. Half a mile above the fort is an excellent wooden bridge protected by a stone tower at each end. All the forts in Kashkar differ in construction from those inhabited by the Shin and Boorish races, having inordinately high towers rising 18 feet above the ramparts, which are themselves 30 feet high. Their distribution also gives evidence of a more secure state of society. Instead of every village having one, and sometimes two, forts sufficient to hold all the inhabitants, as is the case in the valleys draining directly into the Indus, the only forts in Kashkar are the abodes of rulers of districts, or persons nearly related to the ruler.

The ruling family are styled Katooré, from Shah Katoor, brother of Shah Khushwakt, the ancestor of the reigning family of Yassin; but the name Kator seems to have been applied to the country in former times, before the existence of the present dynasty of rulers. The present Mihter, Aman-ool-Mulk, is about 58 years of age, and notorious for his astute and deceitful character. The number of the population he rules over can only be roughly computed, and probably amounts to less than 200,000 souls. These numbers would appear scanty for so large an extent of country, but the population is wholly agricultural, and, as in all these very mountainous countries, the habitations are, with few exceptions, confined to a narrow strip along the sides of streams.

4: Biddulph G-3 (1873-1878) 1880 AV3 Dard AV3
Burusho AV7

the top of the head for a space 2 inches broad in front, tapering to half an inch behind. Those who cannot boast of long locks, dress their hair into numerous small cork-screw ringlets all round the head.[1] On the approach of middle age the whole head is shaved, according to the orthodox Mahommedan fashion, and the beard is allowed to grow. In Chitral the effect of the long-flowing locks reaching to the waist is often extremely picturesque.

The mode of salutation between equals, on meeting after a prolonged absence, is graceful and pleasing. After clasping each other, first on one side then on the other, hands are joined, and each person in turn kisses the hand of the other. Superiors are greeted either by kissing the hand or touching the foot, both at meeting and parting. In Chitral, when the meeting is between two of unequal rank, the inferior kisses the hand of the superior, who in return kisses the former on the cheek. A similar practice is said to have existed among the ancient Persians.[2]

On the occasion of the visit of one chief to another, a rather curious ceremony called "Kobah" takes place. On arrival, the visitor is conducted to the Shawaran,[3] and the followers of both chiefs show their dexterity in firing at a mark set up on a tall pole, from horseback while galloping at speed. After this a bullock is led out before the guest, who draws his sword and does his best to cut its head off at a single blow, or deputes one of his followers to do so, and the carcase is given to his retinue. The custom exists in Shighnan, Badakhshan, Wakhan, Chitral, Yassin, Gilgit, Hunza, and Nager. In the latter place it is customary to slay the bullock with bow and arrow. Of late years the practice has become somewhat modified owing to the strict observance of Mahommedan customs, and it is more usual to give over the bullock alive to the guest, so that its throat may be cut in a more orthodox fashion; but occasionally a chief wishing to show off the strength of his arm and the temper of his blade, will adhere to the old custom.

Polygamy is of course practised, and the right of divorce is somewhat wantonly exercised. The marriage of very young children is not common, though occasionally practised. Girls are generally married between the ages of ten and four-

[1] Rawlinson mentions this as an ancient Persian fashion.—*Ancient Monarchies*, Vol. IV.

[2] Strabo Book XV., Chapter 3, Section 20.

[3] The Shawaran answers all the purposes of the village green in England, being used for all gatherings and games.

## CHAPTER II

### FIRST VISIT TO CHITRÀL

644 159 175 AFZUL-UL-MULK, second son of the Mehtar or King of Chitral, who had passed the winter in a visit to India, and had been in Kashmir as I passed through, now arrived in Gilgit, and came to see me. He was generally known in Chitral as the Tsik Mehtar, or little Mehtar, his elder brother Nizam-ul-Mulk, in consideration of being heir-apparent, having the title of Sirdar. He was a good-looking young man with beautiful eyes and well-shaped face, the mouth being the bad part, the lower lip of which was heavy. It was the family feature, borne by every Katúr, as the clan of the ruling family was called. Colonel Lockhart had taken a great fancy to Afzul-ul-Mulk, and he had certainly a taking personality. Bright, cheery, of an enquiring turn of mind, talking Persian fluently, as does every gentleman in the Hindu-Kush, interested in everything he had seen in India, realising what the British power meant better than his father, who had never left Chitral, and extravagantly loyal, open-handed, courteous to all, young, handsome, hospitable, a good shot, and, for a Chitrali, a fine rider, it would have been curious if he had failed to be popular. But there was a different side to his

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

character, as I very soon learnt. At heart he was a pure savage, a mixture of the monkey and the tiger. Loyal from calculation, and from hopes of being recognised by Government as the heir-apparent, he was, under his cloak of open bonhomie, generosity, and transparent honesty, the most persistent plotter, and the most treacherous and ruthless foe. At his father's death he very naturally seized the throne, and his elder brother fled the country, defeated by superior powers of intrigue. But with all his cunning Afzul-ul-Mulk was a fool. He tried to strike terror by cutting down the leading men; he cut down too many or too few. The cold-blooded and treacherous murder of three brothers would have passed with little comment, the death of leading adherents of his brother was natural, but the announcement that a list of head men existed, who were to be killed, and the uncertainty as to whose turn was to come next, were too much. A carefully prepared plot, hatched in Afghanistan, overthrew him; his trusted adherents betrayed him, his most confidential servant opened the gates of his fort and let in the enemy, and he fell as he had risen, by treachery and murder.

However, at the moment, everything was rosy. No shadows of coming events chilled us, and I gladly arranged to accept the Mehtar's invitation to visit his country, so courteously delivered by Afzul. It was decided that he should move on ahead of me, as he took up a great deal of carriage, and that he should await me at Mastuj, the headquarters of the district he governed. I wanted a few days to arrange about my carriage, and to take farewell of my Kashmiri friends, to each one of whom I had to

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 usual, a present, in this case a small round looking-
681 glass in a brass cover, a thing much prized in these parts. He declined to receive it, and said the last man had got five rupees and a knife, and that he would not take less. It would have been impossible to carry on if I allowed myself to be rushed for presents in this way, so I dismissed him, and sending for the Mehtar's half-brother, who was accompanying me, explained the man's impertinence to him. The result was startling; the old gentleman was furious, said that, had we been in Chitral territory, he would have cut the man to pieces at once, and that the Mehtar would certainly, if he heard of it, kill the man and sell his wife and children for slaves. I interceded for him, and he got off without punishment, but it gave one an idea of how the Mehtar ruled, and why he was obeyed as he was.

159 Nizam-ul-Mulk met us the first march across the border, and was with us a couple of days. He was a handsomer man than his brother, but had the same heavy under-lip. His manners were charming, but his morals, like those of almost every leading man in the country, excepting the Mehtar, Afzul, and one or two others, left much to be desired. He
• [644] was a worse governor than Afzul, a mixture of cruelty, indolence, and good-nature, but he was popular too in his way, being a fine shikari. He was always accompanied by his dancing and singing boys, without whom he would move nowhere, and he was consequently an intolerable nuisance on the march, as they kept up their music right through the night. During his first interview with me he

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

Afzul fairly took my breath away one day during 644
the performance by calling to one of his attendant 515
courtiers, and by blowing his nose on the end of the
latter's turban.

Here we first got the splendid white grape, reserved 262
for the royal family. It almost equals the finest 245
muscatel grown in an English hothouse. Properly
cultivated, it would be about the best grape in the
world. It is said to have been imported from Central
Asia.

Our reception at Mastuj was very striking. Afzul 644
had joined us the day before, and had with him some 291
hundred and fifty mounted men, who formed an 411
irregular bodyguard. They were ablaze with colour;
their chogas of gold kinkob, green and blue velveta,
gorgeous silks of Bokhara, or brilliant broadcloths,
floated loose over bright silk or coloured cotton under-
coats; their voluminous breeches were tucked into
high brown or black boots, or merely into the
gay-patterned knitted woollen stockings which all
Chitralis wear. Every man was armed to the teeth.
All had a rifle or gun slung over the shoulder;
most had a polished metal or leather shield on the
back; nearly all, in addition to a sword, carried
a dagger and pistol stuck in the belt. On narrow
portions of the road they could only go in single file,
some ahead of us and some behind, but as we got into
more open ground they swarmed all round us. As
we approached the fort of Mastuj itself, a horseman
would suddenly single himself out from the crowd and
dash down hill at breakneck speed, circle over the
small cultivated space near the fort, and join the men
waiting to receive us. These notabilities of Afzul's 644
Government, to the number of a hundred, stood in

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

644 one long line before the entrance to the fort, and as we approached they advanced all together and bowed as one man; the effect of the dignified Eastern salaam so given was fine.

262 We had our first Chitrali dinner at Mastuj, and excellent it was. It was served under the great plane tree which shaded the gate of the fort, on a raised platform running round the trunk. This must have been the place of gossip and assembly for the last two hundred years or more. The dinner consisted of pillaus of all sorts, one excellent pillau of beef being on a huge dish, three feet across, piled high with rice. [272] The drink was water cooled with snow. After dinner we were given little cups of tea, with salt in it instead [264] of sugar, a most atrocious mixture. I barely tasted mine, but Robertson, who had insisted on our dining *à la Chitrali*, using our fingers for forks, a most unpleasant and greasy proceeding, drank the whole of his at a draught. He was no companion to me for the rest of the day.

431 After breakfast was over Afzul came out and gave us the usual presents — horses, pieces of Bokhara silk, caps and waist-belts embroidered by the women of his household. By the time I left Chitral I had a string of about twenty horses of sorts, most of them dreadful screws, but useful on the march to mount orderlies and servants. I got rid of a good many in presents on my way down through Punyal, and the rest were sold, together with all other presents received, in India, and their value, as is the custom in these cases, credited to the Foreign Office Toshekhana or treasure-house.

000 We remained at Mastuj about a week to give the

4: Durand G-3 (1888-93) 1900 AVI Kashmir
Durd AVI
Chitral

had to use your hands to steady yourself. Afzul put on all the royal Chitrali airs at once, and had to be helped down, a man on each side of him and his arms round their necks. An affected limpness came over him, and he flopped down the hill like an animated rag doll, only to recover when we got on to more rideable ground, where he was hoisted on his horse and was at once himself again. 159

On my return to Mastuj I found awaiting me Jemadar Rab Nawaz Khan, a native officer of good family in Multan, who was our representative in Chitral, and two more of the Mehtar's sons. They had been sent by the Mehtar to escort me to Chitral. I gathered that the Mehtar was expecting magnificent presents from me, and that he had given strict injunctions that I was to be nursed and prevented from wasting my substance on giving any one else anything. 644

I found that the Chitralis who had been to India with Nizam and Afzul during the last two years could and would talk of nothing but the Mint at Calcutta. Afzul's followers also expatiated on the beauties of a British cavalry regiment seen at Rawal Pindi. But, unfortunately, those in charge of the tours of these savages had taken them all round India, and had practically shown them no troops. The triumphs of local self-government at Calcutta and Bombay did not impress them, their own villages were almost as filthy; the railway was a convenient curiosity, but it obviously could only run about on the flat; the plains of India, one sea of crops, were a source of wonder, and suggested untold loot; but the real joy was the Mint. Constantly we 644 484 177

4: Durand G-8 (1888-93) 1900 AVI Kashmir
Dard AvJ
Chitral

were told of its wonders, how it could turn out fourteen lakhs of rupees a day—a lakh is a hundred thousand—how it coined every day in the year without cessation. The Kashmir officer with us, with what object it was not necessary to enquire (every man in his position must intrigue, and has an axe of his own to grind), capped these stories by informing the Chitralis that our rulers never were at a loss for the white metal, as we could turn copper into silver.

Altogether I soon saw that my prospects of satisfying everybody, or for the matter of that, anybody, were remote. My difficulties would have been much lightened in Chitral had Nizam and Afzul gone through, during their visit to India, a course of sight-seeing at some big military centre. Twenty thousand men on parade, "horse, foot, and dragoons," would have given them and their headmen a much more intelligent appreciation of what the power of the Government of India meant than could wandering about cotton and jute mills, or being driven through foul and crowded bazaars.

Between Mastuj and Chitral we found at Sanoghar, Buni, and other places, miles of splendid cultivation, and we saw above us, on the right bank of the river, the extensive fields of the Murikho valley. But for the most part the road was, as before, extremely difficult: the last couple of marches it was purposely left in the worst condition, running through gorges and along cliffs on rickety brackets which could be destroyed in a moment.

Glacial action is again well marked below Mastuj, the road running over huge masses of rock, rounded,

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

gather the wild flowers as he passed them, and stick them into his turban. As a race they are slight and wiry; there were only half a dozen tall men in the country, and I never saw a fat one. This is no doubt partly due to the fact that there is no superabundance of food available, but the result is good. The children were really a joy to see; they had bright rosy cheeks and well-shaped faces; and the small girls, who were not kept within doors, were in many cases extremely pretty.

As we neared Chitral we were met by an increasing number of grandees, of regularly increasing rank. Eight miles from Chitral itself my old friend Raja Bahadur Khan, the Mehtar's half-brother, received me. I never understood how he had acquired a Hindu title, but in the Hindu-Kush they are not very particular. Half a mile further on, after passing through the narrowest part of a gorge along a path a foot wide, pegged on to the rock—one of the few places not even a Chitrali would ride over—a mass of armed men met us. One of them presented me from the Mehtar with a horse most gorgeously caparisoned with gold embossed head-stall, high demi-pique saddle—instrument of torture for an Englishman accustomed to the familiar Whippy—and prettily embroidered and spangled body cloth. Another half mile and the river leaves the gorge, and on the opposite side there is an isolated rocky mound, along the top of which were ranged some two hundred men, who fired a wild *feu de joie* as we passed. A mile or so further we emerged into the plain, and saw the Mehtar sitting surrounded by a brilliant crowd. Dismounting when about one hundred and fifty yards from him, I

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 walked forward, the Mehtar walking to meet me half way. It was an interesting moment for both of us, as we shook hands and looked into each other's eyes. 159 The Mehtar was a big man, and heavy, about sixty-five years of age, with a very strong and clever face, but the mouth was spoilt by the loss of his front teeth.

644 291 After a few words of welcome we mounted our horses, and rode off. The Mehtar was surrounded by his court, Afzul-ul-Mulk and various other sons were there, and representative nobles from all parts of the country. The scene was one of the most brilliant and striking it is possible to imagine. It could not compare with the more ordered magnificence of the court of an Indian prince, but what was lost in splendour and numbers was made up by its wild picturesqueness. The Mehtar, dressed in green silk (he was a most devout Mahomedan), riding a big horse covered with brilliant silver trappings, moved off, with me on his right hand, the centre of a crowd of hundreds of horsemen and footmen in the brightest array. Cloth of gold, the rich silks of Central Asia, the most superb velvet coats, the colour almost hidden by the gold embroidery, the brightest English and Chinese silks in all colours, scarlets and blues, crimsons and purple, plain and brocaded, chogas of plain whole-coloured velvets, or of English broadcloths, flaring cottons, and the dull, brown haircloth of the country were all mingled without the semblance of order in inextricable confusion. The only appearance of uniform was in the Mehtar's *corps de ballet*, all the men and boys of which were dressed alike in blue sleeveless coats over white muslin shirts covered with

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

huge red spots, finished off with bright red trousers, a costume at once startling and effective.

We rode in this way three miles to the bridge, which we dismounted to cross, then on past the fort, which Robertson was a few years later to know so well, and to assist in defending so splendidly, to the polo ground. There the usual performance was gone through, but on a greater scale than I had seen before, with many more riders and more brilliantly arrayed. Then we rode back to my camp, which was in an orchard a few hundred yards from the fort, I having had quite enough of riding hand-in-hand with my host, a custom which, however honourable, involves you in difficulties when you have to ride over small stone walls, narrow water-courses, and in and out of deep ravines. The Mehtar took his leave after a few minutes' conversation, and soon after sent us in a most excellent dinner cooked by the ladies of his household. In the couple of hours I had been with him he had made a deep impression on me. He was a fine old man, a striking figure as he rode along, sitting his horse upright and well; and had the history of his forty years of rule been unknown, there was that in him which attracted your attention at once. I felt instinctively that I was face to face with a ruler of men.

Chitral

started a conflagration. In the end, whether my counsel had anything to do with it or not, the old gentleman decided to sit on the fence and do nothing. 643 648 159

The Mehtar's views on the condition of frontier affairs were interesting, and his knowledge of men and matters varied and wide. A man does not rule a frontier state forty years for nothing. He saw that, so far as his dynasty and country were concerned, safety lay in alliance with us, danger in any closer intercourse with Afghanistan. For this reason he was delighted to have an unconquered Kafiristan on his flank as a buffer between him and the "God-given Government." He might occasionally, in retaliation for too numerous murders on the part of the Kafirs, raid their country with the object of getting some slaves, but he had no desire to see it conquered, and he was delighted that the Kafirs made the road down towards Asmar, and up the Ashreth valley to the Lowari pass, their happy hunting-ground, and murdered stray Pathans. The more dangerous the road was, the more isolated and safe his state. We discussed many questions, to which I cannot refer, with daily increasing interest and amusement on my part. Some of his ideas with all his shrewdness were very quaint; one of his most persistent demands was that, given any agreement with Government, it should be engraved on a sheet of copper. Some ruffian had persuaded him that no treaty would be binding on us if only written on paper. [721]

My state visit to the Mehtar was most ceremonious. A deputation of his courtiers came and escorted us to the fort, at the gate of which the Mehtar met us, and conducted us to a daïs outside, 644

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

644 under some magnificent chenar trees. It was a very picturesque sight: row after row of the Mehtar's sons and courtiers in the most brilliant dresses sat on each side of us on the ground, in
644 the shade of the trees. The usual band, composed
533 of half a dozen kettle-drums played with sticks,
535 double-headed drums played with the hand, and pipes, struck up, and the *corps de ballet* of men and boys, in their smart new uniform, dashed into the space in front of the daïs and began dancing. The dances, as a rule, are much the same as the Indian *nautch*, but a trifle quicker and more varied. There are, however, some very quick and lively dances full of energy, where the men dash round with flying steps, and one or two rather good sword dances, which are worth seeing.

The Chitralis will dance, and look on at dancing, all night long; they are passionately fond of it; the only thing which they will stop it for is to hear their boys sing. The songs are the usual love songs with occasional songs of war. I never picked up enough of the language to understand them, but some of the airs were charming, and deserve to be collected. I was always thankful when the boys came on instead of the dancers. The boys' voices are really beautiful, and one would willingly have called for them oftener had it been possible to do so without giving the enemy cause to blaspheme. They had a pleasant way sometimes at night, as you sat round a camp fire smoking, of bringing a boy, and starting him singing in the darkness behind you. Very pretty plaintive melodies they sang, accompanied by a few notes of the pipe.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

The chorus at the Mehtar's durbar was composed of all his men off duty, men from all the neighbouring villages who had come to see the fun, a stray Kafir or two who grinned in a friendly way at us, all the heterogeneous rabble possible to collect in Chitral. The price they paid for being present and looking at the dancing was continued applause, shouts of encouragement to the dancers, in which they were led by an official who was described as the head of the Mehtar's household. He was a very wild-looking creature, who rushed along the ranks of the spectators dressed in a scarlet cloth choga, and armed with a big ornamented stick, with which he belaboured any of the crowd who did not shout loud enough. After we had sat through the performance for some time the Mehtar rose, and, taking me by the hand, escorted me along a narrow path made by laying down cotton cloth, white and coloured, and stuffs of various kinds, finishing in a strip of sham kinkob, all of which became the perquisite of my servants after I had passed over it. The path led along the faces of the fort to the private garden, from which there was a door leading to the household offices and ladies' apartments. In the garden we found a tent pitched, into which we entered, followed by three or four of the Mehtar's most important sons and nobles.

Directly we had sat down the Mehtar began an oration which lasted an hour, with interruptions to drink iced water, and to rub snuff on his gums, the Chitrali way of taking this most seductive form of the weed. The upshot of his discourse was that

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 he was a faithful servant of the British Government, and that he wanted various things, mostly
648 rifles and money. Some of his remarks were
159 amusing, as when looking a Kashmiri officer full in the face he said that he had been in the habit, in the old days, of beating the Kashmiris and looting them, but that out of consideration for us he had abandoned this source of revenue. All this time I was getting horribly hungry; we generally breakfasted about eleven, and had been fetched away from camp just before our breakfast was ready, and it was long past two before the Mehtar showed signs of having talked himself out. There was nothing for me to say beyond the usual diplomatic *banalités* about the assurances I had received from the Viceroy's and the Foreign Secretary's lips of the interest felt by the Government in the welfare of Chitral, and of their personal regard for the renowned chief who ruled its destinies. The whole thing was a sort of full-dress debate, the object of which, on the Mehtar's part, was to let it be known throughout Chitral, and in the adjacent Pathan countries, Asmar, Dir, and Bajour, that he was definitely putting himself on the side of the British Government, and under its powerful protection.

644 The Mehtar, having thoroughly talked himself out,
262 departed, leaving Afzul-ul-Mulk to do host. The dinner was excellent of its kind, and we were introduced to various famous royal dishes, about the best being large flat unleavened cakes of bread full of minced meat, and sweet omelets made with honey.

000 I remained some time in Chitral, seeing the

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

willow shaded off into the dark red of the rose thickets. 000

On our way down we branched off to try and get some shooting. We got none, but were amply repaid by the magnificent scenery. We camped one night at an altitude of about twelve thousand feet on a hillside so steep that our small tent could only be pitched by raising one pole on a pile of stones, and our bed places had to be similarly built up. We here got an insight into the reckless way the Chitralis destroy their timber. Some of our hosts' followers were belated, and in order to attract their attention, the men with us calmly fired a patch of forest. The next morning we rode up and crossed the shoulder of the range we were on at a height of sixteen thousand feet. I was pretty well accustomed by then to riding over anything, but we crossed ground that day that a few months before I should have considered impossible for a horse—long, sloping stretches of shaley rock across which our horses picked their way in the most extraordinary manner. The view from the top was grand: right opposite us, with only one range of lower mountains in between, rose Tirich Mir, twenty-five thousand feet high; no cloud obscured the view, and so close did we seem that every turn of the glaciers could be traced, and the lines of the avalanches distinctly seen.

The Mehtar came out to see me at Shoghot, and we spent another day together. With him was his son-in-law Rahat Mian, a Kaka-Kheyl timber merchant from within our borders, and at the moment the most important man in Chitral, as the Mehtar trusted almost implicitly in his advice. Our Native [644] 662

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

Finally, dropping into the bed of the Turikho river, we reached Drasan, Afzul-ul-Mulk's favourite residence, a fort of the usual type, square, with high corner towers, and were given a right royal reception. Nizam-ul-Mulk was very anxious for me to go and see him in Turikho, but the passes out were under snow, and I could not afford to go twice over the same ground very far, so I had, much to my regret, to decline. This was rather unfortunate, as Afzul-ul-Mulk was thereby given another opportunity of entertaining me, which delighted him very much, but made his brother and his brother's retainers perfectly furious. It was very disappointing for me also, as I wanted to make friends with all equally, and, moreover, it prevented my visiting the Baroghil, one of the most important passes over the Hindu-Kush. But with snow falling every night marches over glaciers were not to be lightly undertaken; even over some of the rocky marches the roads would have been dangerous. There is nothing worse than floundering over rocks you cannot see, hidden by a covering of new snow which gives no foothold to man or beast.

So we marched into Mastuj again, and after a day spent in sorting out our kit, we despatched our servants, heavy baggage, and extra horses towards Gilgit by the road we had come, while we ourselves started for another tour. We cut ourselves down to the strictest necessities, one small tent, seven feet square, for the two of us, one for orderlies and servants, no beds, tables, chairs, or unnecessary luxuries, for I meant to double march steadily for a fortnight. Every follower was mounted, and we managed to do all we wanted.

536 supplied by the Pathan's servant, who was kicked by all his masters.

000 We were much amused one day at our old native doctor, whom we were taking up to establish the Chitral dispensary. The road ran for a mile or more along the face of a conglomerate cliff, about sixty feet above the river. It had been much improved, and was six feet wide. We had swung along this at a canter, and turned a sharp corner where the path ran up into a side ravine and was steep and narrow. I was leading, and just had time to pull up to prevent riding over the native doctor, who, on all fours, and with a huge blinker of thick paper fixed to the side of his head to prevent his seeing the precipice, was crawling up what he considered the most dangerous piece on his hands and knees. The poor old gentleman never got accustomed to the cliffs, always vowed that he would return to India by Bajour to avoid them, and eventually did so.

• 644 The Mehtar met me some miles from Chitral, as he had done before, and, coming officially as we were, we of course got into uniform. The show was not so fine as the year before, as one of his grandsons was dead, and he had sent a lot of men down the valley to the obsequies. Moreover, he informed me that he had hundreds of men watching the passes into his country. This I knew was untrue, but it was said to emphasise the need of assistance from Government on his part, and the danger of his position from the Amir and others. The reception does not need describing. A Janáli was improvised on our way in, so that we were saved an extra three-mile ride to the polo ground and back; the guns thundered from the

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

fort, and we were escorted by the Mehtar, surrounded by a brilliant crowd of retainers, to our quiet camp in the well-remembered orchard The day was hot and the dust blinding, and we were delighted when the old Chief, with his tactful courtesy, having seen us home, left us in peace.

Next morning the Mehtar came with a legion of sons, and we received him in uniform, and with a guard-of-honour. He at once began talking business, but as I did not want to discuss my instructions *coram populo*, I turned the conversation first on to Robertson going to Kafiristan, to which he at once assented, and then to the establishment of the dispensary. The native doctor was summoned, and was presented to the Mehtar. I put his hand into the old Chief's, and entrusted him to his care. As usual, the Mehtar's manners were perfect, and he promised to take every care of him, a promise he loyally fulfilled. We then cleared the tent, and proceeded to business, which was concluded in this and following interviews fully to the satisfaction of both sides. The interview closed by my saying that I hoped this would be always remembered as an auspicious day. By the old Mehtar I am glad to think it was, but the seeds of strife sown in his day were even then germinating, and the little kingdom was to reel through a period of battle, murder, and sudden death; the princes, their hands red with brothers' blood, were to go down in rapid succession into the grave, and of all the sons I saw that day but one, then a child of seven, was to weather the storm.

As soon as the Mehtar had departed, Robertson interviewed his Kafirs, and brought them to me to be

~~12~~; Biddulph G-3 (1873-1878) 1880 ~~AUI-Afghanistan-AVI~~
4 AV3 Dard AV3

produce of any mines. His land is exempt from taxes, 634
and ten families are assigned to him as labourers. He also 651
receives a fee of one tilla, equal to 10 shillings, on each marriage. Next to the Atalik is the Charwêlo, who has charge of a group of villages. The country being much intersected by side valleys branching out of the main valley, the whole population of each of these is generally under one Charwêlo. He is directly responsible to the Atalik of his district, and has four families allotted to him for service. His "ishpin" is eight of each kind of produce. With a few exceptions the office is confined to the Ashimadek class.

Below the Charwêlo is the Baramoosh, or head of the 622
village. He is particularly charged with the maintenance of 651
roads, forts, and bridges, for which he receives a yearly "ishpin" of 10 sheep, 10 measures of butter, 10 measures of wheat, and a proportion of the produce of any mines with which he is connected. His land also is free from payment of taxes, and he has the right of releasing ten men of his village from military service.

To assist him he has an attendant "Charboo," whose duties are the same as those of the Zeytoo in Gilgit. He receives a woollen robe and five sheep yearly, and his land is exempt from taxation.

In Yassin territory, both on the Chitral and Woorshigoom sides, the system and titles of officials are the same as in Chitral, showing, perhaps more strongly, the mixture of two systems.

About the person of the Mihter are five Wuzeers, who, with 645 ●
the exception of the Chief Wuzeer, have no fixed functions. The Chief Wuzeer is also styled Diwanbegi, and is the Mihter's slave agent. The practice of selling their own subjects has 567
gained the rulers of Chitral and Yassin an unenviable noto- 651
riety, even among people who have not yet learned to regard slavery with the detestation in which it is held in Europe. The beauty of the Chitral (Kho) women has long been proverbial in Peshawur, Cabul, and Badakhshan, and female slaves still form not the least acceptable portion of the presents given by Chitral rulers to neighbouring princes. Chitral, therefore, has always been a favourite resort for slave-dealers from neighbouring countries, and a system grew up under which the rulers of Kashkar came to regard the sale of their subjects as a legitimate and ordinary way of eking out a scanty revenue. All who in any way fell under the displeasure of the Mihter, were consigned to the Diwanbegi, and his agents were always on the look-out for victims whose conduct

men, and this was not to be wondered at, for when we got to our camp, at about four in the afternoon, an icy wind was blowing, and the thermometer was at forty—a few days before at the same time it had stood at a hundred and fifteen in the shade! In the winter the pass is very cold, but generally practicable. We found black-currant bushes on one side of the pass but no fruit.

Afzul-ul-Mulk's Deputy Governor, Abdulla Khan, met us on the Shandur. He was one of the most picturesque of all the Chitrali nobles, and on this occasion was dressed in a loose "choga," a garment cut like a dressing-gown, of gold brocade, covered with a pattern of large tea roses and bouquets of smaller flowers. The Chitrali always wears a small turban; he was no exception, but his was almost entirely gold. His under coat was of the brightest Bokhara silk; his loose bright green velvet breeches were stuffed into long Turkestan riding boots with extravagantly high heels and square toes. He was a great sportsman, and I never saw him without a hawk on his wrist, sometimes the beautiful grey falcon, often a smaller one to kill little birds. He rode a very fast walking horse with brilliantly-decorated saddlery, bits, headstall, stirrups, all heavily plated with silver, and was altogether a pleasure to look upon.

Between the foot of the pass and Mastuj the ground was much the same as before, and I noted a formidable position, which Afzul said was always held against an enemy coming from the south. A few years later it was held by the Chitralis against Kelly's force, which was advancing to the relief of Robertson, who was besieged in Chitral.

131 A few miles below Kolt is Patora; beyond that Dardistan
101 ends and the Pathán country, where the Pashtú language prevails, begins. The Kolt people are Dárds; they know both the Dárd and Pashtú languages.

642 Many places have been put down as republics; what I have
646 been able to find out about the way of their government will apply to them generally. There is a general assembly of the people, called Sigás, which decides on almost every matter.
[563] It is called together by beat of drum; men, old and young, attend it, but not women; some who have the right to attend are allowed to be absent, under pain of fine. In this assembly the rights of a minority are carefully guarded. I have been told that if even one man, supposing him to be of any consideration, object to a policy, it cannot be carried out; the assembly is adjourned for a few days, and in the interval effort is made either to convince the objector or to modify the proposal; then meeting, they may perhaps have again to adjourn; but in time something or other is sure to be arranged.

643 The executive consists of a few men, may be five or six, chosen by the people in their assembly. These are called *Joshtero* in the Dárd language. They are chosen for their wisdom; but here as elsewhere wealth seems to have influence to convince the people of the wisdom of those who possess it. The office of *Joshtero* is not hereditary; the *Joshteros* must be in general accord with the assembly else they will be displaced. The *Joshteros* deliberate together on a policy, but cannot carry it out without the consent of the assembly of the people, which they themselves call
[692] together. The *Joshteros* are also arbitrators to settle disputes of water and wood, and what not.

623 Where the valley is large, like, for instance, Dárel, each village has its own Sigás, or assembly, which settles the particular affairs of that village, while for matters of more general policy the *Joshteros* of all the villages first meet, and make among themselves a plan to propose, and then a general parliament is called; that is, the people themselves of all the villages together meet to hear and decide. If all of the villages cannot agree on one policy, then

Br Lattimer L-3 (1866-93) 1937 AV3 Dard AV3
Chitral

rather the sphere of influence, of Afghanistan, was distasteful to tribes attached to their hereditary rulers or to republican institutions and was not too willingly accepted by the Amir of Afghanistan, who now expects us to defend the white Elephants that we have given him better than we did Panjdeh. Some Mullás that had fled from Russian tyranny to Afghan territory assured me that "the finger of an Afghan was more oppressive than the whole Russian army." Indeed, so far as Central Asia is concerned, Russia, with the exception of certain massacres, has hitherto behaved, on the whole, as a great civilizing power.*

As for Sirdar Nizám-ul-Mulk, this is his *name* and not his *title*. He is the "Mihtar" or "Prince" Nizám-ul-Mulk, and neither an Indian "Sirdár" nor a "Nizám." He is also the "guardian" of a minor, and being the eldest assigned to him in his father's lifetime as the heir-apparent. He was snubbed by us for offering to relieve that excellent officer, Col. Lockhart, when a prisoner in Wakhan! He has written to me from Turkish for "English phrases and words with their Persian equivalents as a pleasure and a requirement." This does not look like hostility to the British. He spoke to me in 1886 of his brother Afzul's bravery with affection and pride, though he has ever maintained his own acknowledged right as the successor of his father Amán-ul-Mulk. If he has been alienated from us or has ever been tempted to throw himself into the arms of Russia, it has most assuredly been our fault. Besides, just as we have abandoned the Sikh Hazaras, our true friends during the late Afghan War, to be destroyed by their religious and political foe, the Sunni Amir Abdurrahman, so have the Amir Sher Ali and the Thum of Hunza, Safdar Ali Khan, used their

* In spite of Russian attempts to supplant the orthodox Mahommedans of Turkey and thus to take the place of the British as "the Protector of Islám," the news of the revision of the Koran by a Russian Consul and the threat of putting up the Czar's portrait in Central Asian Mosques, have injured Russia's propaganda among Mahommedans, whom also the accounts of the persecution of the Jews have estranged from a Power that began to rule in Central Asia by opening and constructing Mosques, helping Mongol Schools and even subsidising an employé to call "the faithful" to fast and dwell-fast during the month of Ramazán.

(130)

1: Leitner L-3 (1866-93) 1893? AV3 D... AV3

trust in Russian Agents. I regret, therefore, to find in the *Times* telegram of to-day that "the Nizám" "is acting without the support of the British Agent" "who has not interfered," when he had already interfered in favour of the usurper Afzul-ul-Mulk.

As for the connivance of Amir Abdurrahman, my "rough history of Dardistan from 1800 to 1872" shows that, in one sense, Chitrál is tributary to Badakhshán and as we have assigned Badakhshán to the Amir, he, no doubt, takes an interest in Chitrál affairs. I believe, however, that interest to be somewhat platonic, and he knows that his friend Jehandár Shah (the late wrongfully deposed hereditary ruler of Badakhshán) never paid any tribute to Afghanistan. But Chitrál once also paid tribute to Dir, with whose able Chief, Rahmat-ullah Khan, "the Nizám" is connected by marriage. Chitrál on the other hand has *received* a subsidy from Kashmir since 1877, but this was as much a tribute from Kashmir to Aman-ul-Mulk, as a sign of his subjection to Kashmir, for shortly after he made offers of allegiance to Kabul. With all alike it is

> "The good old rule, the simple plan,
> That they should take who have the power,
> And they should keep who can."

It is misleading to speak of their relations to neighbouring States as "tributary." Are the Khyberis tributary to us or we to them, because we pay them a tribute to let our merchants travel through their Pass? Have we never ourselves come, first as suppliants, then as merchants, then as guests, then as advisers, then as protectors, and, finally, as conquerors?

The procedure of Afghanistan, of Chitrál, of Kashmir, and of our own is very much alike and so are the several radii of influence of the various factors in "the question." We have our fringe of independent frontier tribes with whom we flirt, or wage war, as suits the convenience of the moment. Afghanistan has a similar fringe of independent Ishmaelites round it and even through it, whose hands are against everybody and everybody's hands against them.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3
Chitral

Chitrál is threatened all along its line by the Kafirs, who even make a part of Badakhshán insecure, but are nevertheless our very good friends. Kashmir has its fringe on its extreme border, especially since, in violation of our treaty of 1846, it has attacked countries *beyond the Indus on the west*, including the Kunjûtis of Hunza, who resumed their raiding—which had ceased in 1867—during and after Col. Lockhart's visit in 1886. Yet there can be little doubt about "the loyalty" of those concerned. The Amirs of Afghanistan consider themselves "*shields of India*," as I have heard two of them say, and so did our Ally of Kashmir, who ought never to have been reduced to a subordinate feudatory position. What wonder then that old Amán-ul-Mulk of Chitrál should also have tried to become a buffer between Afghanistan on the West, Kashmir on the East, India on the South and, latterly, Russia in the North, if indeed the whole story of Russian intrigue in Chitrál be at all truer than a similar mare's nest which we discovered in Hunza? It is the policy of Russia to create false alarms and thereby to involve us in expenditure, whilst standing by and posing as the future saviour of the tribes. Our tendency to compromises and subservient Commissions of delimitation and to "scuttling" occasionally, is also well known and so we are offered in Russian papers "*an Anglo-Russian understanding on the subject of Chitrál*," as if Chitrál was not altogether out of the sphere of Russia's legitimate influence! It is also amusing to find in the *Novosti* that Russia's sole desire is "to prevent *Afghanistan* from falling into British hands." We are already spending at Gilgit on food etc. for our troops more in one year than were spent in the 40 years of the so-called mismanagement of Kashmir, which I myself steadily exposed, but which kept the frontier far more quiet than it has been since the revival of the Gilgit Agency. There is every prospect now of heavier and continued expenditure, as the policy of the Foreign Department of the Government of India develops. On that policy a *veto* should at once be put

Kashmir AV1
1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

Part I. of a large work, I may claim to speak with some authority as regards these districts, even if I had no other claim. The point which I wish to specially contradict at present, is the one relating to the Russians bringing themselves into almost direct contact with "the Hunza and other tribes subject to Kashmir and, as such, entitled to British protection and under British control."

When I crossed the then Kashmir frontier in 1866, in the disguise of a Bokhara Maulvi, armed with a testimonial of Muhammadan theological learning, I found that the tribes of Hunza, Nagyr, Dareyl, Yasin, and Chitrál had united under the leadership of the last-named to expel the Kashmir invaders from the Gilgit Fort. My mission was a purely linguistic one; but the sight of dying and dead men along the road, that of heads stuck up along the march of the Kashmir troops, and the attempts made on my life by our feudatory, the late Maharaja of Kashmir, compelled me to pay attention to other matters besides the languages, legends, songs, and fables of the interesting races with whom I now came in contact under circumstances that might not seem to be favourable to the accomplishment of my task. I had been warned by the then Lieutenant-Governor of the Panjab, Sir Donald McLeod, whose like we have not seen again, not to cross the frontier, as the tribes beyond were supposed to be cannibals; but as I could not get the information of which I was in search within our frontier, I had to cross it. My followers were frightened off by all sorts of wild stories, till our party was reduced from some fifty to three, including myself. The reason for all this was, that the Maharaja was afraid that I should find out and report his breach of the Treaty by which we sold Kashmir to him in 1846, and in which the Indus is laid down as his boundary on the west. In 1866, therefore, at any rate, even the tenure of Gilgit, which is on the other side of the Indus, was contested and illegal, whilst the still more distant Hunza and Nagyr had more than once inflicted serious punishment on the Kashmir

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

troops that sought to invade districts that have preserved their autonomy during the last fourteen centuries, as was admitted by *The Times* of the 2nd November, 1891, before its present change with the times, if an unintentional pun may be permitted.

Then, as ever, the Anglo-Indian newspapers spoke of Russian intrigues in those regions. I am perfectly certain that if, instead of the fussiness of our statesmen and the sensationalism of our journals, the languages, history, and relations of these little-known races had been studied by them, we should never have heard of Russia in that part of the East. It is also not by disingenuousness and short cuts on maps or in diplomacy, but by *knowledge*, that physical, ethnographical, and political problems are to be solved; nor will the bold and brilliant robberies of Russia be checked by our handing over the inhabitants of the supposed "cradle of the human race" to Affghan, Kashmir, or Chinese usurpations. Above all, it is a loss of time to palm off myths as history in order to suit the policy or conceal the ignorance of the moment.

Just as little as Darwaz and Karategin are ancestral dominions of Bokhara, and, therefore, under Russian influence, so little did even Badakhshan, and much less so, Raushan, Shignan, and Wakhan, ever really belong to Affghanistan. As for the Chinese hold on Turkistan, we ourselves denied it when we coquetted with Yakub Khush Begi, though Kitái was ever the acknowledged superior of Eastern Turkistan. If Hunza admits any allegiance, it is to China, and not to Kashmir; and the designations of offices of rule in that country are of Chinese, and not of Aryan origin, including even "Thàm," the title of its Raja.

As a matter of fact, however, the vast number of tribes that inhabit the many countries between the Indus and the Kuner own no master except their own tribal head or the tribal council. From kidnapping Hunza, where the right to plunder is monarchical, hereditary, and "ayeshó" = "heaven-born," to the peace and learning of republican Kandiá or

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3
Burushe AV7

Gabriál, all want to be left alone. If a neighbour becomes troublesome, he is raided on till an interchange of presents restores harmony. It is impossible to say that either side is tributary to the other. The wealthier gives the larger present; the bigger is considered the superior in a general sort of way, and so two horses, two dogs, and a handful of gold dust are yearly sent by Hunza to Kashmir or to Yarkand as a cloak for much more substantial exactions in return. Nagyr sends a basket of apricots instead of the horses and dogs. In 1871 Chitrál still paid a tribute to Badakhshan in slaves, but it would be absurd to infer from this fact that Chitrál ever acknowledged the suzerainty of Jehandar Shah, or of the Affghan faction that dispossessed him. Nor were the Khaibaris, or other highway robbers, our rulers, because we paid them blackmail, or they our subjects because they might bring us "sweetmeats."

D 648 B 648

The points in which most Englishmen are as deficient as Russians are generally proficient, are language and a sympathetic manner with natives. That, however, linguistic knowledge is not useless may be inferred from the fact that it enabled me, to use the words of my Chief, Commissary General H. S. Jones, C.B., during the Russian War in 1855, "to pass unharmed through regions previously unknown and among tribes hitherto unvisited by any European."

Also in topography and geography linguistics are necessary; and the absurd mistakes now made at certain learned societies and in certain scientific journals, regarding the Pamirs, would be avoided by a little study of the Oriental languages concerned. In 1866, the map which accompanies my philological work on "Dardistan" shows, on linguistic grounds, and on the basis of native itineraries, the various Pamirs that have been partially revealed within the last few weeks, or have been laboriously ascertained by expensive Russian and British expeditions between 1867 and 1890. The publication of my material, collected at my own expense and which shall no longer be delayed, would have saved many complications; but when, *e.g.*, I pointed out,

1: Leitner L-3 (1868-93) 18937 AV3 Dard AV3

Kafirs [whom I include in the term "Dards"] is very little. My informants were two Kafir lads, who lived for some weeks in my compound and whose religious notions had, no doubt, been affected on their way down through Kashmir. That they go once a year to the top of a mountain as a religious exercise and put a stone on to a cairn; that the number of Muhammadan heads hung up in front of their doors indicates their position in the tribe; that they are said to sit on benches rather than squat on the ground like other Asiatics; that they are reported to like all those who wear a curl in front; that they are fair and have blue eyes; that they drink a portion of the blood of a killed enemy—this and the few words which have been collected of their language is very nearly all we have hitherto known about them. What I have been able to ascertain regarding them, will be mentioned elsewhere.*

H. FORMS OF GOVERNMENT AMONG THE DARDS.

Chilâs, which sends a tribute every year to Kashmir for the sake of larger return-presents rather than as a sign of subjection, is said to be governed by a council of elders, in which even women are admitted.† When I visited Gilgit, in 1866, it was practically without a ruler, the invading troops of Kashmir barely holding their own within a few yards of the Gilgit Fort—a remarkable construction which, according to the report of newspapers, was blown up by accident in 1876, and of which the only record is the drawing published in the *Illustrated London News* of the 12th February 1870.‡ There is now (1877) a Thanadar of Gilgit, whose rule is probably not very different from that of his rapacious colleagues in Kashmir. The Gilgitis are kept quiet by the presence of the Kashmir army, and

* Since writing the above in 1867, a third Kafir from Katár has entered my service, and I have derived some detailed information from him and others regarding the languages and customs of this mysterious race, which will be embodied in my next volume. [This note was written in 1872.]

† I have heard this denied by a man from Sazín, but state it on the authority of two Chilâsis who were formerly in my service.

‡ My Saziní says that only a portion of the Fort was blown up.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

by the fact that their chiefs are prisoners at Srinagar, where other representatives of once reigning houses are also under surveillance. Mansur Ali Khan, the supposed rightful Raja of Gilgit is there; he is the son of Asghar Ali Khan, son of Raja Khan, son of Gurtam Khan—but legitimate descent has little weight in countries that are constantly disturbed by violence, except in Hunza, where the supreme right to rob is hereditary.* The Gilgitis, who are a little more settled than their neighbours to the West, North and South, and who possess the most refined Dardu dialect and traditions, were constantly exposed to marauding parties, and the late ruler of Yasin, Gouhar-Amán, who had conquered Gilgit, made it a practice to sell them into slavery on the pretext that they were Shiahs and infidels. Yasin was lately ruled by Mir Wali, the supposed murderer of Mr. Hayward, and is a dependency of Chitrál, a country which is ruled by Amán-ul-mulk. The Hunza people are under Ghazan Khan, the son of Ghazanfar,† and seem to delight in plundering their Kirghiz neighbours, although all travellers through that inhospitable region, with the exception of Badakhshan merchants, are impartially attacked by these robbers, whose depredations have caused the nearest pass from Central Asia to India to be almost entirely deserted (1866). At Gilgit I saw the young Raja of Nagyr, with a servant, also a Nagyri. He was a most amiable and intelligent lad, whose articulation was very much more refined than that of his companion, who prefixed a guttural to every Khajuná word beginning with a vowel. The boy was kept a prisoner in the Gilgit Fort as a hostage to Kashmir for his father's good behaviour,

* *Vide* "History of Dardistan" for details of the contending dynasties of that region, pages 67 to 110.

† Major Montgomery remarks "the coins have the word Gujanfar on them, the name, I suppose, of some emblematic animal. I was however unable to find out its meaning." The word is غضنفر, Ghazanfar [which means in *Arabic:* lion, hero] and is the name of the former ruler of Hunza whose name is on the coins. In Hunza itself, coined money is unknown. [For changes since 1866, see "Hunza and Nagyr Handbook, 1893."]

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

and it was with some difficulty that he was allowed to see me and answer certain linguistic questions which I put to him. If he has not been sent back to his country, it would be a good opportunity for our Government to get him to the Panjab in the cold weather with the view of our obtaining more detailed information than we now possess regarding the Khajuná, that extraordinary language to which I have several times alluded. [This was done on my second official mission to Kashmir in 1886.]

The name of *Rá, Rásh, Raja*, applied to Muhammadans, may sound singular to those accustomed to connect them with Hindu rulers. but it is the ancient name for "King" at Gilgit (for which "Nawab" seems a modern substitute in that country)—whilst Shah Kathor* in Chitrál, Tham in Hunza and Nagyr, Mitérr (Mihtar) and Bakhté in Yasin and Trakhné in Gilgit offer food for speculation. The Hunza people say that the King's race is Mogholote (or Mogul?); they call the King *Sawwash* and affirm that he is Aishea (this probably means that he is descended from Ayesha, the wife of Muhammad).† Under the king or chief, for the time being, the most daring or intriguing hold office and a new element of disturbance has now been introduced into Dardistan by the Kashmir faction at every court [or rather robber's nest] which seeks to advance the interests or ulterior views of conquest of the Dogra

* This was the *name* of the grandfather of Amán-ul-Mulk, the present ruler of Chitrál (1877). Cunningham says that the *title* of "Kathor" has been held for 2000 years. I may incidentally mention that natives of India who had visited Chitrái did not know it by any other name than "Kashkar" the name of the principal town, whilst Chitrál was called "a Kafir village surrounded by mountains" by Neyk Muhammad, a Lughmáni Nimtsha (or half) Mussulman in 1866.

† This is the plausible Gilgit story, which will, perhaps, be adopted in Hunza when it becomes truly Muhammadan. In the meanwhile, my endeavour in 1866 to find traces of Alexander the Great's invasion in Dardistan, has led to the adoption of the myth of descent from that Conqueror by the Chinese Governor or the ancient hereditary "Thám" of Hunza, who really is "*ayeshó*," or "heaven-born," owing to the miraculous conception of a female ancestor. "Mogholot" is the direct ancestor of the kindred Nagyr line, "Girkis," his twin-brother and deadly foe, being the ancestor of the Hunza dynasty. (See Genealogy on pages 69 and 111.)

101 131 from the Burzil Pass to the Sharot village, a distance of 143 miles from south-east towards north-west with its small surrounding valleys of Kamri, Tarsing, Parising, Sai, Haramosh and Bagrot; and along the Hunza river from Gilgit to Guech, with its adjacent valley of Naltar, a distance of 24 miles.

125 631 The country was first conquered in 1846 by the troops of His Highness the Maharaja of Kashmir under Syed Nathe Shah from Gauhar Aman, the Khushwakti Chief of Yasin, who had usurped the district from Sikander Khan and his brother Karim Khan, the rightful rulers of Gilgit. Karim Khan had escaped to Kashmir to ask for help, and returned with a large force under Syed Nathe Shah. Hearing the news of their approach, Gauhar Aman fled to Yasin, leaving the country to be possessed by them without bloodshed. The country was restored to the rightful rulers, but some later events lead the Maharaja of Kashmir to keep the district under the direct jurisdiction of ● [648] his own officials. The British Agency was established in 1889. The Political Agent, an officer of the Government of India, and the Wazir-i-Wazarat, an official of His Highness the Maharaja of Kashmir, have their headquarters at Gilgit proper. The latter has jurisdiction over the district only, while the former, in addition to his control over Gilgit, has political relations with the surrounding states of Hunza, Nagir, Punial, Ishkuman, Yasin, Ghizr and the Chilas republic, which all acknowledge the suzerainty of the Kashmir Durbar. Gilgit is garrisoned by Kashmir Imperial Service Troops under a General Officer Commanding appointed by His Highness the Maharaja of Kashmir. The troops are relieved every two years.

491 205 206 A good pony road runs between Srinagar, Gilgit, Chitral and Hunza, remaining open for traffic from June to October. It is closed from November to May, owing to the heavy fall of snow on the Tragbal (Rajdiagan) and the Burzil passes. However, the ordinary letter post is carried across the passes at favourable opportunities by local runners. Kashmir, Gilgit and Chitral are also connected by a telegraph line.

162 795 619 101 [174] The present inhabitants of the country are all Muhammadans, chiefly of the Shia sect, with a few Sunnis and Maulais. The principal tribes are Ronos, Shins, Yeshkuns Kashmiris, Kramins, Dums and Gujars. They are again divided into several families called after the names of distinguished ancestors. I am of the opinion that the Kramins are the original inhabitants of Gilgit, while the Yeshkuns, Shins and Ronos came afterwards in the above order and conquered the former inhabitants.

101 619 563 The Yeshkuns are probably an Aryan race, having arrived from Central Asia *vid* the Hindu Kush. Being stronger than the aborigines, they succeeded in conquering these districts, made the original inhabitants their servants and named them "Kramins" (attendants).

101 [795] 619 The Shins profess to be the descendants of Arabs. They are probably Jews, and have come *vid* Afghanistan from either Persia or Turkey. They prefer a style of self-government, and endeavour wherever they settle to continue this form of their original government. It is of interest to note, however, that before embracing Islam the Shins, in this resembling the Hindus, disliked meat, milk or even *ghi* made from cow's milk, disapproved of the keeping of fowls and regarded even a fish diet with aversion. If a Shin had taken two wives, one of his own tribe and the other of the Yeshkun tribe, the children

361 valleys of Doodooshal and Kandbari, can muster about 3,000
161 fighting men, but the people are neither fanatical nor turbulent. Since 1860 Darel has paid a yearly tribute to Cashmere
648 of four tolas of gold dust; but no Cashmere officials ever enter the country, and the state of the community differs in no respect from that of other Kohistan republics. In the autumn of 1866 the Cashmere troops invaded Darel in two columns, to chastise the people for joining the rulers of Chitral and Yassin in an attack upon Gilgit. The only resistance met with was at the foot of one of the passes, where a breastwork had been erected across the defile. After a day's resistance the Darelis fled, fearing probably to be taken in rear by the flanking column, and in the pursuit suffered considerably. The whole population fled to the mountains, and no further resistance was offered A few of the Darel leaders were hung, and after a brief stay the troops returned, not without considerable difficulty owing to an unusually early fall of snow, which caused the loss of over a hundred men. Since then Darel has given no trouble to
316 Cashmere. The Kandbari Valley is popularly credited with great mineral wealth, from which probably it derives its name. No mines, however, are now worked there.

361 Above Darel is the small community of Hodar, which has paid a yearly tribute of two tolas of gold-dust to Cashmere since 1860. From the head of the Hodar Valley a road
[167] leads into the Gilgit Valley. In Hodar there is a small settlement of Cashmeri refugees, who fled from the severity of the Pathan rule about a hundred years ago.

Above Hodar are the small valleys of Talpin and Gies, which support a scanty population. The former is a dependency of Chilas, but Gies is claimed both by Chilas and Gor, between which communities disputes have of late become frequent in consequence. From the heads of both of these, good roads lead into the Gilgit Valley. Continuing up the right bank of the Indus, Gor, the last Yaghestan community on that bank, is reached, standing on a high plateau two miles from the river. Notwithstanding its exposed position and its proximity to Chilas, idolatrous customs have lingered in Gor longer than in any other place in Shinkari, and are even now scarcely extinct. Gor can furnish 500 fighting
648 men, and in ancient times was always closely connected with Gilgit. Since the establishment of the Sikh rule across the Indus, Gor has paid to Cashmere a yearly tribute of twelve goats, and is bound to furnish one man from each house for

~~10~~ Biddulph G-3 (1873-1878) 1880 ~~AUI-Afghanistan-AUI~~
4 AV3 Dard AV3

military service in time of war. It also gives three hostages for good conduct, who are changed periodically. The people of Gor claim to have been Mussulmans for only three generations, and are all Soonnees.

There are three forts in Gor, named Loosonotkot, Doolotkot, and Tunelkot. The people of Gor have always been friendly with Chilas. At present Gor is noted in the Kohistan for the good quality of the wool it produces. The tradition is still preserved of the god Taiban, who was the tutelary deity of Gor, and whose worship was continued to a very recent date. A rude sculpture of a horse still exists, which is named "Taiban's horse." Even now Taiban is invoked occasionally as a witness of a solemn covenant. Along the river, at intervals the whole way from Gor to Seo, are said to be a number of ancient rock inscriptions.

A few miles above Gor the small detached village of Thalich forms the extreme limit of Yaghestan, consisting only of 11 houses: it forms, as Mr. Drew observes, the smallest of independent communities. The people of Thalich make common cause with those of Chilas, of whom they are an offshoot, and are protected by them against more powerful enemies.

Above Herbund, on the left bank, is the large community of Chilas, which embraces six valleys. The principal villages are Tor, 200 houses; Chilas, 140 houses; Geen, 5 houses; Takk, 80 houses; and Booner, 60 houses. Chilas can furnish about 1,500 fighting men, without counting a number of immigrants from other communities who have lately settled in the country. Roads lead from Khaghan in the Hazara country by the Babusar Pass to the Indus in seven days, and from Shardi in the Kishengunga Valley by the Shotô Pass in five days. There is also a road from Astor by the Mazenoo Pass, only practicable at any time for men on foot, and closed in winter, by which Booner is reached in four days. The road up the Indus from Chilas is difficult and almost impassable even for men on foot. This difficulty of access has given the Chilasis a spirit of independence, and a distinctive character among all the Kohistan communities. Though but comparatively recent converts to Islam, they are bigoted and fanatical beyond all other Dards, owing, it is said, to Chilas having been at all times a favourite resort of Moollahs from Swat. Being Soonnees, every Shiah who falls into their hands is put to death without being reserved for the usual alternative of slavery. The whole community can muster 3,000 men capable of bearing arms, and have at all times borne a high reputation for bravery.

Biddulph G-3 (1873-1878) 1880 ~~AU1 Afghanistan AU1~~
4 AV3 Dard AV3

000 and have at all times borne a high reputation for bravery. In
● 648 former days, Chilas, with the neighbouring valleys of Darel and Gor, owed allegiance to Gilgit, but the Chilasis were notorious for the way in which they tyrannised over the whole surrounding country, making frequent raids, plundering and carrying off men, women, and children into slavery. The Cashmere, Kishengunga, Astor, and Gilgit Valleys were frequently laid under contribution, and they boast of having once plundered Iskardo. During the Sikh occupation of Cashmere, an expedition was sent against Chilas, but sustained a disastrous defeat. Permission was granted by the British Government, in 1851, to the Maharajah Golab Sing to exact reprisals for a successful raid, and two columns entered Chilas,—one from Cashmere by the Lolab Valley, and one from Astor by the Mazenoo Pass. The Chilas fort was taken, and the Chilasis made submission, agreeing to pay a yearly tribute of a hundred goats and five tolas of gold, and engaging that the fort of Chilas should not
[712] be re-built. Takk is now the only fortified place in Chilas. Since then Chilas has given no trouble to the Cashmere Government. Three hostages reside in Cashmere, and are changed yearly. Cashmere officials do not, however, visit the country, and any attempt to exercise authority would probably be resisted.

533 The love of music, dancing, and polo, which are so marked
535 among all the neighbouring communities, are unknown in
526 Chilas; and ponies, which are common enough elsewhere, are scarce.

361 The country is bare and treeless. The village of Chilas is
[133] situated about half a mile from the Indus, on a plain three miles in length, and from a mile to a mile and a half in breadth, sloping gently down to the river. Booner, though a dependency of Chilas, has paid a separate tribute to Cashmere of twelve
173 goats and three tolas of gold since 1842. The Chilasis relate that in former times a Hindoo Rajah, named Chachai, ruled in Chilas over the whole of Shinkari, but that, dying childless, his country became divided into republican communities, as at present. In later days a disastrous civil war broke out in the community between two brothers, Bôt and Matchuk, which ended in the defeat and expulsion of all the partizans of the latter. The Bôte are now the most prosperous family in Chilas.[1] Tradition still preserves the name of Naron, a

[1] This is perhaps the origin of the name "Bôte," applied indiscriminately to all Dards by Cashmere officials.

Biddulph G-3 (1873-1878) 1880 ~~AV3 Afghanistan AIII~~
4 AV3 Dard AV3

136 be found numerous flocks of the wild sheep (*O. Vignei*). At an elevation of 11,000 feet, wild onions grow in great profusion, and to this fact the range is indebted for its Chinese name Tsungling. (The Onion Mountains.)

133 The principal difficulty in communication is caused by
135 the rivers, which in winter are shrunk to small dimensions,
but in summer, fed by snow-fields and glaciers of enormous
316 extent, become impassable torrents, bringing down tons of soil in their turbid waters. Many of the streams are rich in gold, especially those flowing from the great Rakiposh Mountain, and it is probable that a scientific search for minerals
[823] would be well repaid. The natives believe that the gold is generated by the glaciers, because the greatest quantity is found in the glacier mud, and there are traditions of small but rich veins of earth having been occasionally laid bare by earthquakes. Gold-washing is only practised in winter, and then by none but the poorest and meanest of the population, though the quantity found even with the rude apparatus employed is sometimes very remunerative. The gold itself is of fair quality, the best being of twenty carats.

361 Nearly half way between Gilgit and the Indus is the
316 Bagrot Valley, which contains several flourishing villages, and is capable of supporting a population of 2,000 or 3,000 souls. The Bagrot gold-washings are celebrated for the quantity and fine quality of the gold they yield, and the valley contains many signs of mineral wealth. It was a favourite summer resort of the old Gilgit rulers, and was their last place of
[564] refuge when hard pressed by external enemies. The Bagrot people belong almost entirely to the Shin caste.

133 A mile below Gilgit itself the Hunza River joins that of Gilgit. Though fordable in winter, this is in summer a deep and rapid torrent more than a hundred yards in breadth, bringing down with it an enormous quantity of soil from the lofty
[648] mountains it drains. Cashmere jurisdiction extends some 25 miles up the valley to a point at which the river makes a sudden bend from a westerly course to south-south-east. As generally happens where these abrupt changes of course in a stream are found, the river here flows between perpendicular rocks, across the face of which none but the most expert cragsmen can find a path. On the occasion of my visit to Hunza in 1876, I suddenly found myself confronted with a more difficult and dangerous piece of ground than I had ever traversed in a tolerably large experience of Himalayan sport. For nearly half a mile it was necessary to scramble over

~~Biddulph G-3 (1873-1878) 1880 AVI-Afghanistan AV2~~
AV3 Dard AV3
Burusho AV7

rocky ledges, sometimes letting oneself down nearly to the water's edge, then ascending 300 or 400 feet above the stream, holding on by corners of rock, working along rocky shelves 3 or 4 inches wide, and round projecting knobs and corners where no four-footed animal less agile than a wild goat could find a path. D 133

Immediately above the bend of the river is the district of Chaprot, consisting of the fort and village of that name and three other villages. This has always been a fruitful source of contention among the rulers of the three states of Hunza, Nager, and Gilgit, between which it is situated, principally on account of the fort, which, according to local ideas, is impregnable. It is situated in the angle formed by the junction of two streams, with high precipitous banks, and can therefore only be approached from one side. It has belonged in turns to all three states, but at present is garrisoned by Cashmere troops. Continuing up the valley to the eastward, at about 52 miles from Gilgit, the residences of the rulers of the two states of Hunza and Nager are reached, the river forming the boundary between the wild two. D 361 648 B 131 361

The view of the great Rakiposh Mountain from the north side is truly striking. From the water's edge it rises without a break for 19,000 feet to its topmost peak, which is over 25,000 feet above the sea-level. Its lofty sides, girdled with dark pine forest and seamed with glaciers and *mers-de-glace*, some of which reach nearly down to the water's edge, overlook numerous fertile settlements which are nourished by streams flowing from the great mountain. Above the forests extensive fields of snow sparkle and glitter in the summer sun, while, overtopping all, great points of granite, on whose steep sides the snow can scarce find a resting-place, give emphasis and unity to a scene not easily forgotten. B 133

Above Hunza the course of the river, which rises in the Hindoo Koosh, lies entirely in Hunza territory. The people of these two states, of whom so little is known, have been counted as mere robber tribes, who have brought themselves into notice by their depredations on the caravans between Yarkund and Leh. This is, however, scarcely a just estimation of them. They are of the same stock as the people of Yassin, Ponyal, and the majority of the people of Gilgit and the neighbouring valleys. So far from being mere robber tribes, they are settled agricultural communities, living under rulers who boast of their long unbroken descent from princes of native blood. Hemmed in by lofty mountains, they are B 721 B 144 B 193 186

Biddulph G-3 (1873-1878) 1880 Afgh-Afghanistan-Afg
4
AV3 Dard AV3
Burusho AV7

In Hunza there is a tradition preserved of the occurrence B
at some remote period of a Mongol invasion, but no clue 173
exists to the approximate date. It is said to have taken
place at a period before the separation of Hunza from Nager.
In more recent times a prince of Nager is related to have
visited Cashmere to seek assistance from Shah Jehan, which
was granted, and the prince thereby enabled to expel his
brother and make himself master of the country. Bernier
mentions another prince from this neighbourhood, by name
Bowali Khan, applying in a similar manner for assistance to
Shah Jehan. This prince appears to have belonged to the
family of the rulers of Iskardo or Shigar.

During the rule of Ghasanfur Khan, the father of the
present Thum of Hunza, Nager was temporarily forced to
give allegiance to the Hunza ruler, who had secured the
active alliance of Suleiman Shah, of the Khushwakté
family.

Returning into the Gilgit Valley, 19 miles above Gilgit, D
the Ponyal District is reached. This stretches for some 131
22 miles up to the Yassin frontier. Of old an appanage of
Gilgit, Ponyal became in later times a bone of contention D
between the rulers of Yassin and Gilgit, who each possessed 173
it in turn for a time, till it finally came into the pos-
session of Cashmere in 1860. Soomalik, whose name will
be found in the genealogy of the Gilgit Ras, is said to have
given Ponyal as a dowry with his daughter to a prince of
Chitral. At a later date it became an independent republic
for a time, till a certain Shôt, a native of Darel, made himself
Thum of Ponyal, but was shortly afterwards slain by Shah
Pershah, of the Khushwakté family of Yassin, who established
his son Booroosh as ruler. The present Ra of Ponyal,
Akbar Khan, is a descendant of Booroosh, his father having
been re-established and confirmed in his possession by the
Cashmere Government in return for services rendered in the
wars which finally established the Dogra rule on the right P
bank of the Indus. Cashmere troops garrison Ponyal, and 648
grave cases are under the jurisdiction of the Gilgit officials,
but no revenue is paid either to Cashmere or to Akbar Khan,
who receives in lieu a fixed subsidy from the Maharajah, in
consideration of which he is bound to maintain a certain
number of men to guard the frontier posts in time of peace, and
to render military service in war. But for this arrangement,
Cashmere would hardly have been able to make good its
footing west of the Indus, and its success in this matter may
be said to be entirely owing to the father of Akbar Khan.

Biddulph G-3 (1873-1878) 1880 Afgh-Afghanistan-Afgh
4: AVJ Dard AVJ Chitral

This estimate does not include the tributary tribe of Bushgali Kaffirs, or the subjects of the Yassin ruler, who is independent of Chitral, though the close relationship existing between the two families causes them to act in concert in all important matters. Both rulers pay a tribute of horses, hawks, and hounds to the Maharajah of Cashmere, to whom they acknowledge allegiance. Iron, copper, and orpiment of superior quality are found in Kashkar. Cotton carpets of an inferior kind, which have the peculiarity of being alike on both sides, are made for local use, and Chitral daggers and sword-hilts are in great demand in the neighbouring valleys. Amongst the people of Kashkar, Chitral is constantly pronounced and written Chitrar and Chitlal. This seems to arise from a curious inability[1] to distinguish between the letters *r* and *l*; in this way Koonur becomes Koonul, Punjkorah Punjkolah, the Lowri Pass the Rowli Pass, &c.

The population of Chitral is a curious and intricate ethnological puzzle. The largest section of the population are the Kho, who inhabit the whole of Kashkar Bala, the Ludkho and Arkari Valleys, and the main valley down to Darosh, and have penetrated across the watershed as far as Chashi. They call the country also Kho, dividing it into different sections under the names *Toor*ikho (*Upper*), *Mool*kho (*Middle*), and *Lud*kho (*Great*), and their language Khowar. This is the language given by Dr. Leitner under the name of Arnyia, by which it is known to the Shins of Gilgit, who style the Yassin portion of Kashkar Bala Arinah. In sound it is soft and musical.[2] Unlike the Shins and other cognate tribes hitherto mentioned, the existence of these people in the localities in which we now find them appears to date from so far back as virtually to entitle them to be considered aboriginal. They may have once occupied a wider extent of country, but there is no trace of their having conquered or displaced any previous race of inhabitants. They were undoubtedly the owners of the country until a period not very remote, and they have succeeded in imposing their language on the present ruling class, who style them contemptuously "Fakir Mushkin." They are divided into classes of which a few are Toryié, Shiré, Darkhané, and Shohané. No caste distinctions exist among them.

Above them is a large privileged class, which is divided into clans like the Afghan Khels, and spread all over Kashkar.

[1] The *l* and *r* are scarcely distinguishable in the old Persian.—Rawlinson's *Ancient Monarchies*, Vol. III. p. 102.

[2] See Appendix H.

Dard AV3

not well kept up, but they at last took the chief stronghold of the Chilâsis, a fort two or three miles from the Indus River, and reduced those people to some degree of obedience. A few of the slaves were released, but most of them had been sent to neighbouring valleys for safety, and they could not be recovered; as late as 1869 some half dozen of them escaped, and returned to their homes in Astor. The expedition had the effect of frightening the Chilâsis into good behaviour; there has been no raid since. There is even some communication kept up; the people from Tarshing, a village under Nangâ Parbat, now go to Chilâs, while from Chilâs messengers or envoys come to the Maharaja with a yearly tribute and hostages, of whom a certain number remain in Kashmir until, after a year or two, others come in exchange.

It is curious that while the people of Astor are all riders and keep many ponies, these Chilâsis have none, and they used not to attempt to take away any they met with in their raids.

The Astor people, who thus in later times have suffered so much, used formerly, when they were stronger, to do the same kind of thing. Gurez was liable to their attacks, and Drâs also.

The present state of quietness and security is a great change for them all. But the country has not yet recovered the ruin and depopulation. Some new small settlements have indeed been made in the old village sites; attempts have been made to induce the Baltis, who overflow from their own country, to settle; but the inclement climate of the higher part of the valley (where chiefly there is vacant ground), and the absence of the fruit-trees they are so much used to enjoy, deter them.

The most interesting place I visited in the Astor country is the valley which leads up to the base of Nangâ Parbat. Just beyond the last village, Tarshing, one comes to the foot of one of the glaciers that spring from that great mountain.* I went

* The G. T. Survey Map is not accurate in the delineation of these glaciers; they do not in reality unite as there expressed. I have made the correction, as far as I could with certainty, in the map attached to this book. Other small mistakes occur in the Survey Map as to the position of streams and so on in the Astor and Bunji districts: these, though I was able to detect them, I had not time to rectify; so they have been allowed to stand in mine as in the Government Map.

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

133 plateau on which the village of Choi is situated, and destroyed the prosperity of that place. On the left bank, the flood, in cutting a cliff, carried away the canal that irrigated another village; and some land and some houses at Tarshing itself were washed away. Lower down, in the Astor Valley, at Gurikot, Dushkin, and other places, some cultivated lands were destroyed, but it does not seem that any lives were lost. A curious thing followed this;—the glacier gradually sunk in level, at the rate of a few yards every year, till it came down to its present position, that is about 100 feet below its former level; at the same time it became crevassed, so that now it is difficult to find a road across. It is evident that at the time the glacier abutted against the rock the ice was being compressed, and the crevasses that may have formerly existed were closed up; afterwards, the water kept open a passage, the ice was cracked off bit by bit as it advanced, and the circumstances that cause crevasses (as inequalities in the bed) acted without opposition. Now again the space between the end of the glacier and the cliff is closed up; the waters at present find a passage for themselves beneath; probably the same process of compression has re-commenced, which may again end in a complete stoppage of the upper drainage, formation of a lake, and subsequent outbreak and flood.

[34] The village of Astor is situated on the western side of the valley, at the junction of one of those tributary valleys which come 641 down from the Nangá Parbat Ridge. It is on the remnant of an 175 alluvial plateau, at a height of some 500 feet above the main river. This place, which used to be the seat of a Dárd Raja, is now a cantonment of the Maharaja's troops, the chief station for the Gilgit Brigade. It is a collection of hundreds of small huts, which the soldiers inhabit in twos and threes; these huts are huddled or crowded together in two or three separate clumps. The number of troops is about 1200; the object of keeping them here rather than nearer the frontier is to save carriage of the supplies, which mostly come from Kashmir; the force is on the

1: Drew G-3 (1862-1878) 1878 AVI Kashmir
Card AV3

right side of the snowy Pass, and is always ready to advance to Gilgit if required. I know very little of the history of Astor. Bernier, who wrote about the year 1660, in enumerating the countries that border Kashmir, speaks of the territories of *Raja Gamea*. Now from geographical position I infer that this was the ruler of Astor. When the Sikhs held Kashmir, the Astor Raja was tributary to them; he had become so without any force having been sent; for a time he remained in quiet. But a curious thing happened. When Wazir Lakpat (who was lieutenant of Zoráwar Singh, who was servant of Raja Gulab Singh, who was a tributary of the Sikhs) was victorious in Skárdú, he came over the Harpo Lá and invaded Astor. Lakpat besieged the Astor fort for four months; at the end of which time it was given up for want of provisions, and the Raja was taken away prisoner to Skárdú; and this though he was on terms of friendship and (in a degree) dependent on the Sikh Governor of Kashmir. At last, representations on the subject went to Lábor, and from there Gulab Singh received directions to desist from interfering with Astor, so the Raja was sent back. But not long afterwards the Sikhs themselves from Kashmir required a passage through the Astor territory on their way to Gilgit (as will be related in Chapter XIX.), and not only so, but they required to make their communications sure; with this object a Sikh post was placed at Astor, and from that time the independence of the Raja diminished; now there is a titular Raja, for whose subsistence some provision is made, whether by pension or from land I do not know.

At Astor and for many miles on there is one general character of the valley; at the bottom it is very narrow; the river is quite confined between the ends of great spurs from the lofty mountain-ridges on both sides; the cultivation is on very small spaces, usually some hundreds of feet above the valley-bottom. The hill-sides are partly broken into cliffs and partly of a smooth surface, grown over with grass in tufts, and with bushes of pencil-cedar scattered over, while in parts sheltered from the sun *Pinus*

In Store G-8 (1863-1872) 1871 A91 Kashmir
Dard A91

132 rained. In winter snow seldom falls, but on occasional years it
133 may do so to the depth of an inch, melting away with the first sun. The mountains round are lofty, rocky, and bare; these increase the summer's heat. There is a fall of about 200 feet to the river Indus, which has here a width of 100 yards; the water flows smoothly, and has, I think, a considerable depth; the ferry is a mile or so above the fort. Immediately opposite comes in the Ile stream, while the Gilgit River falls in a few miles above.

## Gilgit.

140 From the mouths of the Dard people, when talking among themselves, in their own language, the sound of this name seemed to my ear such as would properly be represented by the spelling *Gilgit*.* But all people of other races who have had occasion to use the name—Kashmiris, Sikhs, Dogras, and Europeans—have caught the sound as Gilgit, and used this form until it has become so much known that it would be inconvenient, not to say useless, for me to attempt to change the name.

141 The district of Gilgit consists of the lower part of the valley
142 of a river tributary to the Indus, which, rising in the mountains that bound Dashkhúm and Chitrál, flows south-eastward until it falls into the great river, a little above Darwaz. The length of the course of this Gilgit River, speaking roughly and only following the greater changes of direction, is 220 miles, which are thus divided,—Yásin includes a length of 60 miles, Punial of 35 miles, and Gilgit of 35 miles. Yásin is beyond the Maharaja of Kashmir's boundary; Punial is within it, being governed by a Raja dependent on and aided by the Maharaja's power; Gilgit is administered directly by the Maharaja's officers. This refers only to one line of valley—the main one; besides this there are important branch valleys belonging to Yásin, and there is a long tributary valley on the north-east, which is occupied by two other small states—Hunza and Nagar.

* Upon says that the real name of Gilgit is said to be 'Gilit.' Its Lahnda speaks of 'Gulgilan or Gilit.'

In Draw G-8 (1868-1870) 1874 AVI Kashmir
Dated AVI

The lower part of the valley, occupied by Gilgit, is from one to three miles wide; it is bounded on each side by steep rocky mountains; the valley itself contains stony alluvial plateaux of various form, and various level above the river, which flows in cliffs more or less; the greater part of this space is arid and barren, but, as usual, in front of each side ravine is a cultivated space, watered by the side stream, on which is a collection of houses. The line of mountains on the south-west side of the valley is divided most regularly by these ravines; between each of these the steep rocky masses narrow as they rise. On the north-east side the mountains are of an enormous size; they are well seen from the ridge bounding the Ile and Gilgit valleys; the rocky spurs lead back to lofty snowy peaks, one of which is over 25,000 feet in height. In front of each ravine on that side, too, is the wide-spread alluvial fan, with a portion of it watered and cultivated. There the mountains are completely bare, but on the south-west side, high up above the lower cliffs, is a growth of pine-wood.

The village of Gilgit is on one of the watered tracts on the right bank of the river; here the cultivated ground is not part of the fan of a side stream, but is on the flat plain of the river alluvium, which makes a terrace 30 or 40 feet above the water. The cultivation occupies the space of a square mile or so, extending from the river bank to the mountains; the irrigating water comes from the nearest side stream. The houses here, as also in Astor, are flat-topped; they are scattered over the plain in twos and threes among groups of fruit-trees, having been rebuilt in this way after the destruction that occurred in the various wars to which Gilgit has been subject; it will take long for the village to recover the abundance of fruit-trees which used to prevail. The fort of Gilgit is the Maharaja's chief stronghold in Dardistán. It has been at different times taken, destroyed, rebuilt, added to, and altered. In 1870, when I was there, the appearance of it from the south-west was as represented in the sketch on the next page. The central part with the high towers (one of them loftier than the rest) was built by the ruler Gauer Rahmán during his seized reign in Gilgit when the Maharaja Gulab Singh's troops had been for a

Le Drew G-8 (1862-1872) 1875 AV1 Kashmir
Dard AV3

## PUNIAL.

131 Four miles above the village and fort of Gilgit the valley narrows; still there is generally a bit of alluvial plateau on one side or other of the river; a few villages are passed and sites of deserted villages. For a day's march up one is still in the district of Gilgit, which is conterminous with the old Rajaship of Gilgit. Between the villages of Sharot and Gulpur this district ends and Puniál begins.*

132 Puniál is a part of the valley which had long been held by separate Rajas, sometimes I think independent, sometimes depending on one or other of their neighbours—Yásin and Gilgit. The last result of the wars and disturbances that for some generations so much affected these valleys has been to leave Puniál to a ruler of the line of its old Rajas, but under the protection of and in close dependence on, and, in those matters in which interference might be called for, in obedience to, the Maharaja of Kashmir. The district thus held is simply the line of the main 140 valley, all along narrow, from Gulpur up to the village and fort 75 of Gákúch. This is a length of some 25 miles; within it there 141 are nine villages and two or three outlying patches of ground cultivated from the nearest; these villages vary in altitude from 5500 feet to nearly 7000 feet; the chief place is Sher, on the left bank, where the Raja dwells. A characteristic of this part of the valley is that often, after every few miles, one comes to a place where the space is narrowed for a short distance by spurs coming down, so that the passage along is extremely difficult; the name given to these places is *darband*, or "shut-door"; they are of much importance from a military point of view, since at each of them a few might stop an army for a time; but there are usually two roads by which they can be passed—a very difficult one, fit only for agile foot-passengers, along the cliff, and a bridle-path that

* I believe that originally Gulpur itself was under the Gilgit Raja, and that it was granted to Puniál in dowry of one of the daughters of the house. The present actual boundary between Gilgit and Puniál is the stony and sandy plain between Sharot and Gulpur.

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

leads a thousand feet or more above; again, in winter, they can sometimes be turned by twice fording the river. 153 361 715

That we have here come to a country exposed to the attacks, or, at all events, the alarms, of surrounding enemies is shown by the arrangement of the villages. At Sher itself, and from that place onwards, all the villagers, with their wives and families and their cattle, live within the fort; village and fort are here synonymous. 361 712

*Sher Fort* is the strongest hereabouts; it has one face to the bank of the river, whence its supply of water cannot be cut off; all four sides are lofty walls with towers, much in the style of the inner work at Gilgit, but not quite so regularly built. Inside, the whole area is covered, huts are built over it all; these huts are mostly of three stories, the lowest is occupied by the cattle, the second is the usual dwelling-place, and the third is the summer living place; they are lighted by small openings in the roofs. The Raja has a nice set of rooms in one corner. [342]

Besides the country-people, there are 100 irregular sepoys of the Maharaja's army quartered in the fort; they occupy the part next to the walls, while the villagers have the centre. Thus the place is very much crowded. [341]

*Bubar*, which is also on the left bank, some 15 miles up (6000 feet above the sea), is in the same way a place where the villagers live in the fort; this is a large and prosperous village thick in fruit-trees. Vine is much cultivated; it is grown in small vineyards with the plants at irregular distances, many being old trees; the whole of the vineyard is covered with a framework of sticks supported at a height of from two to four feet above the ground, and over this the vines are trained; some of these vineyards are immediately beneath the walls; they are considered as a good defence to the fort; I think it more likely that the fort is a good defence to the vineyards, which are apt to suffer in a war. [345]

Bubar Fort is not quite so strong as Sher, still it is reckoned one of those which cannot be taken by force—the alternative, treachery, is not an uncommon weapon in these countries.

*Gulmutt*, *Singul*, and the other villages in this part of the valley, have the dwellings similarly enclosed in forts.

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

At evening, the people, who have been occupied in their fields during the day, all come with their cattle within the walls and the gates are closed; all night sentries watch on the towers, and every half hour the "All's well" resounds through the stillness, though it may get less frequent towards the sleepy hours of morning. At dawn an armed party go forth and make the round of all places that might possibly harbour an enemy, and not until their search has proved that the village is clear do others issue for their ordinary avocations. At the time I marched up the valley the Maharaja's relations with the Yāsīn chief were in a doubtful state, on account of the murder of Mr. Hayward, for which we were trying to get reparation; these precautions, therefore, may have been more than usually attended to. I did not myself lodge within the forts, but, having an escort of 200 men from Gilgit, we were able to keep such a look-out as effectually to prevent any surprise.

The highest point in the valley that I went to was Gākūj. This is the last village in Puniāl; it is the farthest in this north-west corner to which the Maharaja's power or influence extends—and hence it is the farthest to which the influence of the Government of India reaches. Gākūj is, by my observations, 6940 feet above the sea; it is on a knob of rock behind which is a sloping plain, all this being 700 feet above the river. It is a cold windy place; snow falls there in winter to a depth varying from 6 inches to 1 foot 6 inches, and it stays three months; here only one crop is grown, while near the level of the river, 600 feet down, two crops are got from the land.

There is a strong fort at Gākūj, containing within it a spring of water; the garrison is composed of the villagers—about fifty fighting men. Part of the plain is cultivated, but beyond that part stretches a narrow stony plain backed by mountains 3000 feet or so high, their sides dotted with pencil-cedar bushes with pine-forest above; this strip of plain extends some eight miles up the valley, at which distance a spur from the mountains comes down and juts against the river, making a natural barrier. This spot, called Hūpar, is the extreme point of the Maharaja's territory;

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

here the Puniāl Raja has a guard of six men, who, on signs of an enemy approaching, would light a signal fire; for this reason no cooking of food is allowed there, so the look-out party take a few days' provisions ready cooked, to last until their relief. To hold the position would require one or two hundred men. There are two roads past it, one of them only can be traversed by horses. At three other places is a guard kept. One on the left bank of the Gilgit River, a little lower down than Gākūj; one is on the left bank of the Ishkoman River (which falls in from the north above Gākūj) and one on its right bank, near, I think, its junction with the main stream; while in summer a guard is pushed nearly a day's march up the Ishkoman Valley. The object is to reach the best look-out place at each particular time of the year, and this must vary as the rivers become fordable or impassable. The Yāsīnīs have a guard at a place called Shedodas, on the left bank, opposite to Hūpar.

It was in November, 1870, that I went through Puniāl. The ruler is Raja Isā Bāgdur (a name sometimes corrupted by strangers to Bahādur). We were together for several days; we travelled in company, and nearly every day I joined him in a game of polo; with such intercourse we naturally became well acquainted. He is a man who has long been at enmity with the Yāsīn family, and now entertains the most lively hatred of them; in the various tides of invasion he has had to flee from his territory and take shelter now in Gilgit, now in Chilās, and now in Kashmir. On the re-conquest of Gilgit by the Maharaja (which will be related in another chapter) he was replaced in his own country, which ever since he has held in faithful dependence on the Maharaja's Government, often under difficult circumstances. Though an old man he is strong and active; he is a capital, even a renowned, rider. In character he is both brave and politic, at the same time cautious and enterprising. He is much feared by his enemies and liked by his people; these obey him implicitly; it is their custom, on meeting him, to go up and kiss his hand; this, I believe, to be the general old custom in Dārdistān, or at all events in that part of it where the government is monarchical.

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

the whole length of it. Vineyards abound. Kine and goats are plentiful. Deodar, pine, and oak grow on the hill-sides. Most of the people during summer time live up on the hills, where pasture is to be found. This is a federal republic; but the federal bond seems weak. The people are called by their neighbours Dārele.

*Tangir*, a republic. It has of old been tributary to Yāsīn; but there is no close connection.

*Gor*, a republic; it has three forts or villages. It sends a few goats to the Maharaja by way of tribute, and leaves hostages in Astor, but it is practically independent. The people are called Gūrīje.

*Thalicha*; a small village of seven houses. It is the smallest independent state that I have ever heard of. Its government is republican.

*Chilās.* This is one of the larger of these republics; its people are called by the other Dārds "Bhute." Some account of the way in which the Chilāsīs used to make raids on their neighbours has been given in Chapter XVII. The Sikhs sent an expedition to Chilās under one Sūja Singh, but it was repulsed; this was when Mīān Singh was the Sikh Governor of Kashmir, about the year 1843. The expedition sent by Maharaja Gulab Singh (in 1850 or '51), and its good effects, have already been spoken of. Since that time the Chilāsīs have been in a sense tributary; they now pay yearly to the Maharaja a tribute of 100 goats and about two ounces of gold-dust; otherwise they are free.

Beyond these, down the Indus Valley, are some places of which I know almost nothing but the name, they are—

| | | | |
|---|---|---|---|
| Hudar, whose people are called Hudare. | | | |
| Bunar. | | | |

Dard AV3

backs bent, feet tired and stumbling, just staggering on for days, with eyes on the ground, perhaps fixed on the heels of the man ahead, their loads only lightened by that which they ate of it—leaving less for the journey back; the man who fell was hardly noticed by those who were with him unless he happened to be a relation.

Gilgit, together with Astor, Bunji, Chilas, Hunza, and a few other places is often referred to as Dardistan. Gilgit is the most important place, being nearest the frontier; a British Political Agency was stationed here. The town of Gilgit is the only town of any importance; it has been built on the Gilgit river at a place which is some miles above where that river joins the Indus, and at a height almost the same as Srinagar.

Much of the Gilgit valley is well cultivated, with fruit trees; in the fields wheat and barley are grown; in those which are available to water, fairly good crops of rice, but where cultivation has not been attempted, the land is barren, though some of the hillsides carry large woods of fir and juniper, and higher still there is birch.

The country is hard, bleak and inhospitable—the sort of place one immediately associates with the word "out-post"; one can imagine the disappointment, if not horror, of a married British officer on learning that he had been posted to that garrison, but it was not so for the single man to whom the great attraction was the shooting and the polo. Like all towns and large villages in the mountains, Gilgit has an excellent polo ground which is still used although the British have gone, for the men of the country excel in horsemanship and polo is their national game.

Just as the valley of Kashmir is the home of the fairy tales, so also are the Gilgiti legends famous for those parts; fortunately a great number of them have been preserved for all time by Britishers who have served there. Many of them are fables, others doubtless have a certain amount of truth in them; they contain the history of that part; in them can be seen the character of the men of Gilgit as they have always been, cruel, hard and fearless, and of their womenfolk, lacking nothing in courage and cruelty.

One story so told will never be lost to the people; there is

3: Imperial Gazetteer G-3 (1889-95) 1909 AV1 Kashmir
Jard AV3

487 described in the article on KASHMÍR. By that route Gilgit lies at a distance of 390 miles from the present railway base at Rāwalpindi. An alternative line has been opened over the Babusar pass, which brings Gilgit within 250 miles of the railway at Hassan Abdāl. This line, besides being shorter, has the advantage of crossing only one snow pass, instead of two, or practically three, if the winter snow at Murree be taken into consideration. The routes to the north are mere tracks, when the military roads connecting Gilgit with the outposts at Gupis and Hunza have been passed.

205 648 Post and telegraph offices. There is a daily postal service with India by the Burzil pass and Kashmīr, and the telegraph line follows the same route. Both services work well in spite of heavy snow and destr ctive avalanches, and are maintained by the Government of India. There is a weekly postal service from Gilgit to Chilās and Gupis, and a fortnightly post between Gilgit and Kashgar via the Kilik pass in the summer, and the Mintaka in the winter.

643 704 Administration, &c. The Gilgit Wazārat is in charge of a Wazīr Wazārat. Crime is slight; there is no jail and no police organization. Police duties are carried out by the levies and a few soldiers of the Kashmīr regular troops. There is little litigation; and the chief business of the Wazīr is the provision of supplies to the garrison at Gilgit, now effected by an excellent system of transport from Kashmīr. In 1891–2, at the time of the Hunza-Nagar expedition, the garrison had a force of 2,451; in 1895, when the Chitrāl disturbances broke out, it consisted of 3,373; and the present garrison numbers 1,887, including a mountain battery, two infantry Imperial Service regiments, and Kashmīr sappers and miners. A school is maintained at Gilgit.

651 Land revenue. A land revenue settlement of Astor and Gilgit has been made. It was found impossible to introduce a purely cash assessment, owing to the State's requirements in grain; but many inequalities and abuses were removed, and, on the whole, the condition of the villagers is satisfactory.

631 643 651 Political relations. A British Political Agent resides at Gilgit. He exercises some degree of supervision over the Wazīr of the Kashmīr State, and is directly responsible to the Government of India for the administration of the outlying districts or petty States of Hunza-Nagar, Ashkuman, Yāsīn, and Ghizar, the little republic of Chilās, and also for relations with Tangir and Darel, over which valleys the Puniāl Rās and the Mehtarjaos of Yāsīn have partially acknowledged claims. These States acknowledge the suzerainty of Kashmīr, but form no part of its territory. They pay an annual tribute to the Darbār-

Chitral

We remained at Mastuj about a week to give the
Mehtar time to make his preparations for receiving 648
me, to get a little shooting, and to rest our camp. 662
Afzul also was most pressing for us to stay, thinking that every day he spent with me was another nail in Nizam's coffin, another step towards getting the Government of India to recognise him, and not his elder brother, as heir-apparent. Needless to say, Government had not the remotest intention of interfering in any way in the matter.

We beguiled the time during our enforced idleness 133
by moving up the valley and visiting the Chamarkand. This pass leads into the valley we had come by above Ghizr. I had originally meant to use it, but did not owing to the weather: it is in some ways more difficult than the Shandur. The road leading into it from the Mastuj valley winds through a narrow gorge cut through clay, the sides being carved out by water action into the wildest collection of pinnacles and ravines imaginable, with numerous balanced rocks. We came out very light, and I left my personal 000
servants behind. The consequence was that my orderlies put up my camp bed, an English "paragon," without fitting the joints properly, and it smashed irretrievably directly I sat on it. For the next two months I slept on the ground, and in cold weather, when there are no centipedes about, or other horrors, there is no doubt that it is far the most comfortable arrangement, and very much warmer than a bed. My orderlies used to get a lot of *bhoosa*, the broken straw from the threshing floors, and put a foot of it down all over the floor of the tent, stretch my tent carpet over this, and put down the bedding on the top of all. In real cold this makes the most perfect

Chitral

159 wander apparently aimlessly from subject to subject, but you had to be very careful of what you said or admitted, for, like lightning, would shoot out some sudden searching question about the matter on which his mind was really working. It was his little way, practised I imagined originally as an art, but which had become second nature.

643 The moment was an interesting one to be in
• 648 Chitral: Mahomed Ishák had invaded Afghanistan
159 from Russian Turkestan, Afghan Turkestan had fallen into his hands, the old princes of Wakhan, who had taken refuge in Chitral territory from the Amir, had been summoned by him, and momentarily reinstated in their country, his emissaries were passing through Chitral, and going to Dir, Bajaur, and Swat, endeavouring to raise trouble for the Amir. The Mehtar was very anxious; he was between the devil and the deep sea; he feared the Amir, and rightly, and hated him with a bitter and deadly hatred; he was afraid of the consequences if he espoused Mahomed Ishák's cause, for the success of which he prayed incessantly, and the latter failed in his attempt. On the other hand, Mahomed Ishák made great promises, and, if successful, might be a good friend; he could scarcely be a more dangerous and unpleasant enemy than Abdur Rahman. Altogether, it was a very difficult question, and he came and discussed it with me. I advised him, in what were the interests of Government as well as his own, not to stir up strife: a war once kindled on the frontier spreads frequently in unexpected directions. I pointed out that the Amir was our ally, that we did not desert our allies, and that Government would not be best pleased if the Mehtar

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

started a conflagration. In the end, whether my counsel had anything to do with it or not, the old gentleman decided to sit on the fence and do nothing.

The Mehtar's views on the condition of frontier affairs were interesting, and his knowledge of men and matters varied and wide. A man does not rule a frontier state forty years for nothing. He saw that, so far as his dynasty and country were concerned, safety lay in alliance with us, danger in any closer intercourse with Afghanistan. For this reason he was delighted to have an unconquered Kafiristan on his flank as a buffer between him and the "God-given Government." He might occasionally, in retaliation for too numerous murders on the part of the Kafirs, raid their country with the object of getting some slaves, but he had no desire to see it conquered, and he was delighted that the Kafirs made the road down towards Asmar, and up the Ashreth valley to the Lowari pass, their happy hunting-ground, and murdered stray Pathans. The more dangerous the road was, the more isolated and safe his state. We discussed many questions, to which I cannot refer, with daily increasing interest and amusement on my part. Some of his ideas with all his shrewdness were very quaint; one of his most persistent demands was that, given any agreement with Government, it should be engraved on a sheet of copper. Some ruffian had persuaded him that no treaty would be binding on us if only written on paper.

My state visit to the Mehtar was most ceremonious. A deputation of his courtiers came and escorted us to the fort, at the gate of which the Mehtar met us, and conducted us to a daïs outside,

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

The chorus at the Mehtar's durbar was composed of all his men off duty, men from all the neighbouring villages who had come to see the fun, a stray Kafir or two who grinned in a friendly way at us, all the heterogeneous rabble possible to collect in Chitral. The price they paid for being present and looking at the dancing was continued applause, shouts of encouragement to the dancers, in which they were led by an official who was described as the head of the Mehtar's household. He was a very wild-looking creature, who rushed along the ranks of the spectators dressed in a scarlet cloth choga, and armed with a big ornamented stick, with which he belaboured any of the crowd who did not shout loud enough. After we had sat through the performance for some time the Mehtar rose, and, taking me by the hand, escorted me along a narrow path made by laying down cotton cloth, white and coloured, and stuffs of various kinds, finishing in a strip of sham kinkob, all of which became the perquisite of my servants after I had passed over it. The path led along the faces of the fort to the private garden, from which there was a door leading to the household offices and ladies' apartments. In the garden we found a tent pitched, into which we entered, followed by three or four of the Mehtar's most important sons and nobles.

Directly we had sat down the Mehtar began an oration which lasted an hour, with interruptions to drink iced water, and to rub snuff on his gums, the Chitrali way of taking this most seductive form of the weed. The upshot of his discourse was that

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 he was a faithful servant of the British Government, and that he wanted various things, mostly
• 648 rifles and money. Some of his remarks were
159 amusing, as when looking a Kashmiri officer full in the face he said that he had been in the habit, in the old days, of beating the Kashmiris and looting them, but that out of consideration for us he had abandoned this source of revenue. All this time I was getting horribly hungry; we generally breakfasted about eleven, and had been fetched away from camp just before our breakfast was ready, and it was long past two before the Mehtar showed signs of having talked himself out. There was nothing for me to say beyond the usual diplomatic *banalités* about the assurances I had received from the Viceroy's and the Foreign Secretary's lips of the interest felt by the Government in the welfare of Chitral, and of their personal regard for the renowned chief who ruled its destinies. The whole thing was a sort of full-dress debate, the object of which, on the Mehtar's part, was to let it be known throughout Chitral, and in the adjacent Pathan countries, Asmar, Dir, and Bajour, that he was definitely putting himself on the side of the British Government, and under its powerful protection.

644 The Mehtar, having thoroughly talked himself out,
262 departed, leaving Afzul-ul-Mulk to do host. The dinner was excellent of its kind, and we were introduced to various famous royal dishes, about the best being large flat unleavened cakes of bread full of minced meat, and sweet omelets made with honey.

000 I remained some time in Chitral, seeing the

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

181 time, their rapidity in movement, and intimate knowledge of their country, and its capabilities for defence, would make them dangerous enemies to a small invading force, and valuable auxiliaries while on the winning side.

175 Events proved the justness of the opinion then
181 formed and recorded. A few years later saw Chitral in the throes of civil war, and a Mehtar in possession one day, ousted and flying the next, after the fall of a position attended with the loss of one man. The feeble resistance made to Colonel Kelly's advance by the Chitralis, though holding splendidly defensible positions, the secondary part played by the Chitralis in the memorable siege of Chitral, when all the real fighting was done by Umra Khan's Pathans, and the skill they showed in cutting off small parties of Sikhs, all went to prove that, though not wanting in courage and endurance, they lack the tenacity and grit which is wanted to enable men to face severe loss and to make real soldiers. As Napoleon says, "*Un homme ce n'est pas un soldat.*" The Chitrali is wanting in the something which makes a soldier.

643 I found that the Mehtar had no conception of our
648 real strength, no standard by which to judge our power. He undervalued our troops, his only idea of a standing army being taken from the old Kashmir regulars, a body with whose name disaster was associated, and some of which he had himself defeated, driven into the fort of Gilgit, and besieged there.
643 His sons and leading men who had been to India had
648 not seen enough of our troops for their reports on
743 them to impress him. One thing I found he was most anxious to have, and that was a properly

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 organised hospital and dispensary at Chitral, under a
646 good native doctor; that this was to be at our expense
743 went without saying. I am glad to say I was able to arrange this, a hospital was established next year, and it has flourished and done much good in the country.

431 Before leaving Chitral I sent the Mehtar the pre-
[576] sents I had brought up for him. The local etiquette forbade the gifts being offered in public, as everything so received had at once to be given away. My presents, therefore, were taken to the Mehtar by my head orderly. They consisted of a double-barrel express rifle, a pair of shot guns, and a miscellaneous assortment comprising silver goblets, cutlery, gold cloth from Benares, silks and broadcloths; and as the ladies were to be propitiated, carefully-graduated collections of rich brocades, silks, embroidered muslins, looking-glasses, jewelled trinkets, and last, but not least, boxes of scented soap and cases of perfumery. I was careful to ascertain the proper proportion to be observed in graduating the presents for the Mehtar's leading wives, and had a solemn interview with his minister on the subject. The result was excellent, and to my surprise and satisfaction I found that the Mehtar was delighted with the presents, and valued them at considerably more than treble what they had cost in India, and that the ladies were extremely
[577] pleased with theirs. The Mehtar's appreciation of some of my gifts was amusing. He was much taken with a nest of silver cups in a case, the innermost of which was shaped like a champagne glass. He was delighted with this, and pointed out that it would be most useful as a spittoon when he chewed snuff. The

4: Durand G-3 (1888-93) 1900 AVI Kashmir
Dardavi
Chitral

ladies, I heard, revelled in the soap; and, judging from the men, I should say it was needed.

From Chitral I sent letters to Peshawar through Dir and Bajour, and asked permission to come back to India that way. The Peshawar authorities said afterwards we should have had our throats cut had we attempted it. This, "from information received," I did not believe, and in any case it was worth trying, as we had no accurate knowledge of the road. The Khan of Dir and Umra Khan of Jandol were ready to pass me through their territories, and as both wished to come to an understanding with Government, I believed the opportunity to be a good one, more especially as the Mehtar had at the moment considerable influence with them both, and was prepared to do all in his power to assist me in the attempt, believing that Government would take any help given me by him into consideration. However, the fates were against me, and I did not get permission. I arranged to spend the time pending the receipt of an answer in visiting the Dorah, Agram, Nuksan, and Katinza passes, leading over the Hindu-Kush into Badakshan, but the early setting in of the snowfall rendered it impossible for me to visit the last three, and I had to content myself with the Dorah, the main pass, over which runs a rough kafila or caravan road, which has from time immemorial connected Badakshan through Chitral, Dir, and Swat with India.

I had a final interview with the Mehtar before leaving Chitral, and he presented me at parting with the usual number of horses, and with some fur coats, one of which was much admired when I wore it in

4: Durand G-8 (1888-93) 1900 AVI Kashmir
Dard A43
Chitral

Agent in Chitral also came, and had a long talk to me in the morning, during which he inveighed against Rahat Mian, and unfolded his many villainies. Rahat Mian was a study, an old man with a very shrewd face, and an expression entirely under control. He used to sit during my long talks with the Mehtar with a pomegranate in his hand, cutting out all sorts of fantastic geometrical patterns in the rind with a sharp penknife, watching everybody out of the corner of his eye and never losing a word. He produced a letter from Mahomed Ishák, which he said the Mehtar had intercepted, and our Agent praised his loyalty and devotion to Government, and begged that I would bring his services to notice, he having told me all about the letter an hour before, and how copies had been sent post haste weeks ago to their destination. It was interesting to watch the two who hated each other with a deadly hatred, each knowing the other was lying, and both profuse in their compliments and expressions of affection.

Diplomacy in the Hindu-Kush is an interesting game to watch; the men intrigue from their cradle; it is an amusement as well as the business of life. For an Englishman the only safe course is the honest one; he must think pretty carefully before he speaks, and then speak plainly. Every word must prove true, every promise must be fulfilled to the letter; following on these lines a man in the end will get the influence he wants. At first the native diplomatist will not believe him, and will search for hidden meanings, but in the end he will have confidence in this strange being who plays the game on such hitherto unheard-of lines. But the Englishman who believes

4c Durand G-3 (1888-92) 1900 AV1 Kashmir
Dard AV3
Chitral

anything which is told him will get into difficulties. You must learn to disbelieve any story told you, however plausible, unless you have proof positive from other sources of its accuracy; your first thought when any statement is made must always be what is the speaker's motive, especially if he has told you the truth. No man ever approaches the object he aims at directly. By roundabout and devious paths he will lead up to his point, which is perhaps only brought out casually at the end of a long interview. You live in an atmosphere of falsehood and deceit, the men you do business with lying freely and unblushingly on every available occasion; but they bear you no ill-will when you expose their little lapses, and at once set to work to weave some new plot. The Mehtar was a past master in the art, and it was a never-failing source of excitement and interest to have dealings with him. We got to know each other fairly well by the end of the next four years.

In the afternoon of the last day we spent together we went off to look on at polo. The game was dull, for the players were indifferent, and the ground, at each end of which cropped up huge rocks, was half under water. But the show was diversified by the Mehtar producing various rifles, and making some very fine shooting at a mark across the polo ground, firing over the heads of the players. Then followed the usual dances, one a sword dance to the music of the royal band, the drummer in which, who had only one tooth in his upper jaw, fascinated Robertson and me by his excitement and animation, throwing his arms about frantically, his whole face lighting up,

4: Durand G-3 (1888-95) 1900 AV1 Kashmir AV1
Dard AV3
Chitral

accompany him, go to England, get instruction in the use of instruments, collect all he wanted for his longer exploration, come up to Gilgit the following year, and again enter Kafiristan. The flying visit would give him a good idea of the difficulties he would be likely to encounter, and of the outfit which would be most suitable. A proposal on these lines was drawn up and sent off at once to India, and was eventually sanctioned by Government. The scheme was successfully carried out, as readers of Robertson's book on Kafiristan know.

On arrival at Gakuch I found letters from the Mehtar warning me that Raja Akbar Khan of Punyal, in league with the people of Darel and Tangir, in the Indus Valley, had arranged to attack my camp a day's march from Gakuch. The Mehtar solemnly warned me against coming by the direct road over the Shandur to Chitral, and begged me to wait till Nizam-ul-Mulk came to escort me with a suitable force. I was then to march by the Yasin Valley, cross the Darkot Pass, and reach Chitral by the upper road. The whole thing was a plot got up to embroil me if possible with Akbar Khan, whom the Mehtar hated, and to show the necessity for his being supplied by Government with arms in order to be able to repel attacks from Yaghistan, as the independent territory in the Indus Valley is called. The Mehtar had over-reached himself for once, for I had sent trustworthy men into both Darel and Tangir some time before, and they had just returned reporting everything quiet. Further, he had mentioned as Akbar Khan's accomplice in the plot the man whom I knew to be the latter's bitterest enemy. I wrote

4: Durand C-8 (1888-92) 1900 Art Section A V
Durd A V3
Chitral

K 648 D 648 at once to the Mehtar saying that I should come by the Shandur or not at all, and that I expected him to make the necessary arrangements for the safety of our party. At the same time I wrote to our native Agent who would, I knew, pass on the gist of my letter to the Mehtar, that the latter's story was untrue. I told him that if my camp was attacked it would be at the Mehtar's instigation, and that if he could not guarantee the safety of a small party of British officers marching through his country the Government of India would attach very little importance to his friendship, and that there would certainly be no question of receiving any proof of its good will.

000 I then sat down at Gakuch for a week to give my letters time to arrive, knowing my hint would be sufficient, and that I should hear no more of impending attacks. It would have been stupid to go on at once, for had an attack come off I should have been naturally blamed by Government for disregarding the Mehtar's warning, and I should have played into my old friend's hands. I knew he was quite capable of arranging a small fight, so that he might reap the reward of having come to my assistance. There was plenty to do at Gakuch. We selected the site for a fort which was to be my headquarters when I visited Punyal, had beats for brown bear, shot chickor, went into the question of establishing a dispensary, and inspected various water-courses which wanted the assistance of skilled labour to improve them, and to bring much land now lying waste under cultivation. There were also interminable but interesting interviews with our friends the Punyal Chiefs.

Dard No 3
Chitral

Finally the Mehtar's Agent at Gilgit, who had 145
preceded me to make arrangements for our march, returned to enquire the reason of our not following him. He came to see me, full of indignation at the idea of an attack in the Mehtar's territory being for a moment considered possible. He loudly averred that the whole story was a lie; I said it might be so, but when his master himself wrote and warned me, what was I to do. He was very angry, and said the Mehtar had been deceived, which, considering his knowledge of the frontier, was hardly likely. Altogether it was rather an unpleasant scene, and showed the importance of warning diplomatic agents of an intended coup.

Next day we started, as I calculated that the Mehtar's letter in reply should reach me at the first Chitrali fort across the frontier. We were met by a great deputation of Nizam-ul-Mulk's head men, amongst whom were many old acquaintances. The marching was now delightful, the stream a dream of beauty, its banks aglow with autumn colouring, and snow falling nightly on the hill-tops. At one camp two soldiers from Badakshan, refugees from the Amir's knife, came to see me. The Mehtar had given them asylum, and of course wished to pass them on to our care. They looked very down and unhappy, and I was very sorry for them, but beyond giving them some temporary assistance could do nothing. It was a miserable position for them, wanderers dependent on the charity of a poor and close-fisted Chief, who naturally did not wish to have his country turned into a refuge for penniless exiles. The Mehtar was bound to assist them by

A Dawood G-4 (1889-92) 1889 A91 Kashmir

Chil-ral

●477 the traditions of them with emotion, where a man never knows what his own fate may be. A ruler must extend such hospitality as is in his power, so that if it should come to his turn he may receive the same treatment.

050 Throughout the march, to keep up the fiction of danger from the Indus Valley, we were furnished with a numerous escort; and strong guards were posted on the passes, from whom hourly messages were received that all was well. Afzul-ul-Mulk met us outside Chanki with a large following, and escorted us into camp. It was the usual medley, a crowd of mounted and dismounted men in velvets, cloth of gold, Bokhara silks and woollen homespun. The effect, as our horses splashed through the glittering crystal of the ford, was very picturesque; shields and arms flashed in the sunlight, and the gay colours of the horsemen and the darker mass of the footmen, winding through the autumn-tinted scrub jungle, made a scene which would have delighted an artist. Afzul marched with us for several days, till he left us to go on ahead and make preparations for our reception at Mastuj. Like all Chitralis, he hated riding a march fast, and, as the roads this year were much improved and we disliked riding at a foot's pace, we used to march comfortably, our party, as a rule, getting some shooting en route. Afzul used to come to my tent and have long talks every day, discussing every possible subject, and full of enquiries as to the political conditions and modes of government of the different European states whose names he knew. He was much shocked to hear that Lord Dufferin had

G. Durand C-3 (1888-89) 1900 Afg Kashmir Afg
Dard Afg
Chitral

offensive, and much in fear of the Chilasis, who in any raids in the Gilgit direction had to pass through their territory. The fighting force of Goz was insignificant, and the little state was tributary to Kashmir. The next republic was Darel; it was more important than Goz, and could turn out from a thousand to fifteen hundred men. The Durbar troops had in 1866 penetrated into the country, the people of which had made submission, and every year hostages were sent in to Kashmir, and a small tribute paid. Tangir, which lay next, was about equal in importance to Darel, and paid tribute to the rulers of Yasin. Below these tribes stretched a band of country inhabited by Kohistanis of different clans until the Pathan border was reached.

I found on my arrival at Gilgit that the Goz headmen had expressed their anxiety to come more directly under the protection of Kashmir. They were anxious to avoid being drawn into trouble should the Chilasis, as seemed likely, create disturbances, and to throw in their lot openly with Kashmir seemed to offer them the best chance of security. In a few days their representative deputation arrived, and after listening to their views I dismissed them to their homes with suitable presents, pointing out that they had nothing to fear from our side.

Rather disturbing news now began to come from Chitral. Umra Khan of Jandol had moved over his border, and occupied a portion of Chitral territory, and Afzul-ul-Mulk clamoured for the despatch of the mission. The arrival of a mission and his recognition as Mehtar by the Government of India would

4c Durand G-9 (1888-93) 1900 AVI Kashmir
Durd Acq
Chitral

strengthen his hands, and would tend to prevent aggression from the neighbouring powers. To my disgust but not surprise, for I knew the little savage well, he had signalised his acquisition of the throne by wholesale murders of his elder brother's adherents, and had killed three of his brothers in cold blood. However it was no business of mine to interfere, and I could only watch from a distance. Robertson was very anxious to reciprocate the advances made by the Gor people, and I suggested to the Government of India that the wishes of their representative should be acceded to, and that he should visit the country. Sanction was accorded to the proposal, and early in November Robertson started for Gor.

The day he was to leave Bunji came a messenger in frantic haste, bearing the news that Sher Afzul, a brother of the old Mehtar, who had been in exile for years in Afghanistan a pensioner of the Amir's, had crossed the frontier by the Dorah, surprised and killed Afzul-ul-Mulk in his fort of Chitral, and proclaimed himself Mehtar. This was bad, but the most serious news was that he had proclaimed a religious war against us, that our native agent and doctor were in danger of their lives, and that troops were being collected and hurried towards Yasin, the tract of Chitral just beyond our borders. Later in the day the late Mehtar's minister and the Governor of Mastuj rode up to my door. I could hardly recognise in the haggard travel-stained man, carrying his favourite son on his saddle-bow, who swung himself off his horse and stood broken with hard riding before me, the picturesque, cheery gentleman,

ulterior plans of conquest of the Maharaja, our feudatory. Whilst the name of Wazir is now comm[illegible] or a "minister," we find the names of the subordinate offices of Trangpá, Yarfá, Zeytú, Gopá, etc., etc., which point to the reminiscences of Tibetan Government and a reference to the "Official Designations" in Part II. of my "Dardistan" will direct speculation on other matters connected with the subject.

I need scarcely add that under a Government, like that of Chitrál, which used to derive a large portion of its revenue from kidnapping, the position of the official slave-dealer (Diwánbigi)* was a high one. Shortly before I visited Gilgit, a man used to sell for a good hunting dog (of which animal the Dards are very fond), two men for a pony and three men for a large piece of pattú (a kind of woollen stuff). Women and weak men received the preference, it being difficult for them to escape once they have reached their destination. Practically, all the hillmen are republicans. The name for servant is identical with that of "companion;" it is only the prisoner of another tribe who is a "slave." The progress of Kashmir will certainly have the effect of stopping, at any rate nominally, the trade in *male* slaves, but it will reduce all subjects to the same dead level of slavery and extinguish that spirit of freedom, and with it many of the traditions, that have preserved the Dard races from the degeneracy which has been the fate of the Aryans who reached Kashmir and India. The indigenous Government is one whose occasional tyranny is often relieved

[illegible] which the Dard Legends and Songs show that the Dards are a superior people to the Dogras, who wish to take their country in defiance of treaty obligations,† and I, for one, would almost prefer the continuance of present anarchy which may end in a national solution or in a *direct alliance* with the British, to the *épicier* policy of Kashmir which, without shedding blood,‡ has drained the

* This designation is really that of the Minister of Finances.

† This was written in 1866.

‡ I refer only to the present rule of Kashmir itself and not to the massacres by Kashmir troops in Dardistan, of which details are given elsewhere.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

resources of that Paradise on earth and killed the intellectual and moral life of its people. The administration of justice and the collection of the taxes in Dardistan are carried on, the former with some show of respect for religious injunctions, the latter with sole regard to whatever the tax-gatherer can immediately lay his hand upon.

## I. HABITATIONS.

Most of the villages, whose names I have given elsewhere, are situate on the main line of roads which, as everywhere in Himalayan countries, generally coincides with the course of rivers. The villages are sometimes scattered, but as a rule, the houses are closely packed together. Stones are heaped up and closely cemented, and the upper story, which often is only a space shielded by a cloth or by grass-bundles on a few poles, is generally reached by a staircase from the outside.* Most villages are protected by one or more wooden forts, which—with the exception of the Gilgit fort — are rude blockhouses, garnished with rows of beams, behind which it is easy to fight as long as the place is not set on fire. Most villages also contain an open space, generally near a fountain, where the villagers meet in the evening and young people make love to each other.† Sometimes the houses contain a subterranean apartment which is used as a cellar or stable—at other times, the stable forms the lower part of the house and the family live on the roof under a kind of grass-tent. In Ládak, a little earth heaped up before the door and impressed with a large wooden seal, was sufficient, some years ago, to protect a house in the absence of its owner. In Dardistan bolts, etc., show the prevailing insecurity. I have seen houses which had a courtyard, round which the rooms were built, but generally all buildings in

* *Vide* my comparison between Dardu buildings, etc., and certain excavations which I made at Takht-i-Bahi in Yusufzai in 1870.

† Seduction and adultery are punished with death in Chilás and the neighbouring independent Districts. Morality is, perhaps, not quite so stern at Gilgit, whilst in Yasin, Hunza, and even in Nagyr before 1886, great laxity is said to prevail.

road already mentioned leading into Kandia. Another road leads into the Swat valley and is a favourite route for traders. 487

Tangir and the neighbouring valley, Darel, are celebrated for the number and fine quality of their flocks and herds. Large numbers of sheep are here annually reared for sale to the inhabitants of the neighbouring valleys. Being somewhat straitened for summer pasture, the people of Tangir have long been in the habit of driving their flocks across the watershed to the Yassin country. In return for permission to graze, they pay to the ruler of Yassin a fixed tribute of salt and tobacco from each village. Besides this tribute, they give sheep and goats in varying numbers as a free gift. These payments have led to the Yassin rulers claiming the nominal allegiance of Tangir; but they make no attempt to exercise authority in the valley, which is to all intents and purposes a republican community like others in the Kohistan. Any attempt by the Yassin rulers to enter Tangir is resisted by force of arms, but the connection between the two communities has led to Tangir being regarded as the place of refuge for Yassin princes in misfortune. The people of Tangir pride themselves on giving asylum to all such who claim it, and it is seldom that the valley is long without some exiled member of the Khushwakté family. On such occasions the inhabitants contribute to his support as if he were their legitimate ruler, and if any attempt is made to seize him by force, they take up arms for a sufficient time to secure his safe retreat. Many a deposed ruler of Yassin has found a welcome in Tangir, where in the days of his power he would have been opposed by force of arms. Though Mahommedanism is of comparatively recent introduction, the people of Tangir are more fanatical than any of their neighbours, except those of Chilas, owing probably to themselves more intimately have been Mussulmans for six generations. They marry with Yassin women, but refuse to give daughters in return, on account of the slave-selling practised by Yassin rulers. 233 650 631 [721] 696

Six miles above the mouth of the Tangir stream, the Darel Valley joins the Indus. Though small, this valley is extremely fertile and well populated. From its head, roads lead into Tangir, Yassin, Ponyal, and Gilgit. The principal villages are Birokot (fort), 800 houses; Doodookot (fort) 700 houses, in the Samargal district; Manikal (fort), 140 houses; Rashmal (fort), 120 houses, in the Joomeh district; and Gaiyal (fort), 500 houses. The whole community, including the dependent 361 161

Balti AV2

their strictly Hindoo form where the Shin element exists among the population. The class distinctions existing in Chitral are of a totally different nature, and the whole evidence seems to mark the Shins as having been a Brahminical race, who succeeded in imposing their language, and to a great extent their customs, on races to which they were numerically inferior. D 174 B 174

The system of administration which existed under the old Shin rulers is still maintained by the Cashmere Government with slight modifications. The revenues of the Ra were derived as follows: From the land, a tax called "Koodkool" was paid on every crop, in kind, according to the quality of the land, which was regularly and apparently not heavily assessed. A pastoral tax of a sheep or goat, called "Ganoni mari," was paid by each household every alternate year. This might be commuted at the will of the payer for the sum of two shillings yearly. A tax called "Nyoori shairi," of four shillings a year, was paid by each water-mill, which was, however, exempted from payment the first year after construction. For washing gold-dust, in which a considerable number of people in certain villages find employment during the winter, a fixed tax of fifty-five pounds sterling, called "Ra-i-dillki," was paid yearly. In the autumn a grape tax, called "Jachai toni," was levied in kind on every vine according to its size; and when the wine-making began, a certain number of measures of grape juice, called "Rékhoo," were also paid to the Ra. A money tax of sixteen shillings, called "Garé toloo," was levied on each marriage, for which the bridegroom was liable. Every weaver's house furnished eight yards of cotton cloth to the Ra, which was called "Burutcho patchi." Silk also, which was produced by nearly every household, paid a tax called "Chooshi purtai," which consisted of as many cocoons as the Charboo could grasp in one hand, out of the heap collected by each family. Four villages, in which silk was not produced, paid a commutation of one fat sheep, valued at eight shillings, which was called "Chooshi mâri," per village. D 651

Besides these, a curious tax, called "Cha etté goé," was paid by the villages of Burmess, Khomer, and Naupoor only, which consisted of all the milk and butter produced by one cow from each house in those villages between the Ganoni and Chili festivals,—that is, from the middle of May to the end of October. These three villages also gave the Ra one small kid yearly from each house. This impost was called

Biddulph G-3 (1873-1878) 1880 AUI Afghanistan AUI
4 AV3 Dard AV3

651 "Cheloo." No reason is assigned for the origin of these peculiar taxes, which are said to have been instituted by Queen Jowari. No Shin ruler would have received cow's milk. Another local tax, called "Satêgi," was paid by the village of Bagrot. This originated in a visit paid by Habbi Khan when a boy, during the reign of his mother Jowari, on which occasion the village community made him a grant of a piece of land. It was, however, found inconvenient to cultivate it under the same system as the other crown lands, so it was, shortly afterwards, resumed by the village, on an agreement to pay a tax of thirteen taraks of wheat, equal to five and a half quarters, yearly.

Every trader who entered the country paid a duty, "Masool," of one roll of cloth out of each load, or two per cent. of live-stock, or the equivalent in other goods. At the time of sheep-slaughtering at the winter solstice, one hind quarter was furnished by each house, out of which a certain number went to each of the minor officials, and the head and hind quarters of all game killed was the perquisite of the Ra.

[4:6] Money payments were made in gold-dust, which is still largely used as a circulating medium. An amount of the value of eight shillings is called "Baghaloo."

The Yerfah, or Ra's steward, was responsible for the collection of the land revenue; but special men called "Burro" were appointed to collect the other dues.

[471] In addition to these sources of revenue, the Ra owned tracts of land in each of the larger villages, the cultivation of which was managed by the Yerfah. In each of the villages a certain number of families called "Wairêtché" were responsible for the ploughing, sowing, and irrigation of the Ra's lands under the management of the Yerfah, in return for which they were exempt from all other payments. The harvesting and winnowing were done by the whole village, who combined on certain days for the purpose. The "Wairêtché" of Gilgit, who numbered twenty families as against six or seven in other villages, were [illegible] wood from each family daily during the winter, for the use of the Ra's household, and one load of torchwood a year. Certain families in Gilgit also held the hereditary office of cooks to the Ra, for which they were exempt from all taxes. There are still four families who claim that their ancestors cooked for Shiri Buddutt, and who take no part in the Taleni festival, which celebrates his death, but shut themselves up in their houses, and regard it as a time of mourning. These

~~32~~: Biddulph G-3 (1873-1878) 1880 ~~Afgh. Afghanistan AUI~~
4 AVJ Dard AVJ

651 ●

are apart from several other families of hereditary cooks to the later rulers, who still render service to the present Ra of Gilgit.

651 634

The country was divided into districts, for each of which a Wuzeer was responsible. Wuzeers were obliged to be of good family, and are still chosen only from the three principal castes, *viz.*, Rono, Shin, or Yeshkun. The office was not hereditary, but was held for life. On the appointment of a Wuzeer, three pieces of land were taken from among the peasants' holdings, and assigned to him in addition to his own family possessions. Four families were appointed to manage the whole cultivation of his land and furnish him with one household servant, in return for which they were exempt from all dues of personal service to the Ra. The Wuzeer was responsible for the peace and welfare of his district, and for leading the men of it in war. When the population was called to arms, the Wuzeer had the right of releasing one man in each fortified village from military service, in return for which he received from the man so released two "baghaloos" of gold-dust on the return of the army. If, however, the expedition returned without having fought, only half the fee was paid. On the occasion of a marriage taking place, a cake of leavened bread was sent to the Wuzeer of the district by the father of the bride.

In each village was a "Tarangfah" appointed by the Ra, who acted under the orders of the Wuzeer within his own limits. In time of war he had the right to release three men of his village from military service, from whom he received the same dues as the Wuzeer. He also received a fee of three shillings on each marriage taking place in his village, and had three families assigned to him for service, who were exempt from all other tax or service. He further received sixteen yards of cotton cloth yearly from the village weavers, and was especially charged with the management and preservation of the irrigation arrangements.

The dues paid to all officials are called "Luspik."

Next in rank to the Tarangfah, but with totally different duties, came the Yerfah, who had charge of all the private lands of the Ra, to whom he filled the office of steward. He was responsible for everything connected with the cultivation of the Ra's lands in each district, and received six kharwars of grain out of each crop. As *luspik*, four families in Gilgit, and one in each outlying village in which the Ra owned land, were assigned to him, whose duty it was

Biddulph G-3 (1873-1878) 1880 AU1 Afghanistan AU1
4 AV3 Dard AV3 Burushó AV7

D 651 634 to furnish him each with a yoke of oxen for ploughing his own lands. This service he could commute if he pleased for one baghaloo of gold for each yoke of oxen. He was also responsible for the collection of the "Koodkool" tax, but no authority could be exercised over him by the Wuzeers or Tarangfahs.

Next to the Tarangfah among the district officials was the Charboo, who acted as an assistant to the Tarangfah in each village. His *luspik* consisted in exemption from all taxes, and two of the ruler's fees on marriage a year; it being part of his duty to collect the "Garé toloo" tax. He also received a certain amount of the meat tribute. To help him in his work he was allowed four men called "Zeytoo," who only served for a year as peons to the Charboo, and were paid by an impost of 12 lbs. of grain from each house, which was divided among them.

Dr. Leitner suggests that these names of officials are of Tartar origin. None of them now exist in Baltistan except Wuzeer and Trangpah (Tamngfah). If it be the case that they are originally Tartar titles, it may be taken as a proof of the influence which the Iskardo rulers once exercised in Dardistan.

D 692 681 634 Justice was administered by the Wuzeers in their own districts. Cases which principally arose out of disputes about land were generally settled by a fine of cattle, sheep, or gold-dust. Any case involving a larger fine than one baghaloo of gold-dust was heard by the Ra. Serious crimes, such as murder or treason, were punished by the destruction of the whole family of the offender. His house was razed to the ground, and his relations reduced to slavery, and sold or distributed according to the will of the Ra.

D 651 The dues above mentioned are still paid, some of them to the Cashmere Government, and some to the present Ra of Gilgit.

B 651 D 804 The same system exists in Hunza and Nagar, and in some respects in Wakhan. The following measures are in common use; in some cases they differ only in name, in others they differ slightly in amount:—

B 804 *Dry measure.*

| | | |
|---|---|---|
| 1 kaiy | = 2½ lbs. English | Shina. |
| 6 kaiy | = 1 kut | |

2 [Cf. catalogue no. pp 41-44 -- Analyst]

Sir Biddulph G-3 (1873-1878) 1880 Afgh. 4:
AVJ Dard AVJ Chitral

First in rank comes the Sangallé, Rezaé, Mahomed Begé, and Khush Amadé, who are descended from the common ancestor and founder of the Katoré and Khushwakté families. They are generally spoken of as Shah Sangallié.[1] Next to them come the Zundré, or Ronos, of whom mention has already been made.[2] They are most numerous about Oyon. Below the Zundré comes a large class styled "Ashimadek." Their clans are—

| | |
|---|---|
| Kashé. | Shaoshé. |
| Atambegé. | Baiyeké. |
| Dushmanné. | Shighnié. |
| Ludimé. | Borshimtik. |
| Bairambegé. | Majé. |
| Koshialbegé. | Jikané. |

The term Ashimadek, which signifies "food-givers," is applied to all of these on account of their being bound to supply the ruler and his retainers with food to the extent of eight sheep and eight kherwars of wheat from each house, whenever he passes through their villages. This is the only revenue of any description paid by them to the ruler, and those living in the more remote villages often remain for several years exempt from even this impost. The Shah Sangallié and Zundré are altogether exempt,—the former on account of their relationship to the present ruling family, and the latter because they are descended from a former race of rulers.

Among the Ashimadek, the Shighnié and Kashé claim respectively to come from Shighna and Kash (Kishm?), a village close to Jirm, in Badakhsha. The names of many of the others show that they trace their descent from some individual, and there appears little doubt that they are the descendants of Tajiks from Badakhshan, who settled in Chitral at the time of the establishment of the present ruling dynasty, about the beginning of the seventeenth century, whose founder they probably accompanied and aided. Their present position is not, however, due to conquest, but they appear to have gradually grown up as a large privileged class. They speak the Khowar language and form the most warlike part of the population.

In the upper part of the Ludkho Valley, above Droosh, is a race who occupy the same position with regard to the Ashimadek as the Kho do in Kashkar Bala, and who are also styled

[1] See Account of Chitral.

Rh Riddolph G-3 (1873-1878) 1882 Add Afghanistan 4177
4 Ad3 Dard Ad3 Chitral

564 Zundré and Ashimadek, but do not give daughters in return, except to the Zundré, who, being descended from a former dynasty of rulers of the country, are regarded as of royal blood. All the rest, including the Zundré, intermarry without restriction, but never with the Fakir Mushkin class, from whom, however, they take daughters as concubines.

651 The regular revenue of the country is paid solely by the "Fakir Mushkin" class. Those who live by agriculture are assessed at a tenth of all produce, one sheep, one blanket, and 20 lbs. of honey from each house yearly. The pastoral community is assessed at four sheep, three woollen robes, and 30 lbs. of butter from each house yearly. A few villages, which are almost entirely employed in mining, pay 16 lbs. of mine produce yearly for each house. There is, however, very little regularity observed in collecting these imposts, and, in practice, as much is wrung from the subject population as possible. Considerable dues are collected from the merchants who trade between Badakhshan and the Punjab, and the Chitral ruler's revenue is further increased by the sale of hawks and falcons, of which great numbers are captured every year and sold to merchants, who take them to the Punjab.

643 The administration of justice is practically the will of the [671] ruler, though nominally the precepts of the Shurzat are observed. In some cases the intervention of the Mullahs is useful. In one case which came to my knowledge they 692 intervened to save the life of a condemned man who had murdered a favourite follower of the Mihtar, by pointing out that the Mihtar's injustice in permitting his favourite to forcibly abduct the man's wife had led to the murder. Small cases are settled by the district Ataliks.

643 A somewhat elaborate administrative machinery exists 177 which was probably instituted by, or borrowed from, the Shin Ras of Gilgit. The names of many of the officials are the same, though their functions differ, and the presence of these officials with Uzbek titles shows that a new system has been grafted on the old one.

639 The country is divided into eight districts. At the head 651 of each is an Atalik, whose duty it is to collect the revenue of his district and to command the men of it in war. Like the Wuzeers of districts in Gilgit, he has the right of releasing one man in each village from military service. Out of the revenue of his district he receives 12 sheep, 12 measures of butter, 20 measures of wheat, and a proportion of the

A43 Dard A43
Chitral

produce of any mines. His land is exempt from taxes, and ten families are assigned to him as labourers. He also receives a fee of one tilla, equal to 10 shillings, on each marriage. Next to the Atalik is the Charwêlo, who has charge of a group of villages. The country being much intersected by side valleys branching out of the main valley, the whole population of each of these is generally under one Charwêlo. He is directly responsible to the Atalik of his district, and has four families allotted to him for service. His "ishpin" is eight of each kind of produce. With a few exceptions the office is confined to the Ashimadek class.

Below the Charwêlo is the Baromosh, or head of the village. He is particularly charged with the maintenance of roads, forts, and bridges, for which he receives a yearly "ishpin" of 10 sheep, 10 measures of butter, 10 measures of wheat, and a proportion of the produce of any mines with which he is connected. His land also is free from payment of taxes, and he has the right of releasing ten men of his village from military service.

To assist him he has an attendant "Charbon," whose duties are the same as those of the *Zoytoo* in Gilgit. He receives a woollen robe and five sheep yearly, and his land is exempt from taxation.

In Yassin territory, both on the Chitral and Wooshigum sides, the system and titles of officials are the same as in Chitral, showing, perhaps more strongly, the mixture of two systems.

About the person of the Mihtar are four Waziers, who, with the exception of the Chief Wazier, have no fixed functions. The Chief Wazier is also styled Diwanbegi, and is the Mihtar's slave agent. The practice of selling their own subjects has gained the rulers of Chitral and Yassin an unenviable notoriety, even among people who have not yet learned to regard slavery with the detestation in which it is held in Europe. The beauty of the Chitral (Khe) women has long been proverbial in Peshawar, Cabul, and Badakhshan, and female slaves still form not the least acceptable portion of the presents given by Chitral rulers to neighbouring princes. Chitral, therefore, has always been a favourite resort for slave-dealers from neighbouring countries, and a system grew up under which the rulers of Kashkar came to regard the sale of their subjects as a legitimate and ordinary way of eking out a scanty revenue. All who in any way fell under the displeasure of the Mihtar were consigned to the Diwanbegi, and his agents were always on the look-out for victims whose conduct

[illegible] G-2 (1873-1878) 1881 [illegible]

4 Avi Dard Avi
Chitral

651 might have furnished a pretext for their being sold. Failing
547 an excuse of this sort, the requisite number was made up by forcible seizure. Of late years the market for the disposal of slaves has become circumscribed, and in Chitral the system is now limited to little more than the selling or giving away of female children to supply the harems of Cabul, Badakhshan, and Yaghestan. In Chitral the Ashimadek class can hold slaves without special permission, but none of the "Fakir Mushkin" are allowed to do so.

104 The weights and measures in use are—

*Dry measure.*

6 chwinka = 1 kasi.
6 kasia = 1 mun.
5 munn = 1 kal.

A chwinka equals about 1½ lb. English.

*Long measure.*

A span = 1 vida.
6 vidas = 1 hast.
6 hasts = 1 gaz.

*Land measure.*

6 chuvvums = 1 chuk-wuvum.
6 chuk-wuvums = 1 tukt.

A chuvvum is the extent of land which it takes three kasias, or about 15 lbs., of wheat to sow. The money in use is the Cabul coinage.

563 will no doubt before long be eliminated. Greatly as they dislike the Afghans, their hostility seldom rises to active opposition, their usual attitude being one of passive resistance. The Afghan, on his part, penetrates fearlessly into the Kohistan for purposes of trade, disregarding black looks and cold welcome so long as he can discern a profit to be made. Many of the villages have Pushtoo as well as local names.
241 The Torwal country is rich and fertile, yielding below Chodgram two crops of great abundance yearly. This would show that the elevation of Chodgram is about 7,000 feet. The
233 people own enormous flocks of sheep, goats, and cattle, yielding great quantities of butter, much of which finds its way into the Peshawur market by the hands of Afghan traders. Iron also is found in Torwal.

777 The Torwalik have been too long converted to Islam and exposed to the preaching of Swat Moollahs to have retained
525 any customs connected with other religions. Like most of the other Dard tribes, they have retained their national dances.

162 Bushkar is the name given to the community which
341 inhabit the upper part of the Punjkorah Valley, whence they have overflowed into the upper part of the Swat Valley,
111 and occupied the three large villages of Otrote, Ushoo, and Kalam. They live on good terms with their Torwal neighbours, and number altogether from 12,000 to 15,000 souls. Their principal villages are Tull and Kalkot in the Punjkorah Valley, containing respectively 1,500 families. They are the
511 most degraded of all the Dard tribes, and, in spite of a fertile soil and abundant flocks and herds, live in great squalor.
574 Amongst themselves they are exceedingly quarrelsome, and are adepts in the use of the sling, by means of which they hurl
651 stones with great force and precision. Exposed as they are to raids from every side, they seem unable to offer any resistance, and notwithstanding a payment of yearly tribute, they are subjected to frequent attacks for the sake of wringing additional payments from them. The three villages in the Swat Valley pay tribute to Yasin, and the three northernmost villages in the Punjkorah Valley pay a double tribute to Yasin and Chitral. Birkot, Biar, and Rashkot pay a double tribute to Chitral and Dir, and the five Bushkar villages below Rashkot pay tribute solely to Dir. Rashkot is better
563 known under its Pushtoo name of Patrak. There is also
161 a large Goojur population, which pays tribute to Dir. In recent years a considerable migration of Kho has taken place

Dard AV3

487 described in the article on KASHMÍR. By that route Gilgit lies at a distance of 390 miles from the present railway base at Rāwalpindi. An alternative line has been opened over the Babusar pass, which brings Gilgit within 250 miles of the railway at Hassan Abdāl. This line, besides being shorter, has the advantage of crossing only one snow pass, instead of two, or practically three, if the winter snow at Murree be taken into consideration. The routes to the north are mere tracks, when the military roads connecting Gilgit with the outposts at Gupis and Hunza have been passed.

205 Post and telegraph offices. 648 There is a daily postal service with India by the Burzil pass and Kashmīr, and the telegraph line follows the same route. Both services work well in spite of heavy snow and destr ctive avalanches, and are maintained by the Government of India. There is a weekly postal service from Gilgit to Chilās and Gupis, and a fortnightly post between Gilgit and Kashgar via the Kilik pass in the summer, and the Mintaka in the winter.

648 Administration, 704 &c. 6-5 The Gilgit Wazārat is in charge of a Wazīr Wazārat. Crime is slight; there is no jail and no police organization. Police duties are carried out by the levies and a few soldiers of the Kashmīr regular troops. There is little litigation; and the chief business of the Wazīr is the provision of supplies to the garrison at Gilgit, now effected by an excellent system of transport from Kashmīr. In 1891–2, at the time of the Hunza-Nagar expedition, the garrison had a force of 2,451; in 1895, when the Chitrāl disturbances broke out, it consisted of 3,373; and the present garrison numbers 1,887, including a mountain battery, two infantry Imperial Service regiments, and Kashmīr sappers and miners. A school is maintained at Gilgit.

651 Land revenue. A land revenue settlement of Astor and Gilgit has been made. It was found impossible to introduce a purely cash assessment, owing to the State's requirements in grain; but many inequalities and abuses were removed, and, on the whole, the condition of the villagers is satisfactory.

639 Political relations. 640 651 A British Political Agent resides at Gilgit. He exercises some degree of supervision over the Wazīr of the Kashmīr State, and is directly responsible to the Government of India for the administration of the outlying districts or petty States of Hunza-Nagar, Ashkuman, Yāsīn, and Ghizar, the little republic of Chilās, and also for relations with Tangir and Darel, over which valleys the Puniāl Rās and the Mehtarjaos of Yāsīn have partially acknowledged claims. These States acknowledge the suzerainty of Kashmīr, but form no part of its territory. They pay an annual tribute to the Darbār-

Hunza and Nagar in gold, Chilás in cash (Rs. 2,800), Ashkuman, Yásin, and Ghizar in grain, goats, and ghi. The relations of the Political Agent with the outlying States are eminently satisfactory. No undue interference takes place in the administration, and the people are encouraged to maintain their customs and traditions intact. Besides the military garrison, furnished by the Kashmír State, there is a small but extremely efficient force of local levies armed with Snider carbines. They are drawn from Hunza, Nagar, Punial, Sai, and Chilás.

**Shináki.**—A group of small republics in the valley of the Indus, lying west of Kashmír and south of Gilgit. The territory extends from the junction of the Astor river with the Indus to Seo on the right bank and Jalkot on the left bank of the latter river. Within this area the people are grouped in communities inhabiting one or more nullahs, each community forming a separate republic. Starting from the junction at Rámghát these are, in order: on the right bank, Gor, Kinergah, and Hodar; and on the left bank, Bunar, Thak, Butogah, Gicho, and Thor. They constitute the area known as the Chilás subdivision of the Gilgit Agency, while Chilás proper includes Kinergah, Butogah, and Gicho. Lower down the river are Darel, Tangir, Khili, and Seo on the right bank, and Harban, Sazin, and Jalkot on the left bank.

After the conquest of Chilás by Kashmír in 1851, the Mahárájá imposed a tribute in gold-dust, and arranged for the administration of the country as part of the Gilgit district. A British Agency was re-established at Gilgit in 1889, which included, among other territory, the Chilás subdivision described above except Thor. In 1892 a British mission to Gor was attacked by the Chilásis, which led to the occupation of their country and the appointment of a Political officer at Chilás. The right of the Kashmír Darbár to construct roads and station a limited number of troops in the territory was secured, but the autonomy of the Chilásis was guaranteed. Under the revised arrangements made in 1897 the republics pay small fixed sums to the Mahárájá, and in 1899 Thor was incorporated in Chilás. Darel has rendered a tribute of gold-dust to Kashmír since 1866, when the Mahárájá's troops raided the country. The tribute is now paid through the Punial governor. Tangir pays a small tribute to the governor of Yásin. The remaining communities have no political relations with either Kashmír or British India, except Jalkot, which from its position dominates Thor and the head of the Kághán valley in the North-West Frontier Province.

donkey, but I never heard the value of an old woman quoted. I lived in perpetual terror of being presented with a slave, and was prevented by this and other obvious considerations—one being that I did not want spies in my household—from attempting to start Chitrali servants, which was a loss when later I wanted to learn something of the language.

Throughout Chitral on this occasion I was not allowed to pay for any supplies. As my camp was very small this was no great tax, and I tried to make up for it by giving presents. I found that the ruler and his guests were always supplied with food and firewood, and that this levy really took the place of part of the land tax, and that in some places it was the sole one or land. In theory, it is a perfectly natural and harmless tax in a wild country like Chitral, but in practice it is bad, as the strong man in a village does not produce his own milk or sheep when the king's camp comes along and has to be fed, but takes those of his poorer neighbour, and presents them, with protestations of joy and loyalty. When I visited Chitral again, or officers under my orders did so in after years, it was always the rule that all supplies and carriage should be paid for by a British officer in person. In the case of coolies this ensured the right man getting the money, but with supplies one was never certain of paying the rightful owner, and, in any case, the strong man armed took his share. That we could not help, you cannot alter the immemorial East; all that we could do was to make it evident to the people that we wanted to pay honestly for whatever we took, and that we were not as the

and some dared grimace his commands. But his rule was not popular—far from it. His oppression extended in all directions: he sold large quantities of timber yearly to Peshawari merchants, and the whole of it was cut and conveyed to the streams by forced labour—of course unpaid for; he interfered in trade, and levied prohibitive taxes on merchandise passing through his country; he bought the goods of passing merchants, if he wanted them, at his own valuation; he sold his subjects into slavery, and sent presents of slave boys and girls to the Amir and to neighbouring chiefs. At the same time he had many good points. He was deeply religious according to his lights, yet he was no bigot. His view was that so long as a man was a good subject the ruler had no call to interfere with his religious opinions, and while I was in Chitral he soundly cuffed his son Murid for trying to enforce orthodoxy among his people. He was a kind and indulgent father, and devoted to his small sons, who used to form a pretty group round him when he came to see me, clustering about him with the fearlessness of affection. In a country whose unnatural vices were rampant he was continent. He had a religious horror of them, and attributed his success over the Kashkár chiefs to their depravity, against which God's wrath had kindled. He was much married, not "casually confined" to one wife, or for the matter of that, to some dozens of wives and concubines. Like David, he "scattered his Maker's image through the land," and at every village you found a small son or heard of a daughter. He had eighty children.

rather embarrassed us by asking, after a pause in the conversation, during which he had been fixedly staring at Robertson, whether the latter was a really good doctor. You had to be prepared to receive any question or statement with an impassive face, a feat at first a little difficult, for Chitrali views of life were quaint. 159

Nizam mentioned casually that he had sold forty of his people into slavery this year, and explained that he had selected them from houses in which there were several men, so that it would make no difference in cultivating the land, an arrangement which he seemed to think showed a good deal of consideration. Afzul, when discussing the slavery question later with me, pointed out that in India we could afford to keep up jails, but that in a poor country like Chitral this was impossible, and that selling into slavery answered to our penal servitude; it was the only way of punishing a man who was too much of a scoundrel to be allowed at large. If selling into slavery had been ruled by these conditions, there might not have been so much to say against it in a country in the condition of Chitral, but this was not the case. The Mehtar and his sons looked upon selling men into slavery as a natural source of revenue, and they took every opportunity they could of making money in this way. The market value of an able-bodied man was about a hundred rupees, a good-looking young woman ran up to two hundred or two hundred and fifty, a boy or a girl was usually worth a horse, and could be got for from forty to eighty-five rupees, an old man was worth a good sporting dog or a 517 652 517 652

000 Although the period may be past in which a great English Journal could ask, "*what* is Gilgit?" the contradictory telegrams and newspaper accounts which we receive regarding the countries adjoining Gilgit show that the Press has still much to learn. Names of places, as far apart as Edinburgh and London, are put within a day's march on foot. Names of men figure on maps as places and the relationships of the Chiefs of the region in question are invented or confounded as may suit the politics of the moment, if not the capacity of the printer. The injunctions of the Decalogue are applied or misapplied, extended or curtailed, to suit immediate convenience, and a different standard of morality is constantly being found for our friends of to-day or our foes of to-morrow. The youth Afzul-ul-Mulk was credited with all human virtues and with even more than British manliness, as he was supposed to be friendly to us. He had given his country into our hands in order to receive our support against his elder brother, the acknowledged heir of the late Aman-ul-Mulk of Chitrál, but that elder brother, Nizám-ul-Mulk, was no less friendly to English interests, although he has the advantage of being a man of capacity and independence. The sudden death of Aman-ul-Mulk coincided with the presence of our protégé at Chitrál, and the first thing that the virtuous Afzul-ul-Mulk did, was to invite as many brothers as were within reach to a banquet when he murdered them. No doubt, as a single-minded paramount, he did not wish to be diverted from the task of governing his country by the performance of social duties to the large circle of acquaintances in brothers and their families which Providence bestows on a native ruler or claimant in Chitrál and Yasin. A member of the Khushwaqtia dynasty of Yasin, which is a branch of the Chitrál dynasty, told me when I expressed my astonishment at the constant murders in his family: "A real relative is a high family is a person whom God points out to one to kill as an obstacle in one's way, whereas a foster relative (generally

[over]

173

The dynasty of Chitrál is said to have been established by Baba Ayub, an adventurer of Khorassan. He adopted the already existing name of *Katór*, whence the dynasty is called Katoré. The Emperor Baber refers to the country of Katór in his Memoirs and a still more ancient origin has been found in identifying Katór with "Kitolo, the King of the Great Yuechi, who, in the beginning of the 5th century, conquered Balkh and Gandhara, and whose son established the Kingdom of the Little Yuechi, at Peshawur." (See Biddulph's "Tribes of the Hindoo Koosh," page 148.) General Cunningham asserts that the King of Chitrál takes the title of Shah Kator, which has been held for nearly 2,000 years, and the story of their descent from Alexander may be traced to the fact that they were the successors of the Indo-Grecian Kings in the Kabul valley. If Katór is a corruption of Kaisar, then let it not be said that the remnant of the Katoré exclaimed with the Roman gladiator: "Ave, Kaisar-i-Hind, morituri te salutant."

Amán-ul-Mulk, the late ruler of Chitrál, was, indeed, a terrible man, who to extraordinary courage joined the arts of the diplomatist. He succeeded his elder brother, surnamed Adam-Khór or "man-eater." His younger brother, Mir Afzul, is said to have been killed by him or to have committed a convenient suicide; another brother, Sher Afzul, who is now in possession of Chitrál, was long a fugitive in Badakhshan whence he has just returned with a few Afghans (such as any pretender can ever collect) and a hundred of the Chitrál slaves that used to be given in tribute to the Mir of Badakhshan, which itself never paid a tribute to Kabul before the late Sher Ali of Afghanistan installed Mahmud Shah, who expelled his predecessor Jehandar Shah, the friend of Abdur-Rahman, the present Amir of Afghanistan. Another brother of Amán-ul-Mulk

What could be done with troops so treated? The men were well enough, and, poor wretches, looked eagerly to my coming to relieve them of their misery. Some of the officers were keen, but peculation and corruption were rampant; the honest men, if they existed, had no chance, and the condition of the force was deplorable. K 704 705 [703]

If from the military point of view things were bad, from the civil they were no better. The Durbar was robbed by every official from the highest to the lowest; granaries that should have been full of good grain were empty, or full of rubbish substituted for a consideration, bribery and corruption ruled the land, disloyalty and treachery were in its high places. The man to send warning to the Hunza-Nagar forces, when after the capture of Chaprot they had advanced south and were besieging Nomal, the last Kashmir fort between them and Gilgit, of the advance of the Kashmir troops to its relief, was the Governor of Gilgit's right-hand man, Wazir Ghulam Haidar. Every one knew this, yet he was still employed and passed backwards and forwards between both sides, apparently the trusted servant of the Governor. A more villainous-looking scoundrel I never saw. He came one day, bringing the sons of the Raja of Nagar, who had come as ambassadors from their father, to see me. One of them had some years before been made Rá or Chief of Gilgit by the Durbar, the old line of chiefs having died out, and he having married the last surviving girl belonging to it. He had distinguished himself by bolting from Gilgit and leading the attack of the Nagar forces on Chaprot some months before. I thought D 661 D 662

character as I very soon learnt. At heart he was a pure savage, a mixture of the monkey and the tiger. Loyal from calculation, and from hopes of being recognised by Government as the heir-apparent, he was, under his cloak of open bonhomie, generosity, and transparent honesty, the most persistent plotter, and the most treacherous and ruthless foe. At his father's death he very naturally seized the throne, and his elder brother fled the country, defeated by superior powers of intrigue. But with all his cunning Afzul-ul Mulk was a fool. He tried to strike terror by cutting down the leading men; he cut down too many of too few. The cold-blooded and treacherous murder of three brothers would have passed with little comment, the death of leading adherents of his brother was natural, but the announcement that a list of had men existed, who were to be killed, and the uncertainty as to whose turn was to come next, were too much. A carefully prepared plot, hatched in Afghanistan, overthrew him; his trusted adherents betrayed him, his most confidential servant opened the gates of his fort and let in the enemy, and he fell as he had risen, by treachery and murder.

However, at the moment, everything was rosy. No shadows of coming events chilled us, and I gladly arranged to accept the Mehtar's invitation to visit his country, so courteously delivered by Afzul. It was decided that he should move on ahead of me, as he took up a great deal of carriage, and that he should await me at Mastuj, the headquarters of the district he governed. I wanted a few days to arrange about my carriage, and to take farewell of my Kashmiri friends, to each one of whom I had to

Chitral

side of oppression. The result was natural—the slaves and labouring classes liked us; the Adamzadas or nobles, who thought all the money should go to them, hated the sight of us.

The next point in our journey was Mastuj, a hundred and twenty miles from Gakuch, and the capital of Afzul's government. Afzul met me a march from it, and it was a pleasure, after passing some days in marching through Nizam's country, where such luxuries were unheeded, to get into his territory, and to find roads improved and cleared of stones so far as possible, and bridges repaired.

There was plenty of interest on the road: the first five or six marches from Gakuch were much as usual, over the most dreadful ground, but after that the valley opened a little. An extract from my diary for one day will give an idea of the road:—"The road very stony, in many places passing over the rocky *debris* slopes from the cliffs above, and going for some distance over nothing but broken rocks of all sizes: in fact, yesterday and to-day we have been riding gaily over places I should be afraid to lead an English horse over, but my 'Badakshani,' given me by Nizam, with his unshod feet goes over them as smoothly as a cat. We came by the lower road, along a small 'parri,' about three miles back, which is, I think, the most dangerous bit of road we have seen. For twenty yards or so you go along a sort of ledge of *polished* rock, with inequalities here and there where you can put your feet, and there is a clean drop below you of a hundred feet. All the coolies with loads use it, so that no one without a load ought to mind it."

kingdom without escorts, parted with me for the last time. I never saw him again, though we had three years more to work together in, and whatever snares he laid for me, however much he plotted to my annoyance and sometimes to my anger, my personal friendship and admiration for the old man never changed. Considering his surroundings he was a great man. He was a typical border chief of the old school: for him and his brothers the question had been whether to kill or to be killed. He had chosen the former, and had carried out his plans with unwavering determination, backed by the coolest calculation and the most ruthless execution.

The lines from Sir Alfred Lyall's well-known poem, "The Amir's Soliloquy," used to ring in my head as I sat looking at the old man's striking face:—

> "The victims of God are pardon and pity, they never were mine;
> They have never been ours, in a kingdom all stained with the blood of our kin;
> Where the brothers embrace in the war field, and the reddest sword must win."

The brothers who opposed him slept where they had embraced, and his red sword was sheathed. He ruled over a united country, and no man might gainsay him.

My return journey was uneventful. Afzul-ul-Mulk entertained me at Mastuj. We crossed the Shandur ahead of a heavy snowstorm which overtook us next day, but nothing of importance happened. I received en route a letter from Younghusband, forwarded by the Hunza Chief, saying that

Dard AVJ

181 They are unassuming enough in manner and in appearance. They are men of fine enough physique, but they are soft, and have little or no warlike instinct. [51] Very much attached to their lands, they will not move except under official pressure or the compulsion of the direst poverty. Half a dozen able-bodied men of one family prefer starving on a tiny piece of ancestral land to dividing their forces and taking up ample grants, distant perhaps but a few miles from [66] their old home. The systematic oppression of their rulers, which deprived a man of much of the fruit of his labours, accounts in part for their attitude on this particular point, but, allowing for this, the race is sadly wanting in initiative. The Yeshkun is, I am inclined to think, a better man than the Shin, there is no doubt about his being a better fighting man, and the small caste or clan of the Roun is the best of all.

[78] Taking the whole of Dardistan the inhabitants are not warlike, and in the southern portion alone, which is under the religious influence of the Mullahs of Swat, do you find fanaticism. The people are peaceful; there is none of the natural devilry, dash, love of war, and enterprise, which you find in the neighbouring Pathan, and they never have stood up, and never would stand up, against severe losses. 726 But that they could fight behind suitable defences I always felt was pretty certain, and we found this at Nih. Centuries of desultory warfare have made them adepts at the art of field fortification, and awkward customers to deal with when on the defensive. In attack they are contemptible, and only dangerous when overwhelming numbers force disciplined troops on to the defensive, as at Chitral.

[illegible]

years = winter.] The snow is now becoming a little softer and out-of-door life is more possible. The festivities are kept up for twelve days. Visits take place and man and wife are invited out to dinner during that period. Formerly, when the Shins had a Raja or Nawab of their own, it used to be the custom for women to dance during those twelve days. Now the advent of the Sepoys and the ridiculous pseudo-morality of the Kashmir rule have introduced a kind of Pardah and the chaste Shin women do not like to expose themselves to the strangers. Then there is the Nauraz, which is celebrated for three, and sometimes for six, days.

There are now five great holidays in the year:

The Id of Ramazan.
The Shina-Shin.
The Nauraz.
Kurbani Id.
The Kiu Shin,* } Astor.
Dismikal, } Gilgit.

On the last-named holiday the game of Polo is played, good clothes are put on, and men and women amuse themselves at public meetings.

The Shin people are very patriotic. Since the Maharaja's rule many of their old customs have died out, and the separation of the sexes is becoming greater. Their great national festival I have already described under the head of "Historical Legend of Gilgit" (pages 14 to 16).

### 6. THE RELIGIOUS CREED OF THE DARDS.

If the Dards—the races living between the Hindu-Kush and Kaghán—have preserved many Aryan customs and traditions, it is partly because they have lived in almost perfect seclusion from other Mohammedans. In Chilás, where the Sunni form of that faith prevails, there is little to relieve the monotony of that creed. The men of the Mohammedan Dards are Shiahs, and that belief is more classic and seems to be more suited to a quick-witted race, than the orthodox form of Islam. Sunnism, however, is

* In celebrating its festivals when the fruit and corn have become ripe. For a detailed account of this and other festivals see "Dialect Dogar Khuh Gesh," and Parts II. and III. of the "Languages and Races of Dardistan."

this rather ungrateful at the time, till I found that, with the Governor's connivance, Wazir Ghulam Haidar had previously seized his best house and lands. It was double-dealing of this kind which had brought on the trouble for the Durbar, a mixture of weakness and bullying, fear and swagger, which had half-frightened and half-exasperated the tribesmen into attack. There was also a Helen in the case.

A fortnight at Gilgit put me in full possession of the leading facts bearing on the existing difficulties, which may be summarised as follows:—Hunza was extremely difficult of attack, and practically could have but little pressure brought to bear on it, having exits to the north on to the Pamirs. It could get all its luxuries from Kashgar and Yarkand, and had some connection with China; an Amban being at the time I was in Gilgit, or shortly before, in Hunza, to enquire as to the cause of the trouble. He was plundered and practically sent naked away, but that is another story. Nagar being a *cul-de-sac*, and depending for its salt and other luxuries on Gilgit, could be squeezed, and was, moreover, supposed to be easier of access. The Durbar, while jealous of its military reputation, and ostensibly making great preparations for war, really wished to avoid fighting, and was anxious to arrive at peace by any means in its power. The Committee at Gilgit fully recognised the difficulties of supply and carriage, and were also most anxious to come to some conclusion. The Hunza-Nagar people were sick of the game, and wanted to make peace, so that the men might look after the crops instead of spending the

We continued at Mastuj about a week to get our
Mehtar time to make his preparations for receiving 649
me, to get a little shooting, and to rest our camp. 662
Afzul also was most pressing for us to stay, thinking
that every day he spent with me was another nail in
Nizam's coffin, another step towards getting the
Government of India to recognise him, and not his
elder brother, as heir-apparent. Needless to say,
Government had not the remotest intention of inter-
fering in any way in the matter.

We beguiled the time during our enforced illness 133
by moving up the valley and visiting the Chamarkand.
This pass leads into the valley we had come by above
Chitral. I had originally meant to use it, but did
not owing to the weather: it is in some ways more
difficult than the Shandur. The road leading into it
from the Mastuj valley winds through a narrow gorge
cut through clay, the sides being carved out by water
action into the wildest collection of pinnacles and
ravines imaginable, with numerous balanced rocks.
We came out very light, and I left my peraggal 000
servants behind. The consequence was that my
orderlies put up my camp bed, an English "paragon,"
without fitting the joints properly, and it smashed
irretrievably directly I sat on it. For the next two
months I slept on the ground, and in cold weather,
when there are no centipedes about, or other horrors,
there is no doubt that it is far the most comfortable
arrangement, and very much warmer than a bed.
My orderlies used to get a lot of *khoosa*, the broken
straw from the threshing floors, and put a foot of it
down all over the floor of the tent, stretch my tent
carpet over this, and put down the bedding on the
top of all. In real cold this makes the most perfect

were told of its wonders, how it could turn out fourteen lakhs of rupees a day—a lakh is a hundred thousand—how it coined every day in the year without cessation. The Kashmir officer with us, with what object it was not necessary to enquire (every man in his position must intrigue, and has an axe of his own to grind), capped these stories by informing the Chitralis that our rulers never were at a loss for the white metal, as we could turn copper into silver.

Altogether I soon saw that my prospects of satisfying everybody, or for the matter of that, anybody, were remote. My difficulties would have been much lightened in Chitral had Nizam and Afzul gone through, during their visit to India, a course of sight-seeing at some big military centre. Twenty thousand men on parade, "horse, foot, and dragoons," would have given them and their headmen a much more intelligent appreciation of what the power of the Government of India meant than could wandering about cotton and jute mills, or being driven through foul and crowded bazaars.

Between Mastuj and Chitral we found at Sanoghar, Buni, and other places, miles of splendid cultivation, and we saw above us, on the right bank of the river, the extensive fields of the Murikho valley. But for the most part the road was, as before, extremely difficult; the last couple of marches it was purposely left in the worst condition, running through gorges and along cliffs on rickety brackets which could be destroyed in a moment.

Glacial action is again well marked below Mastuj, the road running over huge masses of rock, rounded,

willow shaded off into the dark red of the rose thickets.

On our way down we branched off to try and get some shooting. We got none, but were amply repaid by the magnificent scenery. We camped one night at an altitude of about twelve thousand feet on a hillside so steep that our small tent could only be pitched by raising one pole on a pile of stones, and our bed places had to be similarly built up. We here got an insight into the reckless way the Chitralis destroy their timber. Some of our hosts' followers were belated, and in order to attract their attention, the men with us calmly fired a patch of forest. The next morning we rode up and crossed the shoulder of the range we were on at a height of sixteen thousand feet. I was pretty well accustomed by then to riding over anything, but we crossed ground that day that a few months before I should have considered impossible for a horse—long, sloping stretches of shaley rock across which our horses picked their way in the most extraordinary manner. The view from the top was grand: right opposite us, with only one range of lower mountains in between, rose Tirich Mir, twenty-five thousand feet high; no cloud obscured the view, and so close did we seem that every turn of the glaciers could be traced, and the lines of the avalanches distinctly seen.

The Mehtar came out to see me at Shoghot, and we spent another day together. With him was his son-in-law Rahat Mian, a Kaka-Kheyl timber merchant from within our borders, and at the moment the most important man in Chitral, as the Mehtar trusted almost implicitly in his advice. Our Native

Agrut in Chitral also came, and had a long talk to me
• 6.62. in the morning, during which he inveighed against Rahat Mian, and unfolded his many villainies. Rahat Mian was a study, an old man with a very shrewd face, and an expression entirely under control. He used to sit during my long talks with the Mehtar with a pomegranate in his hand, cutting out all sorts of fantastic geometrical patterns in the rind with a sharp penknife, watching everybody out of the corner of his eye and never losing a word. He produced a letter from Mahomed Ishák, which he said the Mehtar had intercepted, and our Agent praised his loyalty and devotion to Government, and begged that I would bring his services to notice, he having told me all about the letter an hour before, and how copies had been sent post haste weeks ago to their destination. It was interesting to watch the two who hated each other with a deadly hatred, each knowing the other was lying, and both profuse in their compliments and expressions of affection.

641 Diplomacy in the Hindu-Kush is an interesting game to watch; the men intrigue from their cradle; it is an amusement as well as the business of life. For an Englishman the only safe course is the honest one; he must think pretty carefully before he speaks, and then speak plainly. Every word must prove true, every promise must be fulfilled to the letter; following on these lines a man in the end will get the influence he wants. At first the native diplomatist will not believe him, and will search for hidden meanings, but in the end he will have confidence in this strange being who plays the game on such hitherto unheard-of lines. But the Englishman who believes

of learning all the changes in Chitral politics that had taken place during the preceding year. I found that Afzul-ul-Mulk had made considerable progress, and had detached some of his brother's most trusted adherents. The proposed return to India *viâ* Dir and Bajour was discussed with care, and the general opinion was that I could go down in safety if Umra Khan invited me. Both the Khan of Dir and the Khan of Aladand, the last men through whose hands I should have to pass, were said to be most anxious to arrange my passage, but all depended on the Napoleon of Bajour.

Afzul accompanied me on my way to Chitral, and Nizam-ul-Mulk met me half-way there. The brothers, after the first formal meeting, carefully kept out of each other's way, their followers glowered at each other and kept their swords home in their scabbards. Prince Hal, as we christened Nizam, was the same as ever, in manner and looks infinitely superior to his brother; but feckless as to the future, he was busily throwing away his chances of succession to the throne.

He came to see me after dinner one night and nearly finished his earthly career. We offered him tea, but he voted for something stronger, and we brought out one of our last bottles of champagne. He had never tasted it, and to my surprise was quite delighted with it. Unfortunately, accustomed though he had become to spirits, he was not proof against the sparkling wine, and a couple of glasses got into his head. Towards the end of the interview he looked extremely handsome, had a good colour, and was just sufficiently elevated to be on the best of terms with

to all, and to enjoy himself thoroughly, while at the same time he knew perfectly well what he wanted to say, and said it in the confidential, good-humoured drunken man's way. But the return to his own tents was the serious thing: he did not mind his own men seeing him happy, but did not like Afzul's doing so, and he sat on till near midnight. Then, with protestations of eternal friendship and appreciative remarks as to the efficacy of the Dagmut, he wandered solemnly off, one arm round our Agent's neck, the other round his foster-brother's.

Poor Prince Hal. I was always sorry for him; it was so evident that he was playing a losing game and did not realise it, and if to his other vices he was going to add drink, it did not require a prophet to foresee the end. Afzul's private interview followed next evening, and I heard before he came that the little savage had been furious at his brother's visit the night before. He persuaded himself that I was promising to recognise his brother on the part of Government as the heir, and only the strongest dissuasion on the part of his principal adherents prevented his attacking and murdering Nizam as he passed from my tents to his own. We should have been in a pleasant predicament had he done so. After our interview we went and sat round a camp fire and watched Afzul's boys, and afterwards our Balti coolies, dancing. The latter were most grotesque and uncouth in their movements. The entertainment was diversified by a well-acted pantomime, representing the attack and murder of a party of Pathans by Kafirs, the comic element being

Zundut and Sahimmeth, but do not give daughters in return, except to the Zundut, who, being descended from a former dynasty of rulers of the country, are regarded as of royal blood. All the rest, including the Zundut, intermarry without restriction, but never with the Pako Mushkin class, from whom, however, they take daughters as concubines.

The regular revenue of the country is paid solely by the "Pako Mushkin" class. Those who live by agriculture are assessed at a tenth of all produce, one sheep, one blanket, and 20 lbs. of honey from each house yearly. The pastoral community is assessed at four sheep, three woollen robes, and 30 lbs. of butter from each house yearly. A few villages, which are almost entirely employed in mining, pay 16 lbs. of mine produce yearly for each house. There is, however, very little regularity observed in collecting these imposts, and, in practice, as much is wrung from the subject population as possible. Considerable dues are collected from the merchants who trade between Badakhshan and the Punjab, and the Chitral ruler's revenue is further increased by the sale of hawks and falcons, of which great numbers are captured every year and sold to merchants, who take them to the Punjab.

The administration of justice is practically the will of the ruler, though nominally the precepts of the Shariyat are observed. In some cases the intervention of the Mullahs is useful. In one case which came to my knowledge they intervened to save the life of a condemned man who had murdered a favourite follower of the Mehtar, by pointing out that the Mehtar's injustice in permitting his favourite to forcibly abduct the man's wife had led to the murder. Small cases are settled by the district Atalik.

A somewhat elaborate administrative machinery exists which was probably imitated by, or borrowed from, the Shin Ras of Gilgit. The names of many of the officials are the same, though their functions differ, and the presence of extra officials with Uzbek titles shows that a new system has been grafted on the old one.

The country is divided into eight districts. At the head of each is an Atalik, whose duty it is to collect the revenue of his district and to command the men of it in war. Like the Wazeers of districts in Gilgit, he has the right of releasing one man in each village from military service. Out of the revenue of his district he receives 12 sheep, 12 measures of butter, 20 measures of wheat, and a proportion of the

drunk by the Astoris and Chilasis [the latter are rather nearer Mussulmans than the other Shina people]. After every strength has been taken out of the corn it is given away as food to sheep, etc., which they find exceedingly nourishing.

wine.*

The Gilgitis are great wine-drinkers, though not as much so as the people of Hunza. In Nagar little wine is made. The mode of the preparation of the wine is a simple one. The grapes are stamped out by a man who, previously before entering into the wine press, washes his feet and hands. The juice flows into another reservoir, which is first well laid round with stones, over which a cement is put of chalk mixed with sheep-fat which is previously heated. The juice is kept in this reservoir; the top is closed, cement being put round the sides and only in the middle an opening is made over which a loose stone is placed. After two or three months the reservoir is opened, and the wine is used at meals and festivals. In Darayl (and not in Gilgit, as was told to Vigne,) the custom is to sit round the grave of the deceased and eat grapes, nuts and Tahilgitan (edible pine). In Astor (and in Chilas?) the custom is to put a number of Ghi (clarified butter)-cakes before the Mullis, [after the earth has been put on the deceased] who, after reading prayers over them, distribute them to the company who are standing round with their caps on. In Gilgit, three days after the burial, bread is generally distributed to the friends and acquaintances of the deceased. To return to the wine presses, it is to be noticed that no one ever interferes with the wine of another. I passed several of them on my road from Tahiarbita onward, but they appeared to have been deserted. This brings me to another custom which all the Dards seem to have of burying provisions of every kind in cellars that are scooped out in the mountains or near

* Wine is called in Gilgit by the same name as in "beer" by the Astoris, viz.: "Mā." The wine press is called "Mān Khar." The reservoir into which it flows is called "Mān Sūn."

amongst the Afghans, and after a time the parties are brought together and made to swear peace on the Koran. The crime of murder is rare, and the readiness to spill blood on slight occasions so noticeable among the Afghans is unknown. No public measure can be carried out except by general agreement, the details being left for the Jushtoma to arrange.

The communities in the lower part of Shinkari, being more exposed to Afghan influence, and having been longer converted to Mahommedanism, have lost many of their characteristic customs; but the remoter valleys of Chilas, Gor, Darel, and in a lesser degree Tangir, are probably little changed from what they were two hundred years ago. A very singular custom exists in these valleys, by which the sexes are kept strictly apart during the summer, from May till September. The custom is apparently very ancient, and any attempt to evade it is punished by fine; the old women of the family being specially charged with the responsibility of seeing that the rule is observed. Great difficulty is said to be experienced in rearing children in Chilas. The great mortality among them is ascribed to the climate, but it is more probably due to too close intermarriage.

Agriculture is left entirely to the women, with the exception of ploughing, which demands more strength than they can afford. In summer the men spin wool and attend to their flocks on the mountain pastures; but in winter the duty of caring for the herds is relegated to the women.

Slavery is a recognised institution in all the Shinkari republics—a matter in which they contrast unfavourably with the Afghans and Nuristanis of the Indus Valley, among whom it is unknown. Prisoners taken in war, and the children born of slave parents, form the servile class.

leaping, and one of the women, taking a flying leap on to his shoulders, was carried out of the ring, the second Dainyal following in like fashion on another horse being offered, and the meeting broke up. No attempt is made to direct the prophecy to any topic by hint or question, and the Dainyal is always free to give, on the communication of the fairy, whatever comes into her head. Considerable freedom of speech is gained in this way, and an unpopular ruler often gets a broad hint given him. Dainyals only exist now in Gilgit, Hunza, and Nagar, the stricter Mahommedanism of the neighbouring valleys having disestablished them. Circumstances point to this mode of divination being of Shin introduction, the majority of Dainyals being of that caste. Stronger evidence is afforded by the fact that it is incumbent upon a Dainyal, of whatever caste, to refrain from cow's milk, like the most orthodox Shin.

During the ceremony the witches attempt, occasionally, to rush out of the circle, but are thrust back by the spectators, the idea being that they are forced to prophecy against their will. Occasionally, too, they affect to become excited by the sight of certain persons, bright colours, dogs, &c., and rush at and try to bite them, but are repelled by the spectators, and so are forced to content themselves with hurling stones at the object of aversion.

According to Elphinstone's account of the Siah Posh Kafirs, something of the same kind exists among them. He says: "They have also persons who can procure an inspiration of some superior being, by holding their heads over the smoke of a sacrifice; but these are held in no particular reverence." Moorcroft mentions mountain witches at Nadoun who were called *Dain*, and a form of divination called *Dewalla* is still practised in some parts of the Punjab.

Serious crimes, such as murder, are rare. In Wakhan murder is punished by a fine of six horses, six guns, and thirty woollen robes; should the murderer be unable to pay the fine, he is forced to give up a son or daughter as a slave to the family of the murdered person. Theft is punished by a fourfold restoration of the stolen property, and the thief is bound to a tree and beaten. Grave disturbances, in which deadly weapons are used, are punished by heavy fines, and an offender is not pardoned till he succeeds in bringing a live hare to the Meer, which at certain seasons is a matter of difficulty.

Though bloodshed is rare among the Dards as compared with the Afghans, brutal murders are sometimes committed

for many years a slave in Chilāo, an Ahmadi Shah reports. The Gabrāls were converted to Muhammadanism by a saint named Ahāyat, whose shrine is in Gabrāl, and is one of the most frequented places by pilgrims. The Gabrālis say that this saint lived six or seven generations ago. His Kalāsha (who is really of Kāfir race, but now lives in Gabrāl) says that the Gabrālis were converted to Islām about eight years ago. Lately, this religion has made great progress among the people of Kandāl generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attended to them, which are generally crowded by students from every room. In Gabrāl, the Mullahs or priests are, for the most part, of the Shia sect, but most of every sect are anxious in giving education to their sons. Their education is limited to Muhammadan law (of the Hanafite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and calligraphy, that great Oriental art; so little, indeed, that Shahrbāk and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the calligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Panjāb.

The most accomplished scholar in Kandāl is the high priest and chief of Patān, named Hazrat Ali, who is a Shia.

The people generally are peaceful, and have a fair complexion and good looking. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the most punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (maliks), but is seldom found among the common people.

Government.—Every village or town is governed by a Council of elders, chosen from among every tribe or "mālo." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shins or Yashkuns. No Kamin can be elected an elder, though he may become a Malik, but a Mullā-kamin also cannot be admitted to the Council.

The reigning Council of Gabrāl consists of 12 persons, of whom 9 are Shins and 3 Yashkuns. Painda Khān is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influential of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose function is limited to inter-tribal feuds.

Games and Marriages.—Hockey or hamstuck, which is called "laghāk" in Gabrāl, is played on holidays; and the place where they meet for the sport is called "laghāk-kōto-ān."

Guns are called "nāli" in Gabrāl, and are manufactured in the town by blacksmiths.

Dancing is not practised generally, as in the other Shia countries. Only "Doms" dance and sing, as this is their profession; they play on the "surāi" (pipe), rabāb (harp), and shagāli (drum).

The "purāli" system, or "selling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

to furnish him each with a yoke of oxen for ploughing his own lands. This service he could commute if he pleased for one baghalee of gold for each yoke of oxen. He was also responsible for the collection of the "Kandkool" tax, but no authority could be exercised over him by the Wuzeers or Tarunglehs.

Next to the Tarunglah among the district officials was the Charbon, who acted as an assistant to the Tarunglah in each village. His *dustoor* consisted in exemption from all taxes, and two of the ruler's hens on marriage a year; it being part of his duty to collect the "Gurd tukee" tax. He also received a certain amount of the meat tribute. To help him in his work he was allowed four men called "*Zeytee*," who only served for a year at a time to the Charbon, and were paid by an impost of 10 lbs. of grain from each house, which was divided among them.

Dr. Leitner suggests that these names of officials are of Tartar origin. None of them now exist in Baltistan except Wuzeer and Tungpah (Tarunglah). If it be the case that they are originally Tartar titles, it may be taken as a proof of the influence which the Iskardo rulers once exercised in Dardistan.

Justice was administered by the Wuzeers in their own districts. Cases which principally arose out of disputes about land were generally settled by a fine of cattle, sheep, or gold-dust. Any case involving a larger fine than one baghalee of gold-dust was heard by the Ra. Serious crimes, such as murder or treason, were punished by the destruction of the whole family of the offender. His house was razed to the ground, and his relations reduced to slavery, and sold or distributed according to the will of the Ra.

The dues above mentioned are still paid, some of them to the Cashmere Government, and some to the present Ra of Gilgit.

The same system exists in Hunza and Nagar, and in some respects in Wakhan. The following measures are in common use; in some cases they differ only in name, in others they differ slightly in amount:—

*Dry measure.*

| | | |
|---|---|---|
| 1 kaiy | = 1 lb. English | Hunza. |
| 6 kaiy | = 1 kut | |
| 1 kutpunee | = 3 double handfuls, about 2 lbs. | Nagar. |
| 8 kutpunee | = 1 kambuk | |

leaping, and one of the women, taking a flying leap on to his shoulders, was carried out of the ring, the second Dainyal following in like fashion on another lad being offered, and the meeting broke up. No attempt is made to direct the prophecy to any topic by hint or question, and the Dainyal is always free to give, as the communication of the fairy, whatever comes into her head. Considerable freedom of speech is gained in this way, and an unpopular ruler often gets a broad hint given him. Dainyals only exist now in Gilgit, Hunza, and Nagar, the stricter Mahommedanism of the neighbouring valleys having disestablished them. Circumstances point to this mode of divination being of Shin introduction, the majority of Dainyals being of that caste. Stronger evidence is afforded by the fact that it is incumbent upon a Dainyal, of whatever caste, to refrain from cow's milk, like the most orthodox Shin.

During the ceremony the witches attempt, occasionally, to rush out of the circle, but are thrust back by the spectators, the idea being that they are forced to prophecy against their will. Occasionally, too, they affect to become excited by the sight of certain persons, bright colours, dogs, &c., and rush at and try to tear them, but are repelled by the spectators, and so are forced to content themselves with hurling stones at the object of aversion.

According to Elphinstone's account of the Siah Posh Kafirs, something of the same kind exists among them. He says: "They have also persons who can procure an inspiration of some superior being, by holding their heads over the smoke of a sacrifice; but these are held in no particular reverence." Moorcroft mentions mountain witches at Nadaun who were called *Dain*, and a form of divination called *Demalla* is still practised in some parts of the Punjab.

Serious crimes, such as murder, are rare. In Wakhan murder is punished by a fine of six horses, six guns, and thirty woollen robes; should the murderer be unable to pay the fine, he is forced to give up a son or daughter as a slave to the family of the murdered person. Theft is punished by a fourfold restoration of the stolen property, and the thief is bound to a tree and beaten. Grave disturbances, in which deadly weapons are used, are punished by heavy fines, and an offender is not pardoned till he succeeds in bringing a live hare to the Mehr, which at certain seasons is a matter of difficulty.

Though bloodshed is rare among the Dards as compared with the Afghans, brutal murders are sometimes committed

acquaintance of Raja Akbar Khan, the Chief of Punyal, and his brothers and cousins. Fine fellows, magnificent mountaineers, who were intent, under me, to prove "tall men of their hands."

The climate was perfect after Gilgit. We were camped in an open orchard, at an altitude of seven thousand feet and over, and the delicious air soon set me up.

[361] 133 Gakuch fort and its cultivation stand high, seven hundred feet or so above the river bed. The formation is curious: the hills, in one fine slope from the snows, sweep out till they finish in an almost sheer cliff into the river, the last few hundred yards before the cliff is reached being comparatively flat. Through this level portion project great rounded masses of rock, water-worn and full of "pot-holes," the remains of glacial action. It looks as if, at some remote period, a huge glacier had flowed down the Ishkuman, and [134] had swept to its left down the Gilgit valley. These rounded hillocks were full of chikor, the mountain partridge, which gave us good sport. In one of them is a cave reputed to be fathomless—really, I suppose, about twenty feet deep—heaped up with human bones. It was said to have been filled by a former ruler of Yasin, and a terror to his neighbours, whose bloodthirsty nature gained him the title of Adam khor, "the man-eater."

643 During my halt at Gakuch, Sirdar Nizam-ul-Mulk, 681 the Mehtar's eldest son, who ruled Yasin, and who was to meet me just across the border, bombarded me with letters, and a curious incident occurred with one of his letter carriers. When I handed this man my answer to Nizam's letter, I gave him, as

D-Dawar C-0 (1880-82) 1880 891.5405NG

682 vessel, a present, in this case a small round looking-
681 glass in a brass cover, a thing much prized in those parts. He declined to receive it, and said the last man had got five rupees and a knife, and that he would not take less. It would have been impossible to carry on if I allowed myself to be crushed for presents in this way, so I dismissed him, and sending for the Mehtar's half-brother, who was accompanying me, explained the man's importunities to him. The result was startling: the old gentleman was furious, said that, had we been in Chitral territory, he would have cut the man to pieces at once, and that the Mehtar would certainly, if he heard of it, kill the man and sell his wife and children for slaves. I interceded for him, and he got off without punishment, but it gave one an idea of how the Mehtar ruled, and why he was obeyed as he was.

159 Nizam-ul-Mulk met us the first march across the border, and was with us a couple of days. He was a handsomer man than his brother, but had the same heavy under-lip. His manners were charming, but his morals, like those of almost every leading man in the country, excepting the Mehtar, Afzul, and one or two others, left much to be desired. He
[149] was a worse governor than Afzul, a mixture of cruelty, indolence, and good-nature, but he was popular too in his way, being a fine shikari. He was always accompanied by his dancing and singing boys, without whom he would move nowhere, and he was consequently an intolerable nuisance on the march, as they kept up their music right through the night. During his first interview with me he

rather embarrassed us by asking, after a pause in the conversation, during which he had been fixedly staring at Robertson, whether the latter was a really good-looker. You had to be prepared to receive any question or statement with an impassive face, a feat at first a little difficult, for Chitrali views of life were quaint. 159

Nizam mentioned casually that he had sold forty of his people into slavery this year, and explained that he had selected them from houses in which there were several men, so that it would make no difference in cultivating the land, an arrangement which he seemed to think showed a good-deal of consideration. Afzul, when discussing the slavery question later with me, pointed out that in India we could afford to keep up jails, but that in a poor country like Chitral this was impossible, and that selling into slavery answered to our penal servitude; it was the only way of punishing a man who was too much of a scoundrel to be allowed at large. If selling into slavery had been ruled by these conditions, there might not have been so much to say against it in a country in the condition of Chitral, but this was not the case. The Mehtar and his sons looked upon selling men into slavery as a natural source of revenue, and they took every opportunity they could of making money in this way. The market value of an able-bodied man was about a hundred rupees, a good-looking young woman ran up to two hundred or two hundred and fifty, a boy or a girl was usually worth a horse, and could be got for from forty to eighty-five rupees, an old man was worth a good sporting dog or a 517 691 652 517 652

ever count with certainty as to the succession. You may sometimes strengthen a vigorous ruler with advantage; to bolster up a weak one is, in the end, almost always useless.

The visit to Dir hinged on that to Bajour, and both now had to be abandoned. Preparations were at once made for the return march to Gilgit. Several posts reached me during my last few days in Chitral, and some had been tampered with and parcels stolen. I reported the matter to the Mehtar, who was furious, and who called instant enquiries to be made, and a man sent for from each of the houses which had furnished the runners. The culprits were tracked, and the Mehtar proceeded to order condign punishment. The men were to be sold into slavery, but escaped at my intercession. The old Chief said it was no use he knew to offer me the wives and children of the robbers, but that he thought my Pathans would appreciate the gift. I had much difficulty in persuading him to leave the unfortunates in peace. But if no one suffered very severe pains and penalties, the fuss made had the desired result, and our posts were secured for the future.

My last days in Chitral were full of business, and the evenings were spent as usual round a camp fire watching the dancing, and listening to the boys singing. Three Kafirs joined the circle one night, one of them having the most revolting type of face I ever saw, and danced badly for some time. Nizam then asked them for the chaunt which is sung when a successful raiding party arrives near its own village. They refused to sing it unless a goat was given them to eat, so one was brought and presented

Translation :—

(1) Do not weep, O flower-like girl, thy complexion will turn pale!
(2) Thou wilt go on a lofty hill, O girl, thy complexion will turn pale.
(3) Thou wilt (by weeping) burn your heart, thy complexion will turn pale.

In Shinaki there is a custom called "Kao." If a young man has determined to marry a certain girl but her parents are not willing to give her to him, the young man either calls out in an assembly of the village headmen :—" The girl is mine, and I will perform 'Kao' if she is not given to me." Sometimes in order to assemble the people he fires a gun outside the village and utters the same words in the presence of those who collect ; or if he gets an opportunity he tears the girl's shirt slightly in the presence of some other men and says to her :—" You are mine." When this has been done, the parents are obliged to marry the girl to him, but they can demand from him whatever they like up to the limit of his means. If they marry the girl to anyone else, the young man will murder the girl as well as her husband as soon as he gets an opportunity.

## IV.

### The Ceremony of "Seelo-as-Thali" (Seat of Chastity).

559
831
756
This ceremony was performed for old women, who have been virtuous and chaste throughout their lives. These women were called "Seelo," and their descendants were very proud of them, so that on the occasion of family quarrels they used to say to the opposite party, "What have you to say to us? Our mother is "Seelo," while yours is not." To accomplish this rite, an elevated stone platform, about five yards each in length and breadth and a yard in height, was erected by the woman's nearest relatives. On the day appointed all her kinsmen came to the place, with a white she-goat as a sacred judge, to decide the fate of the old woman. The latter was clad in silk and placed on a bench. The eldest of the family bound a silk turban on his head, as well as on that of the goat; and, placing the goat below the bench with its face westward, addressed it in the following manner :—

"O thou white goat, if my daughter" (or whatever relative the woman was to the speaker) "has throughout her life lived an honest, virtuous and pious life and has remained clear of the sins and crimes of falsehood, theft, debauchery and treachery, be pleased to salute this bench for the sake of such a righteous and godly woman." In the case of the woman having led a blameless life, the goat by touching the bench approved her virtue. The assembled crowd then broke forth in cheers, and as an expression of their joy the relatives killed several goats and fed the people present. But if it happened otherwise, and the goat instead of performing what was considered an obeisance to the bench, ran round it bleating, then a great shame took hold of all the woman's kinsmen, and they ran away to their homes, never to speak to her again during the remainder of her life.

2: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

585 brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

576 It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

584 It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the 331 fields at their work or at festive gatherings. Love declara- [584] tions often take place on these occasions, but if any evil [574] intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love," "pák áshiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objec-

582 tion to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl may be of a lower caste than the bridegroom. In Astór it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attains his point by threatening to live in the family of the bride and

582 become an adopted son. A "Shin" of true race at Astor
628 may live in concubinage with a girl of lower caste, but the

which would point to polygamy, and not to communal marriage, as an ancient institution in the Chitral Valley. In the Bushkarik language the terms point towards polyandry.

Cases of infidelity are extremely common, and the men show none of the jealousy of their wives usual in older Mahommedan communities. In cases of adultery the injured husband has the right to slay the guilty couple when he finds them together; but should he slay one and not the other, he is held guilty of murder. This practice is followed in Sirikol and Wakhan as well as south of the Hindoo Koosh. It is said that the Afghans of Swat, Dir, and Asmar take no notice of a wife's infidelity if, when it comes to their knowledge, they are able to disguise the knowledge from others; but should they learn it through a third person, a bloody vengeance is inflicted. In cases where conclusive proof is wanting, and which are brought for settlement before the ruler or Wuzeer, guarantee is taken for the future by the accused placing his lips to the woman's breast. She thenceforth is regarded as his foster-mother, and no other relations but those of mother and son can exist between them. So sacred is the tie thus established esteemed, that it has never been known to be broken, and the most jealous husband ceases to suspect even though a confession of previous guilt may have been made. In such a case a sheep and a toloo of gold are placed at the feet of the husband by the offender, who humbly sues for forgiveness.

D 608 837

It would appear that morals were more lax formerly than they are now. In Hunza, where the community approaches most nearly to its pre-Mahommedan state, infidelity is not regarded as an offence, and custom requires that a man shall place his wife at his guest's disposal, as in Hazara. The *droit de seigneur* was exercised by the father of the present ruler, and though the custom has been allowed to fall into disuse, it is evident from the accounts given of weekly orgies held by Ghazan Khan that the right is only held in abeyance and not formally renounced. In Nager things are but slightly better, and a man considers himself highly honoured if his wife attracts the attention of the Thum. Islam has not yet brought about the seclusion of the women, who mix freely with the men on all occasions Young men and maidens of different families eat and converse together without restraint, and great liberty is allowed to young women, with frequent evil results. Infanticide arising from illicit connections is common, and is not considered a crime.

AV3 Dard AV3

his foster kindred accompany him. On the other hand, if he rises to influence, his foster-father is generally his most confidential adviser, and his foster-brothers are employed on the most important missions. 608

The custom of cementing friendship by the milk connection seems a favourite one. Should a woman dream that she has adopted any person as a son, or should any man dream that he has been adopted by a certain woman, the connection is carried out in the same way as the forced adoption before mentioned, and nobody would think of refusing to recognise it. The practice is now falling somewhat into disuse, but it was extremely common not many years ago. Milk from a woman's breast is esteemed a sovereign remedy for cataract and other eye-diseases. A resort to it also establishes the milk-tie for ever afterwards. [787] [757]

It is sometimes customary for a young couple, at the time of marriage, to induce a mutual friend to become their foster-father. The tie is ratified at the time of eating bread together. Bride and bridegroom being seated opposite to one another, the foster-father elect seats himself between them, and taking a piece of bread in each hand crosses his arms, observing to keep the right one uppermost, and puts the bread into their mouths. From that time he is regarded as their father.

The foster relationship is regarded as so close, that marriage between foster relations would be looked upon as incestuous, and, in spite of the precepts of the Koran, it would be impossible for a man to marry the widow of his foster-son. [835]

The formation of these ties is practised in a peculiar way among the Ashimadek clans of Chitral. It is customary for every infant to be suckled in turn by every nursing mother of the clan; consequently there is a constant interchange of infants going on among the mothers, for the purpose of strengthening tribal unity. [853]

The Shins are noted for their miserly habits, which they sometimes carry to great extremes. Every man has a secret hiding place in the mountains, where he conceals his money, metal pots, wife's jewels, and all his most valuable property. Occasional stealthy visits are paid to the treasure, which is never taken out for use except on festive occasions. No feeling of honour seems to exist as to the appropriation of another's treasure should it by chance be discovered, and frequent quarrels arise from this cause. Treasures are frequently lost altogether by the sudden death of the owner, 454 [685]

resources of that Paradise on earth and killed the intellectual and moral life of its people. for many years a slave in Chilás, as Ahmad Shah reports). The Gabriális were converted to Muhammadanism by a saint named *Bábáji*, whose shrine is in Gabriál and is one of the most frequented places by pilgrims. The Gabriális say that this saint lived six or seven generations ago. Mir Abdulla (who is really of Afghanistan, but now lives in Gabriál,) says that the Gabriális were converted to Islám about 150 years ago. Lately, this religion has made great progress among the people of Kandiá generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attached to them, which are generally crowded by students from every caste. In Gabriál, the Mullahs or priests are, for the most part, of the Shin caste, but men of every caste are zealous in giving education to their sons. Their education is limited to Muhammadan law (of the Hanifite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and caligraphy, that great Oriental art; so little, indeed, that Harifullah and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the caligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Punjab.

The most accomplished scholar in Kandiá is the high priest and chief of Patan, named Hazrat Ali, who is a Shin.

The people generally are peaceful, and have a fair complexion and erect bearing. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the usual punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (wadán), but is seldom found among the common people.

GOVERNMENT.—Every village or town is governed by a Council of elders, chosen from among every tribe or "taifa." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shins or Yashkun. No Kamin can be elected an elder, though he may become a Mullá, but a Mulla-kamin also cannot be admitted to the Council.

The reigning Council of Gabriál consists of 12 persons, of whom 9 are Shins and 3 Yashkuns. Patshé Khán is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influental of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose operation is limited to inter-tribal feuds.

CUSTOMS AND MANNERS.—Hockey on horseback, which is called "lughât" in Gabriál, is played on holidays; and the place where they meet for the sport is called "lughât-kárin-jha."

Guns are called "náli" in Gabriál, and are manufactured in the town by blacksmiths.

Dancing is not practised generally, as in the other Shin countries. Only "Doms" dance and sing, as this is their profession; they play on the "surúi" (pipe), rabáb (harp), and shapdo (drum).

The "purdá" system, or "veiling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

tutelary deity of Chilas whose worship was practised in former times. 173

The system of government is the same in all these small republics, and differs somewhat from what obtains among the Afghans. Each village, according to its size, has a certain number of Jushteros, or elders, who are appointed according to the general estimation in which they are held for bravery, liberality, and eloquence. They receive no benefit from their office, and are more the servants than the leaders of those they represent. Each village manages its own affairs irrespective of its neighbours, and it is in the superintendence of these details that the Jushteros are mostly occupied. All matters affecting the village are discussed in public. A meeting for this purpose is called *Sigas*. At the Sigas all who please join in the discussion, the Jushteros apparently encouraging individuals to give their advice, and when the general opinion has thus been elicited, the Jushteros announce the decision they have formed. At a Sigas of several villages, a single Jushtero is appointed by each village at a meeting previously held. At the close of the general discussion, which is open as before, a loud whistle is given, after which none but the representative Jushteros are allowed to speak. If war with a neighbouring valley is determined on, the Jushteros settle the way in which those they represent shall take part in it; but beyond their personal influence they have little voice in determining the general policy to be pursued. It is for them to decide who shall stay at home and who shall take the field, and in the innumerable disputes about land their decision is respected; but should the dispute involve men of another village, they are expected to do their best for their own townsmen. In more serious disputes the whole valley makes common cause against its neighbours; but this does not prevent all the communities combining, when threatened by an external foe. Criminal offences are not dealt with by the Jushteros, but by the Moollahs, who profess to administer the law according to the Sharyat; this is, however, set aside in many instances in favour of ancient custom, which is very strong in some communities, and the prompt redress of grievances depends greatly on the personal influence of the aggrieved. Murder is regarded as a personal matter to be avenged by the nearest relative; but should the case be of a very wanton nature, and the family of the murdered individual have sufficient influence with the community, reparation is enforced by general consent. Blood feuds are not permitted to last for an indefinite period, as

D 651 634 to furnish him each with a yoke of oxen for ploughing his own lands. This service he could commute if he pleased for one baghaloo of gold for each yoke of oxen. He was also responsible for the collection of the "Koodkool" tax, but no authority could be exercised over him by the Wuzeers or Tarangfahs.

Next to the Tarangfah among the district officials was the Charboo, who acted as an assistant to the Tarangfah in each village. His *luspik* consisted in exemption from all taxes, and two of the ruler's fees on marriage a year; it being part of his duty to collect the "Garé toloo" tax. He also received a certain amount of the meat tribute. To help him in his work he was allowed four men called "Zeytoo," who only served for a year as peons to the Charboo, and were paid by an impost of 12 lbs. of grain from each house, which was divided among them.

Dr. Leitner suggests that these names of officials are of Tartar origin. None of them now exist in Baltistan except Wuzeer and Trangpah (Tarangfah). If it be the case that they are originally Tartar titles, it may be taken as a proof of the influence which the Iskardo rulers once exercised in Dardistan.

D 692 681 634 Justice was administered by the Wuzeers in their own districts. Cases which principally arose out of disputes about land were generally settled by a fine of cattle, sheep, or gold-dust. Any case involving a larger fine than one baghaloo of gold-dust was heard by the Ra. Serious crimes, such as murder or treason, were punished by the destruction of the whole family of the offender. His house was razed to the ground, and his relations reduced to slavery, and sold or distributed according to the will of the Ra.

D 651 The dues above mentioned are still paid, some of them to the Cashmere Government, and some to the present Ra of Gilgit.

B 651 D 804 B 804 The same system exists in Hunza and Nager, and in some respects in Wakhan. The following measures are in common use; in some cases they differ only in name, in others they differ slightly in amount:—

*Dry measure.*

| | | |
|---|---|---|
| 1 haiy | = 2½ lbs. English | Shina. |
| 6 haiy | = 1 kot | |
| 1 heejootee | = 3 double handfuls, about 2 lbs. | Boorish. |

564 Zundré and Ashimadek, but do not give daughters in return, except to the Zundré, who, being descended from a former dynasty of rulers of the country, are regarded as of royal blood. All the rest, including the Zundré, intermarry without restriction, but never with the Fakir Mushkin class, from whom, however, they take daughters as concubines.

651 The regular revenue of the country is paid solely by the "Fakir Mushkin" class. Those who live by agriculture are assessed at a tenth of all produce, one sheep, one blanket, and 20 lbs. of honey from each house yearly. The pastoral community is assessed at four sheep, three woollen robes, and 30 lbs. of butter from each house yearly. A few villages, which are almost entirely employed in mining, pay 16 lbs. of mine produce yearly for each house. There is, however, very little regularity observed in collecting these imposts, and, in practice, as much is wrung from the subject population as possible. Considerable dues are collected from the merchants who trade between Badakhshan and the Punjab, and the Chitral ruler's revenue is further increased by the sale of hawks and falcons, of which great numbers are captured every year and sold to merchants, who take them to the Punjab.

643 [671] 692 The administration of justice is practically the will of the ruler, though nominally the precepts of the Sharyat are observed. In some cases the intervention of the Moollahs is useful. In one case which came to my knowledge they intervened to save the life of a condemned man who had murdered a favourite follower of the Mihter, by pointing out that the Mihter's injustice in permitting his favourite to forcibly abduct the man's wife had led to the murder. Small cases are settled by the district Ataliks.

642 177 A somewhat elaborate administrative machinery exists which was probably instituted by, or borrowed from, the Shin Ras of Gilgit. The names of many of the officials are the same, though their functions differ, and the presence of extra officials with Usbek titles shows that a new system has been grafted on the old one.

634 651 The country is divided into eight districts. At the head of each is an Atalik, whose duty it is to collect the revenue of his district and to command the men of it in war. Like the Wuzeers of districts in Gilgit, he has the right of releasing one man in each village from military service. Out of the revenue of his district he receives 12 sheep, 12 measures of butter, 20 measures of wheat, and a proportion of the

Dard AV3

131 A few miles below Kolī is Batera; beyond that Dārdistān
101 ends and the Pathān country, where the Pashtū language prevails, begins. The Kolī people are Dārds; they know both the Dārd and Pashtū languages.

642 Many places have been put down as republics; what I have
646 been able to find out about the way of their government will apply to them generally. There is a general assembly of the people, called Sigās, which decides on almost every matter.
[562] It is called together by beat of drum; men, old and young, attend it, but not women; none who have the right to attend are allowed to be absent, under pain of fine. In this assembly the rights of a minority are carefully guarded. I have been told that if even one man, supposing him to be of any consideration, object to a policy, it cannot be carried out; the assembly is adjourned for a few days, and in the interval effort is made either to convince the objector or to modify the proposal; then meeting, they may perhaps have again to adjourn; but in time something or other is sure to be arranged.

643 The executive consists of a few men, may be five or six, chosen by the people in their assembly. These are called *Joshtero* in the Dārd language. They are chosen for their wisdom; but here as elsewhere wealth seems to have influence to convince the people of the wisdom of those who possess it. The office of Joshtero is not hereditary; the Joshteros must be in general accord with the assembly else they will be displaced. The Joshteros deliberate together on a policy, but cannot carry it out without the consent of the assembly of the people, which they themselves call
[692] together. The Joshteros are also arbitrators to settle disputes of water and wood, and what not.

623 Where the valley is large, like, for instance, Dārel, each village has its own Sigās, or assembly, which settles the particular affairs of that village, while for matters of more general policy the Joshteros of all the villages first meet, and make among themselves a plan to propose, and then a general parliament is called; that is, the people themselves of all the villages together meet to hear and decide. If all of the villages cannot agree on one policy, then

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

there by the local people till a few years ago, when it was stopped, I think, by the orders of the Mīr of Hunza. Animals were slaughtered there "in the name of the Bōyo".

From a story of Hunza tribal history it appears that the Bōyo were regarded as the avengers of broken oaths taken in their names. In a dispute about the ownership of land between two brothers Khuru and Khamer, Khamer proposed that the case should be decided by their taking oath. Khuru, the weaker party, who was also incidentally in the right, agreed and said: "O brother, the Sahāla Bō.in and the Hālasa Bō.in are very powerful and they are quick to wrath." But Khamer, who meditated a ramp and had no mind to be caught in this way, would not even hear this proposal out. "If we swear by them," he said, "they will work us evil." So the idea was dropped and with it disappeared our chance of learning the methods of taking oath by the Bōyo.[1]

The Bōyo now bear the stigma attaching to the gods of a superseded religion. "Bōyo-worshipper" (bōyo ū.llikinas) is now used in the sense of *heathen, pagan*.

There seems to be a special association between the Bōyo and trees, and the trees share in their sanctity. Whether they each have their own independent virtue, or whether the one owes its worshipfulness in any measure to the merits of the other it is impossible to say.

In the two remaining texts in which I have references to the Bōyo the associate tree plays an important part. In a statement made in Ṣhiṇa by Ṣūbahdār Sulṭān 'Ali of Nagir regarding certain popular practices at Chaprōt he said: "Further they say that all the people used to assemble to do worship to a pine-tree that was there. They used to take a grey goat and slay it at the foot of the tree and a great

[1] I have here accepted the relation of Bō.in and Bōyō as singular and plural which is morphologically quite in order, and is asserted by some, though denied by other, authorities. The word bō.in seems to survive in bō.indūrgas (pl. bō.in dūrgaṣho) which was explained as arwāh—the spirits of the dead. Dūrg-, occurring in other compounds, appears to refer to a dead person.

### The Ceremony of Nagi Suchemi.

Nagi Suchemi is said to be a goddess who lived at Nangam in the Astore district, on a stone altar situated at the foot of the Nagishi hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jungmi was specially appointed by the Rá to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present, in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sochemi, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this solemnity were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discoverer of the offending juryman at dawn of that day. For some days the case was left awaiting the decision of "Nagi Sochemi," and if in this period the suspected person suffered any kind of loss of property, of relatives, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

### "Khuran" or "Majari."

In Chilas and in the adjacent valleys of Jalkot, Palas, Koli, Darel, Tangir, Gor, Harban, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khuran" in Shinaki (Chilas, Darel, Tangir, Gor, Harban and Sazin), and "Majari" in Kohistan (Jalkot, Palas, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must needs submit.

## VI.

### Danyals.

There are some men and women of these parts who are called Danyals. When they are worked up into a state of frenzy the giants and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Danyals as well as the local musicians. A bundle of green chili leaves is then brought, and some of these, with a little *ghi*, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Danyals push their way towards the fire and begin to inhale the smoke, until

### A Pearl Tree on the Deobani Mountain.

361 776 539

On the east of Tashot, a village in the Bagrot Valley, there stands a snow-covered mountain called Deobani. The people say that there is a large pearl tree on its top, which is the property of the fairies and giants. A good mountaineer is said to have once reached its summit. Gathering a load of the pearls, he started down towards his home. But he was surprised to see a crowd of giants and fairies coming after him, and, being frightened by their approach, he thought it better to throw away all the pearls in order to save his life; he was surprised, however, to find that a fairy still followed him as far as his house. There he closed his door. While changing his clothes he found that a pearl was hidden in his shoes. The pearl was then thrown towards the fairy; she picked it up and disappeared. A similar story is related about Nanga Parbat, a mountain on the west of Astor.

### Shangali Ween.

361 778 539 695

At about two miles east of Danyore, a village about three miles east of Gilgit, there is seen on the northern side of the road leading to the Bagrot Valley a small piece of ground about one yard square surrounded by walls about three feet high. This place is called "Shangali Ween" (place of putting chain). It is said that there used to be a golden chain hanging in the air without any support. In ancient times, when any case was to be decided on oath, both the parties were carried there and each of them addressed the chain in the following manner: "O *Sojo Shangali* (sacred chain), whoever of us is sinful please accuse him by striking his neck; and the chain used miraculously to whirl round the neck of the man who was guilty. The man was then convicted and punished by the authorities according to law. No chain is now found at the spot, and the people relate an interesting story about its disappearance. They say that two men of the Bagrot Valley were once coming together to Gilgit: one of them had brought some gold with him which the other succeeded in stealing. Making a small hole in his stick, he put the gold secretly into it. The men, after a long quarrel about the lost gold, decided that the case should be settled by the Shangali. When they were entering the place, the guilty man gave his stick which contained the gold to the other, and they both began to beg before the Shangali, asking that, whichever of them had gold in his possession, he might be struck by the Shangali. The Shangali, who was aware of the trick, was much enraged at this attempt to deceive, and, considering itself offended, at once disappeared for ever without settling their case. The loser of gold was now very angry, and in a fit of his anger struck the stick on the walls of the enclosure. The stick broke and the lost gold was disclosed.

### Nong and Chakrot Bari.

778 789 823

Near Laos village in the Astor district there is a small fountain called Nong. The people consider it a sacred one and offer sacrifices at the place for the fulfilment of their wants. If owing to drought a loss of their crops is expected, or if for any other reason heavy rain is required, the people used to throw some unclean thing into the spring, such as the bone of a dog; it then began to rain, and continued until the object was taken out. Owing to the belief that the spring was sacred and, moreover, able

~~12~~ Biddulph G-3 (1873-1878) 1880 ~~AU1 Afghanistan AU1~~
4 Av 3 Dard Av 3 Burushe Av 7

when the drum is heard; if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodeni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nager are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the mane and forelock of favourite horses. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

4 AV3 Darel AV3

road already mentioned leading into Kandia. Another road leads into the Swat valley and is a favourite route for traders.

Tangir and the neighbouring valley, Darel, are celebrated for the number and fine quality of their flocks and herds. Large numbers of sheep are here annually reared for sale to the inhabitants of the neighbouring valleys. Being somewhat straitened for summer pasture, the people of Tangir have long been in the habit of driving their flocks across the watershed to the Yassin country. In return for permission to graze, they pay to the ruler of Yassin a fixed tribute of salt and tobacco from each village. Besides this tribute, they give sheep and goats in varying numbers as a free gift. These payments have led to the Yassin rulers claiming the nominal allegiance of Tangir; but they make no attempt to exercise authority in the valley, which is to all intents and purposes a republican community like others in the Kohistan. Any attempt by the Yassin rulers to enter Tangir is resisted by force of arms, but the connection between the two communities has led to Tangir being regarded as the place of refuge for Yassin princes in misfortune. The people of Tangir pride themselves on giving asylum to all such who claim it, and it is seldom that the valley is long without some exiled member of the Khushwakté family. On such occasions the inhabitants contribute to his support as if he were their legitimate ruler, and if any attempt is made to seize him by force, they take up arms for a sufficient time to secure his safe retreat. Many a deposed ruler of Yassin has found a welcome in Tangir, where in the days of his power he would have been opposed by force of arms. Though Mahommedanism is of comparatively recent introduction, the people of Tangir are more fanatical than any of their neighbours, except those of Chilas, owing probably to their more intimate relations with Swat. They say of themselves that they have been Mussulmans for six generations. They marry with Yassin women, but refuse to give daughters in return, on account of the slave-selling practised by Yassin rulers.

Six miles above the mouth of the Tangir stream, the Darel Valley joins the Indus. Though small, this valley is extremely fertile and well populated. From its head, roads lead into Tangir, Yassin, Ponyal, and Gilgit. The principal villages are Birokot (fort), 800 houses; Doodookot (fort) 700 houses, in the Samangal district; Manikal (fort), 140 houses; Rashmal (fort), 120 houses, in the Joomeh district; and Gaiyal (fort), 500 houses. The whole community, including the dependent

1: Drew G-2 (1862-1872) 1875 AVI Kashmir
Dard AV3

From Hattú Pír there is a great descent, of about 5000 feet, by a zigzag road, steep and rough. We do not immediately reach the Indus Valley, but we go first to where the end of the Hattú spur nearly meets the mountain on the opposite side of the Astor River, leaving but a narrow channel for the water. Here the Astor River is spanned by two rope-bridges, made of birch twigs, and by a wooden bridge, over which ponies can be taken; a tower has been built that commands the passage; the position is held by some forty soldiers, who keep a good look-out. The place is a strange one; the soldiers live in caves in the rock; the rock overhangs, so as to keep off the sunshine for the greater part of the day; still the air becomes burning hot in summer; in winter, though no snow falls, the cold is somewhat severe.

Here crossing and following down the Astor River we soon debouch into the Indus Valley and find ourselves on the stony alluvial tracts, over nine miles of which, with small ups and downs, we have to go before reaching Bawanjí.

## BAWANJÍ.

This is a spot where at one time was a good deal of cultivation, and it is likely that fruit-trees once shaded it; but during the wars of two or three generations back it was laid waste and became entirely depopulated, and nought but bare ground remained. At that earlier time it was inhabited by Dárds, but was ruled, as I am informed, from Rondú; it was by Sulaimán Sháh's invasion that it was laid waste.* At the present time Bawanjí has a very small area under cultivation, but the place is of some importance as a military post, since on the holding of it depends the passage of the Indus on the way to Gilgit. There is a fort which was built by the Dográs; it is manned by about seventy men, and as many more are in barracks outside. There is here also a prison, where a gang of incorrigible Kashmírí horse-stealers are detained; these men enjoy during the day some liberty for cultivating their plots of land. The valley here is warm and dry; with irrigation two crops can always be

KOHISTANI.

1. To-morrow night to Lahore I will go.
   *Douche rate Lahore bajanwa.*
2. Thou silent be.
   *Tohe chut guda.*
3. Prepare, ye young men.
   *Jubti masha.*

PUSHTO THE AFGHAN LANGUAGE). 197

1. To-morrow night to Lahore I will go.
   *Saba shapa ba Lahore shazam.*
2. Thou silent be.
   *Tah chup shai.*
3. Prepared be, O young men.
   *Saubhal she zalmú.*

There is a song very current in Kohistan which begins,— 539
*Palas kulal mariga, Patane jirga hotiga, Johle johal madado propár asáli* = "In Palas a potter was killed, in Patan the jirga (or tribal assembly) sat."
"The corrupted (Jirga of Malaks) took a bribe, and retaliation was ignored." The Afghans are called Pathans.

*Religion.*—They have been converted to Islám since four or five generations, and they have forsaken their old religion so completely that no tinge of it now remains; and when a Kohistani is told that they are "nau-Muslims," that is, "new Muhammadans," he becomes angry. 779

Muslim learning, and the building of mosques have become common in Kohistan, and now we find twenty or thirty learned mullas in every considerable town, besides hundreds of students, studying in mosques. 793

*Dress.*—Their national dress consists of a woollen hat, brimmed like that of Europeans, and a loose woollen tunic having a long جاکی along the right breast, so that one can easily get out the right hand to wield one's arms in a fight. Their trousers are also made of wool and are very tight. In the summer they wear a kind of leathern shoes borrowed from the Afghans, but in the winter they wear a kind of boots made of grass (the straw of rice) reaching to the knees. They call it "pájola." 291 [177]

Till very lately their only arms were a small "khanjar" (dagger), bows and arrows; but they have borrowed the use of guns and long swords from the Afghans. 411 177

The dress of their women consists of a loose woollen head-dress with silken fringes, a woollen tunic and blue or black trousers of cotton cloth, which they call "*shakara.*" Generally their women work with their husbands in the corn-fields, and do not live confined to their houses. 291

*Government.*—They have no chiefs like the Afghans, but influential Malaks lead them to battle, who are paid no tribute, salary, etc. 701

When an enemy enters their country they whistle so sharply that the sound is heard for miles; then the whole tribe assembles in one place for the defence of their country, with their respective Malaks at their heads. [202]

*Mode of Living, and other Social Customs.*—In winter they live in the valleys, in houses made of wood and stones; but in summer they leave their houses in the valleys for those on the peaks of mountains, and the mass of the population spends the summer in the cooler region; but those who cultivate the land live the whole day in the valley, and when night comes go up to their houses on the heights. Their food is the bread of wheat, and milk furnished by their herds of cattle (gaómesh, cows, goats, and sheep), which is their sole property. There are no regular Bazárs even 342 221 262 422 000

4: Durand G-S (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

I remained some time in Chitral, seeing the
Mehtar, formally or informally, every day, and talking to his leading men and advisers whom he sent to see me very frequently. To obtain any influence or information in the East an Englishman must always remember that to an Eastern time is no object, and he must be prepared apparently to waste endless hours in desultory conversation. The time so spent is not really wasted; something can be learnt every day, and confidence is engendered by frequent intercourse. Accessibility is a duty on the part of a frontier officer, and I always made it a point during my time on the border to put aside any work to receive a visitor. Talking to a live man is of more value to yourself, and generally, in the end, of more service to Government, than writing or reading reports.

The result of my conversations with the Mehtar and his leading men was to leave in my mind a very poor opinion of the military qualities of the Chitralis. They had an inordinate idea of their power, but they had never been properly shot at. There was no tradition of severe fighting amongst the people. The nature of the country favoured wars of positions, and I found that once a position was turned, and a few men shot, it was a recognised rule of the game that the defenders should bolt. The rule appears to have been strictly adhered to, and I never heard of an action in which more than ten or fifteen men were killed. The people are naturally hopelessly *laissez aller*, and organisation is unknown amongst them. The Adamzadas, I find noted in my diary, might possibly fight, but the common people most probably would only do so in a half-hearted way; at the same

1; Drew G-8 (1862-1872) 1875 AV1 Kashmir
Dard AV3

At evening, the people, who have been occupied in their fields during the day, all come with their cattle within the walls and the gates are closed; all night sentries watch on the towers, and every half hour the "All's well" resounds through the stillness, though it may get less frequent towards the sleepy hours of morning. At dawn an armed party go forth and make the round of all places that might possibly harbour an enemy, and not until their search has proved that the village is clear do others issue for their ordinary avocations. At the time I marched up the valley the Maharaja's relations with the Yāsīn chief were in a doubtful state, on account of the murder of Mr. Hayward, for which we were trying to get reparation; these precautions, therefore, may have been more than usually attended to. I did not myself lodge within the forts, but, having an escort of 200 men from Gilgit, we were able to keep such a look-out as effectually to prevent any surprise.

The highest point in the valley that I went to was Gākūj. This is the last village in Puniāl; it is the farthest in this north-west corner to which the Maharaja's power or influence extends—and hence it is the farthest to which the influence of the Government of India reaches. Gākūj is, by my observations, 6940 feet above the sea; it is on a knob of rock behind which is a sloping plain, all this being 700 feet above the river. It is a cold windy place; snow falls there in winter to a depth varying from 6 inches to 1 foot 6 inches, and it stays three months; here only one crop is grown, while near the level of the river, 600 feet down, two crops are got from the land.

There is a strong fort at Gākūj, containing within it a spring of water; the garrison is composed of the villagers—about fifty fighting men. Part of the plain is cultivated, but beyond that part stretches a narrow stony plain backed by mountains 3000 feet or so high, their sides dotted with pencil-cedar bushes with pine-forest above; this strip of plain extends some eight miles up the valley, at which distance a spur from the mountains comes down and juts against the river, making a natural barrier. This spot, called Hūpar, is the extreme point of the Maharaja's territory;

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

here the Puniäl Raja has a guard of six men, who, on signs of an enemy approaching, would light a signal fire; for this reason no cooking of food is allowed there, so the look-out party take a few days' provisions ready cooked, to last until their relief. To hold the position would require one or two hundred men. There are two roads past it, one of them only can be traversed by horses. At three other places is a guard kept. One on the left bank of the Gilgit River, a little lower down than Gākūj; one is on the left bank of the Ishkoman River (which falls in from the north above Gākūj) and one on its right bank, near, I think, its junction with the main stream; while in summer a guard is pushed nearly a day's march up the Ishkoman Valley. The object is to reach the best look-out place at each particular time of the year, and this must vary as the rivers become fordable or impassable. The Yāsīnīs have a guard at a place called Shedodas, on the left bank, opposite to Hūpar.

It was in November, 1870, that I went through Puniäl. The ruler is Raja Isā Bāgdur (a name sometimes corrupted by strangers to Bahādur). We were together for several days; we travelled in company, and nearly every day I joined him in a game of polo; with such intercourse we naturally became well acquainted. He is a man who has long been at enmity with the Yāsīn family, and now entertains the most lively hatred of them; in the various tides of invasion he has had to flee from his territory and take shelter now in Gilgit, now in Chilās, and now in Kashmir. On the re-conquest of Gilgit by the Maharaja (which will be related in another chapter) he was replaced in his own country, which ever since he has held in faithful dependence on the Maharaja's Government, often under difficult circumstances. Though an old man he is strong and active; he is a capital, even a renowned, rider. In character he is both brave and politic, at the same time cautious and enterprising. He is much feared by his enemies and liked by his people; these obey him implicitly; it is their custom, on meeting him, to go up and kiss his hand; this, I believe, to be the general old custom in Dārdistān, or at all events in that part of it where the government is monarchical.

3: Imperial Gazetteer G-3 (1889-95) 1909 AV1 Kashmir
Dard AV3

487

described in the article on KASHMĪR. By that route Gilgit lies at a distance of 390 miles from the present railway base at Rāwalpindi. An alternative line has been opened over the Babusar pass, which brings Gilgit within 250 miles of the railway at Hassan Abdāl. This line, besides being shorter, has the advantage of crossing only one snow pass, instead of two, or practically three, if the winter snow at Murree be taken into consideration. The routes to the north are mere tracks, when the military roads connecting Gilgit with the outposts at Gupis and Hunza have been passed.

205 648 Post and telegraph offices.

There is a daily postal service with India by the Burzil pass and Kashmīr, and the telegraph line follows the same route. Both services work well in spite of heavy snow and destr ctive avalanches, and are maintained by the Government of India. There is a weekly postal service from Gilgit to Chilās and Gupis, and a fortnightly post between Gilgit and Kashgar via the Kilik pass in the summer, and the Mintaka in the winter.

643 704 [625] Administration, &c.

The Gilgit Wazārat is in charge of a Wazīr Wazārat. Crime is slight; there is no jail and no police organization. Police duties are carried out by the levies and a few soldiers of the Kashmīr regular troops. There is little litigation; and the chief business of the Wazīr is the provision of supplies to the garrison at Gilgit, now effected by an excellent system of transport from Kashmīr. In 1891–2, at the time of the Hunza-Nagar expedition, the garrison had a force of 2,451; in 1895, when the Chitrāl disturbances broke out, it consisted of 3,373; and the present garrison numbers 1,887, including a mountain battery, two infantry Imperial Service regiments, and Kashmīr sappers and miners. A school is maintained at Gilgit.

651 Land revenue.

A land revenue settlement of Astor and Gilgit has been made. It was found impossible to introduce a purely cash assessment, owing to the State's requirements in grain; but many inequalities and abuses were removed, and, on the whole, the condition of the villagers is satisfactory.

631 643 651 Political relations.

A British Political Agent resides at Gilgit. He exercises some degree of supervision over the Wazīr of the Kashmīr State, and is directly responsible to the Government of India for the administration of the outlying districts or petty States of Hunza-Nagar, Ashkuman, Yāsīn, and Ghizar, the little republic of Chilās, and also for relations with Tangir and Darel, over which valleys the Puniāl Rās and the Mehtarjaos of Yāsīn have partially acknowledged claims. These States acknowledge the suzerainty of Kashmīr, but form no part of its territory. They pay an annual tribute to the Darbār-

3: Imperial Gazetteer G-3 (1889-95) 1909 AV1 Kashmir
Bard AV3

Hunza and Nagar in gold, Chilās in cash (Rs. 2,628), Ashkuman, Yāsīn, and Ghizar in grain, goats, and *ghī*. The relations of the Political Agent with the outlying States are eminently satisfactory. No undue interference takes place in the administration, and the people are encouraged to maintain their customs and traditions intact. Besides the military garrison, furnished by the Kashmīr State, there is a small but extremely efficient force of local levies armed with Snider carbines. They are drawn from Hunza, Nagar, Puniāl, Sai, and Chilās.

**Shināki.**—A group of small republics in the valley of the Indus, lying west of Kashmīr and south of Gilgit. The territory extends from the junction of the Astor river with the Indus to Seo on the right bank and Jalkot on the left bank of the latter river. Within this area the people are grouped in communities inhabiting one or more nullahs, each community forming a separate republic. Starting from the junction at Rāmghāt these are, in order: on the right bank, Gor, Kinergah, and Hodar; and on the left bank, Bunar, Thak, Butogah, Giche, and Thor. They constitute the area known as the Chilās subdivision of the Gilgit Agency, while Chilās proper includes Kinergah, Butogah, and Giche. Lower down the river are Darel, Tangir, Khilli, and Seo on the right bank, and Harban, Sazīn, and Jalkot on the left bank.

After the conquest of Chilās by Kashmīr in 1851, the Mahārājā imposed a tribute in gold-dust, and arranged for the administration of the country as part of the Gilgit district. A British Agency was re-established at Gilgit in 1889, which included, among other territory, the Chilās subdivision described above except Thor. In 1892 a British mission to Gor was attacked by the Chilāsis, which led to the occupation of their country and the appointment of a Political officer at Chilās. The right of the Kashmīr Darbār to construct roads and station a limited number of troops in the territory was secured, but the autonomy of the Chilāsis was guaranteed. Under the revised arrangements made in 1897 the republics pay small fixed sums to the Mahārājā, and in 1899 Thor was incorporated in Chilās. Darel has rendered a tribute of gold-dust to Kashmīr since 1866, when the Mahārājā's troops raided the country. The tribute is now paid through the Puniāl governor. Tangir pays a small tribute to the governor of Yāsīn. The remaining communities have no political relations with either Kashmīr or British India, except Jalkot, which from its position dominates Thor and the head of the Kāgān valley in the North-West Frontier Province.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

resources of that Paradise on earth and killed the intellectual and moral life of its people. The administration of justice and the collection of the taxes in Dardistan are carried on, the former with some show of respect for religious injunctions, the latter with sole regard to whatever the tax-gatherer can immediately lay his hand upon.

## I. HABITATIONS.

Most of the villages, whose names I have given elsewhere, are situate on the main line of roads which, as everywhere in Himalayan countries, generally coincides with the course of rivers. The villages are sometimes scattered, but as a rule, the houses are closely packed together. Stones are heaped up and closely cemented, and the upper story, which often is only a space shielded by a cloth or by grass-bundles on a few poles, is generally reached by a staircase from the outside.* Most villages are protected by one or more wooden forts, which—with the exception of the Gilgit fort — are rude blockhouses, garnished with rows of beams, behind which it is easy to fight as long as the place is not set on fire. Most villages also contain an open space, generally near a fountain, where the villagers meet in the evening and young people make love to each other.† Sometimes the houses contain a subterranean apartment which is used as a cellar or stable—at other times, the stable forms the lower part of the house and the family live on the roof under a kind of grass-tent. In Ládak, a little earth heaped up before the door and impressed with a large wooden seal, was sufficient, some years ago, to protect a house in the absence of its owner. In Dardistan bolts, etc., show the prevailing insecurity. I have seen houses which had a courtyard, round which the rooms were built, but generally all buildings in

* *Vide* my comparison between Dardu buildings, etc., and certain excavations which I made at Takht-i-Bahi in Yusufzai in 1870.

† Seduction and adultery are punished with death in Chilâs and the neighbouring independent Districts. Morality is, perhaps, not quite so stern at Gilgit, whilst in Yasin, Hunza, and even in Nagyr before 1886, great laxity is said to prevail.

Chitral

birth) of Brôz; Abdur-Rahman (low-born) at Owir (Bar-pèsh), and Badshah-i-Mulk, also of Owir, who was reared by the wife of Fath-Ali Shah. There are no doubt other brothers also whose names I do not know. Murid, who was killed by Sher Afzul, is also an illegitimate brother. 173

A few words regarding the places mentioned in recent telegrams may be interesting: Shogôth is the name of a village, of a fort, and of a district which is the north-western part of Chitrál, and it also comprises the Ludkho and tributary valleys. Through the district is the road leading to the Dara and Nuqsán passes, to the right and left respectively, at the bottom of which is a lake on which official toadyism has inflicted the name of Dufferin in supersession of the local name. Darushp (Drôshp) is another big village in this district and in the Ludkho valley, and Andarti is a Fort in it within a mile of the Kafir frontier. The inhabitants of Shogôth are descendants of Munjanis, whose dialect (Yidgah) I refer to elsewhere, and chiefly profess to be Shiahs, in consequence of which they have been largely exported as slaves by their Sunni rulers. Baidam Khan, a natural son of Aman-ul-Mulk, was the ruler of it. The Ludkho valley is traversed by the Arkari river which falls into that of Chitrál. At the head of the Arkari valley are three passes over the Hindukhush, including the evil-omened "Nuqsán," which leads to Zeibak, the home of the heretical Maulais (co-religionists of the Assassins of the Crusades) in Badakhshán. It is shorter, more direct, and freer from Kafir raids than the longer and easier Dora pass. *Owir* is a village of 100 houses on the Arkari river, and is about 36 miles from Zeibak. *Drasan* is both the name of a large village and of a fort which commands the Turikoh valley, a subdivision of the Drasan District, which is the seat of the heir-apparent to the Chitrál throne (Nizám-ul-Mulk). Yet the *Pioneer*, in its issue of the 5th October last, considers that Lord Lansdowne had settled the question of succession in favour of Afzul-ul-Mulk, that Nizám-ul-Mulk would thus be driven to seek Russian aid, but that

361 [487] [712] 133 361 000

000 and have at all times borne a high reputation for bravery. In
648 former days, Chilas, with the neighbouring valleys of Darel and Gor, owed allegiance to Gilgit, but the Chilasis were notorious for the way in which they tyrannised over the whole surrounding country, making frequent raids, plundering and carrying off men, women, and children into slavery. The Cashmere, Kishengunga, Astor, and Gilgit Valleys were frequently laid under contribution, and they boast of having once plundered Iskardo. During the Sikh occupation of Cashmere, an expedition was sent against Chilas, but sustained a disastrous defeat. Permission was granted by the British Government, in 1851, to the Maharajah Golab Sing to exact reprisals for a successful raid, and two columns entered Chilas,—one from Cashmere by the Lolab Valley, and one from Astor by the Mazenoo Pass. The Chilas fort was taken, and the Chilasis made submission, agreeing to pay a yearly tribute of a hundred goats and five tolas of gold, and engaging that the fort of Chilas should not
● [712] be re-built. Takk is now the only fortified place in Chilas. Since then Chilas has given no trouble to the Cashmere Government. Three hostages reside in Cashmere, and are changed yearly. Cashmere officials do not, however, visit the country, and any attempt to exercise authority would probably be resisted.

533 The love of music, dancing, and polo, which are so marked
535 among all the neighbouring communities, are unknown in
526 Chilas; and ponies, which are common enough elsewhere, are scarce.

361 The country is bare and treeless. The village of Chilas is
[133] situated about half a mile from the Indus, on a plain three miles in length, and from a mile to a mile and a half in breadth, sloping gently down to the river. Booner, though a dependency of Chilas, has paid a separate tribute to Cashmere of twelve
173 goats and three tolas of gold since 1842. The Chilasis relate that in former times a Hindoo Rajah, named Chachai, ruled in Chilas over the whole of Shinkari, but that, dying childless, his country became divided into republican communities, as at present. In later days a disastrous civil war broke out in the community between two brothers, Bôt and Matchuk, which ended in the defeat and expulsion of all the partizans of the latter. The Bôte are now the most prosperous family in Chilas.[1] Tradition still preserves the name of Naron, a

[1] This is perhaps the origin of the name "Bôte," applied indiscriminately to all Dards by Cashmere officials.

Chitral

increases in density. Forty miles below Chitral a route leads from the main valley past Ashuret over the Lowri Pass to the Afghan state of Dir. Twenty miles lower down, at Birkot, is the mouth of the valley inhabited by the Siah Posh of the Bushgali tribe, the upper end of which is entered from the Dorah Pass. Several smaller valleys are inhabited by Siah Posh, who have lost their independence, and at Bailam the southernmost Kashkar village is passed, and the Afghan state of Asmar is reached. The boundary between Kashkar and Asmar is marked by a wall built across the valley on the right bank between Bailam and Nawakali, and on the left bank by the small stream below Saoo. The valley for many miles above the boundary is reputed to be extraordinarily fertile.

Chitral, which is the seat of the ruler of Kashkar, comprises six large villages, which extend for 3 miles along both sides of the river at an elevation of about 4,000 feet. Its name has gradually come to be applied to the whole country. On the right bank is the fort in which the Mihter, or Badshah, —for he is known by both titles,—resides. Half a mile above the fort is an excellent wooden bridge protected by a stone tower at each end. All the forts in Kashkar differ in construction from those inhabited by the Shin and Boorish races, having inordinately high towers rising 18 feet above the ramparts, which are themselves 30 feet high. Their distribution also gives evidence of a more secure state of society. Instead of every village having one, and sometimes two, forts sufficient to hold all the inhabitants, as is the case in the valleys draining directly into the Indus, the only forts in Kashkar are the abodes of rulers of districts, or persons nearly related to the ruler.

The ruling family are styled Katooré, from Shah Katoor, brother of Shah Khushwakt, the ancestor of the reigning family of Yassin; but the name Kator seems to have been applied to the country in former times, before the existence of the present dynasty of rulers. The present Mihter, Aman-ool-Mulk, is about 58 years of age, and notorious for his astute and deceitful character. The number of the population he rules over can only be roughly computed, and probably amounts to less than 200,000 souls. These numbers would appear scanty for so large an extent of country, but the population is wholly agricultural, and, as in all these very mountainous countries, the habitations are, with few exceptions, confined to a narrow strip along the sides of streams.

000 in the colloquial. Dr. Leitner has collected a large number of Shina songs.

538 Oral traditions and genealogies are also preserved in families to whom this duty is assigned, and carefully handed down from father to son.

411 The ancient weapons were bow and arrows, battle-axe and round leather shield. Those able to afford it also wore a shirt of mail and a steel cap. The bow and battle-axe have been replaced by matchlock and sword, but are not yet quite obsolete. Though powder is easily made, the tribes have to depend on Cashmere and Badakhshan for matchlock barrels, so Robin Hood's weapon is still used in the chase. The bows are made of strips of ibex horn, softened in water and bound together, and are very tough, powerful weapons. The battle-axes are of different shapes, according to locality, some of them being inlaid with silver, or having engraved [585] patterns on them. The old weapons are carefully preserved and produced on the occasion of weddings, which would not be thought complete without them. A bridegroom presenting himself at the house of his father-in-law elect without a battle-axe would be sent away to get one, and if unable to do so would have to make an extra payment. In the present day the men of Chitral are noted for their swordsmanship, which has gained many a victory over matchlocks. In 1852 a regiment of Goorkhas in the Maharajah of Cashmere's service were cut to pieces by Chitral and Yassin swordsmen within 3 miles of Gilgit, though they formed square, and tried to reach the fort from which they had been cut off, in that formation.

726 Dard warfare is, however, seldom of a very resolute nature, and their records are full of accounts in which two or three days' skirmishing has led to the defeat of one party or the [713] other with the loss of a few men only. Every village has one or more forts according to the number of inhabitants, in which all can take refuge in case of need. Owing to the easily defensible nature of the country, surprise is absolutely necessary to success. An attack having been determined on, every effort is made to throw the enemy off his guard, and then, by a succession of forced marches, possession is gained of the pass or the narrow part of the valley which forms the key of his country. Should these be gained, the inhabitants of the invaded country take refuge in their forts. Their defence then depends almost entirely on the state of their supplies. Sometimes their water-supply is

Dard AV3

From Hatū Pīr there is a great descent, of about 5000 feet, by a zigzag road, steep and rough. We do not immediately reach the Indus Valley, but we go first to where the end of the Hatū spur nearly meets the mountain on the opposite side of the Astor River, leaving but a narrow channel for the water. Here the Astor River is spanned by two rope-bridges, made of birch twigs, and by a wooden bridge, over which ponies can be taken; a tower has been built that commands the passage; the position is held by some forty soldiers, who keep a good look-out. The place is a strange one; the soldiers live in caves in the rock; the rock overhangs, so as to keep off the sunshine for the greater part of the day; still the air becomes burning hot in summer; in winter, though no snow falls, the cold is somewhat severe.

Here crossing and following down the Astor River we soon debouch into the Indus Valley and find ourselves on the stony alluvial tracts, over nine miles of which, with small ups and downs, we have to go before reaching Bawanjī.

## BAWANJI.

This is a spot where at one time was a good deal of cultivation, and it is likely that fruit-trees once shaded it; but during the wars of two or three generations back it was laid waste and became entirely depopulated, and nought but bare ground remained. At that earlier time it was inhabited by Dārds, but was ruled, as I am informed, from Rondū; it was by Sulaimān Shāh's invasion that it was laid waste.* At the present time Bawanjī has a very small area under cultivation, but the place is of some importance as a military post, since on the holding of it depends the passage of the Indus on the way to Gilgit. There is a fort which was built by the Dogrās; it is manned by about seventy men, and as many more are in barracks outside. There is here also a prison, where a gang of incorrigible Kashmīrī horse-stealers are detained; these men enjoy during the day some liberty for cultivating their plots of land. The valley here is warm and dry; with irrigation two crops can always be raised.

* See Chapter XIX.

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

The lower part of the valley, occupied by Gilgit, is from one to three miles wide; it is bounded on each side by steep rocky mountains; the valley itself contains stony alluvial plateaus of various form, and various level above the river, which flows in cliffs worn in them; the greater part of this space is arid and barren, but, as usual, in front of each side ravine is a cultivated space, watered by the side stream, on which is a collection of houses. The line of mountains on the south-west side of the valley is divided most regularly by these ravines; between each of them the steep rocky masses narrow as they rise. On the north-east side the mountains are of an enormous size; they are well seen from the ridge separating the Se and Gilgit valleys; the rocky spurs lead back to lofty snowy peaks, one of which is over 25,000 feet in height. In front of each ravine on that side, too, is the wide-spread alluvial fan, with a portion of it watered and cultivated. There the mountains are completely bare, but on the south-west side, high up above the lower cliffs, is a growth of pine-wood. 133

The village of Gilgit is on one of the watered tracts on the right bank of the river; here the cultivated ground is not part of the fan of a side stream, but is on the flat plain of the river alluvium, which makes a terrace 30 or 40 feet above the water. The cultivation occupies the space of a square mile or so, extending from the river bank to the mountains; the irrigating water comes from the nearest side stream. The houses here, as also in Astor, are flat-topped; they are scattered over the plain in twos and threes among groups of fruit-trees, having been rebuilt in this way after the destruction that occurred in the various wars to which Gilgit has been subject; it will take long for the village to recover the abundance of fruit-trees which used to prevail. The fort of Gilgit is the Maharaja's chief stronghold in Dārdistān. It has been at different times taken, destroyed, rebuilt, added to, and altered. In 1870, when I was there, the appearance of it from the south-west was as represented in the sketch on the next page. The central part with the high towers (one of them loftier than the rest) was built by the ruler Gaur Rahmān during his second reign in Gilgit when the Maharaja Gulāb Singh's troops had been for a

GILGIT FORT IN 1870.

1: Drew G-3 (1862-1872) 1875 AVI Kashmir
Dard AV2

time dispossessed of it; this is built in the Dárd style, of a wooden framework for the wall filled in with stones; it was really a strong work for the country. The next outer construction is the work of the Dográs; it is a wall some 14 feet high, built round three sides of the inner fort (the fourth being protected by the steep river bank), so as to enclose a space between the two for 200 or 300 men to live in; of the seven or eight towers of this outer fort two can mount a gun. Lastly, built cornerwise on to the fort, was what was called the *Sangar*—a space enclosed by a poor stone wall; in this were quartered two or three hundred irregulars.

But since this sketch was made, since I saw the place, changes have occurred. In the spring of 1871 a severe earthquake threw down a considerable portion of the fort, and it has now, I believe, been rebuilt on a better plan.

Gilgit, by my reckoning, is 4800 feet above the sea. Mr. Hayward put it down as 5025 feet; but I think the former figures, which are derived by Boiling Point observations from Bawanji, whose elevation is given by the G. T. Survey, to be the nearer. The climate of Gilgit is not unlike that of Baltistán, only less snow falls, indeed but little snow-fall occurs. The vegetable products are the following—wheat, barley, naked barley, rice (in Gilgit village only), maize, millet, buckwheat, pulse (mungt, máh, and masoor), rape, and cotton; and of fruits—mulberry, peach, apricot, grape, apple, quince, pear, greengage, fig (not in any perfection), walnut, pomegranate, and sarshing (*Elæagnus Moorcroftii*, called there anáb, sarshing being the Tibetan name); besides musk-melons and water-melons. Silk is grown, but in very small quantity; the worm is smaller than that of Kashmir, and the cocoon is small. There are three fabrics made of it; one half silk, half wool, this is much worn by those in station above the ordinary peasant; another half silk and half cotton; the third all silk, a strong though loose-wove fabric which is prized for kamarbands.

Gold is washed from the river-gravels, as in many other parts of the Indus basin; here it is in coarser grains than I have seen elsewhere, and the return for the labour of washing is somewhat better.

leads a thousand feet or more above; again, in winter, they can sometimes be turned by twice fording the river.

That we have here come to a country exposed to the attacks, or, at all events, the alarms, of surrounding enemies is shown by the arrangement of the villages. At Sher itself, and from that place onwards, all the villagers, with their wives and families and their cattle, live within the fort; village and fort are here synonymous. *Sher Fort* is the strongest hereabouts; it has one face to the bank of the river, whence its supply of water cannot be cut off; all four sides are lofty walls with towers, much in the style of the inner work at Gilgit, but not quite so regularly built. Inside, the whole area is covered, huts are built over it all; these huts are mostly of three stories, the lowest is occupied by the cattle, the second is the usual dwelling-place, and the third is the summer living place; they are lighted by small openings in the roofs. The Raja has a nice set of rooms in one corner. Besides the country-people, there are 100 irregular sepoys of the Maharaja's army quartered in the fort; they occupy the part next to the walls, while the villagers have the centre. Thus the place is very much crowded. *Bubar*, which is also on the left bank, some 15 miles up (6000 feet above the sea), is in the same way a place where the villagers live in the fort; this is a large and prosperous village thick in fruit-trees. Vine is much cultivated; it is grown in small vineyards with the plants at irregular distances, many being old trees; the whole of the vineyard is covered with a framework of sticks supported at a height of from two to four feet above the ground, and over this the vines are trained; some of these vineyards are immediately beneath the walls; they are considered as a good defence to the fort; I think it more likely that the fort is a good defence to the vineyards, which are apt to suffer in a war. Bubar Fort is not quite so strong as Sher, still it is reckoned one of those which cannot be taken by force—the alternative, treachery, is not an uncommon weapon in these countries. *Gulmutt*, *Simpul*, and the other villages in this part of the valley, have the dwellings similarly enclosed in forts.

[342]

[41]

[245]

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

At evening, the people, who have been occupied in their fields during the day, all come with their cattle within the walls and the gates are closed; all night sentries watch on the towers, and every half hour the "All's well" resounds through the stillness, though it may get less frequent towards the sleepy hours of morning. At dawn an armed party go forth and make the round of all places that might possibly harbour an enemy, and not until their search has proved that the village is clear do others issue for their ordinary avocations. At the time I marched up the valley the Maharaja's relations with the Yásin chief were in a doubtful state, on account of the murder of Mr. Hayward, for which we were trying to get reparation; these precautions, therefore, may have been more than usually attended to. I did not myself lodge within the forts, but, having an escort of 200 men from Gilgit, we were able to keep such a look-out as effectually to prevent any surprise.

The highest point in the valley that I went to was Gákúj. This is the last village in Puniál; it is the farthest in this north-west corner to which the Maharaja's power or influence extends—and hence it is the farthest to which the influence of the Government of India reaches. Gákúj is, by my observations, 6940 feet above the sea; it is on a knob of rock behind which is a sloping plain, all this being 700 feet above the river. It is a cold windy place; snow falls there in winter to a depth varying from 6 inches to 1 foot 6 inches, and it stays three months; here only one crop is grown, while near the level of the river, 600 feet down, two crops are got from the land.

There is a strong fort at Gákúj, containing within it a spring of water; the garrison is composed of the villagers—about fifty fighting men. Part of the plain is cultivated, but beyond that part stretches a narrow stony plain backed by mountains 3000 feet or so high, their sides dotted with pencil-cedar bushes with pine-forest above; this strip of plain extends some eight miles up the valley, at which distance a spur from the mountains comes down and juts against the river, making a natural barrier. This spot, called Húpar, is the extreme point of the Maharaja's territory;

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

The Bunji plain now holds but a small fort, commanding the ferry six hundred feet below, and a patch of cultivation. It only wants water brought on to it to make it blossom like the rose. But the climate is not pleasant; the heat in summer all down the Indus valley is very great; 125° in tents is not uncommon in May. We found our camp very hot, as our tents were little double-fly tents, seven or eight feet square, just high enough for a tall man to stand up in with a few inches to spare. Our servants, orderlies, and guard were in single-fly sepoys' tents, and we were all thankful for the shade of a few trees. We visited the fort, which stood on the edge of a great ravine leading into the Indus, surrounded on two sides up to the very walls by fruit-trees, under which some hundreds of Kashmiri irregular troops were now camped. All the arrangements for water-supply, magazines, and commissariat were of the vaguest.

At Astor we had begun to hear rumours of the heavy losses the Kashmir troops and coolies who had preceded us had suffered crossing the passes, pushed through as they had been in the early spring. Here we heard more details of losses by snow, and now the losses from cholera, dysentery, and other diseases incidental to bad food, over-work, and no sanitary or medical arrangements, began to be evident.

We crossed the river next day. It was running three hundred yards wide, a very mill race, with huge waves boiling over deep hidden rocks in the centre of its course. We crossed on a large raft, about eight feet by ten, made of a light framework of wood and bamboo, floated on half-a-dozen inflated

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

huge red spots, finished off with bright red trousers, a costume at once startling and effective.

We rode in this way three miles to the bridge, which we dismounted to cross, then on past the fort, which Robertson was a few years later to know so well, and to assist in defending so splendidly, to the polo ground. There the usual performance was gone through, but on a greater scale than I had seen before, with many more riders and more brilliantly arrayed. Then we rode back to my camp, which was in an orchard a few hundred yards from the fort, I having had quite enough of riding hand-in-hand with my host, a custom which, however honourable, involves you in difficulties when you have to ride over small stone walls, narrow water-courses, and in and out of deep ravines. The Mehtar took his leave after a few minutes' conversation, and soon after sent us in a most excellent dinner cooked by the ladies of his household. In the couple of hours I had been with him he had made a deep impression on me. He was a fine old man, a striking figure as he rode along, sitting his horse upright and well; and had the history of his forty years of rule been unknown, there was that in him which attracted your attention at once. I felt instinctively that I was face to face with a ruler of men.

when excited by other horses. This was the reason Nizam gave him to me. He nearly did for me once at Gilgit. No man could stop him once he was off, but I managed to turn him, and half a mile of flooded ricefield conquered even the Hubshi. Perfectly untiring, I have ridden him day after day, and after we had settled in Gilgit I found him invaluable. He was always put out on a galloping stage; he had no idea of trotting, and his easy wolf's canter went on eating up mile after mile without a check. One can well imagine a horse like this, in the old wild days in Central Asia, being a present for a king. He had come as a colt from Badakshan, through Chitral, with a great reputation, his native name being "Pariṅda," or the flier, and he had gone to the Akhund of Swat, and had passed from king to king, till my friend Nizam, having ruined him, I suppose, at the janáli, and terrified of his life to get on him, had passed him on to me. It would be curious to know what blood he came from: none, I believe, but the Arab could be responsible for such a combination of courage, fire, endurance, and gentle temper. His bold heart was the only one I trusted in implicitly amongst the dwellers in my kingdom.

060

We varied the monotony of our march to Gilgit by going down the left bank of the river as far as Cherkilla, the chief fort of Punyal, where we turned up into the mountains, and had a couple of days of abortive attempts at sport. There were some nasty places on the road, one zigzag rising several hundred feet and unusually steep. Half-way up a leading pony dislodged a rock, which came rattling down, and cut my pony's legs from under him. For

712 • 487

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

by the fact that their chiefs are prisoners at Srinagar, where other representatives of once reigning houses are also under surveillance. Mansur Ali Khan, the supposed rightful Raja of Gilgit is there; he is the son of Asghar Ali Khan, son of Raja Khan, son of Gurtam Khan—but legitimate descent has little weight in countries that are constantly disturbed by violence, except in Hunza, where the supreme right to rob is hereditary.* The Gilgitis, who are a little more settled than their neighbours to the West, North and South, and who possess the most refined Dardu dialect and traditions, were constantly exposed to marauding parties, and the late ruler of Yasin, Gouhar-Amán, who had conquered Gilgit, made it a practice to sell them into slavery on the pretext that they were Shiahs and infidels. Yasin was lately ruled by Mir Wali, the supposed murderer of Mr. Hayward, and is a dependency of Chitrál, a country which is ruled by Amán-ul-mulk. The Hunza people are under Ghazan Khan, the son of Ghazanfar,† and seem to delight in plundering their Kirghiz neighbours, although all travellers through that inhospitable region, with the exception of Badakhshan merchants, are impartially attacked by these robbers, whose depredations have caused the nearest pass from Central Asia to India to be almost entirely deserted (1866). At Gilgit I saw the young Raja of Nagyr, with a servant, also a Nagyri. He was a most amiable and intelligent lad, whose articulation was very much more refined than that of his companion, who prefixed a guttural to every Khajuná word beginning with a vowel. The boy was kept a prisoner in the Gilgit Fort as a hostage to Kashmir for his father's good behaviour,

* *Vide* "History of Dardistan" for details of the contending dynasties of that region, pages 67 to 110.

† Major Montgomery remarks "the coins have the word Gujanfar on them, the name, I suppose, of some emblematic animal. I was however unable to find out its meaning." The word is غضنفر, Ghazanfar [which means in *Arabic*: lion, hero] and is the name of the former ruler of Hunza whose name is on the coins. In Hunza itself, coined money is unknown. [For changes since 1866, see "Hunza and Nagyr Handbook, 1893."]

825

saw that a bear was there and that he with his forepaws alternately took a pawful of "tromba," blew the chaff away and ate hastily. The man was one-eyed [shéo = blind; my Ghilgiti used "Kyor," which he said was a Persian word, but which is evidently Turkish] and ran to his hut to get his gun. He came out and pointed it at the bear. The animal who saw this ran round the blind side of the man's face, snatched the gun out of his hand and threw it away. The bear and the man then wrestled for a time, but afterwards both gave up the struggle and retired. The man, after he had recovered himself went to look for the gun, the stock of which he found broken. The match-string by which the stock had been tied to the barrel had gone on burning all night and had been the cause of the gun being destroyed. The son of that man still lives at the village and tells this story, which the people affect to believe.

### 5.—WEDDING FESTIVAL AMONG BEARS.

A Mulla, of the name of Lal Mohammad, said that when he was taken a prisoner into Chilás,* he and his escort passed one day through one of the dreariest portions of the mountains of that inhospitable region. There they heard a noise, and quietly approaching to ascertain its cause they saw a company of bears tearing up the grass and making bundles of it which they hugged. Other bears again wrapped their heads in grass, and some stood on their hind-paws, holding a stick in their forepaws and dancing to the sound of the howls of the others. They then ranged themselves in rows, at each end of which was a young bear; on one side a male, on the other a female. These were supposed to celebrate their marriage on the occasion in question. My informant swore to the story and my Ghilgiti corroborated the truth of the first portion of the account, which he said described a practice believed to be common to bears.

### 6.—THE FLYING PORCUPINE.

There is a curious superstition with regard to an animal called "Harginn," which appears to be more like a porcupine than anything else. It is covered with bristles; its back is of a red-brownish and its belly of a yellowish colour. That animal is supposed to be very dangerous, and to contain poison in its bristles. At the approach of any man or animal it is said to gather itself up for a terrific jump into the air, from which it descends unto the head of the intended victim. It is said to be generally about half a yard long and a span broad. Our friend Lal Mohammad, a saintly Akhunzada, but a regular Münchhausen, affirmed to have once met with a curious incident with regard to that animal. He was out shooting one day when he saw a stag which seemed intently to look in one direction.

[721]

* Almost every third man I met had, at some time or other, been kidnapped and dragged off either to Chilás, Chitrál, Badakhshán or Bukhárá. The surveillance, however, which is exercised over prisoners, as they are being moved by goat-paths over mountains, cannot be a very effective one and, therefore, many of them escape. Some of the Kashmir Maharajah's Sepoys, who had invaded Dardistan, had been captured and had escaped. They narrated many stories of the ferocity of these mountaineers; *e.g.*, that they used their captives as fireworks, etc., etc., in order to enliven public gatherings. Even if this be true, there can be no doubt that the Sepoys retaliated in the fiercest manner whenever they had an opportunity, and the only acts of barbarism that came under my observation, during the war with the tribes in 1866, were committed by the Kashmir invaders.

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

to inflict harm upon the people, they themselves did not dare to put an unclean thing into the spring; and therefore on such occasions a foreigner was employed to perform this act, receiving as remuneration a large quantity of grain collected for the purpose at the rate of two seers per house. After receiving this grain he threw some unclean thing into the spring; and took it out when the rain was no more required. There are two other similar springs: one in the Bagrot Valley, called Chakrot Bari; and the other near the Tarshing village in the Astor District, called Komachon uts.

### "Rashoo ai Yudaini."

(The Fairies' Drum of Rashoo.)

The Doms of Bulchhi, a village in the Bagrot Valley, have still in their possession a small drum about one foot in diameter and three feet in circumference. This is called "Rashoo ai Yudaini." It was once carefully kept in a handsome cover by Rashoo, a Rono Wazir of Gilgit, who had ruled for the chief in that place. It is said, that whenever Rashoo intended to advance against any chief, the Yudaini was brought and kept before him. If it made a noise, without having been beaten by anybody, Rashoo believed it an omen of success. But if it were silent, Rashoo postponed his expedition.

### The Hoof Mark of a Horse.

Between Edgah and Balan villages in the Astore district there are seen on a rock near the old road which faces the Phina village, a few small flags. It is said that at this place there is a mark on a stone of the hoof of a horse. The story of the hoof-print is this—The place was once haunted by a giantess, who was a bitter enemy of mankind, and had become the terror of the people. The people wished to get rid of her. By the providence of God, one day a venerable Darwesh—some say that the Darwesh was no one else but Hazrat Khizar himself—halted on the river-bank close to the foot of the Phina village, and saw the giantess across the stream. He flung himself on his horse and, spurring it vigorously, came upon the giantess with the speed of lightning. She had no alternative left but to take to her heels, which she did, leaving the noise of her shrieks behind, and was never seen again. The horse had come upon it with such a vigour that the stone gave way under its weight, and there burst forth from the stone a spring of cool, fresh water. Though there exists no trace of it now, it is still looked upon as a sacred place, and the people from far and near gather together annually to celebrate the event by killing a sheep, feasting upon it, and making merry.

### The Foot of Malik the Rá of Gilgit.[1]

It is said that one of the feet of Malik, an ancient Rá of Gilgit, was naturally formed like the hoof of an ass. He took great care to conceal this defect from all people. One of his old servants had, however, a knowledge of the mystery; but he was strictly forbidden by the Rá to disclose the secret. The servant kept it from becoming known

539

[1] [Cf. the Greek story of Midas and his ears, and of how their asinine form was revealed to the people.—Ed.]

539 241 the Katchata the crops were that year excellent. The boy was afterwards married and is said to have had four sons. Three of them were sent to the Rás of Hunza, Nagar and Yasin, at their request, to reside in their respective States as beings of divine nature, while one remained at Gilgit. From that time it has become a custom that the Rá's lands are ploughed first by the Katchata clan, and that afterwards the other people commence this operation. As soon as the ploughing is finished and the time to sow the seed has arrived, the Rá gives a big feast to the inhabitants, who all assemble at his house and make merry, with the usual dancing, singing and playing upon flutes and drums. Some flour is then rubbed on a Katchata's face, and his long locks are let loose. Moreover, he is made to bellow and go like an ox in front of all the party towards the Rá's fields, where some food is given him by the Rá. This he catches and eats like a beast. Next begins the sowing operation by the Katchata's putting some handfuls of seed in the Rá's skirt, who mixing with it a small amount of gold dust, scatters it with his own hands in one of the fields. The rest of the seed is scattered by the Katchata, and then by all the other people in their fields. On this day, which is called "Chili," the Katchata receives from the Rá a reward of one maund of flour, 5 seers of *ghi*, one turban and one cloak.

### The Murder of Wazir Thusho.

173 121 539 There lived a wealthy and influential man named Thusho at Gulapur in the Punyal District, during the time of Badshah, who was the ruler of Yasin. He had made for himself a golden plough, and used to keep many hidden treasures in safe places in the adjacent *sullahs*. These are said to be still buried, but the places are unknown. Badshah, the Mehtar of Yasin, once sent him a *khillat*. When the messengers reached Gulapur, Thusho was ploughing in a field on the side of the Yasin road. The men, who did not know Thusho asked him the whereabouts of the house of Wazir Thusho. He pointed out his own house to them, showing them a round-about way to it, while he himself went there direct by a short cut and arrived before them. In the interval he changed his clothes and then met the messengers, who presented him with the *khillat*. On receiving this, Thusho *salaamed* towards his fort called "Boori Thoki." (Its ruins are still found at Gulapur.) By so doing he meant that his fort was so strong that the Mehtars of Yasin sent him presents. The messengers were soon dismissed by him, and they related this story to their chief on their return to Yasin. The chief was much angered by Thusho's bearing, and advanced against him with a large force. Thusho sent out his younger brother, Khushhal Beg, to check his advance, but he had already reached Gulapur. In the fighting which ensued, Khushhal Beg cut his way through the opposite forces and came face to face with Badshah, who made three cuts with a sword at Khushhal Beg, which the latter dexterously parried with his shield, and cried out that it was now his turn of attack. The Mehtar enquired as to which of them was after all to turn tail, to which Khushhal Beg made reply that Badshah was a king of hawks, Khushhal Beg of fowls only, and that he must at last give away. The fighting was then stopped, and the Mehtar being considered victorious, returned to Yasin. Thusho was very angry that his brother Khushhal Beg had not killed Badshah when such a favourable opportunity offered itself; so he made him a prisoner in the fort of Chatur Khan in Ishkoman. Hearing this news, Badshah again led his forces against

Thusho. The Mehtar captured Hakim Beg, the son of Thusho, at Gakuch and brought him along with great ceremony and treated him very kindly, making him many presents in order to show him his magnanimity. Reaching Gulapur, the Mehtar sent Hakim Beg to his father Thushoo with a message of surrender; but Thusho was still more enraged at such a message from the lips of his own son, whom he blamed for bringing with him an army against his father; and (taking up a matchlock) was ready to commence fighting. Hakim Beg who had seen Badshah's might, however, persuaded him from doing so, and forced him to accept allegiance. Thusho yielded to this, and in the midst of a large crowd of the headmen and his followers, came out of his fort to *salaam* to Badshah. A dance was then held by the Mehtar, and Thusho ordered to show his obedience by dancing. This he did, but instead of *salaaming* to Badshah in the course of the dance, he bowed towards his own fort. The Mehtar was filled with anger and ordered his servants to behead Thusho with his 12 sons at the same spot. They were cruelly murdered and buried all together. Their grave, which is called "Thusho ai Bombat," is about five yards square and nine feet high, having the form of a small vault in which they are buried. The roof has now fallen in owing to a fig-tree having grown out of the vault. Khhushal Beg, the brother of Thusho, was afterwards recalled by Badshah from Chatur Khan and made Wazir of Gulapur.

### The advance of Skardu Chiefs against Chitral and the Devastation of the Chemogah Village.

When Sher Shah, Ali Shah, Shah Murad, and Shah Sultan, the princes of Skardu, advanced towards Chitral, they halted on their way for a couple of days at Chemogah, a village about 19 miles east of Gilgit. Here they made merry, played polo, and tried to overawe the people by the horrible noise of about a score of drums. All the inhabitants of the village came to pay their respects, except one wealthy man of Chemogah. Some of his enemies called his absence to notice. He was therefore brought by the Chiefs' men and asked to explain the cause of his delay in paying his respects. He stated that he had gone to his goat-pen, and as he had left the kids and lambs loose to suck milk, he could not, owing to their noise, hear of the arrival of the princes or the sound of their drums. The chiefs turned very angry, and to ascertain the truth of his statement, they deputed some of their servants to go into the man's pen and to listen for the sound of the drums, which would be beaten afterwards. They returned, saying that the noise of his flocks was sufficiently overpowering to overcome the sound of the drums. The chiefs were astonished to hear this; but still they did not relent, and they decided that the lands of Chemogah should be laid waste in order to prevent any of the people becoming rich enough to admit of a similar display of arrogance and disrespect. For this purpose the chiefs gave orders that twelve bags of quicksilver should be thrown into the source of the Chemogah stream, in order that thequick silver, because of its weight, would cause the level of the stream to be depressed and prevent water from being obtained for the irrigation of the land; and so it came about that Chemogah village and fields were laid waste.

Their army is said to have arrived at Gilgit by both the Haramosh and the Astore routes. When both the divisions joined at Hinzil, a village about seven miles north-west of Gilgit, the

173 721 539

princes thought of counting their men for the purpose of ascertaining their losses, as they were proceeding against a distant and formidable foe, who was likely to inflict a further loss on their numbers. Such a large force was never seen before in the country, and it was not an easy task for the chiefs to have them counted in a day. The simplest way therefore was adopted by the chiefs, *viz.*, to order their men to throw stones together in a heap at one stone per man, and to take out one stone from the same heap on their return, in order that by this means they might be able to deduct the casualties. There is a heap of stones at Hinzil, which, however, is more probably the ruins of a Bhuddist tope.

They conquered the country as far as Chitral, where they are said to have placed a big stone under a large *chinar* tree.

The *dâk* arrangements are said to be so excellent that the chiefs used to eat dinner cooked at Skardu, which reached them warm at a distance of about 400 miles.

The following song is still preserved at Gilgit in memory of these Chiefs :—

"(1) Ala, Sher Shah, Ali Shah, Murad trai draro, Khiri nile sine aje Kaltor ganaige.

(2) Ala pote, Makpoon ai pote, trai draro Khiri nile sine aje Kaltor ganaige.

### Trakhan's being Thrown into the River.

539
173

Tra-Trakhan, an ancient Rá of Gilgit, is said to have married a woman of a wealthy family of Darel. The Rá was very fond of playing polo and used to go to Darel weekly for the purpose of playing his favourite game with the seven brothers of his wife. One game was played on the condition that whichever party lost the game should be murdered. After a long and skilful game the Rá was winner, and according to the conditions of the agreement he executed all his brothers-in-law. The Soni (queen), who was much disturbed on hearing the sad news of her brothers' death, determined to revenge them and mixed arsenic in her husband's food. So he died, and she took the reins of government into her own hands. After a lapse of a month she gave birth to a son who was named Trakhan; but, his mother, who was deeply grieved on account of her brothers' fate, did not like to see the son of a murderer, and cruelly locked him up in a wooden box, which she secretly threw into the river. The box is said to have been carried away by the current as far as Hodar, a village in the Chilas District, where it was seen by two brothers of poor means, who were collecting wood on the river bank. Noticing that

4 AV3 Dard AV3

road already mentioned leading into Kandia. Another road leads into the Swat valley and is a favourite route for traders. 487

Tangir and the neighbouring valley, Darel, are celebrated for the number and fine quality of their flocks and herds. Large numbers of sheep are here annually reared for sale to the inhabitants of the neighbouring valleys. Being somewhat straitened for summer pasture, the people of Tangir have long been in the habit of driving their flocks across the watershed to the Yassin country. In return for permission to graze, they pay to the ruler of Yassin a fixed tribute of salt and tobacco from each village. Besides this tribute, they give sheep and goats in varying numbers as a free gift. These payments have led to the Yassin rulers claiming the nominal allegiance of Tangir; but they make no attempt to exercise authority in the valley, which is to all intents and purposes a republican community like others in the Kohistan. Any attempt by the Yassin rulers to enter Tangir is resisted by force of arms, but the connection between the two communities has led to Tangir being regarded as the place of refuge for Yassin princes in misfortune. The people of Tangir pride themselves on giving asylum to all such who claim it, and it is seldom that the valley is long without some exiled member of the Khushwakté family. On such occasions the inhabitants contribute to his support as if he were their legitimate ruler, and if any attempt is made to seize him by force, they take up arms for a sufficient time to secure his safe retreat. Many a deposed ruler of Yassin has found a welcome in Tangir, where in the days of his power he would have been opposed by force of arms. Though Mahommedanism is of comparatively recent introduction, the people of Tangir are more fanatical than any of their neighbours, except those of Chilas, owing probably to their more intimate relations with Swat. They say of themselves that they have been Mussulmans for six generations. They marry with Yassin women, but refuse to give daughters in return, on account of the slave-selling practised by Yassin rulers. 233 651 631 [721] 696

Six miles above the mouth of the Tangir stream, the Darel Valley joins the Indus. Though small, this valley is extremely fertile and well populated. From its head, roads lead into Tangir, Yassin, Ponyal, and Gilgit. The principal villages are Birokot (fort), 800 houses; Doodookot (fort) 700 houses, in the Samangal district; Manikal (fort), 140 houses; Rashmal (fort), 120 houses, in the Joomeh district; and Gaiyal (fort), 500 houses. The whole community, including the dependent 361 161

tutelary deity of Chilas whose worship was practised in former times. 173

The system of government is the same in all these small republics, and differs somewhat from what obtains among the Afghans. Each village, according to its size, has a certain number of Jushteros, or elders, who are appointed according to the general estimation in which they are held for bravery, liberality, and eloquence. They receive no benefit from their office, and are more the servants than the leaders of those they represent. Each village manages its own affairs irrespective of its neighbours, and it is in the superintendence of these details that the Jushteros are mostly occupied. All matters affecting the village are discussed in public. A meeting for this purpose is called *Sigas*. At the Sigas all who please join in the discussion, the Jushteros apparently encouraging individuals to give their advice, and when the general opinion has thus been elicited, the Jushteros announce the decision they have formed. At a Sigas of several villages, a single Jushtero is appointed by each village at a meeting previously held. At the close of the general discussion, which is open as before, a loud whistle is given, after which none but the representative Jushteros are allowed to speak. If war with a neighbouring valley is determined on, the Jushteros settle the way in which those they represent shall take part in it; but beyond their personal influence they have little voice in determining the general policy to be pursued. It is for them to decide who shall stay at home and who shall take the field, and in the innumerable disputes about land their decision is respected; but should the dispute involve men of another village, they are expected to do their best for their own townsmen. In more serious disputes the whole valley makes common cause against its neighbours; but this does not prevent all the communities combining, when threatened by an external foe. Criminal offences are not dealt with by the Jushteros, but by the Moollahs, who profess to administer the law according to the Sharyat; this is, however, set aside in many instances in favour of ancient custom, which is very strong in some communities, and the prompt redress of grievances depends greatly on the personal influence of the aggrieved. Murder is regarded as a personal matter to be avenged by the nearest relative; but should the case be of a very wanton nature, and the family of the murdered individual have sufficient influence with the community, reparation is enforced by general consent. Blood feuds are not permitted to last for an indefinite period, as

186 Great enmity exists between the people of Ponyal and those of Yassin and Chitral.

361 The principal place in Ponyal is Cher,[1] which has been
147 corrupted into Sher by the Dogras. The people are, with few
795 exceptions, Yeshkun or Boorish, but the language spoken is
161 Shina. In religion they are mostly Maulais, a few Sooonees and Shiahs only being found amongst them. Ponyal contains about 2,000 inhabitants; the men are remarkable for their athletic figures. The soil, where cultivable at all, is
124 fertile and yields two harvests in the year, but between the
202 different patches of cultivation long stretches of sandy plain intervene, while at certain places the rocks close in on the river, which, for more than half the year, is an impassable torrent, so that the passage can be easily held by a few against superior numbers. In unsettled times guards are posted at these places to give the alarm by beacon fires.

361 At the western extremity of Ponyal is the fort and village of Gahkuch, which is the residence of the Rao Afiat Khan, a member of the Boorooshé family, who owns allegiance to Cashmere and receives a yearly subsidy in consideration of his holding this frontier post. Gahkuch is a place of some importance, as it commands the mouth of the Karoomber Valley as well as upper part of the main valley.

133 Opposite Gahkuch, the Karoomber Valley and river, run-
487 ning almost due south from the Hindoo Koosh, joins the main valley. Mr. Drew has described how this valley has during the last twenty years alternately belonged to Yassin and Gilgit. Nothing but extreme timidity or apathy can have induced the Cashmere Durbar to abandon it, as mentioned by Mr. Drew, for it is outside the natural boundary of Yassin, and could not have remained a portion of Yassin territory had the slightest disposition been evinced to retain it by the Dogras. For 25 miles the valley is broad and open, beyond that it contracts, and a road branches off past the village of Ishkaman or Ishkoman to the foot of the Durkot Pass. Continuing up the valley, which bends to the eastward, the Hindoo-Koosh is crossed into the Oxus Valley by the Ishkoman Pass at a height of 12,000 feet. Formerly this road was a favourite one, but owing to recent physical changes it has now fallen into disuse.

162 The Karoomber Valley, which contains the ruins of several
● 721 large villages, now supports only 300 souls. The former in-
133 habitants are said to have been exposed to constant forays

[1] Meaning "an impregnable rock."

AVJ Dard AVJ

from the Wakhis and Sirikolis, but the wars of the Yassin rulers since the beginning of the century have been the most powerful agent in depopulating the country. The security given to inhabitants in one way has been accompanied by a fresh source of danger to them in another. More than once the glacier has temporarily dammed up the stream until sufficient water has accumulated to burst the barrier and carry destruction to the valley below. At Eemit there is a hot mineral spring.

162
133
721

Dard AV3

137 and the pine-forest is less extensive, while spruce-fir has become
138 rare. Birch is found nearly up to 12,000 feet, and *Pinus excelsa* at 11,500. Some of the hill-sides have great stretches of birch-wood, which, as I saw them in autumn, made a glorious blaze of yellow, from the valley-bottom far up the mountain, enveloping detached woods of dark pine.

[36] Coming down the valley we reach traces of cultivation at the level of 10,000 feet. First are detached hamlets and small villages, bare, with no trees round them. Then, at Ratté, are some apricot trees; at the next place are some small walnuts; while at Chagám, which is 8500 feet, are many fine walnut trees, and from there onwards the villages are mostly well shaded by fruit-trees.

75 *But in that upper part it is chiefly traces of former cultiva-*
74 tion that one sees; they are enough to show that crops will grow and ripen; but the fields are waste, the hamlets deserted. In
[6] most of the mountain-tracts we have hitherto gone over the population has increased nearly up to the limit of land available; but here is room for hundreds of settlers. This state of things was brought about by the raids of the people of Chilás. The
[30] Chilásis are a Dárd race inhabiting a long valley on the west of Diyámir or Nangá Parbat. Until about 1850 they used to make occasional expeditions for plunder into this Astor Valley. Often they came over the Mazeri Pass to reach these higher parts, while for Astor itself, which they also attacked, they came round
[567] by the Hatú Pass and Dtiyán. The plunder they came for was cattle and people to make slaves of; their captives they do not sell, but they keep them for their own service, making use of them to take their flocks and herds to pasture. But since it would be almost impossible to keep grown men as their slaves at such work, where opportunities for escape would be plentiful, they used to kill the men and carry away only the women and the young people.

It was these raids that determined Maharaja Gulab Singh to send a punitive expedition against Chilás; this he did in 1851 or 1852, I am not sure which; one force went direct from Kashmir, and one advanced by this Mazeri Pass. The Dográs were in great straits for provisions, as the communications were

[i.e. Astor Valley - Astor]

Ja Drew G-2 (1869-1872) 1871 AVI Kashmir
Dard AV3

not well kept up, but they at last took the chief stronghold of the Chilâsis, a fort two or three miles from the Indus River, and reduced those people to some degree of obedience. A few of the slaves were released, but most of them had been sent to neighbouring valleys for safety, and they could not be recovered; as late as 1869 some half dozen of them escaped, and returned to their homes in Astor. The expedition had the effect of frightening the Chilâsis into good behaviour; there has been no raid since. There is even some communication kept up; the people from Tarshing, a village under Nanga Parbat, now go to Chilâs, while from Chilâs messengers or envoys come to the Maharaja with a yearly tribute and hostages, of whom a certain number remain in Kashmir until, after a year or two, others come in exchange.

It is curious that while the people of Astor are all riders and keep many ponies, these Chilâsis have none, and they used not to attempt to take away any they met with in their raids.

The Astor people, who thus in later times have suffered so much, used formerly, when they were stronger, to do the same kind of thing. Gurez was liable to their attacks, and Drás also.

The present state of quietness and security is a great change for them all. But the country has not yet recovered the ruin and depopulation. Some new small settlements have indeed been made in the old village sites; attempts have been made to induce the Baltis, who overflow from their own country, to settle; but the inclement climate of the higher part of the valley (where chiefly there is vacant ground), and the absence of the fruit-trees they are so much used to enjoy, deter them.

The most interesting place I visited in the Astor country is the valley which leads up to the base of Nanga Parbat. Just beyond the last village, Tarshing, one comes to the foot of one of the glaciers that spring from that great mountain.* I went

* The G. T. Survey Map is not accurate in the delineation of these glaciers; they do not in reality unite as there represented. I have made the correction, so far as I could with certainty, in the map attached to this book. Other small mistakes occur in the Survey Map as to the position of streams and so on in the Astor and Bunji districts: these, though I was able to detect them, I had not time to rectify; as they have to be allowed to stand in mine as in the Government Map.

Dard AV3

right side of the snowy Pass, and is always ready to advance to Gilgit if required. I know very little of the history of Astor. Bernier, who wrote about the year 1660, in enumerating the countries that border Kashmir, speaks of the territories of *Raja Gamou*. Now from geographical position I infer that this was the ruler of Astor. When the Sikhs held Kashmir, the Astor Raja was tributary to them; he had become so without any force having been sent; for a time he remained in quiet. But a curious thing happened. When Wazir Lakpat (who was lieutenant of Zorâwar Singh, who was servant of Raja Gulâb Singh, who was a tributary of the Sikhs) was victorious in Skârdû, he came over the Harpo Lâ and invaded Astor. Lakpat besieged the Astor fort for four months; at the end of which time it was given up for want of provisions, and the Raja was taken away prisoner to Skârdû; and this though he was on terms of friendship and (in a degree) dependent on the Sikh Governor of Kashmir. At last, representations on the subject went to Lâhor, and from there Gulâb Singh received directions to desist from interfering with Astor, so the Raja was sent back. But not long afterwards the Sikhs themselves from Kashmir required a passage through the Astor territory on their way to Gilgit (as will be related in Chapter XIX.), and not only so, but they required to make their communications sure; with this object a Sikh post was placed at Astor, and from that time the independence of the Raja diminished; now there is a titular Raja, for whose subsistence some provision is made, whether by pension or from land I do not know.

At Astor and for many miles on there is one general character of the valley; at the bottom it is very narrow; the river is quite confined between the ends of great spurs from the lofty mountain-ridges on both sides; the cultivation is on very small spaces, usually some hundreds of feet above the valley-bottom. The hill-sides are partly broken into cliffs and partly of a smooth surface, grown over with grass in tufts, and with bushes of pencil-cedar scattered over, while in parts sheltered from the sun *Pinus*

539 And the Queen ordered that the youths be brought to her. She was at once smitten by the likeness of the now handsome Trakhan to the Ra she had poisoned. She asked the youth from whence he had come, who his parents might be, and he told her all he knew. Then she was certain that he must be her son. The years had softened her; she was sad and lonely at times, for her daughter had married and left her castle, and she told him the rest of his story, pronouncing him to the men of Gilgit as their rightful Ra and seating him on the "Nilo But"—the coronation stone of the Ras of Gilgit. He was later to become the most famous of all the Ras of Gilgit, his rule was wise and strong, he extended the frontiers of his country, "he increased them to beyond Hunza and Nagar, right to the confines of Cathay." His nephews Girkis and Mughlot—the sons of his sister—he made the first rulers of Hunza and Nagar, their descendants being the Mirs there today. His memory will ever remain with the people of Gilgit, for there are so many songs of his great deeds and his wisdom now held up before the youths of those hard mountain parts as an example of what they, who also are born of that land, can achieve.

538 The men will sit for hours telling such stories as this to the young men and boys, stories of blood, honour, swords and wars, whilst the women's stories, though not as bloodthirsty, are also those which rekindle a determination in the girls that the land, the gold and the women of Gilgit shall never be taken, whatever the sacrifice demanded or the price paid to hold them.

503 The people of Gilgit are Mohammedans of both the Shia and the Sunni sects; the people of Nagar are of the Shia sect only, those of Hunza of the Ali-Ilahi sect—that is, believing that Ali is God; the others are Mulahis.

172 Yet there are signs that the Buddhist faith at one time also reached as far as this, for Knight tells of walking to the entrance of the Kargha nullah, through which there is a track leading on to Yaghistan, and of a carving of the Lord Buddha to be seen on the face of a great rock.

721 The chiefs of Gilgit "living in their mountain fastness", were in the days gone by, "notorious for their raids into the countries of their neighbours, which they made with impunity".

Chitral

started a conflagration. In the end, whether my counsel had anything to do with it or not, the old gentleman decided to sit on the fence and do nothing. 643 644 159

The Mehtar's views on the condition of frontier affairs were interesting, and his knowledge of men and matters varied and wide. A man does not rule a frontier state forty years for nothing. He saw that, so far as his dynasty and country were concerned, safety lay in alliance with us, danger in any closer intercourse with Afghanistan. For this reason he was delighted to have an unconquered Kafiristan on his flank as a buffer between him and the "God-given Government." He might occasionally, in retaliation for too numerous murders on the part of the Kafirs, raid their country with the object of getting some slaves, but he had no desire to see it conquered, and he was delighted that the Kafirs made the road down towards Asmar, and up the Ashreth valley to the Lowari pass, their happy hunting-ground, and murdered stray Pathans. The more dangerous the road was, the more isolated and safe his state. We discussed many questions, to which I cannot refer, with daily increasing interest and amusement on my part. Some of his ideas with all his shrewdness were very quaint; one of his most persistent demands was that, given any agreement with Government, it should be engraved on a sheet of copper. Some ruffian had persuaded him that no treaty would be binding on us if only written on paper. [721]●

My state visit to the Mehtar was most ceremonious. A deputation of his courtiers came and escorted us to the fort, at the gate of which the Mehtar met us, and conducted us to a daïs outside, 644

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

I remained some time in Chitral, seeing the
Mehtar, formally or informally, every day, and talking to his leading men and advisers whom he sent to see me very frequently. To obtain any influence or information in the East an Englishman must always remember that to an Eastern time is no object, and he must be prepared apparently to waste endless hours in desultory conversation. The time so spent is not really wasted; something can be learnt every day, and confidence is engendered by frequent intercourse. Accessibility is a duty on the part of a frontier officer, and I always made it a point during my time on the border to put aside any work to receive a visitor. Talking to a live man is of more value to yourself, and generally, in the end, of more service to Government, than writing or reading reports.

The result of my conversations with the Mehtar and his leading men was to leave in my mind a very poor opinion of the military qualities of the Chitralis. They had an inordinate idea of their power, but they had never been properly shot at. There was no tradition of severe fighting amongst the people. The nature of the country favoured wars of positions, and I found that once a position was turned, and a few men shot, it was a recognised rule of the game that the defenders should bolt. The rule appears to have been strictly adhered to, and I never heard of an action in which more than ten or fifteen men were killed. The people are naturally hopelessly *laissez aller*, and organisation is unknown amongst them. The Adamzadas, I find noted in my diary, might possibly fight, but the common people most probably would only do so in a half-hearted way; at the same

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

strengthen his hands, and would tend to prevent aggression from the neighbouring powers. To my disgust but not surprise, for I knew the little savage well, he had signalised his acquisition of the throne by wholesale murders of his elder brother's adherents, and had killed three of his brothers in cold blood. However it was no business of mine to interfere, and I could only watch from a distance. Robertson was very anxious to reciprocate the advances made by the Gor people, and I suggested to the Government of India that the wishes of their representative should be acceded to, and that he should visit the country. Sanction was accorded to the proposal, and early in November Robertson started for Gor.

The day he was to leave Bunji came a messenger in frantic haste, bearing the news that Sher Afzul, a brother of the old Mehtar, who had been in exile for years in Afghanistan a pensioner of the Amir's, had crossed the frontier by the Dorah, surprised and killed Afzul-ul-Mulk in his fort of Chitral, and proclaimed himself Mehtar. This was bad, but the most serious news was that he had proclaimed a religious war against us, that our native agent and doctor were in danger of their lives, and that troops were being collected and hurried towards Yasin, the tract of Chitral just beyond our borders. Later in the day the late Mehtar's minister and the Governor of Mastuj rode up to my door. I could hardly recognise in the haggard travel-stained man, carrying his favourite son on his saddle-bow, who swung himself off his horse and stood broken with hard riding before me, the picturesque, cheery gentleman,

## PUNIAL.

131 Four miles above the village and fort of Gilgit the valley narrows; still there is generally a bit of alluvial plateau on one side or other of the river; a few villages are passed and sites of deserted villages. For a day's march up one is still in the district of Gilgit, which is conterminous with the old Rajaship of Gilgit. Between the villages of Sharot and Gulpūr this district ends and Puniāl begins.*

648 642 Puniāl is a part of the valley which had long been held by separate Rajas, sometimes I think independent, sometimes depending on one or other of their neighbours—Yāsīn and Gilgit. The last result of the wars and disturbances that for some generations so much affected these valleys has been to leave Puniāl to a ruler of the line of its old Rajas, but under the protection of and in close dependence on, and, in those matters in which interference might be called for, in obedience to, the Maharaja of Kashmir. The district thus held is simply the line of the main valley, all along narrow, from Gulpūr up to the village and fort of Gākūj. This is a length of some 25 miles; within it there are nine villages and two or three outlying patches of ground cultivated from the nearest; these villages vary in altitude from 5500 feet to nearly 7000 feet; the chief place is Sher, on the left bank, where the Raja dwells. A characteristic of this part of the valley is that often, after every few miles, one comes to a place where the space is narrowed for a short distance by spurs coming down, so that the passage along is extremely difficult; the name given to these places is *darband*, or "shut-door"; they are of much importance from a military point of view, since at each of them a few might stop an army for a time; but there are usually two roads by which they can be passed—a very difficult one, fit only for agile foot-passengers, along the cliff, and a bridle-path that

361 133 725

* I believe that originally Gulpūr itself was under the Gilgit Rajas, and that it was granted to Puniāl in dowry of one of the daughters of the house. The present actual boundary between Gilgit and Puniāl is the stony and sandy plain between Sharot and Gulpūr.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

133 way every fan has been formed, the stream which
132 made it cutting its way through its own fan to reach the river.

The mud flow of which we saw the traces was a mere baby; it had only covered rocks ten feet high in the stream bed, and made a miniature fan where it debouched, but its force was attested by the huge boulders it had moved. These mud flows come down with terrible rapidity and irresistible force, and with no further warning than a tremble of the ground like an earthquake and a grinding roar, followed immediately by the wall of mud and rock: man or beast caught in a ravine by them is lost. The peculiar formation so common in the Hindu-Kush by which a stream, with a catchment area perhaps thirty to fifty miles round, cuts its way into the main river through a gorge fifty feet wide, with walls several hundred feet in height, is what makes these mud
491 flows possible and so dangerous. No one who had not had his attention drawn to them would believe in their action. When making the road down to Chilas in 1893 I found a bridge being built over a ravine apparently in a perfectly safe situation about thirty feet above the bed. The engineer in charge would not believe that it could be unsafe till I showed him on the cliffs not fifty yards from the bridge traces of a mud flow, which I knew was only a year or so old, some thirty feet higher than his bridge site.

● 725 About twelve miles from Gilgit we passed lines of sungahs, stone breast-works, following the edge of the cliff above the river, and blocking the ravine heads leading into it, and asked their meaning. The road at this point dropped into the river bed, and led for a

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

few hundred yards along a flat sandy bank by the water's edge. We were told that the place was called "the fort of Bhoop Singh," from a Kashmir general of that name who, some forty years before, had marched up to the relief of Gilgit. Instead of pushing on to the high ground beyond, he had halted his men here, and had neglected to hold the heights. Immediately taking advantage of his folly, the insurgents who were beleaguering Gilgit came down during the night, seized both the paths leading up from the river bed, and built the sungahs we saw, while the Hunza-Nagar men came down and took up a position on the opposite bank. After some days of hopeless fighting the force, which numbered twelve hundred, was wiped out, every single man killed or carried off into slavery.

One could see the tragedy; the wretched men under a plunging fire, with inaccessible cliffs above them, and a raging torrent in front of them, badly equipped, badly led, and with nothing but death or worse staring them in the face. It was a useful reminder to all soldiers passing by. I never rode through the place without feeling the horror of the long past days of agony, and without having the difficulties and dangers of campaigning in such a country forcibly brought in on me. It would have saved us many a life before some years were over had all ranks, British and native, taken the lesson to heart. But it was not to be: each generation must apparently make the same mistakes, men will be reckless, and some apparently can only buy experience with the wasted blood of their men, and gain common-sense for themselves when it comes to them hand in hand with death.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

The sizes of the stones forming the slope vary with the character of the rock and the length of the fall. You may pass through the foot of a slope by a path running over and amongst a heap of gigantic fragments weighing many tons each, or you may ride across a slope of fine slatey shingle which gives at every step, but wherever you cross a slope you generally find all the stones at that point very much the same size. Whenever there is heavy rain, or snow begins to melt in the spring, rock avalanches come down, and I have lain at night for hours listening to the thundering roar of great fragments plunging down from thousands of feet above one's camp. In the day-time you have to keep a sharp look-out when marching. There are many places well-known as extremely dangerous, in crossing which it is prudent not to loiter. I have never seen a man killed, but I have seen a man's leg broken a few yards in front of me by a falling stone, and have witnessed very narrow escapes. There was one particularly nasty stone shoot at Shaitan Nara, where stones fell all day long, the smaller whizzing by like a bullet, and the larger cannonading down in flying leaps, the last of which frequently carried them nearly across the Astor River. Starting stone avalanches on to an enemy below is a well understood and thoroughly appreciated form of warfare in these parts, and a very effectual means of offence it is.

A "parri" is a cliff, across the face of which the road is carried. These cliffs constantly occur, either where the hills close in on the river, or where a long alluvial fan projects into its bed. Rising sheer from

Dard Av3
Chitral

644 were told of its wonders, how it could turn out
484 fourteen lakhs of rupees a day—a lakh is a hundred
177 thousand—how it coined every day in the year
[462] without cessation. The Kashmir officer with us, with what object it was not necessary to enquire (every man in his position must intrigue, and has an axe of his own to grind), capped these stories by informing the Chitralis that our rulers never were at a loss for the white metal, as we could turn copper into silver.

000 Altogether I soon saw that my prospects of satisfying everybody, or for the matter of that, anybody, were remote. My difficulties would have been much lightened in Chitral had Nizam and Afzul gone through, during their visit to India, a course of sight-seeing at some big military centre. Twenty thousand men on parade, "horse, foot, and dragoons," would have given them and their headmen a much more intelligent appreciation of what the power of the Government of India meant than could wandering about cotton and jute mills, or being driven through foul and crowded bazaars.

361 Between Mastuj and Chitral we found at Sanoghar,
311 Buni, and other places, miles of splendid cultivation, and we saw above us, on the right bank of the river,
487 the extensive fields of the Murikho valley. But
725 for the most part the road was, as before, extremely difficult; the last couple of marches it was purposely left in the worst condition, running through gorges and along cliffs on rickety brackets which could be destroyed in a moment.

133 Glacial action is again well marked below Mastuj, the road running over huge masses of rock, rounded,

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

smoothed, and polished by the ice, and showing the characteristic surface scratchings. 133

Many "darbands" or positions were shown us, that on the Parabek plain being the most curious. The road runs across a huge fan once cultivated, now a desert owing to the failure of the stream which formed and watered the fan. Suddenly you come to a great ravine with perpendicular walls sixty to a hundred feet deep. The ravine runs without a break up into the mountains to the right, and into the river to the left; there is only one path leading down into it at its debouchure. Elsewhere one or two goat tracks exist, the heads of which are covered by sungahs. These sungahs, planted apparently without purpose in the open plain, are the first intimation you get of the existence of this ravine. This was the second position forced by Colonel Kelly on his march to the relief of Chitral, and it was carried by a turning movement to his right in the hills. It is the only position in the open that I ever came across in Chitral; it possessed great natural strength, but like all positions taken up with only the idea of passive resistance, it was of course doomed to fall to an enterprising enemy. An invading army from Badakshan had been here checked and defeated. 133 725

Below Parabek was position after position, and every day impressed me more with the difficulties of making war in this country, and with the danger to which isolated bodies must be exposed. A small body of troops moving in the valley could so easily, as our men found to their cost when Chitral was besieged in 1895, be headed by mountaineers using

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

133 paths thousands of feet above them, and would
725 then find themselves in a trap with the road cut on both sides of them, advance or retreat equally impossible.

Near Barnas there is a defile connected with one of the proudest days in Chitrali history. In Shah Katur's day the Badakshani ruler attacked him, and the invading army penetrated to Barnas. An envoy from the Mehtar met the conquering general in the gorge, threw himself at his feet, made complete submission on his master's part, and, clasping the conqueror's knees, he implored mercy, then with a sudden jerk hurled him off the road to plunge a hundred feet into the roaring torrent below. Both ends of the defile were in a moment in Chitrali hands, and the whole invading force, said to have numbered seven thousand men, was destroyed or taken prisoner.

181 It was impossible not to be taken with the Chitralis. Putting aside their avarice, which was but natural, and their cruelty and treachery amongst themselves, their nobles were pleasant men to meet, fond of sport, courteous and hospitable, and with a great love of their wild country. The people—that is, the freemen, not the slaves—were bright, cheery, impervious to fatigue, splendid mountaineers, fond of laughter and song, devoted to polo and dancing. The man striding along before your horse, with his loins girt, and the front end of his choga tucked into his waistband to give his legs free play, his chest open, and his shoulders thrown back by a sword carried across his back hooked into his elbows, would sing all the way uphill and down dale, and would

## VII.

### Omens.

Probably on account of the frequent attacks on Gilgit made by the chiefs of the surrounding States, certain signs and occurrences are considered to be omens among the Gilgitis. They are as follows :—

(1) If an unusually heavy rain falls at any season in Gilgit, it is supposed that the chief of Yasin will advance towards Gilgit.

(2) If innumerable kites are seen hovering over Gilgit, it is generally accepted that Gilgit is to be invaded by the Nagar people.

(3) If packs of wolves make frequent night visits into Gilgit, and inflict heavy losses among the flocks, it is affirmed that the chief of Hunza is certainly going to invade and plunder Gilgit.

(4) If the harvest be unusually abundant, it is believed that Gilgit will be attacked by the Punyal Chiefs.

## VIII.

### Lunar Eclipse.

The Gilgitis say that Grahn is the name of a giant, who is a lover of the moon. On the 14th of the lunar months, when the moon is in its full beauty, the Grahn, whenever he pleases, catches hold of the moon, leaving untouched only a part which contains a fig tree. At such time the people of these parts beat their iron pans (on which they cook bread) like drums and cry loudly, "O Grahn, we have brought a large force, beating drums against thee, leave her (the moon), or we will rush upon thee?"
In the meantime the eclipse ends, and they become happy at their success.

### Solar Eclipse.

The Gilgit people say that whenever any good king dies or is banished from his country, the giant Grahn becomes angry against the sun, and darkens a whole or a part of his (the sun's) face as a sign of grief for the death or the banishment of such a good king.

## IX.

### The Creation of the World.

It is said that the earth was at first enveloped in water, which was at some places frozen, and where some Yaths (giants) had taken their abode under Yamlo Hal Singh, their ruler. On a certain day they held a council for the purpose of bringing earth over the water. Their ruler said that the task was above their power but, however, he knew of a wolf called Bojare Shal who lived at a place named Milgamok (old ice) and who, owing to his great genius, would be able to perform this work. "Provision[1]," was first sent as a messenger by the Yaths, but the wolf refused to come, saying that he would not

[1] [In answer to a question regarding this name, the author of the paper informs me that the original word is *rayi*, which may also mean "fortune."—Ed.]

4
AD3 Dard AD3

000 in the colloquial. Dr. Leitner has collected a large number of Shina songs.

538 Oral traditions and genealogies are also preserved in families to whom this duty is assigned, and carefully handed down from father to son.

411 The ancient weapons were bow and arrows, battle-axe and round leather shield. Those able to afford it also wore a shirt of mail and a steel cap. The bow and battle-axe have been replaced by matchlock and sword, but are not yet quite obsolete. Though powder is easily made, the tribes have to depend on Cashmere and Badakhshan for matchlock barrels, so Robin Hood's weapon is still used in the chase. The bows are made of strips of ibex horn, softened in water and bound together, and are very tough, powerful weapons. The battle-axes are of different shapes, according to locality, some of them being inlaid with silver, or having engraved [585] patterns on them. The old weapons are carefully preserved and produced on the occasion of weddings, which would not be thought complete without them. A bridegroom presenting himself at the house of his father-in-law elect without a battle-axe would be sent away to get one, and if unable to do so would have to make an extra payment. In the present day the men of Chitral are noted for their swordsmanship, which has gained many a victory over matchlocks. In 1852 a regiment of Goorkhas in the Maharajah of Cashmere's service were cut to pieces by Chitral and Yassin swordsmen within 3 miles of Gilgit, though they formed square, and tried to reach the fort from which they had been cut off, in that formation.

726 Dard warfare is, however, seldom of a very resolute nature, and their records are full of accounts in which two or three days' skirmishing has led to the defeat of one party or the [713] other with the loss of a few men only. Every village has one or more forts according to the number of inhabitants, in which all can take refuge in case of need. Owing to the easily defensible nature of the country, surprise is absolutely necessary to success. An attack having been determined on, every effort is made to throw the enemy off his guard, and then, by a succession of forced marches, possession is gained of the pass or the narrow part of the valley which forms the key of his country. Should these be gained, the inhabitants of the invaded country take refuge in their forts. Their defence then depends almost entirely on the state of their supplies. Sometimes their water-supply is

Biddulph G-3 (1873-1878) 1880 ~~Afghanistan~~

D
726 cut off or their stores fail, and they are obliged to make terms. On the other hand, if they are well supplied, the invader gets tired after a short time and retires. If they feel strong and confident, the garrison sallies out to offer battle outside the walls, but the taking of a fort by assault is unknown. On account of the supplies it is usual to plan an attack for the time when the standing crops in the invaded country are just ripe.[1] The store in the fort is then at its lowest, and the invader finds no difficulty in subsistence.

D
805 Though Islam has introduced the inconvenient Mahommedan calendar, the ancient method of computation by the sun is still in use. In Gilgit and the valleys to the south
[177] the months are now distinguished by the Arabic names of the zodiacal signs. In Hunza and Nager a more ancient nomenclature still exists, as it did till lately in Gilgit, though most
B of the names in the latter place are now lost. The year is
805 divided into two seasons, from solstice to solstice, called "yôl" (Boorish) and "hallôl" (Shina). The season commencing at the winter solstice is called "baiy," and the one commencing at the summer solstice "shini." Each season is divided into six months, the names of which are repeated in each season in a different order; the second season beginning with the first month, and then the other names being taken backwards. The months are named from certain objects or fancied resemblances on the horizon behind which the sun sets at certain dates, as seen from the gate of the ruler's castle, so that each place has a different set of names for the month. The calendar as it still exists in Nager will give a sufficiently good idea of the system.

The months are as follows, commencing with the winter solstice:—

1. Baiy Isha.
2. „ Gamoosa (*ice-sun*, the sun sets behind a glacier).
3. „ Tikkidir, (*earth line*, the sun sets behind a level space).
4. „ Kabula, (*kibla*, the direction of Mecca).
5. „ Hingbalter (*door-way*, from a rock resembling a gateway).
6. „ Booye (*shoulder-blade*, from a rock resembling the blade bone of a sheep).
7. Shini Isha (commencing with the summer solstice).
8. „ Booye.
9. „ Hingbalter.
10. „ Kabula.
11. „ Tikkidir.
12. „ Gamoosa.

181 The Shin is enterprising, manly in character and in perseverance. They are men of fine enough physique, but they are soft, and have little or no warlike instinct.

[511] Very much attached to their lands, they will not move except under official pressure or the compulsion of the direst poverty. Half a dozen able-bodied men of one family prefer starving on a tiny piece of ancestral land to dividing their forces and taking up ample grants, distant perhaps but a few miles from

[661] their old home. The systematic oppression of their rulers, which deprived a man of much of the fruit of his labours, accounts in part for their attitude on this particular point, but, allowing for this, the race is sadly wanting in initiative. The Yeshkun is, I am inclined to think, a better man than the Shin, there is no doubt about his being a better fighting man, and the small caste or clan of the Ronu is the best of all.

[795] Taking the whole of Dardistan the inhabitants are not warlike, and in the southern portion alone, which is under the religious influence of the Mullahs of Swat, do you find fanaticism. The people are peaceful; there is none of the natural devilry, dash, love of war, and enterprise, which you find in the neighbouring Pathan, and they never have stood up, and never would stand up, against severe losses.

726 But that they could fight behind suitable defences I always felt was pretty certain, and we found this at Nilt. Centuries of desultory warfare have made them adepts at the art of field fortification, and awkward customers to deal with when on the defensive. In attack they are contemptible, and only dangerous when overwhelming numbers force disciplined troops on to the defensive, as at Chitral.

[The Shins -- Analysis]

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Gurusho AV7

Even then they would never push an attack home, it is always an affair of a ring of stone breastworks drawn tighter and tighter round the invested body, of incessant fire and perhaps mining, never of a stern open assault such as Pathans would deliver. From the soldier's point of view they are certainly not first-class fighting men. Their rulers alone are blood-thirsty, and that really from the accident of birth and of religion. Even among them, though you might find instances of ruthless severity such as must accompany succession in a Mahomedan state, you but very rarely found the cruelty of the savage who delights in the torture of his victim. It was generally a case of a short sharp shrift. Among the people murders are very rare, and are almost invariably the result of a slip on the part of a lady. By their own laws the resulting punishment, if inflicted under certain circumstances, is perfectly lawful, so that it can scarcely be called murder.

The great difference between the Dard and the Pathan cannot be better illustrated than by the condition of Hunza and Nagar after our fighting there in the year 1891. Within a day of the last fight which decided the short campaign, officers could and did traverse the country unarmed: Conway's mountaineering party wandered all over it six months later without the semblance of an escort, and not one single shot was fired at us after the power of the tribesmen had been broken. They "took their licking," and bore no malice, and within a year, from the very men who had fought against us, I had organised local levies who were ready to fight on our side, who turned out without hesitation when called on, and who did excellent work.

tutelary deity of Chilas whose worship was practised in former times.

The system of government is the same in all these small republics, and differs somewhat from what obtains among the Afghans. Each village, according to its size, has a certain number of Jushteros, or elders, who are appointed according to the general estimation in which they are held for bravery, liberality, and eloquence. They receive no benefit from their office, and are more the servants than the leaders of those they represent. Each village manages its own affairs irrespective of its neighbours, and it is in the superintendence of these details that the Jushteros are mostly occupied. All matters affecting the village are discussed in public. A meeting for this purpose is called *Sigas*. At the Sigas all who please join in the discussion, the Jushteros apparently encouraging individuals to give their advice, and when the general opinion has thus been elicited, the Jushteros announce the decision they have formed. At a Sigas of several villages, a single Jushtero is appointed by each village at a meeting previously held. At the close of the general discussion, which is open as before, a loud whistle is given, after which none but the representative Jushteros are allowed to speak. If war with a neighbouring valley is determined on, the Jushteros settle the way in which those they represent shall take part in it; but beyond their personal influence they have little voice in determining the general policy to be pursued. It is for them to decide who shall stay at home and who shall take the field, and in the innumerable disputes about land their decision is respected; but should the dispute involve men of another village, they are expected to do their best for their own townsmen. In more serious disputes the whole valley makes common cause against its neighbours; but this does not prevent all the communities combining, when threatened by an external foe. Criminal offences are not dealt with by the Jushteros, but by the Moollahs, who profess to administer the law according to the Shuryat; this is, however, set aside in many instances in favour of ancient custom, which is very strong in some communities, and the prompt redress of grievances depends greatly on the personal influence of the aggrieved. Murder is regarded as a personal matter to be avenged by the nearest relative; but should the case be of a very wanton nature, and the family of the murdered individual have sufficient influence with the community, reparation is enforced by general consent. Blood feuds are not permitted to last for an indefinite period, as

1: Drew G-3 (1862-1872) 1874 AVI Kashmir
Dard AVI

The lower part of the valley, occupied by Gilgit, is from one to three miles wide; it is bounded on each side by steep rocky mountains; the valley itself contains stony alluvial plateaux of various form, and various level above the river, which flows in cliffs more or less in them; the greater part of this space is arid and barren, but, as usual, in front of each side ravine is a cultivated space, watered by the side stream, on which is a collection of houses. The line of mountains on the south-west side of the valley is divided most regularly by these ravines; between each of them the steep rocky masses narrow as they rise. On the north-east side the mountains are of an enormous size; they are well seen from the ridge separating the Sin and Gilgit valleys; the rocky spurs lead back to lofty snowy peaks, one of which is over 25,000 feet in height. In front of each ravine on that side, too, is the wide-spread alluvial fan, with a portion of it watered and cultivated. There the mountains are completely bare, but on the south-west side, high up above the lower cliffs, is a growth of pine-wood.

The village of Gilgit is on one of the watered tracts on the right bank of the river; here the cultivated ground is not part of the fan of a side stream, but is on the flat plain of the river alluvium, which makes a terrace 30 or 40 feet above the water. The cultivation occupies the space of a square mile or so, extending from the river bank to the mountains; the irrigating water comes from the nearest side stream. The houses here, as also in Astor, are flat-topped; they are scattered over the plain in two and threes among groups of fruit-trees, having been rebuilt in this way after the destruction that occurred in the various wars to which Gilgit has been subject; it will take long for the village to recover the abundance of fruit-trees which used to prevail. The fort of Gilgit is the Maharaja's chief stronghold in Dardistán. It has been at different times taken, destroyed, rebuilt, added to, and altered. In 1870, when I was there, the appearance of it from the south-west was as represented in the sketch on the next page. The central part with the high towers (one of them loftier than the rest) was built by the ruler Gaur Rahmán during his second reign in Gilgit when the Maharaja Gulab Singh's troops had been for a

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

without its note, no warlike expedition could be expected to succeed which started without the fairy approval. But if I never heard the fairy drum, I have seen what few will ever have the chance of seeing again, the Dainyal, the diviner or soothsayer inspired by the fairies. Dainyals are usually women, but men sometimes become possessed, and the seers are seemingly of all ages. The one I saw was a buxom married village girl of about twenty, held in great estimation in the village and district on account of her supernatural powers, and ruling her household with a rod of iron.

I had ridden up the Bagrot valley, down which a stream from the southern glaciers of Rakapushi reaches the Gilgit river, in order to see what could be done to improve the water channels, which were carried along very difficult cliffs, and which the people only kept in even partial repair with the greatest labour. It was a melancholy ride. The valley had been raided years ago by the Yasin ruler, and some two-thirds of the population carried off into slavery or killed, and the traces of the tragedy were recognisable on all sides. At the mouth of the Bagrot valley lay hundreds of acres of land gone out of cultivation, the terraced fields and the raised irrigation channels still intact, their lichen-grown and sunburnt stones showing that water had not run over them for decades. Further up the valley half, and sometimes two-thirds, of the village land lay in the same state, the dead and gone vineyards easily recognisable by the small stone vats, which had once run full of foaming must; the flat stones above them, on which the grapes had been trodden out, and the little stone runnels, through which the juice had poured, were still in their places.

## CHAPTER II.

### GILGIT—HUNZA—NAGER—PONYAL.

CLOSE above Gor the traveller leaves Yaghestan and reaches Cashmere territory. On the left bank is the extensive Astor Valley, of which so good a description has already been given by Mr. Drew. Twelve miles below the point at which the Indus, after a north-westerly course of nearly 500 miles, turns between precipitous rocks abruptly to the south, is Boonji, the name of which has been converted by the Sikhs and Dogras into Bawanji. This was at one time a flourishing settlement, and is said to have contained eight forts, which would represent a population of between 2,000 and 3,000 souls. Its prosperity began to decline under the influence of the wars undertaken at the beginning of the present century by the rulers of Yassin and Chitral, which finally led to the Sikh occupation of Gilgit. In 1841 Boonji only contained 200 houses, and it was then finally ruined by the disastrous flood, of which Mr. Drew gives so interesting and able an explanation. The water-courses, on which the prosperity of such alluvial spots entirely depends, were swept away, and the amount of labour and expense necessary for their repair are beyond the power of a small village community. The Cashmere Government has lately taken them in hand, with a view to encouraging the resettling of the place, which at present only contains a colony of convict horse-stealers and a small garrison.

Immediately opposite Boonji is the narrow but fertile Sai Valley. Six miles further up, the Gilgit river falls into the Indus. The lower part of the valley of this river, nearly 40 miles in length, forms the Gilgit district. Gilgit itself, situated 24 miles from the Indus, at an elevation of 4,890 feet, combines the advantages of a good climate, a considerable extent of fertile land, and a central position, and appears from ancient times to have been the seat of a succession of rulers who, to a greater or less degree, exercised authority over the surrounding valleys and states.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

491 rope, swaying in the wind, and facing the cold air which rushes down above the centre of these ice-fed torrents. In order to prevent the side-ropes getting close together they are kept apart by sticks inserted at every few yards, over which you have to step. This is rather an acrobatic performance, as in the middle of the bridge the side ropes are two-and-a-half to three feet above the foot rope, but you soon get used to it. Every one crosses these bridges, old women, children, men carrying any loads, alive or dead. Some dogs negotiate them quite easily, but many get frightened and lie down half way and have to be picked up. We had one pariah, who followed us from Kashmir, drowned, alas! three years afterwards in the Indus, who always tried to walk over the rope bridge, and invariably fell into the water when half way over. He did not try the Shaitan Nara: nothing that fell into that boiling torrent could come out alive.

312 From Ramghat the road runs for eight miles over
133 an open sloping plain bordering the Indus to Bunji.
• 731 This plain extends north for another ten miles, and is reported to have been richly cultivated, to have been partially ruined during the numerous wars at the beginning of the century, and to have had its devastation completed by the great flood in 1841. This was caused by a gigantic landslip, probably following an earthquake. The whole hillside facing the Indus, just above the Lechur nullah, from a height of about four thousand feet above the river, was precipitated into the valley below, impinging on the opposite bank, and bringing down on that side a secondary hill-fall. The course of the river was completely

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

312
133
731

arrested by a huge dam thousands of feet thick and some hundreds high; the water must have risen at the dam to fully a thousand feet above its present level. Whatever may have been the ordinary level then, the Bunji plain was converted into a lake, and the Gilgit river, which runs into the Indus six miles above Bunji, was dammed up for thirty miles to just below the present fort of Gilgit. The tradition is that the dam held for months, and that, when it began to cut, the river completed its work in one day, and swept down in a solid wall of water carrying all before it. All down the Indus valley to the plains the people were of course prepared for the rush, and though miles of cultivated land were ruined, one does not hear of much loss of life. But where the river begins to open out into the plains of India near Attock, a great disaster occurred. A portion of the Sikh army was encamped practically in the river-bed, and the flood caught it and swept it away. In the picturesque native description it is said: "As an old woman with a wet cloth sweeps away an army of ants, so the river swept away the army of the Maharaja." All down the Indus valley ruined village lands covered with sand still attest the violence of the flood. You pass through a mile or more of the great dam, a mass of crumpled and distorted hillocks, on the road by the left bank of the Indus to Chilas; and the remains of a great pile of drift-wood left by the flood, which had for fifty years formed an inexhaustible supply of firewood for every traveller, shepherd, shikari, or raider who had passed that way, was still to be seen a year or two ago.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

133 bullock skins. It was a most exhilarating perform-
501 ance; once you had pushed out from the shore and began rowing, the raft was caught in the stream, and went dancing madly down, tossed in all directions by the waves, the men pulling for their lives so as to avoid being swept past the landing-place and through the heavy rapids below. A few minutes of racing down-stream, and you pulled into quieter water on the opposite side, some hundreds of yards lower down than you started. All our kit, guard, etc., crossed in the boats, a much more dangerous performance, unless most carefully watched, for the Kashmir officials had never realised that the flat-bottomed boats, suitable to the navigation of the Woollar Lake, and of the quiet upper reaches of the Jhelum, were not fitted to the roaring stream
[731] of the Indus in flood. Consequently, year by year, they continued to build slab-sided flat-bottomed boats, and to man them with unfortunate impressed Kashmiri boatmen, accustomed to use a futile heart-shaped paddle instead of an oar; the natural result was that every year, as a rule, there was a disaster, and twenty to thirty men drowned. The local officials did not even trouble to select the best place for a ferry; there were far better places a little up the stream. A Kashmir officer, while the arrangements for crossing were being made, explained to us the advantages of the rafts, and thoughtfully remarked: "The boat is very dangerous; we will not go in it ourselves, but send the coolies and guard." I crossed often afterwards by boat, but it was most unpleasant, and with a lot of men and horses
000 in it, really unsafe. There were the usual casualties

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

181 time, their rapidity in movement, and intimate knowledge of their country, and its capabilities for defence, would make them dangerous enemies to a small invading force, and valuable auxiliaries while on the winning side.

175 Events proved the justness of the opinion then formed and recorded. A few years later saw Chitral
181 in the throes of civil war, and a Mehtar in possession one day, ousted and flying the next, after the fall of a position attended with the loss of one man. The feeble resistance made to Colonel Kelly's advance by the Chitralis, though holding splendidly defensible positions, the secondary part played by the Chitralis in the memorable siege of Chitral, when all the real fighting was done by Umra Khan's Pathans, and the skill they showed in cutting off small parties of Sikhs, all went to prove that, though not wanting in courage and endurance, they lack the tenacity and grit which is wanted to enable men to face severe loss and to make real soldiers. As Napoleon says, "*Un homme ce n'est pas un soldat.*" The Chitrali is wanting in the something which makes a soldier.

643 I found that the Mehtar had no conception of our
648 real strength, no standard by which to judge our power. He undervalued our troops, his only idea of a standing army being taken from the old Kashmir regulars, a body with whose name disaster was associated, and some of which he had himself defeated, driven into the fort of Gilgit, and besieged there.
643 His sons and leading men who had been to India had
648 not seen enough of our troops for their reports on
743 them to impress him. One thing I found he was most anxious to have, and that was a properly

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

643 organised hospital and dispensary at Chitral, under a
648 good native doctor; that this was to be at our expense
743 went without saying. I am glad to say I was able to arrange this, a hospital was established next year, and it has flourished and done much good in the country.

431 Before leaving Chitral I sent the Mehtar the pre-
[576] sents I had brought up for him. The local etiquette forbade the gifts being offered in public, as everything so received had at once to be given away. My presents, therefore, were taken to the Mehtar by my head orderly. They consisted of a double-barrel express rifle, a pair of shot guns, and a miscellaneous assortment comprising silver goblets, cutlery, gold cloth from Benares, silks and broadcloths; and as the ladies were to be propitiated, carefully-graduated collections of rich brocades, silks, embroidered muslins, looking-glasses, jewelled trinkets, and last, but not least, boxes of scented soap and cases of perfumery. I was careful to ascertain the proper proportion to be observed in graduating the presents for the Mehtar's leading wives, and had a solemn interview with his minister on the subject. The result was excellent, and to my surprise and satisfaction I found that the Mehtar was delighted with the presents, and valued them at considerably more than treble what they had cost in India, and that the ladies were extremely
[159] pleased with theirs. The Mehtar's appreciation of some of my gifts was amusing. He was much taken with a nest of silver cups in a case, the innermost of which was shaped like a champagne glass. He was delighted with this, and pointed out that it would be most useful as a spittoon when he chewed snuff. The

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

make a present of more or less value on the part of Government.

We were not sorry to start; the valley was horribly hot and unhealthy, the rice cultivation in full swing, the fields a sea of putrid water, cholera was more or less all round us, and we had both been rather out of sorts. The measures taken to stop the cholera were curious. No attention was paid to such trifles as water-supply or sanitation, but morning and evening the Brahmins used to march round the camps of the troops, blowing conch-shells and invoking their gods, a plan which, however effective against the walls of Jericho, left something to be desired during a cholera epidemic.

We found the country we marched through to Gakuch, the last fort in Punyal, and for many marches beyond, wilder than anything we had yet seen. For the most part the road runs through a narrow valley just wide enough to give room for a roaring torrent sixty to eighty yards across, with an average fall of forty feet to the mile, the valley here and there opening out and showing alluvial fans and patches of cultivation. The two most marked features of the road for a hundred miles from Gilgit, and practically throughout the Hindu-Kush, are shingle slopes and the "parris." Thousands of feet above you are the mountain tops, shattered by frost and sun into the most fantastic outlines, from whose rugged summits fall masses of rock. Below any precipice you consequently see the shingle slope in existence; these slopes sometimes running up thousands of feet at a steep unbroken angle, almost universally of thirty degrees.

13: Heber and Heber D-3 (1914-25) 1926 AJ4 W. Tibetans AJ4
Dards AV3

D 162 54v 771 for this extraordinary arrangement by the fact that originally the Dards were Mohammedans, and presumably have not been able entirely to throw off this allegiance. It is stated that in one of their villages, they actually found a burial ground; D [764] sure proof to them of a Mohammedan ancestry, for the Buddhist burns his dead, whilst it is the Mohammedan that D 784 inters. This may be a satisfactory explanation of their religious ideas, but from whence have they derived all their taboos? Thus the Brogpa must not raise fowl, nor may he eat their eggs. The cow may be employed for the ploughing of his fields, but the gods would most certainly be displeased were he to drink their milk, or even use the butter which is made from the same. In other villages the eating of fish is taboo, and by the look and smell of them washing surely must be also. In fact they avow that it is "Krims med" D not the custom. For some time it almost seemed to us as if ● 751 vaccination was also on their list of prohibitions, for, although they had actually begged us to come for this very purpose, it took the three of us quite a long time cajoling, threatening, entreating and advising then, before they would undergo this fearful operation. At last one faced it, soon to be followed by the others, so that eventually we had quite a busy morning vaccinating. A week later this must have been a sore village, where most of the people wished vaccination had been taboo, but by then we were well away with the knowledge that, should smallpox attack Hanu, it would find the defences fairly strong.

NT 563 443 671 Now let us pay a visit to the Khampas, although it wants a George Borrow to describe these gipsies of Western Tibet. Kham, from whence they come, is a province of Tibet, but when we see the numbers of them who wander over the Indian parts of the Himalayas, we begin to wonder whether any of them are left "at home." Evidently the Khampa finds it more lucrative to wander like our own gipsies than to stay on his native soil. As the bazar in Leh provides most of the things needed by the people who inhabit the upper valley of

186 The people of Astor and Gilgit would be
101 surprised if they were told that they were Dards living in Dardistān, and their neighbours of Hunza-Nagar and Yāsīn would be equally astonished. If consulted, they would probably describe their country as Shināka, or the land of the Shins, where Shinā is the spoken language. They are an
517 Aryan people, stoutly built, cheery, honest, frugal, and sober.
291 They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head,
342 round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain
784 side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure
751 Shīn village no one will eat fowls or touch them. They
795 practise inoculation for small-pox, their one epidemic. The people of Astor are Musalmāns, two-thirds being of the Sunni persuasion, and the rest being either Shiahs or Maulais.
564 There is no religious intolerance in Astor.
162 Drew mentions the following caste divisions: Ronu, Shins, Yashkun, Kremins, and Dums. As regards the Ronu caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the Rājā caste of Dardistān. The majority of the Astoris belong to the Yashkun caste, and the Shins are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shins, according to the Census, being 7,733. The Shins are regarded
[592] with great respect by the Yashkuns and the other castes. The
563 Yashkuns claim the Shins as their forefathers. The Shins give their daughters to Ronus and to Saiyids, but take wives from the Yashkuns. Far away in Central Ladākh, in the Hanu valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they
[771] came and its Shinā dialect, but they wear the pigtail and the Ladākhi cap. It is said that, though Buddhist by name, they
[595] really worship local spirits and demons. They practise poly-
[784] andry, but they will not eat with Tibetan Buddhists, and, like the Shins in Dardistān, they hold the cow in abhorrence.
000 In Gilgit, as in Astor, there are few social subdivisions, for

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

Yaçh and Yaçhôlo still receive attention in some localities as beings capable of affecting, at least prejudicially, the prosperity of the crops.

Turning now to purely human beings gifted with supernatural powers we find two principal representatives of the class: the Rû.i, a woman displaying some of the powers and proclivities of the western witch, and the Daiyâl, a person of either sex endowed with some of the abilities of the Seer and the Prophet.

There are also the possessors of the EVIL EYE, voluntary or involuntary, and there are persons who have acquired powers of magic (chhla).

These are the principal Dramatis Personæ of the Living Supernatural, and we may now examine their peculiarities in somewhat greater detail, paying particular attention to the Bôyo, the Chhçh and the Rû.i, partly because of their peculiarly local character, as signalized by their purely local names, and partly because of their intrinsic importance.

## THE BÔYO

From what I have heard I very much fear that the Bôyo are as extinct as the Dodo, though their extinction is of quite recent date. Perhaps they still enjoy a tenuous existence in the phantasies of some elderly minds, but their day of power and awe is gone, their cult is dead, and their worshippers departed.

From the little information I possess it appears that the Bôyo lived in holes at the foot of trees and rocks; and that the cult consisted in placing offerings of food, at any rate of slaughtered animals, at the foot of the trees, i.e. presumably in front of the holes. The Bôyo themselves are described as puppies, or animals like puppies, so this simple form of worship was probably acceptable to them. At any rate they condescended to eat the offerings.

There were Bôyo in residence at a spot on the Dadimo Lat a little above the fort at Hindi, and the cult was maintained

2z Lorimer L-3 (1920-34) 1929 AV3 Dard AV3

he keeps quiet. The man has children, their appearance they say, is ill-favoured, like that of a Yaṣḥ. The Yaṣḥ lives in his house and he (Roskli) is superior, they say, to all the Astôris in wealth. They say that the Yaṣḥ is in Roskli's house in the skin of a cat. They say that his wife's food every seven days is 24 eggs and 2 seers (4 lb.) of ghee. This matter is publicly known to all the people. A number of Astôri people have told us this story." The wife's diet seems rather limited in kind, but bread and vegetables are perhaps taken for granted. 776

## Yaṣḥṭio

The Yaṣḥṭio,[1] by his name, must be some sort of cousin of the Yaṣḥ, but he is a shadowy personage whose only known interests are agricultural. Here is all the information I have about him: "At the time of the reaping of the wheat and barley, in the name of the Yaṣḥṭio they put some mîli (gruel) in a dish and carry it to some place in a field where there is a big stone and where they say the Yaṣḥṭio is. The reason is this: they say, 'if we propitiate the Yaṣḥṭio our wheat and barley will be plentiful.' Nowadays they do not do this in Gilgit (proper), but in Shinâki places, e.g. Bagrôt, at places on both sides of the River (Sherôt, Shakiôt, and Bârgo), and at Herkmosh, in these places they do it." 776 241

We may now pass on to the Human Supernatural, of whom the Rô.i and the Daiyâl are the chief. The term Rô.i is Shina. The Burushaski equivalent is Bîlas, but the word has also, I think, wider application. In Khowâr the idea is, I believe, covered by the word Gôr. 776 171

## Rô.i

The Rô.i is perhaps the most interesting of the whole Gilgit cast, and of her I happen to have particularly full 764

[1] I have lately come on an isolated note: "Yachîl, a demon like a bear."

2: Lorimer 1-3 (1920-24) 1929 AV3 Dard AV3

154 information. I might have devoted the whole of this article to her but decided that it was preferable to cover as wide a field as possible. All I can do in the available space is to mention briefly her chief characteristics and her methods.

Rū.is are witches with a limited repertory. They are ordinary women possessing some specialized tastes and gifted with some extraordinary powers. Their master-taste is an appetite for human flesh which they indulge at the expense of their less gifted neighbours.

Briefly stated, their procedure is as follows: a Rū.i disables and seizes a victim and bears him off, flying through the air to some tryst where the whole Rū.i community is assembled. There they slaughter the victim, after which they chop him up into bits and distribute portions to all present. The company then partake of the feast so furnished and return again to their homes as they came. Meanwhile the victim, whose visible and material body has to all appearance remained at home unaffected, presently falls ill and dies.

A few details may be given regarding the various episodes in this drama. It appears that normally a particular Rū.i is told off by the group to provide a victim for the next assembly. The duty falls on the various members in succession. At the same time one may consider it unlikely that a Rū.i would ever see a favourable opportunity and let it slip. The process of capture is facilitated by her ability to change into any animal form she pleases. Like the Chèch she may do a series of lightning changes. So she may appear as a cat, donkey, magpie, etc., or simply as a woman or as one after another in succession. Rū.is hunt alone or sometimes in couples.

If the intended victim detects the Rū.i and divines her mission, and can keep his head and do her a physical injury, he escapes her clutches and she it is who suffers. She appears at home bearing the injury which she sustained, it may be when in animal form, and unless her victim can be brought to visit her sick-bed she dies. If through ignorance or

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

weakness he does come to her, she recovers and he in his turn dies.

When the Rõ.i succeeds in her attack she flies off with the victim to the Rõ.is' meeting-place. Rõ.is fly mounted on boxes or on spinning-wheels. They are debarred from the use of the broomstick, for that is an implement of Western civilization unknown in Gilgit. The victim is carried along in a sheet. As it is stated that at certain places Rõ.is are sometimes *heard* flying through the air, one may conclude that they are not visible when they fly and that they conduct their revels in spiritual, immaterial forms and not in their everyday fleshly bodies. Similarly with the victim, for his bodily presence remains to all appearance safe in his home. What the Rõ.i secures is only some spiritualised, but still edible, presentation of him.

A Rõ.i in action has to look where she is going and to mind her steps, for if her foot touches water or a graveyard she can proceed no further.

When the victim has been safely conveyed to the place of assembly where all the Rõ.is of the district are collected, it simply remains to chop him up and distribute him in fragments to the company. The chopping-up is effected with an adze. Hence, incidentally, the adze has acquired a taste for human flesh and is a dangerous house-mate for a woman at child-birth as it is apt to go and open the door to give admittance to Dõ.õs, Peris, and Rõ.is (*vp.* 317).

No time is wasted on cooking or dressing the flesh, for the Rõ.i [illegible] information goes, enter into the order of the day. This is curious in view of the procedure at the Sabbats of the Western Witches and the popularity of dancing on festive occasions in Gilgit at the present day.

I have mentioned physical obstacles which may intervene between the Rõ.i and the indulgence of her tastes, but she has other more active interference to reckon with.

There are two kinds of human Avvi-Rõ.i, whose business

In Lecture 1-3 (1930-34) 1938 AVS Dent AVS

●759 and pleasure it is to come between the Rākṣ and her prey. These are gifted with superhuman faculties of perception and with powers of locomotion not inferior to the Rākṣ's.

759 759 The Paṇḍ—the word belongs to the root *paṇḍ*, "to see"—is a "seer", a man or woman who sees what ordinary people cannot see. The Paṇḍit can see not only Rākṣ in action but also Dēvīs and Pṛts.

By one means or another the Paṇḍit gets to know that someone has been carried off. We have it generally stated that people's guardian spirits—Iṣṭadēvīs—inform the Paṇḍit when their protégés are threatened; but in one case a Paṇḍit told me that the Rākṣ themselves informed him, when he was asleep, that they were carrying off a victim and invited him to come along: a sporting action on their part, for the Paṇḍit's function is to baulk them of their prey.

The moment the Paṇḍit learns of an abduction he starts off in pursuit. He also flies through the air no less swiftly than the Rākṣ, a fact which is all the more remarkable in that he flies in his proper person and not only in an immaterial semblance. When he is absent on a mission of rescue his place at home is empty.

Having come up with the Rākṣ at their meeting-place the Paṇḍit demands the surrender of the victim, but if the latter is already dead his labour has been in vain. If the victim is still alive he enters into negotiations with the Rākṣ and as a rule succeeds in striking a bargain with them. For a ransom, in the shape it may be of a goat or an ox to be delivered within a certain period, they relinquish their prey.

All then return apparently to their various homes.

The Rākṣ are not above making attempts to deceive the Paṇḍit by concealing their victim in the skin of a goat, cow, or other animal.

A practising Paṇḍit, who told me that he was peculiarly successful in rescue work, claimed that in two years he had had 200 successes against 100 failures. He had gone so far afield

In Lucknow L-8 (1250-94) 1939 AVS Dard AVS

as India. In his flights he was unconscious of mountains or other obstacles, but it is probable that like the Bilás he must not touch water or a graveyard. 754 771

The other Anti-Bilá is the Mirú. I am unable to give any explanation of the name. Mirús appear to be always men. The Mirú is a more ambiguous person than the Pushú. He is professedly an antagonist of the Bilás, but he seems to slip very easily into the rôle of aider and abettor. Ostensibly his functions and practice are similar to the Pushú's, but he appears to have less authority and less firm moral purpose. When he fails, he yields to pressure or persuasion by the Bilás and allows himself to be used as a sort of human anvil on which the victim is dismembered, or else he himself drops him up. He still, however, retains some of his original better feelings, for he refuses to accept a share of the victim's flesh.

Some doubt is cast on the Mirú's original good faith by a statement made to me by a Pushú: that the Mirú accompanies the Bilás carrying an axe with him; but perhaps this imputation is due to professional jealousy.

I must confess to some doubt as to the use of the Mirú as a chopping-block. It is a curious idea and I have no actual vernacular text to support it, only notes made in English of what I understood at the time was told me.

The Mirú is unconscious when travelling on his errand of mercy; but if his feet touches water he returns to consciousness, is unable to proceed further, and returns home.

Mirús are found in Nagir and Hagrú, but there are none [171] in Gilgit proper.

It may perhaps be useful to offer a few more facts about Bilás. Bilás are numerous and ubiquitous in the Gilgit area. They are found in Punial, Hunza, Nagir, and other districts, as well as in Gilgit proper. 754 171

My Pushú friend told me that in Gilgit there were some 300 of them, but this I can only take to be a gross exaggeration. I fancy he was something of a misogynist, for he also

In Lantzner 1-3 (1930-34) 1928 AV3 Dard AV3

●754 informed me, with all the seriousness that the statement
[071] deserved, that there is a trace of the Rā.i in all women.

All women in fact are potential Rā.is—a truly terrible thought.

[648] Fortunately, in practice Rā.is are products of heredity rather than education. The potential Rā.i does not seem as a rule to pass spontaneously into the practising Rā.i, but if a woman is a Rā.i her daughter will also be a Rā.i.

As regards their external distinguishing features the infallible sign of a Rā.i is that her feet are turned backwards. This must only be when she is functioning as a Rā.i, and even then it is noteworthy that when she is in animal form the animal's feet are not reversed in this way. Rā.is' hair and clothes are said to be repulsive. Their hair stands up on end. Their mouth is red (query—with blood?) when they have been maltreating anyone and at night they vomit. People then say, "Perhaps she has killed some one to-day."

It is a very remarkable thing that Rā.is and their doings do not seem to arouse any active resentment either in the public or in private individuals. There are many women who are notorious as being practising Rā.is, but they do not appear to be subjected to any form of persecution. I have heard of no case of Rā.i-baiting.

Tests and ordeals, such as ducking, may be unnecessary where the quality of at least the most important Rā.is is known to everyone and is beyond dispute, but then one would expect that they would be dealt with summarily and drastically by the irate relatives of their victims.

[illegible]

It would be possible to support it by many actual instances, but that would take too much space. I will, however, quote just a couple of stories which illustrate some of the main points.

754 The following is the story of a Nagir Rā.i which I recorded in English: "Two young men in Nagir one day wanted water. There was a shortage of water so they went to the head of an

2: Lortmer L-3 (1920-24) 1929 AV3 Dard AV3

754

irrigation channel where it entered a field. The men both saw two cats going along in front of them. The cats kept looking back at them and fire was issuing from their mouths. The elder of the young men threw stones at the cats, on which they both turned and seized him by the leg. Being strong-minded he preserved his senses and did not fall down but beat the two cats with a stick. The two cats then turned into a donkey. The youth, thinking that the donkey was perhaps someone's which had strayed or been left behind, mounted it.

"When they had gone on some distance he dismounted from the donkey and saw that it had turned into a magpie. He threw a stone at it and it turned into two women. With a stone he broke the head and upper jaw of one of the women, and both women vanished. In the morning the young man returned to his home and lapsed into unconsciousness.

"Meanwhile the woman who had been wounded went out on to the roof of her house, fell down from it and broke her head and her jaw, which accounted for the results of her previous misadventure. The people carried her into the house and she not unnaturally developed symptoms of indisposition. She told her people that a certain man had cast the evil eye on her and said that he must be sent for. The man accused was of course the youth who had broken her head when she was playing the Rā.i. They went off and called him, but he refused to come. The woman died. The other woman who had been with her, and the man, are still living."

The following is a statement made to me by the experienced Pushū already referred to: "Four days ago when I was asleep the Rā.is came and informed me by word of mouth: 'We have taken So-and-So, you come.' They then bore off their victim like stones carried by the wind. I said: 'I'll rescue him,' and started off after them. I caught them up at Bāltas, a big boulder in the direction of Harkū. I told them to let him go. The boy's mother was among the Rā.is. She let go the sheet in which he was tied, and I raised it up. The boy was dead. If a victim is freed when still alive all is well,

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

754 but if he dies then his real self at home dies in a day or two. On this occasion there were present many Rū.is from all quarters."

In taking leave of the Rū.is it is, I presume, superfluous to lay stress on their similarity to the witches of the West. Almost every point that has been mentioned above can be duplicated from European records of witches.

## The Daiyāl.

791 787 We now come to the Daiyāl, the last of the characters whom I propose to treat of here. Daiyāls are superhumanly endowed human beings, who at the present day chiefly exhibit their powers by furnishing answers to recondite questions. They supply on request information relating to what lies outside the scope of the ordinary senses of sight and hearing, and regarding what is going to come to pass in the future.

Their sources of knowledge are hidden, but there is nothing obscure about their procedure, for they exhibit their powers before all the world in broad daylight.

The public attend on the local polo ground, which corresponds to the village green. At one side sit the local band of drums and pipes and the Daiyāl enters the circle formed by the spectators. There he primes himself by inhaling the smoke of burning juniper twigs which has some sort of intoxicating effect on him. After this he divides his time between stooping over and listening to the drums, dancing round the circle in various measures and posturing in the middle of it.

At certain points he may be asked questions by members of the general public, the answers to which he ostensibly obtains by listening to the drums or by watching the behaviour of some grains of corn thrown on the vibrating parchment of a drum. His answers are couched in language which is really I think unintelligible, but which someone eventually is always found to interpret.

Biddulph G-3 (1873-1878) 1880 ~~AUI Afghanistan AUL~~
4 AV3 Dard AV3

his foster kindred accompany him. On the other hand, if he rises to influence, his foster-father is generally his most confidential adviser, and his foster-brothers are employed on the most important missions. 608

The custom of cementing friendship by the milk connection seems a favourite one. Should a woman dream that she has adopted any person as a son, or should any man dream that he has been adopted by a certain woman, the connection is carried out in the same way as the forced adoption before mentioned, and nobody would think of refusing to recognise it. The practice is now falling somewhat into disuse, but it was extremely common not many years ago. Milk from a woman's breast is esteemed a sovereign remedy for cataract and other eye-diseases. A resort to it also establishes the milk-tie for ever afterwards. [787] [757]

It is sometimes customary for a young couple, at the time of marriage, to induce a mutual friend to become their foster-father. The tie is ratified at the time of eating bread together. Bride and bridegroom being seated opposite to one another, the foster-father elect seats himself between them, and taking a piece of bread in each hand crosses his arms, observing to keep the right one uppermost, and puts the bread into their mouths. From that time he is regarded as their father.

The foster relationship is regarded as so close, that marriage between foster relations would be looked upon as incestuous, and, in spite of the precepts of the Koran, it would be impossible for a man to marry the widow of his foster-son. [835]

The formation of these ties is practised in a peculiar way among the Ashimadek clans of Chitral. It is customary for every infant to be suckled in turn by every nursing mother of the clan; consequently there is a constant interchange of infants going on among the mothers, to the purpose of strengthening tribal unity. [853]

The Shins are noted for their miserly habits, which they sometimes carry to great extremes. Every man has a secret hiding place in the mountains, where he conceals his money, metal pots, wife's jewels, and all his most valuable property. Occasional stealthy visits are paid to the treasure, which is never taken out for use except on festive occasions. No feeling of honour seems to exist as to the appropriation of another's treasure should it by chance be discovered, and frequent quarrels arise from this cause. Treasures are frequently lost altogether by the sudden death of the owner, 454 [685]

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

765 meat. After that period the grave is again visited by the deceased's friends, who, on reaching the grave, eat some ghí and bread, offer up prayers, and, on returning, slaughter a sheep, whose kidney is roasted and divided in small bits amongst those present. Bread is distributed amongst those present and a little feast is indulged in, in memory of the 771 deceased. I doubt, however, whether the Gilgitis are [761] very exact in their religious exercises. The mention of death was always received with shouts of laughter by them, and one of them told me that a dead person deserved only to be kicked. He possibly only joked and there can be little doubt that the Gilgit people are not very communicative about their better feelings. It would be ridiculous, however, to deny them the possession of natural feelings, although I certainly believe that they are not over-burdened [177] with sentiment. In Astór the influence of Kashmir has made the people attend a little more to the ceremonies of the Mussulman religion.

In Chilás rigour is observed in the maintenance of religious practices, but elsewhere there exists the greatest 212 laxity. In fact, so rude are the people that they have no written character of their own, and till very recently the art of writing (Persian) was confined to, perhaps, the Rajas of these countries or rather to their Munshis, whenever they had any. Some of them may be able to read the Koran. Even this I doubt, as of hundreds of people I saw only one who could read at Gilgit, and he was a Kashmiri who had travelled far and wide and had at last settled in that country.

### F. HOLIDAYS.

796 The great holiday of the Shín people happened in 1867, during the month succeeding the Ramazan, but seems to be generally on the sixth of February. It is called the "Shinó náo," "the new day of the Shín people." The Gilgitis call the day "Shinó bazóno," "the spring of the Shín people." [The year, it will be remembered, is divided into bazono = spring; walo = summer; shero = autumn;

Biddulph G-3 (1873-1878) 1880 ~~AUS Afghanistan AUS~~
4 Av3. Dard Av3
Burushu Av7

D 762 178 It is also a matter of accepted tradition in Gilgit, Gor, Hunza, and Nager, that suttee was formerly practised. The dead man, with his finest clothes and his weapons girded on him was placed on the pyre, and as the fire burnt up, the B 762 178 woman, arrayed in her jewellery and her richest clothes, leaped into the flames.

The burning of the dead ceased to be practised more D [764] than sixty years ago. One or two old men have told me that they could remember hearing it mentioned, as a not uncommon occurrence, in their youth, but none could recollect having witnessed any actual instance. So lately as in 1877, a very old man in Darel scandalised his neighbours by calling his sons to him on his death bed, and after having his arms and valuables brought to him, desiring to be burnt with them when dead. His wish, however, was not carried out. He and a man of Gor, who died twenty years ago, are known to have always refused to be circumcised, or to call themselves Mahommedans. They were probably the very last Hindoos in Dangaristan. Suttee was abolished earlier, and has certainly not been practised in Dangaristan for the last hundred years.

D 771 171 It is to be remarked that none of these customs, which savour so strongly of modern Hindooism, are to be found, either as now existing or as resting on former tradition, in any of the valleys to which the Shin rule did not extend; nor is the term Dangarik applied in any cases except those mentioned. The difference between some types of Hindooism and Buddhism is not necessarily very great, but the existence of customs among them, not shared by their neighbours, the establishment of a caste system, the use of the title of Ra for their rulers, and the common suffix of *Sing* to their own names, with the frequent use of Sanscrit terms, show that considerable differences exist between the Shins and their neighbours of the Swat, Punjkorah, and Chitral Valleys, with whose language their own has so much in common.

D 778 782 In spite of the more severe type of Mahommedanism which prevails, and which gathers strength year by year, idolatrous customs still survive. In every village in which Shins are in the majority, there is a large stone, which is still more or less the object of reverence. Each village has its own name for this stone, but an oath taken or an engagement made over it, is often held more binding than where the Koran is used. In several villages goats are still annually

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

585 539 *Nikastali ke karantlie.*
Come out why delayest thou.
*Né ro tsharéyn baráye.*
Do not weep waterfall's fairy.
*Né ro teyn róng boje.*
Do not weep thy colour will go.
*Né ro jaro shidati.*
Do not weep brethren's beloved.
*Né ro téy róng boje.*
Do not weep thy colour will go.
*Né ro maleyn shidati.*
Do not weep father's beloved.
*Né ro téy róng boje.*
Do not weep thy colour will go.

*Translation.*

Come out, O daughter of the hawk!
Come out, why dost thou delay?
Come forth from thy father's tent,
Come out and do not delay.
Weep not! O fairy of the waterfall!
Weep not! thy colour will fade;
Weep not! thou art the beloved of us all who are thy brethren,
Weep not! thy colour will fade.
O Weep not! thou beloved of fathers, [or "thy father's darling."]
For if thou weepest, thy face will grow pale.

Then the young man catches hold of her dress, or in Gilgit of her arm, puts her on horseback, and rides off with her, heedless of her tears and of those of her companions.

### E. FUNERALS.

764 Funerals are conducted in a very simple manner. The custom of eating grapes at funerals I have already touched upon in my allusion to Dureyl in the chapter on "Wine." Bread is commonly distributed together with Ghi, etc., three days after the funeral, to people in general, a custom which is called "Nashí" by the Astóris, and "Khatm" by the

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

Gilgitis. When a person is dead, the Mulla, assisted generally by a near friend of the deceased, washes the body which is then placed in a shroud. Women assemble, weep and relate the virtues of the deceased. The body is conveyed to the grave the very day of the decease. In Astor there is something in the shape of a bier for conveying the dead. At Gilgit two poles, across which little bits of wood are placed sideways and then fastened, serve for the same purpose. The persons who carry the body think it a meritorious act. The women accompany the body for some fifty yards and then return to the house to weep. The body is then placed in the earth which has been dug up to admit of its interment. Sometimes the grave is well-cemented and a kind of small vault is made over it with pieces of wood closely jammed together. A Pir or saint receives a hewn stone standing as a sign-post from the tomb. I have seen no inscriptions anywhere. The tomb of one of their famous saints at Gilgit has none. I have heard people there say that he was killed at that place in order to provide the country with a shrine. My Gilgiti who, like all his countrymen, was very patriotic, denied it, but I heard it at Gilgit from several persons, among whom was one of the descendants of the saint. As the Saint was a Kashmiri, the veracity of his descendant may be doubted. To return to the funeral. The body is conveyed to the cemetery, which is generally at some distance from the village, accompanied by friends. When they reach the spot the Mulla reads the prayers standing as in the "Djenazi"—any genuflexion, "ruku" رکوع and prostration are, of course, inadmissible. After the body has been interred the Mulla recites the Fatiha, [opening prayer of the Koran] all people standing up and holding out their hands as if they were reading a book. The Mulla prays that the deceased may be preserved from the fire of hell as he was a good man, etc. Then after a short benediction the people separate. For three days at Gilgit and seven days at Astor the near relatives of the deceased do not eat

3: Muhammad G-3 (ca. 1900) 197 AV3 Dard AV3

frequently visited by fairies who used to make these inscriptions, as in the opinion of the Chilasis it is beyond man's power to produce such inscriptions. It is also affirmed that these fairies were seen in those days by all men, but nowadays they are visible to no one except to a great Mullah by dint of his miracles. The Bagrot people say that the carvings were inscribed on stones by the fairies on the night of "Shino Bazoo;" and that on the same night the fairies frequently used to rub away the figures from one stone and to engrave the same on another.

### The Ceremony of Sai Kun.

Sri Kun is said to be the sister of Nagi Schemi, and lived at Shankank, a village near Godai in the District of Astore. The villagers used to present goats to this goddess and prayed before her seat for the supply of their wants. Her followers were strictly prohibited from keeping cows, or drinking their milk, and were under the impression that by so doing they were apt to lose their flocs, herds, or the produce of their lands.

### "Jainkish" and "Dewaro."

At Gilgit proper and in the surrounding villages there are seen two small tracts of land called "Jainkish" and "Dewaro." The former is situated on the river bank and the latter at the foot of a hill, except at some place in which they both are found at the foot of a hill. In ancient times, when Islam had not spread to these parts, the tribes used to burn the dead at "Jainkish," and a few days after they gathered and carried away the bones to "Dewaro," where they buried them i one pit. Remnants of bones still mark these places, though the traces have almost been obliterated by time. In these circumstances, however, one is not wrong in supposing that Muhammadanism is of recent growth.

Several old men still living at Gilgit relate that they used to play with the brass bangles and rings which they found in "Jainkish;" but to carry away such articles to their houses was considered improper. From this it appears that the dead bodies were burnt with their ornaments.

### Sankar Village and a "Chenar" Tree.

There is a small populous village named Sankar in the Bagrot Valley. It is said that when this tract was lying waste, a Fair named Shah Burya passed through and halted there for a short time. Becoming thirsty and finding no water, he prayed to God for a good supply. His prayer was granted and a sufficient quantity of water burst forth from an adjacent hill. After a few days Shah Burya felt the heat of the sun, and planting his stick, which was of *chenar* wood deep into the ground, prayed again to the Almighty to make it into a large *chenar* tree. This [illegible] was also created, and a big tree grew, under whose shadow he afterwards used to sit. The branches of this tree are said to have been once so large and spreading that they touched the neighbouring hill about 600 yards distant, across the Bagrot Nullah. The tree was afterwards burnt by the Mongols, but after a short period five shoots sprung out from its trunk, and these are still to be seen, forming an enclosure about 30 yards wide.

Biddulph G-3 (1873-1878) 1880 Afgh. Afghanistan 4th
AVJ Dard AVJ

from Ghizr to Ushoo, where Khowar is in consequence beginning to be spoken. The Bushkarik proper are divided into three clans, the Moolanor, Kootchkhor, and Joghior. They say that they have been Mussulmans for nine generations, and the peculiar customs still common among the Shins do not exist among them. Till somewhat recently they used to expose their dead in coffins on the tops of hills. The Bushkar dialect[1] approaches more nearly to modern Punjabi than any other of the Dard languages; but in some respects seems to show some affinity to the dialects of the Siah Posh.

The Bushkarik intermarry with the Torwalik, but not with their other neighbours. Forts are not in use among them, but their villages are built in a peculiar fashion for safety. A hill side with a suitable slope is selected, against which the houses are built in a succession of terraces rising one above the other, so that the flat roof of each house is on a level with the floor of the one above it. The whole are connected by an outer wall, within the confines of which is a labyrinth of passages, and the site is often selected so that a stream of water runs through the mass of buildings. All the houses are built of wood, and those on the outside of the village have no parapets. Bushkar is said to be very thickly wooded, and the trees are said to grow to an unusual size.

[1] See Appendix E.

4 Biddulph G-8 (1573-1578) 1880 AV3 Died AV3
Burslem AV7

In Gor, rings are exchanged at marriage. In the ruling families of Hunza and Nagar, it is the custom, when a daughter is married, for the bridegroom to present her at betrothal with a gold and silver needle. In Yasin, when, as not unfrequently happens, the bridegroom is too poor to pay the required price, the young couple elope, with the consent of the bride's parents. At the end of ten days the bridegroom comes to them and asks forgiveness, promising to pay the required sum by degrees. A little scene is acted, forgiveness is granted, the neighbours are summoned to the feast which has been already prepared, and the wedding is celebrated. This is to save the credit of the bride's family in not having received a sufficient price for her.

The old marriage barriers between the castes are beginning to be broken down under the levelling influence of Mahommedanism, and in a few generations will probably disappear altogether. The birth of a son is always a matter of general rejoicing. The friends of the happy father at once make it an excuse to stop work for the day, and seizing their matchlocks keep up a general *feu-de-joie* till their powder flasks are empty. The village band is summoned, and dancing kept up round the door for the rest of the day. No notice is taken of the birth of daughters. In the Oxus Valley and in Sirikol, when a son is born, all the father's friends hang their weapons on the walls of his house, so as to accustom the infant to martial sights. After seven days the weapons are returned to the owners, except those belonging to near relations, who receive special presents in exchange.

After the birth of a child a woman is esteemed unclean, and no one will eat from her hand for seven days. North of the Hindoo Koosh this period is extended to forty days, and for the first seven the infant is not allowed to suckle its mother.

I have elsewhere discussed the old custom of disposing of the dead by burning. Here the common form of Mussulman interment is used. A small flat slab of earth about two feet long is neatly plastered over the graves, and a light is kept burning at night by newly-made graves, under the pretence of keeping away wild beasts till the earth has hardened; but, as Mr. Drew has remarked, this is more probably a relic of the old practice of cremation. No attention or care is paid to old graves, which constantly present a most unpleasant appearance, owing to the falling-in of the arched roof. I remarked in Sirikol the same want of attention to old graves

[illegible] G-0 (1873-1877) 1880 [illegible]
4 Avs Dard Avs

as exists south of the Hindoo Koosh, and Wood remarked the same in Kundooz. In Darel and Tangir a piece of roughly-carved wood is placed at each end of the grave, which is neatly plastered over, and small pieces of white spar are placed along the ridges between the pieces of wood, which are about 8 feet apart. In Chitral, instead of wood, flat pieces of stone or slate, 3 or 4 feet long, are used.

All that concerns the division and inheritance of land is naturally of great consequence among a people who live almost entirely by agriculture. In Gilgit and the adjacent valleys, on a man's death his land is not divided equally among his sons, as is prescribed in the Sharyat, but in equal portions between his wives' families; for instance, should a man leave one son by one wife and three by another, the one son inherits half land, and the other three the other half, which again is sub-divided between them. Should one wife have sons, and the other only daughters, the land is divided among the former, the daughters being only entitled to a marriage-portion out of the land. Should a man die leaving only daughters, the land goes to the nearest male heir of the deceased; but a curious exception is made in the case of a man leaving only a single daughter, who is allowed to take the whole land as her marriage-portion. The practice is always spoken of as a favour, and not a right, but it seems to be a relic of a custom by which the succession of women was once recognised. The history of these countries shows several instances of the succession of female rulers in default of male heirs. In Wakhan and Sirikol daughters share equally in everything except land, which is divided among the sons. In Chitral and the Swat Valley the law of the Sharyat, by which all sons have equal shares, is followed. Daughters are entitled to a dowry out of the paternal land on marriage. In Torwal, women inherit the father's land in equal shares with the sons.

The system of foster-relationship is maintained among all the ruling families, and its ties seem more stringent than those of blood kinship. On the occasion of a son or daughter being born, the child is assigned to a foster-mother, in whose house it is brought up, so that frequently the father does not see his children till they are six or seven years old, and the whole family of the nurse place themselves at the disposal of their foster-child, with whom, for the rest of their lives, their fortunes are unalterably bound up. Whatever are a man's misfortunes or crimes in after-life, his good and bad fortunes are equally shared. Should exile be his lot,

good grounds for supposing that the religion of the Shins was of the Brahminical type.

Mention has already been made of the curious fact of the cow being esteemed unclean. Mr. Shaw has shown how the feeling among the Shins of Dah Hanu is one of aversion, and not of reverence, and Mr. Drew remarks that anything more opposed to modern Hindooism cannot be imagined. But the most orthodox Brahmin would consider himself defiled by touching leather, or any part of a dead cow, so that there does not appear to be anything in the present practice directly opposed to modern Hindooism, but rather a perverted feeling that has grown out of it.

This peculiarity of the ruling race led to the appellation of Dangariké,[1] *i. e.*, "cow-people," being conferred on them by their neighbours, who apply the term to all the Shina-speaking people. Though this can hardly be cited as a proof in itself of the Hindoo origin of the Shins, I think that, when considered in connection with other points, it forms a strong argument. The feeling of the Shins with regard to the domestic fowl is shared with them by Hindoos all over India.

This feeling regarding the cow and domestic fowls is not shared by any other tribe in the Hindoo Koosh, except by a small one in Chitral, to whom the name of Dangariké is also applied by their neighbours, and by the Kalash Kaffirs, who dwell close to them. I have not been able to obtain the language of the Chitral Dangariké, but there seems to be no reason to suppose that they have any connection with the Shins of Gilgit.

Till a very recent period burning the dead was practised, the burning places being still called Jain, which would appear to be identical with Chân, the name by which burning places are called in some parts of the Punjab. The ashes were carefully collected and buried in rude wooden boxes, sometimes carved out of a solid block, or in round earthen jars. I have dug up several of both kinds. The bones are neatly packed in the boxes, which have previously been lined with birch bark. In one or two I found pieces of check cotton cloths, of a kind not now known in the country, with pieces of brass chains and other ornaments. Women's urns are readily distinguished by a number of wooden spindle whorls, mixed with the bones.

[1] Cunningham met with the term in Baltistan, and speaks of Gilgit being inhabited by Dangariks, and of the Dangri language, as if it was the name of a tribe. The now well-known term of Dard has no doubt come to be applied in the same manner.

D 762 178 It is also a matter of accepted tradition in Gilgit, Gor, Hunza, and Nager, that suttee was formerly practised. The dead man, with his finest clothes and his weapons girded on him was placed on the pyre, and as the fire burnt up, the woman, arrayed in her jewellery and her richest clothes, leaped into the flames.

B 762 178 The burning of the dead ceased to be practised more than sixty years ago. One or two old men have told me that they could remember hearing it mentioned, as a not uncommon occurrence, in their youth, but none could recollect having witnessed any actual instance. So lately as in 1877, a very old man in Darel scandalised his neighbours by calling his sons to him on his death bed, and after having his arms and valuables brought to him, desiring to be burnt with them when dead. His wish, however, was not carried out. He and a man of Gor, who died twenty years ago, are known to have always refused to be circumcised, or to call themselves Mahommedans. They were probably the very last Hindoos in Dangaristan. Suttee was abolished earlier, and has certainly not been practised in Dangaristan for the last hundred years.

D [764] It is to be remarked that none of these customs, which savour so strongly of modern Hindooism, are to be found, either as now existing or as resting on former tradition, in any of the valleys to which the Shin rule did not extend; nor is the term Dangarik applied in any cases except those mentioned. The difference between some types of Hindooism and Buddhism is not necessarily very great, but the existence of customs among them, not shared by their neighbours, the establishment of a caste system, the use of the title of Ra for their rulers, and the common suffix of *Sing* to their own names, with the frequent use of Sanscrit terms, show that considerable differences exist between the Shins and their neighbours of the Swat, Punjkorah, and Chitral Valleys, with whose language their own has so much in common.

D 771 171

D 778 782 In spite of the more severe type of Mahommedanism which prevails, and which gathers strength year by year, idolatrous customs still survive. In every village in which Shins are in the majority, there is a large stone, which is still more or less the object of reverence. Each village has its own name for this stone, but an oath taken or an engagement made over it, is often held more binding than where the Koran is used. In several villages goats are still annually

Wine is drunk by the Maulais without concealment, and they do not strictly abstain from eating the flesh of animals not killed in the orthodox manner. Being absolved from the constraints of prayer and fasting, the practical religion of the uneducated consists of little more than obeying the commands of their Caliphas and Pirs, and making offerings freely through them to their spiritual chief. They are by no means intolerant, and, where permitted, live on good terms with Sunnees and Shiahs, with whom they intermarry without restraint. The only cases I have known of ill-feeling between the sects have been caused in the first instance by Sunnees from other places. From Shiahs they seldom meet with hostility, owing probably to the respect they show to Ali; though they do not celebrate the martyrdom of Hussun and Hoossain.

On the death of a Maulai the choicest articles of his portable property are set aside for the Imam-i-zeman. No food is cooked in the house, for from three to eight days, according to the rank of the deceased, and the family subsist on food cooked elsewhere. Food is also placed on trees and exposed places for birds to eat. On the evening of the appointed day a Caliphs comes to the house, and food is cooked and offered to him. He eats a mouthful and places a piece of bread in the mouth of the dead man's heir, after which the rest of the family partake. The lamp is then lighted (from which the ceremony is called "Chiragh roshun"), and a six-stringed guitar called "ghurba" being produced, singing is kept up for the whole night.

The Noor Buksh sect, which has been before referred to, is peculiar to Baltistan, where it numbers over twenty thousands followers, most of whom are to be found in Shigar and Khapulu. It is apparently an attempt to form a *via media* between Shiah and Sunnee doctrines. Mahommedanism is said to have been first introduced into Baltistan according to Sunnee tenets by Syud Ali Hamadani. Later, a certain

Lib. Tibetan and Indian D-S (1914-20) 1920 Add. W. Tibetan
Durbin AV3

for this extraordinary arrangement by the fact that originally the Durbs were Mohammedans, and presumably have not been able entirely to throw off this allegiance. It is stated that in one of their villages, they actually found a burial ground; sure proof to them of a Mohammedan ancestry, for the Buddhist burns his dead, whilst it is the Mohammedan that inters. This may be a satisfactory explanation of their religious ideas, but from whence have they derived all their taboos? Thus the Brogpa must not raise fowl, nor may he eat their eggs. The cow may be employed for the ploughing of his fields, but the gods would most certainly be displeased were he to drink their milk, or even use the butter which is made from the same. In other villages the eating of fish is taboo, and by the look and smell of them washing surely must be also. In fact they avow that it is "Krims med" not the custom. For some time it almost seemed to us as if vaccination was also on their list of prohibitions, for, although they had actually begged us to come for this very purpose, it took the three of us quite a long time cajoling, threatening, entreating and advising them, before they would undergo this fearful operation. At last one faced it, soon to be followed by the others, so that eventually we had quite a busy morning vaccinating. A week later this must have been a sore village, where most of the people wished vaccination had been taboo, but by then we were well away with the knowledge that, should smallpox attack Hanu, it would find the defences fairly strong.

Now let us pay a visit to the Khampas, although it wants a George Borrow to describe these gipsies of Western Tibet. Kham, from whence they come, is a province of Tibet, but when we see the numbers of them who wander over the Indian parts of the Himalayas, we begin to wonder whether any of them are left "at home." Evidently the Khampa finds it more lucrative to wander like our own gipsies than to stay on his native soil. As the bazar in Leh provides most of the things needed by the people who inhabit the upper valley of

Card AVI

The Yashkun without any Shia are found in more distant places, in the upper parts of the valleys of the Indus tributaries, namely in Nagar, Hunza, Ishkoman, Yasin, and Chitral.

## MUHAMMADANISM AMONG THE DARDS.

The Dards are now (with the exception that will be noted further on) Mohammedan.* Formerly they had some kind of idolatry of which we know not much, nor do we know at what period they were converted to Islam. At the time the Sikhs annexed Gilgit and Astor the people of those places were in some respects but very weak Mohammedans; it so happened that the Sikh commander, Nathé Shah by name, was a Mohammedan and a Syed; he acquired over these Dards a great influence, and he exerted it to make "good Mohammedans" of them, to get them to attend more carefully to the forms of their religion. It is a fact that before Nathé Shah came (say in 1842) the Astor people used to burn their dead, and not bury them as Mohammedans should. A curious remnant of the custom still remains there—when they bury they light a fire by the grave; it is true they will now tell you that they light the fire to keep off jackals; this may be in some sense true, that is to say they could hardly reconcile themselves to leaving the body in its grave unbestrewed, so they lit the fire as they had been used to, and this satisfied them in giving an amenity as against the beasts of prey and at the same time making a link with the past.

But it is not enough to say that these Dards are Mohammedans; they are divided into three separate Mohammedan sects—Sunni, Shia, and Maláhi.

Sunni and Shia require no description, as the division exists in almost every part of the Mohammedan world. The Maláhi sect corresponds very nearly, or it may be exactly, with that sect called Ali-Ilahiah which we found in Baltistán (see Chapter XVI.), which was a modification of the Shia. The name must have its

* This must be taken without prejudice to the question of the relationship of the Kafirs to the Dards. It is true at all events of those who have as yet been definitely classed as Dards.

1: Drew G-8 (1862-1872) 1875 AV1 Kashmir
Dard AV3
Balti AV2

might infer that they are, or have been, of the Shin caste, from the fact that all these customs concerning the cow, which we saw to be characteristic of that caste, are held by these Buddhist Dárds to an extreme degree.

It is curious to trace how in some respects they keep to the customs of the race they sprang from, and how in others they have adopted the customs of the Buddhists. There seems to be an instance of the former case in that their headmen of villages (at all events in the Hunt Valley) are elected for three years only, and even within that time are sometimes changed; this is certainly a trace of the republican system, of which something will be said in Chapter XX. On the other hand, we see them following the Buddhist Ladákhis in the practice of polyandry, to which they are completely given: among these Buddhist Dárds a woman has sometimes as many as five husbands.

Their religion, I think, lies very upon them; they are not so attentive to its ordinances as the Ladákhis are; and I do not think that any of their young men are trained up to be Lámas. Their dead they burn, and the bones of them they stow away in holes in the cliff, closing up these with stones.

## Sundry Notes.

Leaving now the Buddhist Dárds, we will note a few isolated facts concerning the race generally.

It has been seen from the map that the Dárds have spread, driven by want, or by oppression, or by disturbances, from their own countries across certain ridges into valleys that were occupied by other races; in these they often live side by side with those other races—as with the Kashmírís and the Baltis—sometimes in villages separate, sometimes occupying part of the same village.

At Dráss the Dárds nearly equal the Baltis; the two do not intermarry. At Dáwar also the two races are about half and half, but here they have intermarried, and the distinctiveness has been broken up. At Dard and at Sarpára they are of those who do not drink cow's milk; these must be of the Shin caste.

1: Leitner 1-3 (1866-93) 18837 AV3 Dard AV3

drunk by the Astóris and Chilasis [the latter are rather stricter Mussulmans than the other Shiná people]. After every strength has been taken out of the corn it is given away as food to sheep, etc., which they find exceedingly nourishing.

### WINE.*

The Gilgitis are great wine-drinkers, though not so much as the people of Hunza. In Nagyr little wine is made. The mode of the preparation of the wine is a simple one. The grapes are stamped out by a man who, fortunately before entering into the wine press, washes his feet and hands. The juice flows into another reservoir, which is first well laid round with stones, over which a cement is put of chalk mixed with sheep-fat which is previously heated. The juice is kept in this reservoir; the top is closed, cement being put round the sides and only in the middle an opening is made over which a loose stone is placed. After two or three months the reservoir is opened, and the wine is used at meals and festivals. In Darey[illegible] (and not in Gilgit, as was told to Vigne,) the custom is to sit round the grave of the deceased and eat grapes, nuts and Tahilgutaa (edible pine). In Astor (and in Chilas?) the custom is to put a number of Ghi (clarified butter) cakes before the Molla, [after the earth has been put on the deceased] who, after reading prayers over them, distributes them to the company who are standing round with their caps on. In Gilgit, three days after the burial, bread is generally distributed to the friends and acquaintances of the deceased. To return to the wine presses, it is to be noticed that no one ever interferes with the store of another. I passed several of them on my road from Tahukerbin onward, but they appeared to have been destroyed. This brings me to another custom which all the Dards seem to have of burying provisions of every kind in cellars that are scooped out in the mountains or near

* Wine is called in Gilgit by the same name as in "Inner" by the Astoris, viz. "Mú." The wine press is called "Mú-ri-Khor." The reservoir into which it flows is called "Mú-ri-Sim."

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

Gilgitis. When a person is dead, the Mulla, assisted 764
generally by a near friend of the deceased, washes the body which is then placed in a shroud. Women assemble, weep and relate the virtues of the deceased. The body is conveyed to the grave the very day of the decease. In Astor there is something in the shape of a bier for conveying the dead. At Gilgit two poles, across which little bits of wood are placed sideways and then fastened, serve for the same purpose. The persons who carry the body think it a meritorious act. The women accompany the body for some fifty yards and then return to the house to weep. The body is then placed in the earth which has been dug up to admit of its interment. Sometimes the grave is well-cemented and a kind of small vault is made over it with [778]
pieces of wood closely jammed together. A Pir or saint receives a hewn stone standing as a sign-post from the tomb. I have seen no inscriptions anywhere. The tomb of one of their famous saints at Gilgit has none. I have heard people there say that he was killed at that place in order to provide the country with a shrine. My Gilgiti who, like all his countrymen, was very patriotic, denied it, but I heard it at Gilgit from several persons, among whom was one of the descendants of the saint. As the Saint was a Kashmiri, the veracity of his descendant may be doubted. To return to the funeral. The body is conveyed to the cemetery, which is generally at some distance from the village, accompanied by friends. When they reach the spot the Mulla reads the prayers standing as in the "Djenazi"—any genuflexion, "ruku" (q.v.) and prostration are, of course, inadmissible. After the body has been interred the Mulla recites the Fatiha, [opening prayer of the Koran] all people standing up and holding out their hands as if they were reading a book. The Mulla prays that the deceased may be preserved from the fire of hell as he was a good man, etc. Then after a short benediction 765
the people separate. For three days at Gilgit and seven days at Astor the near relatives of the deceased do not eat

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

765 meat. After that period the grave is again visited by the deceased's friends, who, on reaching the grave, eat some ghí and bread, offer up prayers, and, on returning, slaughter a sheep, whose kidney is roasted and divided in small bits amongst those present. Bread is distributed amongst those present and a little feast is indulged in, in memory of the 771 deceased. I doubt, however, whether the Gilgitis are [761] very exact in their religious exercises. The mention of death was always received with shouts of laughter by them, and one of them told me that a dead person deserved only to be kicked. He possibly only joked and there can be little doubt that the Gilgit people are not very communicative about their better feelings. It would be ridiculous, however, to dény them the possession of natural feelings, although I certainly believe that they are not over-burdened [177] with sentiment. In Astór the influence of Kashmir has made the people attend a little more to the ceremonies of the Mussulman religion.

In Chilás rigour is observed in the maintenance of religious practices, but elsewhere there exists the greatest 212 laxity. In fact, so rude are the people that they have no written character of their own, and till very recently the art of writing (Persian) was confined to, perhaps, the Rajas of these countries or rather to their Munshis, whenever they had any. Some of them may be able to read the Koran. Even this I doubt, as of hundreds of people I saw only one who could read at Gilgit, and he was a Kashmiri who had travelled far and wide and had at last settled in that country.

### F. HOLIDAYS.

796 The great holiday of the Shin people happened in 1867, during the month succeeding the Ramazan, but seems to be generally on the sixth of February. It is called the "Shiné nin," "the new day of the Shin people." The Gilgitis call the day "Shiné bastan," "the spring of the Shin people." [The year, it will be remembered, is divided into bastan = spring; walo = summer; shero = autumn;

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

765 meat. After that period the grave is again visited by the deceased's friends, who, on reaching the grave, eat some ghí and bread, offer up prayers, and, on returning, slaughter a sheep, whose kidney is roasted and divided in small bits amongst those present. Bread is distributed amongst those present and a little feast is indulged in, in memory of the 771 deceased. I doubt, however, whether the Gilgitis are [761] very exact in their religious exercises. The mention of death was always received with shouts of laughter by them, and one of them told me that a dead person deserved only to be kicked. He possibly only joked and there can be little doubt that the Gilgit people are not very communicative about their better feelings. It would be ridiculous, however, to deny them the possession of natural feelings, although I certainly believe that they are not over-burdened [177] with sentiment. In Astór the influence of Kashmir has madethe people attend a little more to the ceremonies of the Mussalman religion.

In Chilás rigour is observed in the maintenance of religious practices, but elsewhere there exists the greatest 212 laxity. In fact, so rude are the people that they have no written character of their own, and till very recently the art of writing (Persian) was confined to, perhaps, the Rajas of these countries or rather to their Munshis, whenever they had any. Some of them may be able to read the Koran. Even this I doubt, as of hundreds of people I saw only one who could read at Gilgit, and he was a Kashmiri who had travelled far and wide and had at last settled in that country.

### 9. HOLIDAYS.

796 The great holiday of the Shia people happened in 1867, during the month succeeding the Ramazan, but seems to be generally on the sixth of February. It is called the "Shiá eáo," "the new day of the Shia people." The Gilgitis call the day "Shiá baolen," "the spring of the Shia people." [The year, it will be remembered, is divided into baoseo = spring; walo = summer; shero = autumn;

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

advancing in Dardistan and will, no doubt, sweep away many of the existing traditions. The progress, too, of the present invasion by Kashmir, which, although governed by Hindus, is chiefly Sunni, will familiarize the Dards with the notions of orthodox Muhammadans and will tend to substitute a monotonous worship for a multiform superstition. I have already noticed that, in spite of the exclusiveness of Hinduism, attempts are made by the Maharaja of Kashmir to gather into the fold those races and creeds which, merely because they are not Muhammadan, are induced by him to consider themselves Hindu. For instance, the Siah Posh Kafirs, whom I venture also to consider Dards, have an ancient form of nature-worship which is being encroached upon by Hindu myths, not because they are altogether congenial but because they constitute the religion of the enemies of Muhammadans, their own bitter foes who kidnap the pretty Kafir girls and to kill whom establishes a claim among Kafirs to consideration. In the same way there is a revival of Hinduism in the Buddhist countries of Ladak and Zanskar, which belong to Kashmir, and ideas of caste are welcomed where a few years ago they were unknown. As no one can become a Hindu, but any one can become a Muhammadan, Hinduism is at a natural disadvantage in its contact with an advancing creed and, therefore, there is the more reason why zealous Hindus should seek to strengthen themselves by amalgamation with other idolatrous creeds. To return to the Mussulman Dards, it will be easy to perceive by a reference to my ethnographical vocabulary what notions are Muhammadan and what traces there remain of a more ancient belief. The "world of Gods" is not the mere عرش which their professed religion teaches, nor is the "serpent world" a Muhammadan term for our present existence. Of course, their Maulvis may read "religious lessons" and talk to them of Paradise and Hell, but it is from a more ancient source that they derive a kindly sympathy with the evil spirits "Yatsh," credit them with good actions, describe their worship of the sun and moon, and fill the interior of

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

mountains with their palaces and songs. Again, it is not Islam that tells them of the regeneration of their country by fairies—that places these lovely beings on the top of the Himalayas and makes them visit, and ally themselves to, mankind. The fairies too are not all good, as the Yatsh are not all bad. They destroy the man who seeks to surprise their secrets, although, perhaps, they condone the offence by making him live for ever after in fairy-land. Indeed, the more we look into the national life of the Dards the less do we find it tinctured by Muhammadan distaste of compromise. Outwardly their customs may conform to that ceremonial, but when they make death an opportunity for jokes and amusement we cannot refuse attention to the circumstance by merely explaining it away on the ground that they are savages. I have noticed the prevalence of caste among them, how proud they are of their Shin descent, how little (with the exception of the more devout Chilâsis) they draw upon Scripture for their personal names, how they honour women and how they like the dog, an animal deemed unclean by other Muhammadans. The Dards had no hesitation in eating with me, but I should not be surprised to hear that they did not do so when Mr. Hayward visited them, for the Hinduized Mussulman servants that one takes on tours might have availed themselves of their supposed superior knowledge of the faith to inform the natives that they were making an improper concession to an infidel. A good many Dards, however, have the impression that the English are Mussulmans—a belief that would not deter them from killing or robbing a European traveller in some districts, if he had anything "worth taking." Gouhar-Amân [called "Gôrmân" by the people] of Yasin used to say that as the Koran, the word of God, was sold, there could be no objection to sell an expounder of the word of God, a Mulla, who unfortunately fell into his hands. I did not meet any real Shin who was a Mulla,* but I have no doubt that, especially in

* I have already related that a foreign Mulla had found his way to Gilgit, and that the people, desirous that so holy a man should not leave

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

Hunza, they are using the services of Mullas in order to give a religious sanction to their predatory excursions. I have said that the Dards were generally Shiahs—perhaps I ought not to include the Shiah Hunzas among Dards as they speak a non-Aryan language unlike any other that I know*—and as a rule the Shiahs are preyed upon by Sunnis. Shiah children are kidnapped by Sunnis as an act both religious and profitable. Shiahs have to go through the markets of Bokhara denying their religion, for which deception, by the way, they have the sanction of their own priests.† Can we, therefore, wonder that the Mulái Hunzas make the best of both worlds by preferring to kidnap Sunnis to their own co-religionists? A very curious fact is the attachment of Shiahs to their distant priesthood. We know how the Indian Shiahs look to Persia; how all expect the advent of their Messiah, the Imám Mahdi; how the appointment of Kazis (civil functionaries) is made through the Mujtehid [a kind of high priest] and is ratified by the ruling power, rather than emanate direct from the secular authorities, as is the case with Sunnis. The well-known Sayad residing at Bombay, Agha Khan, has adherents even in Dardistan, and any command that may reach them from him [generally a demand for money] is obeyed implicitly. Indeed, throughout India and Central Asia there are men, some of whom lead an apparently obscure life, whose importance for good or evil should not be underrated by the authorities. [See my "Hunza and Nagyr Handbook, 1893."]

What we know about the religion of the Siah-Posh

them and solicitous about the reputation that their country had no shrine, killed him in order to have some place for pilgrimage. Similar stories are, however, also told about shrines in Afghanistan. My Sarini speaks of shrines in Nagyr, Chilás and Yasin, and says that in Sunni Chilás there are many Mullahs belonging to all the castes—two of the most eminent being Kramins of Shatiál, about 8 miles from Sazin. About Castes, vide page 62.

* I refer to the Khajuná, or Burishki, a language also spoken in Nagyr and a part of Yasin, whose inhabitants are Dards.

† I refer to the practice of "Taqqiah." In the interior of Kabul Hazara, on the contrary, I have been told that Pathan Sunni merchants have to pretend to be Shiahs, in order to escape being murdered.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

ready to take a tin containing pork and could scarcely be restrained till "lawful" food was brought to them by my servants. Men were forced to go with the troops. One Hakim Ali Shah, a teacher at Amritsar, was compelled to serve as a physician, a post to which he had no other claim, except that his name happened to be "Hakim." I rescued him. A virulent fever was destroying the troops at Gilgit, who, even after the siege of the fort had been raised, were liable to be shot down by prowlers from the tribes within a few yards of the fort. I ordered the fort, etc., to be cleaned and, although myself in danger of life from my Kashmir friends, if not from the tribes, I insisted on my orders being obeyed, the assumption of an authoritative tone being often a traveller's only chance of safety among Asiatics. I distributed medicine among the troops and was afterwards told in Durbar by the Maharajah that some medicine which I had sent to Wazir Zoorawra, who was then on his Dawyl expedition, had saved his life.

---

Since then, the Dards have made the acquaintance of diseases for which there was not even a name in 1866. I refer chiefly to cholera and syphilis, which Kashmiri and Indian troops have introduced. Simultaneously, the indigenous methods of treatment, which are full of lessons for the impartial learner, are dying out. Industrial handicrafts, historical superstitions or reminiscences, national feasts which existed in 1866 exist no longer, and what exists now will soon vanish before the monotony of orthodox Muhammadanism and the vulgarity of so-called European civilisation. "*Und der Götter Instt Gerümmel, Hat vglaich das stille Haus gefüllt.*" The fairies and prophetesses of Dardistan are silent, the Thum of Hunza no longer brings down rain, the family axes are broken, the genealogies have been destroyed, and the sacred drum is heard no longer. The quaint computations of age, of months, seasons, years and half-years, and the strange observations of shadows thrown at various times are dying out or are already dead. Worse than all for enquiry into ancient human history, the languages which contain the words of "*whatever was,*" are being flooded by foreign dialects, and what may survive will no longer appeal to the national understanding. This result is most lamentable as regards Hunza, where the oldest human speech still showed elementary processes of development. I fear that my attempt to commit, for the first time, to writing, in an adapted *Persian* character, the Khajuna language, has only been followed in a document of honour which the venerable Chief of Nagya sent me some years ago. Already do some European writers call him and his people "ignorant" when their own ignorance is alone deserving of censure. I deeply regret that the friendship of so many Dard Chiefs for me has made them unsuspicious of Europeans, and may have thus indirectly led to the loss of their independence, but I rejoice that for over twenty-five years I have not attracted the European adventurer to Dardistan by saying anything about Pliny's "*fortissimi sunt Dardæ*," except in Khajuna Ethnographical Dialogues in the "Hunza-Nagya Handbook," which explorers were not likely to read. Now others have published the fact, but not the accompanying risks.

As Kandia is inserted, Nagya pious, Chilas puritanical, and all true Dard tribes essentially peaceful and virtuously republican, so, no doubt, Hunza was the country of free love and of raiding, that had ceased in 1865, which we gratuitously revived (see Appendix I.). I doubt, however, whether

# APPENDIX VI.

## A ROUGH ACCOUNT, COLLECTED IN 1866, OF ITINERARIES IN THE "NEUTRAL ZONE" BETWEEN CENTRAL ASIA AND INDIA. By Raja Khushwaqtia and Dr. G. W. Leitner.

### Route I.

From Gilgit to Kabul, viâ Darayl, Tangir, Kandia, Ujh, Torwal, Swat, Dir, Maidán, Jandúl, Bajour, Mamuzai, Pushái, Kunár, Jalálabad, Kabul.

Gilgit to Sherrila, 9 kúrha (rough) kós * (18 miles), ruled by Ism Bahadur's son, Raja Akbar Khan, under Kashmír, a faithful ally, contains 70 zemindars' (peasants') houses on the Yasin river.

Sherrila to Patári (is uninhabited), over a ridge Pir (17 kurha kós) called Banzir, which is a pleasure on which the Darayls graze their flocks in the spring.

Patári to Yasnoor (12 kurha kós), road stony and jungly. Yasnoor is a village of Darayl of one hundred houses, occupied by zemindars who have cattle, sheep, goats, and buffaloes (which are not found in Badakhshan). The ground produces much white maize (from which bread is made), wheat, barley, grapes growing to a gigantic size, nuts, etc. There is excellent water, but it is very cold. The people are Sunnis, and speak Shind (the dialect of Chilás). [The Shins appear to have been a Hindu tribe expelled from Kashmír territory and converted to a sort of Mohammedanism, both Shiah and Sunni. They are the highest caste in Dardistan; but, instead of the Babylonical veneration for the cow, they abhor everything connected with it—its flesh and milk—and only touch its calf at the end of a prong.] Yasnúr has two mosques, and Mullas who understand Arabic well. The Darayls are very religious, and attentive to their ceremonial practices. The remainder of Darayl runs past it.

Yasnoor to Mankial, 3 kurha kós, a plain easy march through a prairie. Mankál has two forts, one of which has about 300 houses, and is called Dirkana; and the other, Mankál proper, which has 300 houses and an old Mosque. Mankál is surrounded by forests. When the Kashmír troops reached Mankál, the Darayls, after fighting, burned down their old fort rather than surrender. There are many Mullas and disciples there, some coming from Peshawar, Swat, etc.

Mankial to Sawarghái, 3 kurha kós, over an inhabited plain. The fort contains 800 houses. A great elder (Djadoorun) called Kalashmír resides there, whom all the Darayls respect and follow, although there are many other Djadoorun, like Mingbáshees (tribes, mayors), in Kashmír villages. He is wise and rich, possessing, perhaps, in addition to cattle,

* A kós is a measurement of distance varying from 1 to 4½ miles, and often depending on the speaker's imagination due to localities unacquainted as to other means. "Kurha" and "pukka," for "rough, unfinished" and "thorough," respectively, are terms well known to Anglo-Indians. "Kurha" and "pukka" are generally spelt "kutcha" and "pucka."

In Lockwood 1-5 (1950-54) 1959 AV3 Dard AV3

The matter I have to present came to me largely fortuitously. My own interests lay in matters linguistic, and my immediate object was to obtain knowledge and specimens of the local languages. These languages are, of course, unwritten.

My principal method in such cases has been to get the people to tell me current popular tales and legends, and to give me accounts of local customs and beliefs, and to write them down to their dictation.

The content of my language material may therefore present subject of interest to folklorists, but it has not been collected with the critical knowledge or care of an expert folklorist.

Material thus casually collected is bound to present contradictions, ambiguities, and possibly misunderstandings, when it is not set in the firm frame of a story.

In regard to the terrain with which we are concerned, it is enough to recall that it is situated in the extreme north of India, to the north-west of Kashmir, in one of the loftiest mountain tracts of the world: the meeting point of the Hindu Kush and Karakoram ranges, where peaks and even ranges of 20,000 feet are a commonplace. The physical features are such as to favour isolation, a condition difficult of attainment in a continental country. Access for foreign influences must always have been difficult and restricted.

Even in recent times with the advent of the Pax Britannica, the partial establishment of foreign administration, and the construction of traversable roads, there has been no overwhelming inflow of exogenous influences, only a gradual infiltration. Thus old-standing beliefs and customs have not been subjected to any violent assault by modern disintegrating forces.

Isolation, however, is never more than relative.

In the case of Gilgit, at some unknown time, probably not more than 500 or 600 years ago, Islam gained admittance and sooner or later became the sole recognized religion in the region. Islam is a whole cultural system in itself,

Rc Lawimer L-3 (1930-34) 1930 AV3 Dast AV3

providing everything from popular tales and domestic ritual upwards, and its effects on the outlook of any unvitiated people must be immense.

Again a new period of foreign influence opened in the nineteenth century, first with the incursions of the Dogra rulers of Kashmir, resulting in partial occupation and administration, and later, in 1892, by the establishment of British general control in the rest of the country.

There are three principal languages in use in the Gilgit area: Burushaski, Shina and Khowar. Burushaski is the language of the people of Hunza Nagir, and a dialect of it is spoken by the inhabitants of Yasin. Shina is the language of the majority, current, in various dialects, over the greater part of the Gilgit Agency, as well as in Darel and Tangir to the south. It is an Aryan language. Khowar is also of that stock and is the language of Chitral. It is spoken in the western districts of Gilgit, Ghizar, and part of Kuh, and as a secondary language in Yasin.

How far there are to-day any definite ethnical distinctions in the population corresponding to these different languages is an open question. There has certainly been considerable mingling through intermarriage and individual migration, but there are at present insufficient data for solving the ethnological problems of the Gilgit region. When in Gilgit I secured anthropometric measurements of some 600 men from the various districts, and it is possible that if these are ever worked out by some competent anthropologist they may afford grounds for intelligent guessing.

The material of which I am going to make use reached me chiefly through the medium of Shina: that is, it represents the beliefs of the Shin and Yashkun speakers of Shina. To a lesser extent I shall be able to refer to corresponding beliefs existing among the Burushaski speakers of Hunza and Nagir. It is significant that the names of several of the principal supernatural actors are different in the two languages, for this means that even if the two linguistic communities derive

St Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

121 from a common racial source these supernatural beings have
197 been long enough in the possession of each to acquire
● 771 independent existence in its language. This of course
171 probably represents an inversion of the facts. It is safer on the whole to assume independent origins and gradual assimilation through contact and social fusion.

197 It appears to me not an impossible theory that of the two
563 great sections into which the Shina-speaking population
194 is divided, the socially inferior Yashkuns represent the earlier population who probably shared the language and culture of the surviving Burushaski-speaking peoples, while the Shins were an invading and conquering race who imposed on the Yashkuns their language and probably took over from them some of their beliefs.

[532] The Khowar in the western districts is due probably to the extension of the Chitrali population beyond the political and natural borders of Chitral, reinforced by intermarriage which goes on at the present day, and in part to political domination in the past, which in quite recent times amounted to actual rule. Punial and Yasin are still governed by members of the Khushwakhti family of Chitral whose mother tongue is Khowar.

128 In order to facilitate the arrangement and handling of the material with which we have to deal, it is necessary to adopt some system of classification of the Supernatural. I am not in a position to offer any scientific scheme, but a very rough grouping will suffice to serve our needs.

From one point of view we may regard the Supernatural as represented :—

1. By Animate Beings possessing certain supernatural powers or qualities, e.g. demons, witches, etc.

2. By Qualities or Virtues pertaining to, or affecting inanimate objects, exhibited in magical or irrational processes and properties.

With the latter category, comprising examples of sympathetic and contagious magic, the working of the evil

In Lorimer L-S (1920-34) 1929 AV3 Dard AV3

there by the local people till a few years ago, when it was stopped, I think, by the orders of the Mir of Hunza. Animals were slaughtered there "in the name of the Bōyo".

From a story of Hunza tribal history it appears that the Bōyo were regarded as the avengers of broken oaths taken in their names. In a dispute about the ownership of land between two brothers Khuru and Khamer, Khamer proposed that the case should be decided by their taking oath. Khuru, the weaker party, who was also incidentally in the right, agreed and said: "O brother, the Sahāla Bō.in and the Hilesa Bō.in are very powerful and they are quick to wrath." But Khamer, who meditated a ramp and had no mind to be caught in this way, would not even hear this proposal out. "If we swear by them," he said, "they will work us evil." So the idea was dropped and with it disappeared our chance of learning the methods of taking oath by the Bōyo.[1]

The Bōyo now bear the stigma attaching to the gods of a superseded religion. "Bōyo-worshipper" (bōyo ā.šikinas) is now used in the sense of heathen, pagan.

There seems to be a special association between the Bōyo and trees, and the trees share in their sanctity. Whether they each have their own independent virtue, or whether the one owes its worshipfulness in any measure to the merits of the other it is impossible to say.

In the two remaining texts in which I have references to the Bōyo the associate tree plays an important part. In a statement made in Ghizr by Šāhabāz Sultān 'Ali of Nagir regarding certain popular practices at Chapēt he said: "Further they say that all the people used to assemble to do worship to a pine-tree that was there. They used to take a grey goat and slay it at the foot of the tree and a great

[1] I have here accepted the relation of Bō.in and Bōyō as singular and plural which is morphologically quite in order, and is asserted by some, though denied by other, authorities. The word bō.in seems to survive in bō.indrgus (pl. bō.in dērgaṛi) which was explained as urwāh—the spirits of the dead. Dērg, occurring in other compounds, appears to refer to a dead person.

Jr Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

frequently visited by fairies who used to make these inscriptions, as in the opinion of the Chilasis it is beyond man's power to produce such inscriptions. It is also affirmed that these fairies were seen in those days by all men, but nowadays they are visible to no one except to a great Mullah by dint of his miracles. The Bagrot people say that the carvings were inscribed on stones by the fairies on the night of "Shino Bazono;" and that on the same night the fairies frequently used to rub away the figures from one stone and to engrave the same on another.

532 174 776 778

### The Ceremony of Sri Kun.

Sri Kun is said to be the sister of Nagi Sochemi, and lived at Shankank, a village near Gudai in the District of Astore. The villagers used to present goats to this goddess and prayed before her seat for the supply of their wants. Her followers were strictly prohibited from keeping cows, or drinking their milk, and were under the impression that by so doing they were apt to lose their flocks, herds, or the produce of their lands.

776 782 262

### "Jainkish" and "Dewaro."

At Gilgit proper and in the surrounding villages there are seen two small tracts of land called "Jainkish" and "Dewaro." The former is situated on the river bank and the latter at the foot of a hill, except at some places in which they both are found at the foot of a hill. In ancient times, when Islam had not spread to these parts, the tribes used to burn the dead at "Jainkish," and a few days after they gathered and carried away the bones to "Dewaro," where they buried them in one pit. Remnants of bones still mark these places, though the traces have almost been obliterated by time. In these circumstances, however, one is not wrong in supposing that Muhammadanism is of recent growth.

361 771 764

Several old men still living at Gilgit relate that they used to play with the brass bangles and rings which they found in "Jainkish;" but to carry away such articles to their houses was considered improper. From this it appears that the dead bodies were buried with their ornaments.

[174]

### Sankar Village and a "Chinar" Tree.

There is a small populous village named Sankar in the Bagrot Valley. It is said that when this tract was lying waste, a Fakir named Shah Burya passed through and halted there for a short time. Becoming thirsty and finding no water, he prayed to God for a good supply. His prayer was granted, and a sufficient quantity of water burst forth from an adjacent hill. After a few days Shah Burya felt the heat of the sun, and planting his stick, which was of *chinar* wood, deep into the ground, prayed again to the Almighty to make it into a large *chinar* tree. This prayer was also granted, and a big tree grew, under whose shadow he afterwards used to sit. The branches of this tree are said to have been once so large and spreading that they touched the neighbouring hill about 600 yards distant, across the Bagrot Nullah. The tree was afterwards burnt by the Mongols, but after a short period five shoots sprang out from its trunk, and these are still to be seen, forming an enclosure about 30 yards wide.

languages, who differ considerably amongst themselves. As, however, there is no one name which will properly apply to the peoples and countries in question, it will be perhaps convenient to retain the names of Dard and Dardistan when speaking collectively of the tribes in question and the countries they inhabit. 101

The first 50 miles of the Kohistan of the Indus Valley is inhabited by tribes of cognate race, who still speak a variety of dialects and languages. Their distribution seems to show that they represent tribes who formerly lived apart, but have been forced by circumstances into contiguity. In addition to their own languages, Pushtoo is universally spoken, and they present the appearance of a decadent race in process of absorption by one of greater vigour. The country is somewhat poorer and less fertile than that already described. Long intervals of barren sand intervene between the patches of cultivation, the villages are smaller, much cultivable land lies idle, and all agriculture is of a slovenly description. The men are small and clean-limbed, with dark complexions, quick eye and sharp features. Women are not secluded from the public gaze. Men shave their heads in a manner more suggestive of Hindoos, and many strange customs still linger amongst them, showing that Mahommedan fanaticism is not incompatible with ignorance of the Koran. In some of the more inaccessible villages idolatry can hardly yet be said to be extinct. Instead of the loose ample garments of the Pathan, the men wear tight-fitting clothes, like the natives of Hindustan. 197 563 134 311 142 562 302 771 291

Some 15 miles above the mouth of the Kanra-Ghorbund Valley, on the right bank of the Indus, is the extensive but thinly-populated valley of Doobeyr, which extends nearly due north for a distance of about 40 miles. Five miles from the Indus the village of Ranooliyah, 200 houses, is reached; above this the habitations are scattered broadcast over the whole valley, instead of being collected into villages. The only village of any size is Jarg, 100 houses, 6 miles above Ranooliyah. From the head of the valley a road leads into the Swat Valley near Payeteh, and another into Kandia. The valley can furnish about 1,500 fighting men, and the ground, where cultivable, is said to yield excellent crops. 361 162

On the opposite bank of the Indus and above the mouth of the Doobeyr Valley are the neighbouring and rival communities of Koli and Palus, which are often spoken of as forming a single tribe. They were formerly close allies, but a feud, arising out of a dispute concerning some land to which 628

[i.e. the country of the Pathans - Analyst]

## CHAPTER VII.

### HABITS AND CUSTOMS.

NOTWITHSTANDING original tribal differences, the Shin rule in Gilgit and the surrounding valleys practically welded both conquerors and conquered into one people, distinguished only by caste divisions; and, though Mahommedanism has in some instances modified and in others abolished old customs, many of great interest still remain. Many of these, though originating in religious rites and beliefs, have now lost all connection with them in the minds of those who still practise them. It is difficult, almost impossible, now to distinguish between those which were introduced by the Shins, and those which were adopted by them from the original inhabitants; but fairly correct conjectures concerning the origin of some of them may be formed. Hunza is the country least affected by external influences, and in which the laxest form of Mahommedanism now exists, but there is scarcely any custom or observance maintained there which has not its counterpart still existing, or which till lately existed in the neighbouring valleys. In Chitral and some of the valleys to the westward, many customs seem to have partly disappeared. This may, not improbably, be due to the inhabitants having been earlier converts to Islam, or more exposed to external influences. In the valleys to the southward, like Chilas and Darel, the want of a single ruler and the stricter tenets of Soonnee Mahommedanism have contributed to cause many old customs and festivals to fall into disuse. In spite, however, of local differences, enough remains to show that a strong bond of kinship exists between all the Dard and Ghalchah tribes.

In appearance the men are light, active figures, averaging from 5 feet 5 inches to 5 feet 8 inches in height. Though well made, they are not, as a rule, remarkable for muscular development, presenting in this respect a marked contrast to the Tartar races. Notwithstanding their hardy, simple lives, they seem unequal to any prolonged physical effort. In travelling and shooting I have constantly found them knock up before

4 Acc 3 Dard Acc 2

## CHAPTER IX.

### PAST AND PRESENT RELIGIONS.

771
174

MR. DREW has shown that the stricter observance of Mahommedan customs in Gilgit dates from a very recent period, and though the tenets of Islam, owing to local circumstances, have taken firmer root in some valleys of Dardistan than in others, there are no positive records or traditions to indicate the nature of the religion which they supplanted. Circumstantial evidence, however, enables some opinion to be formed on the subject, and each religion that has in turn prevailed in these valleys has left some trace of its existence.

The Oxus Valley having been the cradle of the religion of Zoroaster, the valleys south of the Hindoo Koosh are not likely to have escaped its influence. In Wakhan there are many towers and structures which are still ascribed to the worshippers of fire, and the tradition of this worship still lingers in Yassin. The secluded easily defensible valleys of Yassin and Gilgit are so eminently suited to afford shelter from persecution to the followers of a dying faith, that fire-worship probably existed in them long after it had been driven out of neighbouring, more accessible, valleys. In the "Taleni" portion of the Nôo festival, of which mention has already been made, we probably see the last surviving relic of Magian worship in these countries.

Richardson, in his Dissertation, says, speaking of the ancient fire-worshippers—

"In December, on the shortest night of the year, was the anniversary of the great festival of fire, called *Shab Sindeh* (شب سده), when their temples were illuminated, and large piles of fire blazed all over the kingdom; round which the people entertained themselves all night with choral dances, and various amusements peculiar to the season."

He also says that the festival was instituted to commemorate a popular tradition—

"In the time of King Hushang (about 860 years before the Christian era) a monstrous dragon infesting the country, the king himself attacked him with stones, when one of them falling with prodigious force upon

another, struck fire, set the heritage and surrounding trees in a blaze, and consumed the dragon in the flames."

The resemblance of this legend to the Gilgit legend, which the Talemi festival is said to commemorate, is noteworthy. Under the story of the tyrant Shiri Buddum devouring his subjects is probably concealed an ancient sun-myth. Long after the original meaning of the celebration had been forgotten, the custom no doubt survived; and advantage may have been taken of the festival to get rid of an unpopular ruler. In the legend of Shiri Buddum it is represented that his life could not exist fire, and he is still fabled as dwelling in a place surrounded by glaciers, from which he attempts to issue yearly at the time of the winter solstice, but is driven back by the Talemi.

Later, when Buddhism was the prevailing religion on both sides of the Hindoo Koosh, this religion doubtless established itself as strongly in the southern valleys as it did in the lateral valleys of Badakhshan. Scattered through the Gilgit and Astor Valleys are a number of remains of Buddhistic stone altars, similar to those which are so common in Ladakh. The name "Mani," which is still applied to them, sufficiently attests their origin, though the natives attempt to account for them by saying that they have been made for the convenience of people carrying loads to rest their burdens upon. Their size, position, and the labour that has evidently been expended on them, however, forbid the acceptance of the reason assigned. They are sometimes also called "Thalli."

Both in the Sai and Gilgit Valleys there are several remains of Buddhist Chortens, whose forms can still be distinctly traced. Those in best preservation are about 3 miles from Gilgit, near the village of Nowpoor, where there are four Chortens close together in line. The remains of a large one also exist in the Chitral Valley, on a conspicuous point near the road not far from the valley of Koosht, and are still spoken of as "the idol." Closer research would no doubt discover many others.

Near the village of Nowpoor,[1] not far from Gilgit, is a large rock-cut figure of Buddha. The angle of the fork of two ravines is formed by an abrupt perpendicular rock several hundred feet high. In the very point of the angle the rock has split, so as to leave a broad smooth surface 50 feet from the ground. On this a deep slot has been cut in

[1] Nowpoor would appear to have been formerly the more important place of the two, its earliest name was Amoor.

[Cf. category 116, plate facing p. 108 -- Analyst]

4 Adj Dard Adj

771 174 172 the form of a pentagon, within which the figure has been cut in intaglio. The face is exactly as represented on well-known figures of Buddha, with ear ornaments and head-dress, thick compressed lips, smooth face, and impassive countenance. The figure is erect, and is about 9 feet high. The upper part, which is in excellent preservation, is well finished, the lower part is not so well executed. The right arm is held across the body with the hand open, palm outwards; the left hand hangs by the side, and holds a staff or some kind of weapon. The whole figure is exposed, but the edge of a robe or some hanging drapery is portrayed, which, with the smooth face, has given rise to the modern belief that it is intended for a female figure. The lines of the pentacle are accurately drawn and deeply cut. On the edge are deep square niches, cut at regular intervals, which may have been used to hold timber supports of a frame to protect the figure from injury. The feet of the figure are upwards of 30 feet from the ground, and it must have been a matter of considerable difficulty to execute the work in such a position.

It is probable, however, that the level of the soil below the figure was formerly higher than it is at present, for there are signs close by of the existence of an old watercourse for purposes of irrigation, part of which appears to have been carried for a considerable distance along the face of the rock in a wooden trough. This watercourse has been rendered useless by the sinking of the water-levels, probably accompanied by a sinking of the level of the adjacent soil; and, this being the case, it appears likely that, at the time at which the figure was cut, no very high platform was necessary to enable the cutters to reach the proper position. The cutting both of the figure and of the sockets, which appear to have been used for the supports of the watercourse, show a knowledge of stone-cutting quite beyond the power of the present inhabitants of the country.

771 174 Were it not for the difference in size, I should be inclined to regard this as the figure of Buddha mentioned by the Chinese traveller Fah-Hian, who visited India about A.D. 400. According to him the figure was 94 feet high, and the length of one foot 9 feet 4 inches. His route as far as Khoten is traced without difficulty, and To-li, or Tha-li-lo, must certainly be Darel or Gilgit; but the route followed between these two points is less easily identified. General Cunningham has given strong reasons for identifying Kiech-ha with Leh, thus making Fah-Hian's route to have been along the

9 A.J. Dard A.J.

course of the Indus from Leh to Dard, but the narrative shows that the great mountain range was not crossed till after leaving Kiech-ha, which must therefore have been on the north side of the mountains. Also it is scarcely possible that the travellers should have journeyed for a month along the bank of Indus, from Leh to Dard, without making mention of the river, and the first mention of it is not made till after passing Tsa-li. Moreover, the route down the Indus Valley from Leh would necessitate frequent crossings and re-crossings of the river, which would scarcely have escaped mention, and is so difficult, even in the present day, as to be only accessible to practised mountaineers, as it is not likely to have ever been used by ordinary travellers. Had Fah Hian passed through Leh on his way to India, he would naturally have continued by the route in present use through Cashmere, which he certainly did not visit. Beal identifies Kiech-ha with Kaschan, which has lately been re-discovered by Shaw; but the elevation of Kaschan is not sufficient to justify the statement that no grain except corn ever ripened there, or to procure for the inhabitants the title of "Men of the snowy mountains." Beal identifies Tsa-ho with Yarkand, while Cunningham, following Klaproth, would identify it with Cogiar. The balance of evidence is certainly in favour of Beal's view. Cogiar has not advantages sufficient ever to have made it so important a place as Tsa-ho seems to have been, and it is situated immediately at the foot of the mountains, which would be entered by the travellers on the first march after leaving the place. But the narrative states that they did not enter the mountains till four days after leaving Tsa-ho, and this would correspond well with the position of Yarkand. The twenty-five days occupied by the travellers on the road between Khoten and Yarkand gives a fair idea of their general rate of march. I should be disposed to identify Kiech-ha either with Sirikol, which in spite of its elevation was certainly an important place in those days, or with Raskam, which, though now deserted, is said to have once been the centre of a flourishing community. Each of these places would answer fairly well to Kiechha. The distances, however, judging by the number of days taken by the travellers, agree best with Sirikol, in which, therefore, I would recognise Kiech-ha. From Yarkand the travellers must have reached Sirikol by the Kooshersh route, and the Yu-hwui must have been nomad tribes, answering to the Kirghis of the present day. From Sirikol Fah-

777 ● 178

Hian and his companions must have travelled either through Hunza down to Gilgit, and so on to Darel, or, more probably, across the Pamir, which would account for the mention of their route proceeding westward from Sirikol, and into the Gilgit Valley by the Darkot Pass, as suggested by Beal. From the Gilgit Valley they would naturally take the route to Darel up the Kergah Valley, at the mouth of which is the rock figure in question. This would certainly have been their most direct route to the Punjab. Striking the Indus (Sin-tu) at the mouth of the Darel Valley, they must have followed the course of the river for several days, and reached Swat (So-ho-to) by one of the lateral routes, such as that by Ghorband.

Whether or not this be the actual figure mentioned by Fah-Hian, his account enables the date of the introduction of Buddhism into these valleys to be approximately fixed at about 150 B.C., or three hundred years after the Nirvana of Buddha.

The account now given of the figure is, that in ancient times a *Dewnee*, or female demon who preyed on men, lived in the ravine, from which she sallied forth to seize passers-by; her custom being to devour only half of her prey, that is, if she seized two men, she devoured one and left the other; if she seized one, she only ate half of her victim. One day a holy man arrived who undertook to free the country of the demon. The Demnee sallied out as usual to seize him, but by the power of the holy man was turned into stone, and fixed to the rock. Being soon after desirous of leaving the country, the holy man told the people that, to ensure the continuance of the spell by which the demon had been rendered powerless, it was necessary that at his death he should be buried at the foot of the rock, and stringently charged them to be careful to bring back his body for the purpose from whatever place in which he might chance to die.

The people of Gilgit, according to the account of their descendants, took a very practical view of the case. They said that they could not be at the trouble of searching for, and bringing back, his body from any distant place he might chance to die in, with the risk of the demon being restored to life in case of failure, so they chopped off his head there and then, and buried him as directed. At the foot of the rock is a tomb which is pointed out as that of the unlucky saint.

Buddhism was no doubt the religion of the country at the time of the Shin invasion. There seem, however, to be

D 744 178 B 744 178 D [744]

It is also a matter of accepted tradition in Gilgit, Gor, Hunza, and Nagar, that suttee was formerly practised. The dead man, with his finest clothes and his weapons girded on him was placed on the pyre, and as the fire burst up, the woman, arrayed in her jewellery and her richest clothes, leaped into the flames.

The burning of the dead ceased to be practised more than sixty years ago. One or two old men have told me that they could remember hearing it mentioned, as a not uncommon occurrence, in their youth, but none could recollect having witnessed any actual instance. So lately as in 1877, a very old man in Darel scandalised his neighbours by calling his sons to him on his death bed, and after having his arms and valuables brought to him, desiring to be burnt with them when dead. His wish, however, was not carried out. He and a man of Gor, who died twenty years ago, are known to have always refused to be circumcised, or to call themselves Mahommedans. They were probably the very last Hindoos in Donguristan. Suttee was abolished earlier, and has certainly not been practised in Donguristan for the last hundred years.

D 771 171

It is to be remarked that none of those customs, which savour so strongly of modern Hindooism, are to be found, either as now existing or as resting on former tradition, in any of the valleys to which the Shin rule did not extend; nor is the term Dongarik applied in any cases except those mentioned. The difference between some types of Hindooism and Buddhism is not necessarily very great, but the existence of customs among them, not shared by their neighbours, the establishment of a caste system, the use of the title of Ra for their rulers, and the common suffix of *Sing* to their own names, with the frequent use of Sanscrit terms, show that considerable differences exist between the Shins and their neighbours of the Swat, Punjkorah, and Chitral Valleys, with whose language their own has so much in common.

D 775 762

In spite of the more severe type of Mahommedanism which prevails, and which gathers strength year by year, idolatrous customs still survive. In every village in which Shins are in the majority, there is a large stone, which is still more or less the object of reverence. Each village has its own name for this stone, but an oath taken or an engagement made over it, is often held more binding than where the Koran is used. In several villages goats are still annually

A43 Dard A43

sacrificed beside the stone, which is sprinkled with blood, and in other places the practice has only lately been discontinued. Though the religion introduced by the Shins would appear to have been of a Brahminical type, it must have contained also a considerable amount of demon worship, as is shown by Mr. Shaw in his account of the Hasu Dards.

I have been told that when the Cashmere troops first occupied Gilgit, there was in the fort a slab of stone about 3 feet long, bearing a Sanscrit inscription. My informant told me that he had made out the words, "Ishwar ling murti," or, "the Lingum incarnation of Shiva," but that the rest of the inscription was illegible. In 1871 the fort was destroyed by an earthquake which exploded the powder magazine and reduced the whole to ruins. The present fort was erected on the same site, and the stone was doubtless built into the foundations. The names of many of the rulers and of a number of places, not only in the Indus and Gilgit Valleys, but also in the Chitral Valley, point to a Brahminical origin. Amongst the names of places may be mentioned *Isu* (Siva, *or* Mahadeo), *Shigrum* (Siva's village), *Shigrur* (Siva's priest), and *Sumo*. In the Hunza and Nagar genealogies we find the names of *Ladikkum* (the beautiful Thum), *Hurrikkum*,[1] and *Bukkalikkum*,[2] and one of the last independent Rus of Gilgit, Suleiman Khan, is best known by the name of *Gowrikkum*.[3]

With all this evidence it can scarcely be doubted that some form of Brahminism was introduced by the Shins into the Gilgit Valley, and, to a greater or less degree, wherever their rule extended. In valleys in which they were out-numbered by the former inhabitants, the result was, doubtless, a mixture of Buddhism and Hindooism, grafted on a form of demon-worship already existing in the country. The religious practices of the Hasu Dards described by Mr. Shaw, probably approach most nearly to those which formerly existed in Gilgit and the neighbouring valleys, when under Shin rule.

The Shins seem to have introduced, along with their form of Hindooism, a piece of tree-worship, which has been already described. Though no longer an object of public worship, supplications are still addressed to the *Chili*, especially by women desirous of children, by burning its branches, and it is still regarded as possessing special powers of puri-

[1] From Hari, a name for Mahadeo.

[2] Probably a corruption of *Mukkalikkum*, referring to Mukkai "the first transmigration."

[3] From Gowri, the wife of Mahadeo.

4 AVS Dard AVS Burushe AVS

D 771 174 778 fication. It plays a conspicuous part in the incantations of the Dainyals, and on a great man entering a Shin village a pan of burning Chili branches is waved before him. On certain occasions both men and women saturate themselves with the smoke, which is of a particularly pungent nature.

D 771 174 B 771 178 The custom of Chili worship does not appear to have penetrated to Hunza or Nager, nor is any trace of it to be found in the Oxus Valley, in Chitral, or among the tribes of the Swat Valley; but among the Siah-Posh it seems to exist in almost the same form as it did among the Shins. Chili wood, or Pudam, is still taken down to the Punjab to be used in Hindoo ceremonials. According to Colonel Prejevalski, the same tree is also held sacred by the Mongols and Tangutans, who burn the branches for incense during prayer time. At Hemis Shukpa, within 20 miles of Leh, a few trees of great age exist, and are held in much veneration by the Tartars of the village, though the tree is not generally an object of Tartar respect.[1] It may be that the feeling of veneration was imbibed from the Shins, whose influence must have extended nearly to Leh. It is still usual in Gilgit to sprinkle goat's blood on a tree of any kind before cutting it down.

D 771 171 B 771 171 The religion of the whole country is now some form of Mahommedanism, and in the immense knot of mountains of which Yassin forms the centre, three different types of the same religion have met, and are now striving for the mastery. From the south, Soonnee Moollahs have carried their tenets up the different valleys with more or less success. From the eastward a current of Shiah doctrines has set in from Iskardo; and from the westward the curious Maulai, or Mugloe,[2] tenets have found their way up the Oxus Valley. It is to be noticed that the subversion of Hindooism by Mahommedanism in the remoter valleys seems to have been extremely gradual, and to have been more owing to gradual conversion than to persecution.

D 771 173 B 771 173 The genealogical tables of the present ruling families of Hunza, Nager, and Gilgit, enable a fair idea to be formed of the date of the introduction of Islam into the country. Tradition records the death of the Gilgit Ra with the non-Mussulman name of Shiri Buddutt,[3] at the hands of a stranger bearing the Mussulman name of Azru, or Azor, from whom the present Ra of Gilgit, and the Thums of Hunza and Nager, trace

[1] Henderson's *Lahore to Yarkand*, page 52.
[2] The common uneducated pronunciation.
[3] The meaning of the name is perhaps "Given by Sri Buddha." —*Sri Buddha Dutta.*

their descent. Allowing twenty-five years for each generation, this would place the first appearance of Mahommedanism in Gigit at about the end of the thirteenth, or the beginning of the fourteenth century—a time when that faith had already spread over the more accessible parts of Central Asia. It is to be noted that this exactly corresponds with the time when Islam was first introduced into Cashmere, which, according to Ferishta, happened between A. D. 1313 and 1346. General Cunningham, by computing thirty years for each generation, and fifteen for the reign of each ruler, places the introduction of Mahommedanism into Khapalu about a century later.* According to one tradition Azor came from Iskardo, and in the genealogy of the Mahpon princes, a Mahommedan adventurer is shown to have established himself in that place at exactly the same time, if the same computation be allowed for the duration of a generation.

It is not, however, probable that the usurper would have been in a position to attempt the forcible conversion of his new subjects; and it may be presumed that, for a long period, his descendants contented themselves with practising their own faith, with, no doubt, greatly relaxed stringency, without interfering with that of their subjects. It is not till eight generations of rulers later, which would represent a period of two centuries, that we meet with a Mussulman Thum in the neighbouring state of Nagar. There was, probably, a fresh impulse given to Mahommedanism about the end of the sixteenth century, for it was at about that period that a Persian adventurer, the founder of the present ruling families of Chitral and Yassin, established himself in Kashkar. The names of those whose kingdom he usurped are lost, the only record being that they were of the Shahreis family, which is the name by which the Gigit rulers previous to the time of Azor were known, and which was retained by the descendants of the usurper for four generations. The Emperor Baber, writing in the early part of the sixteenth century, speaks of Chitral as forming part of Kafiristan, "in the hill-country to the north-east lies Kafiristan, such as Katter and Gebrek."† But on several occasions he distinguishes this Kafiristan from Kafiristan Pich (which is still a Kafir country), as if some difference existed between the two. It is probable, therefore, that though the faith of Islam was introduced into the country mentioned about the beginning of the fourteenth century, it was long confined to

* Cunningham's Ladak, p.
† Erskine's Memoirs of Baber, page 140.

a limited number of the inhabitants, and did not become general till the middle or end of the sixteenth century. Even then its acceptance was so irregular that it is not surprising that Hindooism has lingered on, and has only become extinct in the present day.

The tribes of the Indus Valley were exposed earlier to the fervid preaching of the Moollahs of Swat and Boneyr, and this has led to the adoption by them of the Soonnee tenets. The people of Chilas, who were always a less tractable race than their neighbours, make it their boast that, though travellers and traders are safe in their country, no Shiah ever escapes out of their hands. At Gor, also, a few miles above Chilas, the people are all Soonnees, but a lesser type of Mahommedanism prevails, and prayers were till recently addressed to the god Taibar, whose horse is sculptured on the rock near the village.

In Gilgit the population is now three-fourths Soonnee and the rest Shiah, but at the commencement of the Sikh occupation, the greater proportion were Shiahs or Moolais, and it is related that any Soonnee falling into their hands was branded with a hot iron unless he consented to become a proselyte. Those who now still adhere to the Moolai tenets, are mostly old men, who keep the fact concealed as far as possible, and call themselves Shiahs. At Soonnea, a secluded village in Yasin, the people, though professed Mussulmans, still make offerings to the god Shaitan. In several other places the names of local deities are still preserved, and objects, such as a peculiar-shaped rock near a village, are still regarded with veneration, and invoked in the registration of solemn covenants.

The influence of the Iskardo Princes introduced Shiah tenets into the north-eastern part of Dardistan, while the tenets of the Moolais have made their way from the Oxus Valley across the passes of the Hindoo Koosh. In Nagar the entire population are Shiahs of the orthodox type, and so are two-thirds of the people of Baltistan; the rest belong to the Noor Buksh sect. In Hunza, till a few years ago, Shiah tenets found many followers; now the Mear and the whole population are Moolais.

The Shiahs in these countries lament the martyrdom of the sons of Ali twice a year; once at the usual time according to the Mahommedan calendar, and again in the month of August, the season at which they say the martyrdom actually occurred.

Sth Bridge and Harbour D-8 (1954-58) 1958 Alt W. Tibetans
David AVS

be difficult to recognize, that is if those who are less so are scrupulously honest! Although they now speak a dialect of Tibetan they must at one time have had a language of their own of which one sometimes strikes peculiar remnants. At Kalatse, for instance, the branches of the pencil cedar are freshly put on one of their *lhatse* at the New Year, accompanied by the mumbling of phrases which they do not understand themselves, but which are usually remains of their own Dardish language.

Nothing, however, can be more strange than their religious arrangements. As has already been mentioned, the *Broggpa* of Hanu and also of the village of Da, which is quite near-by, is a Buddhist, but often in a Buddhist family one member must of necessity be a Mohammedan. Of a similar, but converse arrangement, a most striking example is told. We passed through the village of Bot Kharbu on our way up to Leh. Here there lives a family of Mohammedan Broggpas, but one member of this family must always be a Buddhist priest of the neighbouring monastery of Lamayuru. Now the Mohammedan is only allowed to eat the meat of an animal that has been *halladed*, that is to say has had its throat cut, whilst the butcher says "Bismillah—it is the will of God," whereas the Buddhist eats meat killed in any way, so long as he himself has not taken the life of the animal. This family avoids such complications by the simple expedient of cooking all the meat in one pot, irrespective of how the animal has been killed, then inserts a bit of stick into the cooking pot, which is said to separate off *halladed* meat from *unhalladed*, and all the Mohammedan has to be careful about is that he shall not take meat from the wrong side of the stick. Another method they have of keeping on good terms with the spirit powers of both religions is to make members of successive generations of the same family belong to the religion of Mahomet and the lamas in turn. Thus the Broggpa supplies us with another version of the Vicar of Bray story. Some authorities account

Zb Heber and Shebar D-8 (1934-52) 1936 A24 W. Tibetans
Deale AV3

for this extraordinary arrangement by the fact that originally the Dards were Mohammedans, and presumably have not been able entirely to throw off this allegiance. It is stated that in one of their villages, they actually found a burial ground; sure proof to them of a Mohammedan ancestry, for the Buddhist burns his dead, whilst it is the Mohammedan that inters. This may be a satisfactory explanation of their religious ideas, but from whence have they derived all their taboos? Thus the Broggpa must not raise fowl, nor may he eat their eggs. The cow may be employed for the ploughing of his fields, but the gods would most certainly be displeased were he to drink their milk, or even use the butter which is made from the same. In other villages the eating of fish is taboo, and by the look and smell of them washing surely must be also. In fact they know that it is "Krima med" not the custom. For some time it almost seemed to us as if vaccination was also on their list of prohibitions, for, although they had actually begged us to come for this very purpose, it took the three of us quite a long time cajoling, threatening, entreating and advising them, before they would undergo this fearful operation. At last one faced it, soon to be followed by the others, so that eventually we had quite a busy morning vaccinating. A week later this must have been a sore village, where most of the people wished vaccination had been taboo, but by then we were well away with the knowledge that, should smallpox attack Hanu, it would find the defences fairly strong.

Now let us pay a visit to the Khampas, although it wants a George Borrow to describe these gipsies of Western Tibet. Kham, from whence they come, is a province of Tibet, but when we see the numbers of them who wander over the Indian parts of the Himalayas, we begin to wonder whether any of them are left "at home." Evidently the Khampa finds it more lucrative to wander like our own gipsies than to stay on his native soil. As the bazar in Leh provides most of the things needed by the people who inhabit the upper valley of

The people of Astor and Gilgit would be surprised if they were told that they were Dards living in Dardistán, and their neighbours of Hunza-Nagar and Yasin would be equally astonished. If consulted, they would probably describe their country as Shináka, or the land of the Shins, where Shiná is the spoken language. They are an Aryan people, sturdy built, cheery, honest, frugal, and sober. They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head, round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure Shin village no one will eat fowls or touch them. They practise inoculation for small-pox, their one epidemic. The people of Astor are Musalmáns, two-thirds being of the Sunni persuasion, and the rest being either Shiahs or Maulais. There is no religious intolerance in Astor.

Drew mentions the following caste divisions: Rorus, Shins, Yashkun, Kromins, and Dums. As regards the Rorus caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the Raja caste of Dardistán. The majority of the Astoris belong to the Yashkun caste, and the Shins are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shins, according to the Census, being 7,733. The Shins are regarded with great respect by the Yashkuns and the other castes. The Yashkuns claim the Shins as their forefathers. The Shins give their daughters to Rorus and to Saiyids, but take wives from the Yashkuns. Far away in Central Ladákh, in the Hanu valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they came and its Shiná dialect, but they wear the pigtail and the Ladákhi cap. It is said that, though Buddhist by name, they really worship local spirits and demons. They practise polyandry, but they will not eat with Tibetan Buddhists, and, like the Shins in Dardistán, they hold the cow in abhorrence.

In Gilgit, as in Astor, there are few social subdivisions, for

G-India G-5 (2)(2)(2)(2)(2)

WT 166 167 D 167

persons while others acquiring land were Dalit women. These people live in Lah on the villages surrounding it and carry on trade in lumber, salt, wool, apricots etc.

(xxii) Gilgit - Several tribes from Yaghistan, Afghanistan, Chitral, Hunza, Nagar, Kashmir and the Punjab have come and settled in Gilgit. Some of the Yaghistanis have migrated to Gilgit and settled there. Others have fled from the country to escape the penalty attendant on family feuds so common among primitive and uncivilized people. Some have been driven by poverty and debt to seek in Gilgit from Yaghistan. Some of these have succeeded even in acquiring land. These people are generally industrial criminals and constitute a scourge to the local inhabitants whose morals have also been affected by nothing on account with them.

From Afghanistan, Chitral and Hunza to the N. W. F. Province have come Pathans, Shins and Yaghistanis. They chief occupations are service, labour and trade. The Punjab has contributed some Hindus and Sikhs who are mainly engaged in trade.

From the Jammu Province some Hindus have migrated as trade classes and some Gurjars have also settled in the area and follow their own calling.

A large number of Kashmiri Muslims from the provinces of Kashmir have gone to Gilgit for purposes of trade and settled there.

From Ladakh have come Baltis who are usually labourers or are employed in some sort of service. The pensions in Gilgit are generally of Balti tribe. The Baltis stay there for a year or so and return home after that period. Some of them have married local women and thereby acquired land. In Baltistan they are divided into separate tribes but here they are classed as Yaghistanis without distinction.

Trade in this part of the country holds out bright prospects which have attracted immigrants of so many castes and parts of countries to settle at Gilgit.

The local inhabitants are generally landholders who do not take kindly to labour. There are no blacksmiths, carpenters or carpenters in the country. Naturally therefore labourers from Baltistan, Hunza and Nagar and the artisans are lured into the place and return home after making money.

Before Gilgit passed under the Dogra rule there were no roads. The paths led over mountains and were perilous in the extreme. Such a state of affairs introduced immigration of the trading community though it did not present an insurmountable obstacle to agriculturists and pastoral people. After the establishment of Dogra rule communications underwent a distinct improvement which led people to keep ponies for transport. In Astore at present the people generally depend on the form of transport for a major part of their income. In Gilgit proper even carts are maintained by some enterprising men.

Labour in Gilgit especially for construction of roads and bridges comes from Hunza, Nagar, Baltistan and other surrounding villages.

Were there no Burzil pass between Kashmir and Gilgit migration would expand but the pass remains closed for nearly six months of the year and permanently bars egress and ingress. Gilgit, however, does not hold out unlimited possibilities for immigrants as the population is on the rise while the cultivable land is limited and the produce insufficient.

D 771 177

Immigration has affected the customs of the people. The Yaghistanis are Sunnis while the people of Gilgit belong to the Shia sect. In the past the Gilgit rulers observed no distinction between Sunnis and Shias and mutual

marital relations were frequent but the growing influx of Yaghistanis has served to make the distinction pronounced and now such relations are rare.

The religious life of the people of the past was simple but contact with outsiders has brought about a change in religious outlook and has made the people here to observe injunctions with greater zeal and fidelity.

Formerly the total population was divided into castes and each caste was endogamous but this practice is now giving way as a result of observance of Shikaramuddin law. The people have an exaggerated confidence and do not go out for labour or service but they have begun to send out boys to Colleges at Srinagar for prosecution of studies which marks a change.

*Frontier Dialects*—Shinaand is on all sides by high mountains except the Darelian Dialect tends to be corroded by Shinaand as a result of the problem of migration. Shinaand has superseded and search for livelihood makes men penetrate into this isolated country also. There is a periodic flow of Gujjars from Yaghistan and Gilgit to the hill grazing grounds in the upper valleys of the mountain bench that separates the two territories. This lasts for about four months in the year.

Besides Gujjars, Kishtwaris from the Lower Indus Kohistan come to these Ilaqas for trade or labour and have brought about a slight change in caste composition by inducing a few of the locals to take up trade. The number affected is, however, almost negligible though no doubt a beginning has been made.

From Hunza where the population is greater than the country can comfortably support, a few individuals come down to Gilgit in search of work, and occasionally go to India to seek employment, but the people in general are so devoted to their homes that they prefer poverty and want there to greater prosperity elsewhere.

(3) Conclusion.—We are now in a position to state the general facts about migration which follow as a conclusion from the above account.

(1) The castes that are comparatively more migratory are the Gujjars, Doghlis and Bakarwals who follow pastoral professions.

Next to these come Kashmir Muslims whose annual exodus to British India constitutes the main emigration current. The Shins and Mayar people are also more on the move than others. The Brahmans and other Hindu castes who go to the Punjab for labour are comparatively fewer in number. The trading section of the Hindus, and the Rajputs who go out in quest of service, contribute a fair share to the volume of migration.

(2) The emigrants from the State are generally males while immigrants also have a preponderance of males. Those emigrants who have permanently or semi-permanently settled in the State either as traders or ammunitions or State servants are accompanied by their families though some of them send out their families to their countries or Hunza which deviates from female population in Hunza, the case where reverse is taken. During summer the annual visitors to the Kashmir valley are accompanied by their wives but the male element is in excess.

(3) The emigration of the State inhabitants has no effect on sex fertility as the emigrations is periodic lasting from 4 to 8 months.

(4) Migration has resulted in greater fidelity to religion especially in the case of Muslims who by coming in contact with outside Muslims have begun to follow the Quranic injunctions with greater devotion. The changes effected in religious sphere in Gilgit illustrate this tendency. As regards Hindus, a liberalising of beliefs is noticeable especially as the result of Arya Samaj activity.

## VII.

### Omens.

Probably on account of the frequent attacks on Gilgit made by the chiefs of the surrounding States, certain signs and occurrences are considered to be omens among the Gilgitis. They are as follows :—

(1) If an unusually heavy rain falls at any season in Gilgit, it is supposed that the chief of Yasin will advance towards Gilgit.

(2) If innumerable kites are seen hovering over Gilgit, it is generally accepted that Gilgit is to be invaded by the Nagar people.

(3) If packs of wolves make frequent night visits into Gilgit, and inflict heavy losses among the flocks, it is affirmed that the chief of Hunza is certainly going to invade and plunder Gilgit.

(4) If the harvest be unusually abundant, it is believed that Gilgit will be attacked by the Punyal Chiefs.

## VIII.

### Lunar Eclipse.

The Gilgitis say that Grahu is the name of a giant, who is a lover of the moon. On the 14th of the lunar months, when the moon is in its full beauty, the Grahu, whenever he pleases, catches hold of the moon, leaving untouched only a part which contains a fig tree. At such time the people of these parts beat their iron pans (on which they cook bread) like drums and cry loudly, "O Grahu, we have brought a large force, beating drums against thee, leave her (the moon), or we will rush upon thee!" In the meantime the eclipse ends, and they become happy at their success.

### Solar Eclipse.

The Gilgit people say that whenever any good king dies or is banished from his country, the giant Grahu becomes angry against the sun, and darkens a whole or a part of his (the sun's) face as a sign of grief for the death or the banishment of such a good king.

## IX.

### The Creation of the World.

It is said that the earth was at first enveloped in water, which was at some places frozen, and where some Yachs (giants) had taken their abode under Yambo Hal Singh, their ruler. On a certain day they held a council for the purpose of bringing earth over the water. Their ruler said that the task was above their power but, however, he knew of a wolf called Bojare Shal who lived at a place named Milgamoh (old ice) and who, owing to his great genius, would be able to perform this work. "Provisions!" was first sent as a messenger by the Yachs, but the wolf refused to come, saying that he would not

[1] [In answer to a question regarding this name, the author of the paper informs us that the original word is *rupi*, which may also mean "fortune."—Ed.]

773 keep trust in Provision, who was a servant of everybody. On this the Yatha sent "Trust" to the wolf, and he came with him to the ruler of the Yatha. The object was explained to him and he said that a bird called Gorai Patan, who lived on the snows on the Conus Mountain, should be sent for at once. Provision was first made the messenger; but the bird declined to come; whereupon Trust was sent to him and he came to see Bojare Shal and Yamlo Hal Singh. Bojare Shal now sent for a mouse which lived close to his home. When everything was ready the wolf gave orders that Yamlo Hal Singh should stand in water as a pillar upon which Gorai Pattan should spread his wings, while the mouse by the making a hole into the ice should bring out and spread all the soil over the wings of Gorai Pattan. The orders were obeyed and the wings of the bird covered all the water, while the mouse brought out all the soil which was beneath the water. In this way the earth was turned over the water.

## X.*

### "Neelo But" (The Blue Stone).

643 778 There used to be at Gilgit a blue stone called "Neelo But," about a yard square, where the present telegraph office is situated. No king was acknowledged in the country unless he had resorted to it and prostrated himself before the stone. There and then the people adorned his head with a crown, swore fealty and tendered their allegiance. This was the day when all the better class would gather to see the new "Rá" perform all the ceremonies, and undergo all obligations considered necessary to the office of leader of the nation. This was done in order to secure their confidence by a man who was to become sole director over their destinies, among them being many who had taken an active part in bringing him to the throne and proclaiming him their chief.

When the ceremonies were over, all came one by one to kiss his hands, to receive his blessings and to bless him in return. They would then dance to the beating of drums, make merry, sing praises and recite poems describing the heroic deeds already performed by the Rá, his ancestors and others whose lives had become endeared to all by self-sacrifice in the cause of their country.

[787] The *deoya*/ (soothsayer) was not left out on this occasion, for it was necessary to foretell the future of the king and his courtiers, and to exhibit the state of ecstacy that accompanies prophecy by the soothsayer. Before being dismissed at night all present partook of a feast; some were gratified with handsome *khilats* and other distinctions; some gratified by a gesture of kindliness.

### The Ceremony of Shri Bai.

778 796 842 782 Shri Bai is the name of a goddess who, as the people say, lived on a rock at Nangam, a village in the Astore district. The rock too is called Shri Bai, and is always kept covered with branches of juniper, while an attendant called "Buh Bin" resides there to look after it. Barren women used to sacrifice goats to and pray before the sacred stone in the hope of progeny. In the hot weather, when the people had gathered their

* [See also p. 109 ante.—Ed.]

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

at the Balbè Gīri on the way to Nōmal. Several times the men who carry the mails have seen it. One time when a zamindār, Shukur Khān by name, carrying the mail approached the Balbè Gīri, a Balā came out on to the road and would not let him pass. Shukur Khān says: 'I remembered and prayed to God and blew on my body and said the Call to Prayer. Immediately the Balā left the road. I noticed its eye was in the middle of its forehead. I went along the road and it went up to the mulberry-tree at the roadside, and when I looked it disappeared. I spent the night at Nomal and early next morning came in to Gilgit.' Shukur Khān told the above story to his family."

There are other similar stories in which the apparition is called a Jinn, but it seems clear that the Jinn is of the Çhèçh variety. They merely did not happen to be related as instances of çhèçh phenomena.

It is possible that Çhèçh is in fact a sort of abstract term denoting something like "apparition" or, possibly, "fear." The use of the verb "fall" with it suggests such a significance.

## Arwāh

Ghosts, or Spirits of the Dead, whether they rightly belong to the category of the Superhuman or not, may be disposed of here. I have only two notes regarding them, both recorded in English. Çhèçh, I was told, are often associated with graveyards and so also Arwāh (Spirits of the Dead), who are said to come out and hold meetings. At one of these re-unions they were dividing up some food. To one of those present they refused any share on the ground that his relatives on earth gave no offerings of food for the dead. The ghost so penalized repudiated responsibility. He said he had a son living and they should refer to him on the subject. One wonders whether after this the son had a Çhèçh or ghost experience.

I was further told that the Spirits of the Dead come and

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

carry you far away and do you injury. They enter into the skins of dead persons and so make their appearance.

Possibly ghosts sometimes figure as Ċḥèċḥ or Jinns or are confused with them. There are tales of how people have had dealings with jinns masquerading in the forms of known human beings, but these are rather cases of the impersonation of actual living people.

## YAÇH

The name Yaçḥ corresponds to the Sanskrit *yakṣa-*. Yaçḥ are probably to be regarded as a class of Dē.ū who are in some way interested in agriculture. I was given the following statement: "At the time of the removing of the crops (from the fields) the people make *mūl* in a dish and prepare a flavouring of bitter kernels which they add to it. They do this in the name of the Yaçḥ. They then add ghee to the mūl and eat it. They say 'The Yaçḥ is eating the Yaçḥ's mūl.' If they didn't prepare the Yaçḥ's mūl they say the Yaçḥ(s) would carry off the grain and not make it prosper." The last word rendered "Yaçḥ(s)" is peculiar in form and somewhat resembles the word for "bear", but the rendering given is probably correct.[1]

A note is given that the Yaçḥ will become unconscious if it eats a bitter thing. Hence no doubt the bitter kernels.

The Yaçḥ, so far as this custom goes, might be regarded as little more than an abstraction, a fertility, or anti-fertility, spirit of some kind, but there is one story told of a very active and practical Yaçḥ. It was given me as follows: "There is a man of Gurikōt (a place near Astōr) called Rozāli. They say that a Yaçḥ has formed a friendship with the wife of Rozāli. The Yaçḥ brings grain and goods from one place and another and collects them in Rozāli's house. They say if Rozāli scolds his wife or beats her some live stock or other in his house dies. For this reason the man does not scold his wife. If anything in the house goes astray or gets lost

[1] Cp. Yaçḥōlo, p. 527, n.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

eye, rain-making, cures, and so on, I shall not here attempt to deal. 128

The first or animate category may be analysed as including :—

1. Beings whose supernatural operations are observable in ordinary daily life—the LIVING SUPERNATURAL. These may be superhuman or non-human beings, or they may be ordinary human beings.

2. Beings whose operations are chiefly found embalmed in folk tales—the "LEGENDARY" or "LITERARY" SUPERNATURAL. These may be regarded as superhuman or non-human.

At the top of the scale of the Superhuman, the GOD of Islam under his Persian name KHUDA appears to have ousted all rivals. Only among the Burushaski-speaking peoples are there traces of more primitive animal spirits, or spirits assuming animal forms, treated as objects of reverence or worship. The name under which their memory has been preserved is Bōyo. This I believe to be the plural of a singular form Bō.in, but I should just mention that this is a point on which doubt is possible. 776

Among the Ṣhiṇa speakers the principal forms of superhuman being are sometimes referred to collectively in a phrase of association as "Jinn, dē.ū, peri".

Jinn as a foreign (Arabic) word of Islamic origin is given rather a wide and vague application, but Dē.ūs and Peris can be roughly differentiated as demons and fairies.

The term Rāçḥ is generally used of inanimate protective objects, which belong to the impersonal side of magic, but in the form Rāçḥi it possesses also a personal significance. 778

Çhèçḥ is the name of an important type of apparitional supernatural. 775

Whether Ghosts, the Spirits of the Dead, are to be reckoned as human or superhuman is a nice question. They are, I suppose, in fact sub-human. They seem to be recognized under the foreign (Arabic) title of Arwāḥ, but to play no very active part in popular belief.

# LEGENDS, SONGS, AND CUSTOMS OF DARDISTAN,*

## (GILGIT, YASIN, HUNZA, NAGYR, CHITRÁL, &C., AND KAFIRISTAN).

*(Committed to writing for the first time in 1866,*
*By* DR. G. W. LEITNER,
212 *from the dictation of Dards. This race has no written character of its own.)*

### A.—DEMONS = YATSH [1] (YUECCI ?).

776 DEMONS are of a gigantic size, and have only *one eye, which is on the forehead.* They used to rule over the [177] mountains and oppose the cultivation of the soil by man. They often dragged people away into their recesses. Since the adoption of the Muhammadan religion, the demons have relinquished their possessions, and only occasionally trouble the believers.

776 They do not walk by day, but confine themselves to 823 promenading at night. A spot is shown near Astor, at a village called Bulent, where five large mounds are pointed out which have somewhat the shape of huge baskets. Their existence is explained as follows. A Zemindar (cultivator) at Grukōt, a village farther on, on the Kashmir road, had, with great trouble, sifted his grain for storing, and had put it into baskets and sacks. He then went away. The demons came—five in number—carrying huge leather-

101 * "Dardistan," or the country of the Daradas of Hindu mythology, embraces, in the narrowest sense of the term, the Shiná-speaking countries (Gilgit, &c.); in a wider sense, Hunza, Nagyr, Yasin, and Chitrál; and in the widest, also parts of Kafiristan. (See my "Dardistan," part III.)

[1] "Yatsh" means "bad" in Kashmiri.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

776 823 sacks, into which they put the grain. They then went to a place which is still pointed out and called "*Gué* Gutumé Yatsheyn gau boki," or "The place of the demons' loads at the holow"—Gué being the Shiná name for the present village of Grukŏt. There they brought up a huge flat stone—which is still shown—and made it into a kind of pan, "tawa," for the preparation of bread. But the morning dawned and obliged them to disappear; they converted the sacks and their contents into earthen mounds, which have the shape of baskets and are still shown.

## 1.—The Wedding of Demons.

776 539 A Shikari (sportsman) was once hunting in the hills. He had taken provisions with him for five days. On the sixth day he found himself without any food. Excited and fatigued by his fruitless expedition, he wandered into the deepest mountain recesses, careless whither he went as long as he could find water to assuage his thirst, and a few wild berries to allay his hunger. Even that search was unsuccessful, and, tired and hungry, he endeavoured to compose himself to sleep. Even that comfort was denied him, and, nearly maddened with the situation, he again arose and looked around him. It was the first or second hour of night, and, at a short distance, he descried a large fire blazing a most cheerful welcome to the hungry, and now chilled, wanderer. He approached it quietly, hoping to meet some other sportsman who might provide him with food. Coming near the fire, he saw a very large and curious assembly of giants, eating, drinking, and singing. In great terror, he wanted to make his way back, when one of the assembly, who had a squint in his eye, got up for the purpose of fetching water for the others. He overtook him, and asked him whether he was a "child of man." Half dead with terror, he could scarcely answer that he was, when the demon invited him to join them at the meeting, which was described to be a wedding party. The Shikari replied: "You are a demon, and will destroy me"; on which the spirit took an oath, *by the sun and the moon*, that

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

he certainly would not do so. He then hid him under a bush and went back with the water. He had scarcely returned when a plant was torn out of the ground and a small aperture was made, into which the giants managed to throw all their property, and, gradually making themselves thinner and thinner, themselves vanished into the ground through it. Our sportsman was then taken by the hand by the friendly demon, and, before he knew how, he himself glided through the hole and found himself in a huge apartment, which was splendidly illuminated. He was placed in a corner where he could not be observed. He received some food, and gazed in mute astonishment on the assembled spirits. At last, he saw the mother of the bride taking her daughter's head into her lap and weeping bitterly at the prospect of her departure into another household. Unable to control her grief, and in compliance with an old Shin custom, she began the singing of the evening by launching into the following strains:

## SONG OF THE MOTHER.

ORIGINAL:—

*Ajjeyn Birâni!*[2] *mey palise, shikk sanéy,*
(Thy) mother's Birâni! my little darling, ornaments will wear,
*Inne Buldar Bútshe angai tapp bey hani,*
(Whilst) here at Buldar Bútshe the heavens dark will become,
*Nágeri Phall Tshátshe Kani mirâni in,*
The Nagari (of race) Phall Tshátshe of Khans the prince will come,
*Téyn Mirkân málose tshé gûm bagéy,*
Thy Mirkan father-from new corn will be distributed.
*Sátti Yabeo wey bo! Shadú Malik bojum théum.*
Seven rivers' water be! Shadu Malik a going will make,
*Tey Mirkann malo Tshe gi bage.*
Thy Mirkann, father, now ghee will distribute.

TRANSLATION:—

"Oh, Birâni, thy mother's own; thou, little darling, wilt wear ornaments, whilst to me, who will remain here at Buldar Butshe, the heavens will appear dark. The prince of Lords of Phall Tshatshe race is coming from Nagyr; and Mirkann, thy father, now distributes corn (as an act of welcome). Be (as fruitful and pleasant) as the water of *seven rivers*, for Shadu Malik (the prince) is determined to start, and now thy father Mirkann is distributing ghee (as a compliment to the departing guest)."

---

[2] The father's name was Mir Khan. The daughter's name was Birani. The bridegroom's name was Shadu Malik of Nagyr, of Phall Tshatshe race, and the place of the wedding was Buldar Butshe.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

776 539 The Shikari began to enjoy the scene and would have liked to have stayed, but his squinting friend told him now that he could not be allowed to remain any longer. So he got up, but before again vanishing through the above-mentioned aperture into the human world, he took a good look at the demons. To his astonishment he beheld on the shoulders of one a shawl which he had safely left at home. Another held his gun; a third was eating out of his own dishes; one had his many-coloured stockings on, and another disported himself in pidjamas (drawers) which he only ventured to put on, on great occasions. He also saw many of the things that had excited his admiration among the property of his neighbours in his native village, being most familiarly used by the demons. He scarcely could be got to move away, but his friendly guide took hold of him and brought him again to the place where he had first met him. On taking leave he gave him three loaves of bread. As his village was far off, he consumed two of the loaves on the road. On reaching home, he found his father, who had been getting rather anxious at his prolonged absence. To him he told all that had happened, and showed him the remaining loaf, of which the old man ate half. His mother, a good housewife, took the remaining half and threw it into a large granary, where, as it was the season of Sharó (autumn), a sufficient store of flour had been placed for the use of the family during the winter. Strange to say, that half-loaf brought luck, for demons mean it sometimes kindly to the children of men, and only hurt them when they consider themselves offended. The granary remained always full, and the people of the village rejoiced with the family, for they were liked and were good people.

It also should be told that as soon as the Shikari came home he looked after his costly shawl, dishes, and clothes, but he found all in its proper place and perfectly uninjured. On inquiring amongst his neighbours he also found that they too had not lost anything. He was much astonished at all this, till an old woman who had a great reputation for wisdom,

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

told him that this was the custom of demons, and that they invariably borrowed the property of mankind for their weddings, and as invariably restored it. On occasions of rejoicings amongst them they felt kindly towards mankind.

Thus ends one of the prettiest tales that I have heard.

## 2.—The Demon's Present of Coals is Turned into Gold.

Something similar to what has just been related, is said to have happened at Doyur, on the road from Gilgit to Nagyr. A man of the name of Phûko had a son named Laskirr, who, one day going out to fetch water was caught by a Yatsh, who tore up a plant ("reeds" ?) "phuru" and entered with the lad into the fissure which was thereby created. He brought him to a large palace in which a number of goblins, male and female, were diverting themselves. He there saw all the valuables of the inhabitants of his village. A wedding was being celebrated and the mother sang:—

Gúm bagé déy, Buduléy Khatúni.
Gúm bagé déy, huhá huhá!!
Gí bagé déy, Buduléy Khatúnise.
Gí bagé déy, huhá huhá!!
Motz bagé déy, Buduléy Khatúni.
Motz bagé déy, huhá huhá!!
Mô bagé déy, huhá huhá!! &c., &c.

Translation:—

Corn is being distributed, daughter of Budul.
Corn is being distributed, hurrah! hurrah! (*Chorus.*)
Ghee is being distributed, &c. (*Chorus.*)
Meat is being distributed, &c. (*Chorus.*)
Wine is being distributed, &c., &c. (*Chorus.*)

On his departure, the demon gave him a sackful of coals, and conducted him through the aperture made by the tearing up of the reed, towards his village. The moment the demon had left, the boy emptied the sack of the coals and went home, when he told his father what had happened. In the emptied sack they found a small bit of coal, which, as soon as they touched it, became a gold coin, very much to the regret of the boy's father, who would have liked his son to have brought home the whole sackful.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

## B.—"Barai," "Peris," "Fairies."

776 539 They are handsome, in contradistinction to the Yatsh or Demons, and stronger; they have a beautiful castle on the top of the Nanga Parbat or Dyarmul (so called from being inaccessible). This castle is made of crystal, and the people fancy they can see it. They call it "Shell-batte-kōt" or "Castle of Glass-stone."

### 1.—The Sportsman and the Castle of the Fairies.

Once a sportsman ventured up the Nanga Parbat. To his surprise he found no difficulty, and venturing farther and farther, he at last reached the top. There he saw a beautiful castle made of glass, and pushing one of the doors he entered it, and found himself in a most magnificent apartment. Through it he saw an open space that appeared to be the garden of the castle, but there was in it only one tree of excessive height, and which was entirely composed of pearls and corals. The delighted sportsman filled his sack in which he carried his corn, and left the place, hoping to enrich himself by the sale of the pearls. As he was going out of the door he saw an innumerable crowd of serpents following him. In his agitation he shouldered the sack and attempted to run, when a pearl fell out. It was eagerly swallowed by a serpent which immediately disappeared. The sportsman, glad to get rid of his pursuers at any price, threw pearl after pearl to them, and in every case it had the desired effect. At last, only one serpent remained, but for her (a fairy in that shape?) he found no pearl; and urged on by fear, he hastened to his village, Tarsing, which is at the very foot of the Nanga Parbat. On entering his house, he found it in great agitation; bread was being distributed to the poor as they do at funerals, for his family had given him up as lost. The serpent still followed and stopped at the door. In despair, the man threw the corn-sack at her, when lo! a pearl glided out. It was eagerly swallowed by the serpent, which immediately disappeared. However, the man was not the same being as before. He was ill for days, and in about a fortnight after the events narrated, died, for fairies never forgive a man who has surprised their secrets.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

## 2.—The Fairy who Punishid her Human Lover.

It is not believed in Astor that fairies ever marry human beings, but in Gilgit there is a legend to that effect. A famous sportsman, Kibá Lorí, who never returned empty-handed from any excursion, kept company with a fairy to whom he was deeply attached. Once in the hot weather the fairy said to him not to go out shooting during "the seven days of the summer," "Canicular," which are called "Bardá," and are supposed to be the hottest days in Dardistan. "I am," said she, "obliged to leave you for that period, and, mind, you do not follow me.' The sportsman promised obedience and the fairy vanished, saying that he would certainly die if he attempted to follow her. Our love-intoxicated Nimrod, however, could not endure her absence. On the fourth day he shouldered his gun and went out with the hope of meeting her. Crossing a range, he came upon a plain, where he saw an immense gathering of game of all sorts and his beloved fairy milking a "Kill" (markhor) and gathering the milk into a silver vessel. The noise which Kibá Lorí made caused the animal to start and to strike out with his legs, which upset the silver vessel. The fairy looked up, and to her anger beheld the disobedient lover. She went up to him and, after reproaching him, struck him in the face. But she had scarcely done so when despair mastered her heart, and she cried out in the deepest anguish that "he now must die within four days." "However," she said, "do shoot one of these animals, so that people may not say that you have returned empty-handed." The poor man returned crestfallen to his home, lay down, and died on the fourth day.

## C.—Dayall = Wizards and Witches.

The gift of second sight, or rather the intercourse with fairies, is confined to a few families in which it is hereditary. The wizard is made to inhale the fumes of a fire which is lit with the wood of the *tshili*[3] (Panjabi = Padam), a kind

[3] Elsewhere called *tshi*.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3
Chitral

lips of the cavern were closed, and the three men imprisoned in it. God converted the three into bees, whilst the two who had gone to fetch water fled towards Afghanistan. Thus were created the first honey-bees, who, finding their way out of the cavern, spread themselves and their sweet gift all over the world. This is a story told by the Kalàsh, who credit that the bees are there still; but it is difficult to get there, as the mountains are too steep, but people go near it and, pushing long rods into the hole of the cavern, bring them back covered with honey. 539

---

Shah Muhterim is the name of a Mehter (prince), the grandfather of the present Ruler of Chitrár. This Mehter was renowned as a descendant of fairies, who all were under his command. Whatever he ordered the fairies did. Thus some time passed. From among them he married a fairy, with whom he made many excursions. She bore him a daughter. Seven generations have passed since that time. This daughter is still alive, and her sign among the fairies is that her hair is white, which does not happen to ordinary fairies. Whenever a descendant of the Shah Muhterim leaves this transitory world for the region of permanence, all the fairies, who reside in the mountains of Chitrár, together with that white-haired lady, weep and lament, and their voices are clearly heard. This statement is sure and true, and all the men on the frontiers of Chitrár are aware of the above fact. 539 776

---

THE PEOPLE OF AUJER (THE BŒOTIA OF CHITRAL). 539

There is a country "Aujer," on the frontier of Chitrár (or Chitrāl as we call it), the inhabitants of which in ancient times were renowned for their stupidity. One had taken service at Chitrár, and at a certain public dinner noticed that the King (Padishah) ate nothing. So he thought that it was because the others had not given anything to the king. This made him very sorry. He left the assembly, and reached home towards evening; there he prepared a

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

eye, rain-making, cures, and so on, I shall not here attempt to deal. 128

The first or animate category may be analysed as including :—

1. Beings whose supernatural operations are observable in ordinary daily life—the LIVING SUPERNATURAL. These may be superhuman or non-human beings, or they may be ordinary human beings.

2. Beings whose operations are chiefly found embalmed in folk tales—the "LEGENDARY" or "LITERARY" SUPERNATURAL. These may be regarded as superhuman or non-human.

At the top of the scale of the Superhuman, the GOD of Islam under his Persian name KHUDA appears to have ousted all rivals. Only among the Burushaski-speaking peoples are there traces of more primitive animal spirits, or spirits assuming animal forms, treated as objects of reverence or worship. The name under which their memory has been preserved is Bōyo. This I believe to be the plural of a singular form Bō.in, but I should just mention that this is a point on which doubt is possible. 776

Among the Ṣhina speakers the principal forms of superhuman being are sometimes referred to collectively in a phrase of association as "Jinn, dē.ū, peri".

Jinn as a foreign (Arabic) word of Islamic origin is given rather a wide and vague application, but Dē.ūs and Peri can be roughly differentiated as demons and fairies.

The term Rāçḥ is generally used of inanimate protective objects, which belong to the impersonal side of magic, but in the form Rāçḥi it possesses also a personal significance. 778

Çhèçḥ is the name of an important type of apparitional supernatural. 775

Whether Ghosts, the Spirits of the Dead, are to be reckoned as human or superhuman is a nice question. They are, I suppose, in fact sub-human. They seem to be recognized under the foreign (Arabic) title of Arwāḥ, but to play no very active part in popular belief.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

Yaçh and Yaçhōlo still receive attention in some localities as beings capable of affecting, at least prejudicially, the prosperity of the crops.

Turning now to purely human beings gifted with supernatural powers we find two principal representatives of the class: the Rū.i, a woman displaying some of the powers and proclivities of the western witch, and the Daiyāl, a person of either sex endowed with some of the abilities of the Seer and the Prophet.

There are also the possessors of the Evil Eye, voluntary or involuntary, and there are persons who have acquired powers of magic (çhíla).

These are the principal Dramatis Personæ of the Living Supernatural, and we may now examine their peculiarities in somewhat greater detail, paying particular attention to the Bōyo, the Çhèçh and the Rū.i, partly because of their peculiarly local character, as signalized by their purely local names, and partly because of their intrinsic importance.

## The Bōyo

From what I have heard I very much fear that the Bōyo are as extinct as the Dodo, though their extinction is of quite recent date. Perhaps they still enjoy a tenuous existence in the phantasies of some elderly minds, but their day of power and awe is gone, their cult is dead, and their worshippers departed.

From the little information I possess it appears that the Bōyo lived in holes at the foot of trees and rocks; and that the cult consisted in placing offerings of food, at any rate of slaughtered animals, at the foot of the trees, i.e. presumably in front of the holes. The Bōyo themselves are described as puppies, or animals like puppies, so this simple form of worship was probably acceptable to them. At any rate they condescended to eat the offerings.

There were Bōyo in residence at a spot on the Dadimo Lat a little above the fort at Hīndi, and the cult was maintained

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

there by the local people till a few years ago, when it was stopped, I think, by the orders of the Mīr of Hunza. Animals were slaughtered there " in the name of the Bōyo ".

From a story of Hunza tribal history it appears that the Bōyo were regarded as the avengers of broken oaths taken in their names. In a dispute about the ownership of land between two brothers Khuru and Khamer, Khamer proposed that the case should be decided by their taking oath. Khuru, the weaker party, who was also incidentally in the right, agreed and said: " O brother, the Sahāla Bō.in and the Hālasa Bō.in are very powerful and they are quick to wrath." But Khamer, who meditated a ramp and had no mind to be caught in this way, would not even hear this proposal out. " If we swear by them," he said, " they will work us evil." So the idea was dropped and with it disappeared our chance of learning the methods of taking oath by the Bōyo.[1]

The Bōyo now bear the stigma attaching to the gods of a superseded religion. " Bōyo-worshipper " (bōyo ū.llikinas) is now used in the sense of *heathen, pagan*.

There seems to be a special association between the Bōyo and trees, and the trees share in their sanctity. Whether they each have their own independent virtue, or whether the one owes its worshipfulness in any measure to the merits of the other it is impossible to say.

In the two remaining texts in which I have references to the Bōyo the associate tree plays an important part. In a statement made in Ṣhiṇa by Ṣūbahdār Sulṭān 'Ali of Nagir regarding certain popular practices at Chaprōt he said: " Further they say that all the people used to assemble to do worship to a pine-tree that was there. They used to take a grey goat and slay it at the foot of the tree and a great

[1] I have here accepted the relation of Bō.in and Bōyō as singular and plural which is morphologically quite in order, and is asserted by some, though denied by other, authorities. The word bō.in seems to survive in bō.indūrgas (pl. bō.in dūrgaṣho) which was explained as arwāh—the spirits of the dead. Dūrg-, occurring in other compounds, appears to refer to a dead person.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

number of puppy-dogs used to come out from below the pine-tree to drink up the blood. Then the people used to return rejoicing to their homes, and they used to say among themselves: 'Thanks be! Sickness has now been banished from the country.'"

Here it is stated that the tree is worshipped, but that the puppies, who are doubtless the Bōyo, benefit by the sacrifice. The Ṣhiṇa word (śilō.iki) translated "worship" means to *appease, placate, propitiate, do reverence to.* It corresponds, I think, exactly to the Burushaski *-īlikinas.

The other story, in which the tree also plays the chief rôle, is briefly as follows: From ancient times there was a juniper-tree in the garden of a man called Keramo Derbēsh, living in the Dirāmiting territory. It was called the Bōyo Gal ("the Bōyo juniper"). It was said that formerly animals like puppy-dogs used to come out from under it. The people of Hunza used to propitiate them (worship them) and called them Bōyo. One, Bagher Tham, cut the tree down and he promptly died. Two stems grew up again from the stump and a man cut one of them. He became paralyzed and an idiot. A man called Māmad Shāh cut down the remaining bough and he fell down from a cliff and was killed. After this people were afraid to meddle with the tree and left one bough (not previously mentioned) unmolested. Last year and the preceding year (1923 and 1922) this bough was still *in situ*. Then a man Yaqīn, obtained permission from the owner (Keramo Derbēsh) and cut it down and took it to his house. But he had a dream in which a number of women appeared to him and asked him why he had cut down their juniper-tree, and intimidated him. In view of past history he became alarmed and returned the juniper bough to its original owner, Keramo Derbēsh, in whose house it now lies, for no one will venture to burn it.

Here we are left wondering whether there was any connection, other than topographical, between the juniper and the

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

Bōyo, and whether the ladies who resented the ill-treatment of the tree were an original dream-invention of Yaqīn's or were personages already known to the public. 776 775

This is all the information I can give about the Bōyo. As far as I know they have no counterpart in the present-day beliefs of the Shina-speaking peoples.

We next come to the association of the JINN, DE.O, PERI. The name Jinn, as already stated, is not an authentic local title, but has been derived from Islamic sources. It is used rather vaguely for all beings of the apparitional order. The popular mind is probably not very clear about the exact nature of all the supernatural phenomena which it encounters, and welcomes a non-committal term carrying all the flavour of high religious sanction. There are many stories in which Jinn appear, and it is probable that the foreign name has brought with it some foreign conceptions and associations. I am inclined to regard them with suspicion, though in the main I believe them to be merely re-christened Cḥēcḥ and perhaps Dē.ōs. 776 777

Another foreign (Arabic) term, Balā, seems to be used even more vaguely for evil spirits or demons whose presence you suspect or perceive, but whom you have not yet clearly seen and to whom you cannot put a name.

On the other hand a third foreign (Arabic) name, Shaiṭān, seems to carry with it a more definite personality. Shaiṭān is a leader among malignant and malicious spirits, at least a demon with an individuality, the Devil, Satan. He is probably a foreign intruder. On these foreign or denationalized Devils whose antecedents are somewhat suspect I shall not here spend time.

I may just mention by way of illustration that if after "concocting" magic, a process which takes forty days, you then sit down in the open and draw a line round yourself on the ground, a Jinn will appear and try to frighten you. If you keep up your courage other Jinns, Dē.ōs and Peris will come and try to frighten you. Finally if you remain firm 776 789

2: Lautner L-3 (1920-24) 1929 AV3 Dard AV3

the King of the Jinns, Dē.ōs and Peris himself appears, confesses that he is in your power and enquires your wishes —and so on.

I think it is a pure coincidence that where I have the term Balā it occurs usually in conjunction with horses. A groom and a horse—both later in my service—had a thrilling experience with a Balā which it would take too long to relate here, but the principle involved was elsewhere stated to me as follows: "If one mounts a horse at night and rides anywhere, then if the horse sees a Balā it will refuse to go forward. If at this moment the rider looks over the horse's head between its ears the Balā will be visible to him."

The more frivolous character of the Devil, Shaiṭān, is shown in the following: If in certain circumstances you can snatch the cap off the Devil's head and take refuge in a masjid and avoid his efforts to seize you by the seat of your trousers and go off with them, then if you put on the Devil's cap you will be able to see him, but he will not be able to see you and others will not be able to see either you or him—a piquant if not very useful situation.

If these foreign—Arabic—names could be eliminated, as I confess I should like, I think it would be found that most of the beings rendered innominate, would readily gain admittance to the ranks of the Chēch and the Dē.ōs.

## Dē.ō

The name Dē.ō, akin to the Sanskrit *deva-*, may be regarded as a legitimate Ṣhiṇa word. At any rate, its source need not be sought in Islam or Islamic influence.

Dē.ōs play a prominent part in the folktales of the country as demons, ogres, etc., usually of maleficent proclivities, but they also descend into legendary history. In the latter situation they probably represent a once locally dominant race which has died out or been absorbed. But that is probably only a later identification. Their origin must lie in or before the Folktale period which is presumably much

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

earlier. This, however, is not the place to deal with the Dē.ū of myth or legend.

The Dē.ū of to-day is a shadowy and illusive being, scarcely to be isolated from the group of Jinn-dē.ū-pēri. He is evidently not endowed in the popular consciousness with a very definite or vivid personality. Demonic possession is usually attributed to Jinns, but it is noteworthy that there is the expression *dēcē.i dakḫal ṣḫātin*, denoting possession by a Dē.ū.

We know something of the general habits of the Dē.ū, which they share with their supernatural colleagues the Jinns and Peris. For instance, I have the following note among others: "At the time when the mulberries are ripe people do not eat them at midday. They say that Dē.ūs and Peris throw people down (from the trees at that hour)." It should be explained that people, especially children, climb into the trees to eat mulberries and other fruit, and that there are often accidents and broken limbs due to their falling down.

Again: "In summer-time Jinns, Dē.ūs, and Peris live in the open country. In autumn they come to inhabited places." And: "At the time when a woman has given birth they do not keep an adze close by in the house. If there is an adze at hand, and if it goes by night and opens the door and brings the Dē.ūs, Peris, and Rū.is into the house, then the woman suffers injury." Why adzes go and open the door is duly explained (cp. p. 529).

It is possible by the "concoction of magic" followed by other rites to make the Jinns, Dē.ūs, and Peris subject to one. There was a man known as the Chīlègi Saiyid living a few years ago, and probably still alive, who had achieved this.

Such general facts could be multiplied, but I can recall no Ṣḫina account of any definite individual Dē.ū taking part in any actual exploit at the present day.

In Burushaski there is a word Pfūt (plural Pfūtū or Pfūtants) which is interpreted as Dē.ū or Jinn.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

In a long story the titles Būrum Pfūt and Dī.u Safīd, the "White Dīv", are used indifferently for a beneficent Dīv, but the story itself must be regarded as a foreign importation.

There is, however, another genuine local story in which Pfūtū play a principal part. The narrator explained them as Jinns, but the story must go far back to long before the time when the word jinn was known in the country, and Dē.ū would seem to be a more appropriate rendering. In this story a man had lost his goat and in searching for it he saw a light and came upon a party of Pfūts engaged in revels. He joined in their dancing and in the feasting which followed it. After the feast the Pfūts collected the skin and bones of the animal which they had eaten. The man concealed the rib which had fallen to his share and the Pfūts replaced it by an artificial wooden rib. Then they shook the bones up in the skin and a goat came to life. The man recognized it as his missing property. When he got home he found the goat awaiting him there, and when he slaughtered it he found it had a wooden rib. During this experience he learnt one of the Pfūts' tunes. It is still known and played in Hunza.

One curious point about this story is that the Pfūts were either indifferent to the presence of a human being, or oblivious of it, and there is no clue to their usual attitude towards man.

The Burushaski Dangalaṭas, and, in some aspects, the Bīlas, are probably to be regarded as female Dē.ūs.

## Peri

When we come to the Peris we are on somewhat firmer ground. We know a good deal about their characteristics, and they do still on occasion enter into relations with human beings.

The resemblance of the word "Peri" to "fairy" is of course purely accidental, but there are actually points of similarity between Peris and western fairies, whether or not there is

2: Lorimer L-3 (1920-24) 1929 AVS Dard AVS

any blood relationship. The name is identical with the Persian word represented in Avestan by *pairika* to which there seems to be no recorded parallel in Sanskrit, but it is conceivable that in Ṣhiṇa it is an original and not a borrowed word.

However this may be, the Peris are quite firmly established under that title in popular belief in Gilgit, Chitrāl, and among the Paṭhans. The word is known in Burushaski, both in foreign stories and as a complimentary epithet for women and boys, but I have come on no Peris in the definitely local stories of Hunza and Nagir.

The Peris of the Ṣhiṇa-speaking peoples are of both sexes. The female is called a Peri and the male a Periān. They are not spoken of as "little folk", and appear in general to resemble human beings. They eat "pillau", as is attested by Pashūs (anti-witches) and others who have seen them. Their eyes are said to be vertical, that is with the axis set vertically. I fancy they have only one eye placed in the middle of the forehead as is recorded of Jinns and others, but I cannot quote authority for this. They can fly; but if cow-dung is thrown on a Peri, or if its clothes are held in the smoke of a cow-dung fire it becomes unable to move. This point is illustrated in a Burushaski story, which is, however, of foreign origin. I have only one instance of a Peri with a name: a Peri called Mādi is said to live on the mountain of Diāmer (Nanga Parbat).

Peris wear green clothing and consider that they have exclusive rights in that colour. Hence we are told: "If anyone puts on green clothes it is said that the Peris get angry and snatch at the man and crush him. The reason is this: the Peris say: 'Green garments are our clothing. Why have they put them on?' and they become angry."

This claim is supported by their human confidants, the Daiyāls. As witness: "Daiyāls say that when a Daiyāl dances the Peris come flying through the air and remain watching the people. The Daiyāls say, 'We understand

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

what the Peris say. We communicate it in songs to the people.' If the Daiyāl sees anyone wearing green clothes he gets angry. The reason for this is that the peris wear green clothes, they say, and therefore if any earthly being puts on green clothing the peris become angry and do him injury."

The attitude of the Peris towards ordinary mortals cannot be described as cordial or benevolent. For instance: "They say that if anyone goes to the desert at midday the peris will snatch at his eyes and make him blind."

If a new house proves to be poor or unlucky it may be due to the adverse influence of a Periān. Again: "When a woman, all of whose children have died, gives birth to a child the mother cuts the umbilical cord and licks the blood that comes from it. The reason for this is that over every woman there is a Peri woman. The Peri woman says, 'Now that this woman has drunk the blood of her child she will never do me any good,' and fearing the woman the Peri clears out."

Here the reluctance to relinquish power over a human being indicates how such power is prized. Various methods are employed to obtain it even to the point of stealing or carrying off children or adults. In this we have an important resemblance between the Peris and the fairies of the West. The following notes are relevant in this connection: "A *dernīji mā* (i.e. 'outside mother') is a fairy in the jungle who gives milk to a child and rears it. When the boy grows up he is a good mountaineer." In one known case the peri-fosterling says he only sees his Peri mother when he is alone.

"Ten or more years ago (i.e. counting from 1922) a boy was carried off by the Peris from Nāpur. His clothes were found on the hills but he has never returned again."

One of the grooms of the Assistant Political Agent, Chilās, made the following statement: "Every day (i.e. always) at the (end of the) dark period of the moon the peris carry me off. I see them and they see me. They say to me, 'You stay with us and we'll look after you well. If you don't

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

stay we'll throw you down from the mountain.' They thus put me in great fear and then *I* promise to stay." So far, however, he had apparently successfully evaded either staying or being thrown down from the mountain. 776●

Of the common motif of a man marrying a fairy wife I have only one example, and it does not contain the usual feature of the fairy wife imposing a prohibition on the man which he breaks to his undoing. In the Ṣhiṇa story the parties are more equally matched than usual, for the husband is a Daiyāl. Still he had the worst of it in the long run. 776 539

A Daiyāl of Herāmosh bewitched a peri and casting a spell on her hair tied it all up in knots. Then he married her and in due course they had a daughter. When the daughter grew up her father instructed her that if her mother ever asked her assistance in dealing with the population of her hair she should give it, but on no account should she undo the knots. One day when the mother and daughter were out with the goats the anticipated situation arose and the girl played her part. The mother then explained that her husband had been angry with her and had tied her hair in knots and she appealed to the girl as her daughter to undo them. In a moment of sympathy and forgetfulness the girl performed the service. Immediately the Peri slew all the goats and flew away carrying her daughter with her. The Daiyāl, on discovering his treble loss, remained where he was weeping and beating his breast.

I think it was in 1922 that Rājā Sifat Bahādur, Governor of Yasin, married a peri lady, presumably *in absentiâ*, but doubtless with all due ceremony. I believe that to his intimates he claimed to have seen her, but a youth, who was probably an epileptic and certainly a scoundrel, acted as go-between and the Peri's agent in the affair. The Rājā cannot have proved a wholly acceptable husband, as shortly after the wedding he had a fall at polo and broke some ribs. Later, I think, he damaged his knee, and before two years were out he was assassinated in Independent Territory. 776 588

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

776 [588] I have recorded instances of human-peri marriages in Chitrāl, but that lies outside our present beat.

## RĀÇḢ

776 778 The term rāçḥ, cf. the Sanskrit root *rakṣ-*, "to protect," is usually applied to material objects, which exercise protective powers over human beings. Among such objects are included articles worn as talismans. It is also said, however, that everyone has a guardian spirit in the form of a small girl—Rāçḥe Mulai.i, or Rāçḥi. There may be two of them. These Rāçḥi communicate with the Pashū or Anti-witch when their protégés are in danger.

Again, if a bad woman rides on a horse the horse's Rāçḥi is depressed. Here the Rāçḥi was explained as the *sitāra*, "star" or "fortune", but it is not therefore to be assumed that it is an impersonal abstraction. The conception of a man's "luck" or "fortune" as a living being who is sometimes asleep and sometimes awake is very common.

[171] In a Burushaski story there are three women who are the "Guardians" (rāçḥakūyo) of a king of Irān. They know his fate beforehand and how he can escape it, but are not in direct communication with him. This story, however, is obviously of foreign origin, at least in its existing form, and the guardian women are an integral part of it and could hardly have been introduced as an afterthought.

## ÇḢÈÇḢ

776 [171] We now pass to a very active and vital group of the Living Supernatural—the Çḥèçḥ. The name is not identifiable as a foreign loan-word and has all the appearance of being good Ṣhiṇa. If I am right in believing the ch's to be cerebral, they would ordinarily correspond to Sanskrit kṣ or tr, but I cannot suggest a deriyation.

Çḥèçḥ appear to me to present features of interest and originality, but they may be commonplace to the instructed folklorist. I shall first mention some of the chief characteristics and then illustrate them by specific examples.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

A Ċhèċḥ is a sort of bogle which usually appears at night. 776
It is said to "fall"—*ċhèċḥ dijen*. A sound is sometimes heard and the Ċhèċḥ appears in the form of some animal, such as a horse, donkey, or cow, but sometimes as a human being. Sometimes it appears as a tall figure which reaches up to the sky and is swathed in white clothing—a guise which is also sometimes adopted by Jinns.

When a man sees a Ċhèċḥ he may faint with fear and fall [782]
to the ground. If, however, he can manage to preserve his courage and presence of mind and repeat the Call to Prayer (aẓān) the apparition will disappear. The people then reckon them to be Jinns.

Ċhèċḥ are commonly attached to particular localities, from which it appears they do not wander. There are many such Ċhèċḥ-haunted places in Gilgit proper as well as outside.

A Ċhèċḥ is known to frequent the garden of the Political Agency office. Another haunts the neighbourhood of the P.W.D. Staff Bungalow and has been seen by many people. Its beat extends from there to the Political Agency Office, a distance of a few hundred yards. Another haunts a tree in the garden of the Divisional Engineer's house in the same area. Some deserted houses above the Ranbīr Bāgh are the home of another.

A Ċhèċḥ has been seen by many near the European cemetery. My informant's brother once saw a man wearing black clothes in the cemetery. This apparition pursued him, kicked him, and flung him into an irrigation channel.

Ċhèċḥ, like ghosts, are rather addicted to graveyards. Many other Ċhèċḥ-haunted places could be mentioned.

The following are one or two well-authenticated stories of Ċhèċḥ and their doings. One night Ghulām Muhammad, Chaukidār (night-watchman), was sleeping in pursuance of his duty with his brother in the verandah of the Political Agent's Office in Gilgit. The brother used to give the following account, reported in slightly differing versions, of their experiences: "We were sleeping in the verandah of

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

776 the office. I awoke at midnight and found a horse sitting beside me. It had an English saddle on. I thought it must belong to some visitor and have strayed. So I tied it up to a tree and kept my eye on it. Presently I saw that it had turned into a donkey, and it came and sat down beside my head. My big brother beat it and it went and sat down on the road and turned into a bull. My brother repeated the Call to Prayer and it disappeared."

Sarfarāz, Chaprāsi of the Political Agency Office, told me the following, which is compounded of two slightly differing versions: "There is a lot of earth near the door of our cow-house in Amperi, Gilgit. They say that there were formerly there a mother and six daughters. They are not there now. My father's younger brother says he had seen them himself. About the year 1915–16 one day the (elder) brother was going at night to another quarter. By the path he saw a thin little girl sitting on a big stone. He felt an instinctive fear of her. He said: 'The child came down to the path and caught hold of my hand. I pulled in the direction of my house, and it pulled in the direction of the byre. At last with a great effort I got my hand free and went on to my house. The girl said, "Go now, O man, your luck is great. You have escaped from me, otherwise I should have killed you here." She pointed out to him a spot, a few hundred yards further on and said her beat extended up to there. She said that she had a mother and six (five ?) sisters."

Sarfarāz, continuing, said: "My uncle returning thence to the house lost consciousness. They burned a lot of talismans and gave the Ākhund what he demanded, and my uncle recovered." Owing to this misadventure, however, none of the children of this senior brother survived, and on his death his land came to Sarfarāz. People advised him not to continue to live there, so he built a new house. At midnight a noise of cats is sometimes heard, but no cats are ever seen.

Here is another episode. "They say that a Ċhèċh appears

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

at the Balbè Gīri on the way to Nōmal. Several times the men who carry the mails have seen it. One time when a zamīndār, Shukur Khān by name, carrying the mail approached the Balbè Gīri, a Balā came out on to the road and would not let him pass. Shukur Khān says: 'I remembered and prayed to God and blew on my body and said the Call to Prayer. Immediately the Balā left the road. I noticed its eye was in the middle of its forehead. I went along the road and it went up to the mulberry-tree at the roadside, and when I looked it disappeared. I spent the night at Nomal and early next morning came in to Gilgit.' Shukur Khān told the above story to his family."

There are other similar stories in which the apparition is called a Jinn, but it seems clear that the Jinn is of the Çhèçh variety. They merely did not happen to be related as instances of çhèçh phenomena.

It is possible that Çhèçh is in fact a sort of abstract term denoting something like "apparition" or, possibly, "fear." The use of the verb "fall" with it suggests such a significance.

## Arwāh

Ghosts, or Spirits of the Dead, whether they rightly belong to the category of the Superhuman or not, may be disposed of here. I have only two notes regarding them, both recorded in English. Çhèçh, I was told, are often associated with graveyards and so also Arwāh (Spirits of the Dead), who are said to come out and hold meetings. At one of these re-unions they were dividing up some food. To one of those present they refused any share on the ground that his relatives on earth gave no offerings of food for the dead. The ghost so penalized repudiated responsibility. He said he had a son living and they should refer to him on the subject. One wonders whether after this the son had a Çhèçh or ghost experience.

I was further told that the Spirits of the Dead come and

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

carry you far away and do you injury. They enter into the skins of dead persons and so make their appearance.

Possibly ghosts sometimes figure as Ċhèċh or Jinns or are confused with them. There are tales of how people have had dealings with jinns masquerading in the forms of known human beings, but these are rather cases of the impersonation of actual living people.

## YAÇH

The name Yaçh corresponds to the Sanskrit *yakṣa-*. Yaçh are probably to be regarded as a class of Dē.ū who are in some way interested in agriculture. I was given the following statement: "At the time of the removing of the crops (from the fields) the people make *mūl* in a dish and prepare a flavouring of bitter kernels which they add to it. They do this in the name of the Yaçh. They then add ghee to the mūl and eat it. They say 'The Yaçh is eating the Yaçh's mūl.' If they didn't prepare the Yaçh's mūl they say the Yaçh(s) would carry off the grain and not make it prosper." The last word rendered "Yaçh(s)" is peculiar in form and somewhat resembles the word for "bear", but the rendering given is probably correct.[1]

A note is given that the Yaçh will become unconscious if it eats a bitter thing. Hence no doubt the bitter kernels.

The Yaçh, so far as this custom goes, might be regarded as little more than an abstraction, a fertility, or anti-fertility, spirit of some kind, but there is one story told of a very active and practical Yaçh. It was given me as follows: "There is a man of Gurikōt (a place near Astōr) called Rozāli. They say that a Yaçh has formed a friendship with the wife of Rozāli. The Yaçh brings grain and goods from one place and another and collects them in Rozāli's house. They say if Rozāli scolds his wife or beats her some live stock or other in his house dies. For this reason the man does not scold his wife. If anything in the house goes astray or gets lost

[1] Cp. Yaçhōlo, p. 527, n.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

he keeps quiet. The man has children, their appearance they say, is ill-favoured, like that of a Yaçḥ. The Yaçḥ lives in his house and he (Rozāli) is superior, they say, to all the Astōris in wealth. They say that the Yaçḥ is in Rozāli's house in the skin of a cat. They say that his wife's food every seven days is 24 eggs and 2 seers (4 lb.) of ghee. This matter is publicly known to all the people. A number of Astōri people have told us this story." The wife's diet seems rather limited in kind, but bread and vegetables are perhaps taken for granted.

776 ●

## YAÇḤŌLO

The Yaçḥōlo,[1] by his name, must be some sort of cousin of the Yaçḥ, but he is a shadowy personage whose only known interests are agricultural. Here is all the information I have about him: "At the time of the reaping of the wheat and barley, in the name of the Yaçḥōlo they put some mūl (gruel) in a dish and carry it to some place in a field where there is a big stone and where they say the Yaçḥōlo is. The reason is this: they say, 'if we propitiate the Yaçḥōlo our wheat and barley will be plentiful.' Nowadays they do not do this in Gilgit (proper), but in Shināki places, e.g. Bagrōt, at places on both sides of the River (Sherōt, Shakiōt, and Bārgo), and at Herāmosh, in these places they do it."

776
241

We may now pass on to the Human Supernatural, of whom the Rū.i and the Daīyāl are the chief. The term Rū.i is Ṣhiṇa. The Burushaski equivalent is Bīlas, but the word has also, I think, wider application. In Khowār the idea is, I believe, covered by the word Gūr.

776
171

## RU.I

The Rū.i is perhaps the most interesting of the whole Gilgit cast, and of her I happen to have particularly full

754

[1] I have lately come on an isolated note: "Yaçḥōl, a demon like a bear."

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

## V.

### The Ceremony of Nagi Suchemi.

Nagi Suchemi is said to be a goddess who lived at Nangam in the Astore district, on a stone altar situated at the foot of the Nagishi hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jungmi was specially appointed by the Rá to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present, in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sochemi, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this solemnity were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discoverer of the offending juryman at dawn of that day. For some days the case was left awaiting the decision of "Nagi Sochemi," and if in this period the suspected person suffered any kind of loss of property, of relatives, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

### "Khuran" or "Majari."

In Chilas and in the adjacent valleys of Jalkot, Palas, Koli, Darel, Tangir, Gor, Harban, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khuran" in Shinaki (Chilas, Darel, Tangir, Gor, Harban and Sazin), and "Majari" in Kohistan (Jalkot, Palas, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must needs submit.

## VI.

### Danyals.

There are some men and women of these parts who are called Danyals. When they are worked up into a state of frenzy the giants and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Danyals as well as the local musicians. A bundle of green chili leaves is then brought, and some of these, with a little *ghi*, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Danyals push their way towards the fire and begin to inhale the smoke, until

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

## VII.

### Omens.

Probably on account of the frequent attacks on Gilgit made by the chiefs of the surrounding States, certain signs and occurrences are considered to be omens among the Gilgitis. They are as follows:—

(1) If an unusually heavy rain falls at any season in Gilgit, it is supposed that the chief of Yasin will advance towards Gilgit.

(2) If innumerable kites are seen hovering over Gilgit, it is generally accepted that Gilgit is to be invaded by the Nagar people.

(3) If packs of wolves make frequent night visits into Gilgit, and inflict heavy losses among the flocks, it is affirmed that the chief of Hunza is certainly going to invade and plunder Gilgit.

(4) If the harvest be unusually abundant, it is believed that Gilgit will be attacked by the Punyal Chiefs.

## VIII.

### Lunar Eclipse.

The Gilgitis say that Grahn is the name of a giant, who is a lover of the moon. On the 14th of the lunar months, when the moon is in its full beauty, the Grahn, whenever he pleases, catches hold of the moon, leaving untouched only a part which contains a fig tree. At such time the people of these parts beat their iron pans (on which they cook bread) like drums and cry loudly, "O Grahn, we have brought a large force, beating drums against thee, leave her (the moon), or we will rush upon thee?"
In the meantime the eclipse ends, and they become happy at their success.

### Solar Eclipse.

The Gilgit people say that whenever any good king dies or is banished from his country, the giant Grahn becomes angry against the sun, and darkens a whole or a part of his (the sun's) face as a sign of grief for the death or the banishment of such a good king.[1]

## IX.

### The Creation of the World.

It is said that the earth was at first enveloped in water, which was at some places frozen, and where some Yaths (giants) had taken their abode under Yamlo Hal Singh, their ruler. On a certain day they held a council for the purpose of bringing earth over the water. Their ruler said that the task was above their power but, however, he knew of a wolf called Bojare Shal who lived at a place named Milgamok (old ice) and who, owing to his great genius, would be able to perform this work. "Provision!," was first sent as a messenger by the Yaths, but the wolf refused to come, saying that he would not

[1] [In answer to a question regarding this name, the author of the paper informs me that the original word is *rogi*, which may also mean "fortune."—Ed.]

773 keep trust in Provision, who was a servant of everybody. On this the Yaths sent "Trust" to the wolf, and he came with him to the ruler of the Yaths. The object was explained to him and he said that a bird called Garai Patan, who lived on the snows on the Coxus Mountain, should be sent for at once. Provision was first made the messenger; but the bird declined to come; whereupon Trust was sent to him and he came to see Bojare Shal and Yamlo Hal Singh. Bojare Shal now sent for a mouse which lived close to his home. When everything was ready the wolf gave orders that Yamlo Hal Singh should stand in water as a pillar upon which Gorai Pattan should spread his wings, while the mouse by the making a hole into the ice should bring out and spread all the soil over the wings of Gorai Pattan. The orders were obeyed and the wings of the bird covered all the water, while the mouse brought out all the soil which was beneath the water. In this way the earth was turned over the water.

## X.*

### "Neelo But" (The Blue Stone).

643 778 There used to be at Gilgit a blue stone called "Neelo But," about a yard square, where the present telegraph office is situated. No king was acknowledged in the country unless he had resorted to it and prostrated himself before the stone. There and then the people adorned his head with a crown, swore fealty and tendered their allegiance. This was the day when all the better class would gather to see the new "Rá" perform all the ceremonies, and undergo all obligations considered necessary to the office of leader of the nation. This was done in order to secure their confidence by a man who was to become sole director over their destinies, among them being many who had taken an active part in bringing him to the throne and proclaiming him their chief.

When the ceremonies were over, all came one by one to kiss his hands, to receive his blessings and to bless him in return. They would then dance to the beating of drums, make merry, sing praises and recite poems describing the heroic deeds already performed by the Rá, his ancestors and others whose lives had become endeared to all by self-sacrifice in the cause of their country.

[787] The *dawyal* (soothsayer) was not left out on this occasion, for it was necessary to foretell the future of the king and his courtiers, and to exhibit the state of ecstacy that accompanies prophecy by the soothsayer. Before being dismissed at night all present partook of a feast; some were gratified with handsome *khilats* and other distinctions; some gratified by a gesture of kindliness.

### The Ceremony of Shri Bai.

778 ● 776 842 782 Shri Bai is the name of a goddess who, as the people say, lived on a rock at Nangam, a village in the Astore district. The rock too is called Shri Bai, and is always kept covered with branches of juniper, while an attendant called "Boh Bin" resides there to look after it. Barren women used to sacrifice goats to and pray before the sacred stone in the hope of progeny. In the hot weather, when the people had gathered their

* [See also p. 109 *ante*.—Ed.]

crops, the female population of the village proceeded to the Devi in their best attire. They sang on their way, and when they reached their destination presented a goat to the "Boh Bin." He then threw up some small branches of the juniper in the air, and the women attempted to catch them before they fell to the ground. It was believed that a woman would be blessed with as many children as the branches she succeeded in catching. Descendants of the original "Boh Bin" still remain, but the ceremony is no longer observed.

A stone of this kind is also found at Barmas near Gilgit. The ceremony performed upon this stone was exactly the same as stated above, but it has a different name, *viz*: "Mulkum."

## "Rato" or "Chili."

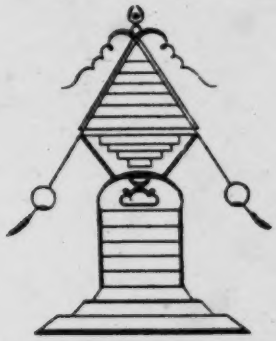
At Farfuh, a village in the Bagrot valley, there are five small portions of land situated at the foot of a mountain and called Chuto Rato, Shilo Rato, Surgon Rato, Chilko Rato and Thoko Rato. In these tracts there are five very large boulders and five small stones, called respectively "Dev-ai-Maron" and "Mos Samaran Ken" (*i.e.*, stone for distributing flesh). Here the "Rato" ceremony, also called "Chili," used to be performed as follows. During the first six days of the ceremony, which lasted for seven days, the people wore new and clean clothes, the sexes being separated and inhabiting different houses. On the seventh or the last day, all the people of the different communities or families of the village assembled separately and went to their respective "Ratos" with a goat and some young branches of the chili or *Juniperus macrocarpa*. These branches were placed upon the "Dev-ai-Maron," and the blood of the goat which was now sacrificed was thrown on. The meat was placed on the "Mos Samaran Ken" and distributed among those present, who roasted and ate it at the same place. It was never given to any woman or to a man of any family other than that of "Rato." The shoulder-blade of the goat killed was then placed on a high stone and fired at by marksmen amidst the noisy acclamations of the people, and a dance was held in honour of the sacred ceremony. After this the people assembled round the "Dev-ai-Maron," while the oldest man present or the headman of the village sat quite close to the stone and addressed it in the following manner: "O iron-like Rato, O Shri Bagartham, we have come to thee to express our wants. We have no progeny: kindly endow us with children. We are destitute of money: kindly favour us with gold and silver. We are in want of grain: please supply us." In the same manner he related all their desires for cattle, clothes, goods, etc., while the other men followed him and expressed their assent to what he said by crying "Amen." The women of the village now appeared in their best attire, with some dry flour and small flat loaves. They threw the *atta* on the *chili* branches and prayed in the same manner for the fulfilling of their desires. The loaves were distributed among the men, who eat and rejoiced. At some places the women were strictly prohibited from going near the Rato stone. This ceremony was performed and known by the same name throughout the whole of Gilgit, but on stones of different names, so that the stones at Datuchi and Bulchi were called "Aju Bin," at Sinakar "Shri Bin," at Gilgit and Dainyor "Rato-denaken," and at Naugam "Shri Bai." The

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

000 "Shri Bai" ceremony, performed with a slight difference at Naugam, will be dealt with separately.

## Sculptured Stones.*

532 174 778 On the bank of the Indus river a big stone is seen about a mile's distance from the entrance of Botugah Nullah (Chilas Nullah) where there stand some boatmen's huts. It bears a figure of a Buddhist *Mane* [ ? ]. The carving begins a little above the foot of the stone. In height it is a little larger than a man. Though faintly engraved, it is so skilfully whitened that, although it has been exposed for so long a time to the action



of the weather, its white colour is still to be remarked from a distance. On this rock there are also many other figures of the same kind, but they are somewhat smaller in size than the one above mentioned. Some two or three miles below this place, there are numerous stones of various sizes on the river bank bearing the figures of goats and markhors, &c. Some of the stones show representations of axes, while the others are those of deer. At some places the carvings are seen on the top of a stone as well as on its sides. The same kind of figures are also seen in the Bagrot Valley engraved on rock-faces between the Sanikar and Bulchi villages.[1]

At Barmas, near Damot, in the Sai valley, there are two pictures of Buddha. One is carved on a stone, and the other is a painting of Buddha sitting among his disciples.

At another place, in the neighbourhood of Chilas, there is a rock still larger in size, and on its river side there are a good many figures. There are also two or three carvings of temples with a large number of men, goats, horses and cows, &c., engraved on them. On this stone there is an inscription written in some ancient character. The same carvings are noticed for some way along the river, which here does not rise sufficiently in summer to do them any injury. It shows that in a certain period, this part of Chilas was inhabited by Buddhists. The inhabitants of Chilas are under the impression that all these inscriptions are made by the fairies.[2] The tradition is that in ancient times the land was

532 174 776 778

[1] These villages are situated in the Lasper Valley.

[2] [A similar belief is held by the Malays (Mahammadans) of Lower Siam and Pahang regarding the "Orang Parai" (Peris), and certain clay tablets of Buddhistic origin found in caves. See Steffen, *Man*, 1902, No. 125.—Ed.]

113

*[See also p. 106 *antea*.—Ed.]

frequently visited by fairies who used to make these inscriptions, as in the opinion of the Chilasis it is beyond man's power to produce such inscriptions. It is also affirmed that these fairies were seen in those days by all men, but nowadays they are visible to no one except to a great Mullah by dint of his miracles. The Bagrot people say that the carvings were inscribed on stones by the fairies on the night of "Shino Bazono;" and that on the same night the fairies frequently used to rub away the figures from one stone and to engrave the same on another.

532 174 776 778

### The Ceremony of Sri Kun.

Sri Kun is said to be the sister of Nagi Sochemi, and lived at Shankank, a village near Godai in the District of Astore. The villagers used to present goats to this goddess and prayed before her seat for the supply of their wants. Her followers were strictly prohibited from keeping cows, or drinking their milk, and were under the impression that by so doing they were apt to lose their flocks, herds, or the produce of their lands.

776 782 262

### "Jainkish" and "Dewaro."

At Gilgit proper and in the surrounding villages there are seen two small tracts of land called "Jainkish" and "Dewaro." The former is situated on the river bank and the latter at the foot of a hill, except at some places in which they both are found at the foot of a hill. In ancient times, when Islam had not spread to these parts, the tribes used to burn the dead at "Jainkish," and a few days after they gathered and carried away the bones to "Dewaro," where they buried them in one pit. Remnants of bones still mark these places, though the traces have almost been obliterated by time. In these circumstances, however, one is not wrong in supposing that Muhammadanism is of recent growth.

361 771 764

Several old men still living at Gilgit relate that they used to play with the brass bangles and rings which they found in "Jainkish;" but to carry away such articles to their houses was considered improper. From this it appears that the dead bodies were burnt with their ornaments.

[174]

### Sankar Village and a "Chinar" Tree.

There is a small populous village named Sankar in the Bagrot Valley. It is said that when this tract was lying waste, a Fakir named Shah Burya passed through and halted there for a short time. Becoming thirsty and finding no water, he prayed to God for a good supply. His prayer was granted, and a sufficient quantity of water burst forth from an adjacent hill. After a few days Shah Burya felt the heat of the sun, and planting his stick, which was of *chinar* wood, deep into the ground, prayed again to the Almighty to make it into a large *chinar* tree. This prayer was also granted, and a big tree grew, under whose shadow he afterwards used to sit. The branches of this tree are said to have been once so large and spreading that they touched the neighbouring hill about 600 yards distant, across the Bagrot Nullah. The tree was afterwards burnt by the Mongols, but after a short period five shoots sprang out from its trunk, and these are still to be seen, forming an enclosure about 30 yards wide.

361 539 988 174

### A Pearl Tree on the Deobani Mountain.

361 776 539

On the east of Tashot, a village in the Bagrot Valley, there stands a snow-covered mountain called Deobani. The people say that there is a large pearl tree on its top, which is the property of the fairies and giants. A good mountaineer is said to have once reached its summit. Gathering a load of the pearls, he started down towards his home. But he was surprised to see a crowd of giants and fairies coming after him, and, being frightened by their approach, he thought it better to throw away all the pearls in order to save his life; he was surprised, however, to find that a fairy still followed him as far as his house. There he closed his door. While changing his clothes he found that a pearl was hidden in his shoes. The pearl was then thrown towards the fairy; she picked it up and disappeared. A similar story is related about Nanga Parbat, a mountain on the west of Astor.

### Shangali Ween.

361 778 539 695

At about two miles east of Danyore, a village about three miles east of Gilgit, there is seen on the northern side of the road leading to the Bagrot Valley a small piece of ground about one yard square surrounded by walls about three feet high. This place is called "Shangali Ween" (place of putting chain). It is said that there used to be a golden chain hanging in the air without any support. In ancient times, when any case was to be decided on oath, both the parties were carried there and each of them addressed the chain in the following manner: "O *Sojo Shangali* (sacred chain), whoever of us is sinful please accuse him by striking his neck; and the chain used miraculously to whirl round the neck of the man who was guilty. The man was then convicted and punished by the authorities according to law. No chain is now found at the spot, and the people relate an interesting story about its disappearance. They say that two men of the Bagrot Valley were once coming together to Gilgit: one of them had brought some gold with him which the other succeeded in stealing. Making a small hole in his stick, he put the gold secretly into it. The men, after a long quarrel about the lost gold, decided that the case should be settled by the Shangali. When they were entering the place, the guilty man gave his stick which contained the gold to the other, and they both began to beg before the Shangali, asking that, whichever of them had gold in his possession, he might be struck by the Shangali. The Shangali, who was aware of the trick, was much enraged at this attempt to deceive, and, considering itself offended, at once disappeared for ever without settling their case. The loser of gold was now very angry, and in a fit of his anger struck the stick on the walls of the enclosure. The stick broke and the lost gold was disclosed.

### Nong and Chakrot Bari.

778 789 823

Near Laos village in the Astor district there is a small fountain called Nong. The people consider it a sacred one and offer sacrifices at the place for the fulfilment of their wants. If owing to drought a loss of their crops is expected, or if for any other reason heavy rain is required, the people used to throw some unclean thing into the spring, such as the bone of a dog; it then began to rain, and continued until the object was taken out. Owing to the belief that the spring was sacred and, moreover, able

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

always nourished by human milk would certainly be better than that of an animal. Coming to this conclusion, he gave orders that a tax of human children should be levied in future instead of sheep, and that their meat should always be served at his dinner. In this way he became a man-eater. 539

### The Capture of Gilgit by Skardu Chiefs; the Soul of Shri Badat and the "Talino" and "Nisalo" Ceremonies.

In the reign of Shri Badat, a Buddhist Chief of Gilgit, three princes named Khisrau, Jamshed and Shamsher, the sons of Azur, a chief of Skardu, are said to have arrived at Danyore, a village situated about four miles east of Gilgit at the junction of the Gilgit and Hunza rivers. They were the first Muhammadan chiefs who started from Skardu to conquer and subdue the hill States of Hunza, Nagar and Gilgit. They had succeeded in capturing the two former States, and it was now the turn of Gilgit to fall into their hands. The people relate an interesting story about their arrival and their obtaining possession of the fertile tract of Gilgit proper. They say the princes were born of fairies and arrived at Danyore flying on wings from the lofty mountains where the fairies live. One day they saw a wild cow grazing on the "Danyore Khoh," a hill at about two miles distant from the place they were sitting. The elder brothers, Khisrau and Jamshed, requested the younger, Shamsher, to shoot the cow with his bow and arrow. Shamsher out of respect for his elder brothers said that he could not shoot first, but he was overruled and compelled to carry out the request. He then took up his bow and arrow and aiming at the cow shot her with such dexterity that her body was pierced by the arrow. The Danyore people were much surprised to see this skill of Shamsher, and ran away noisily to the hill to fetch the body. They found the animal lying half-dead of the wound caused by the arrow, which had penetrated the heart. The cow was brought to the village and placed before the princes, who ordered the liver to be roasted and served. When the meat was brought in, Khisrau and Jamshed remarked that it would be seemly on Shamsher's part to eat it himself, as it was the result of his skill. In vain did Shamsher try to make them join. He was thus obliged to eat it himself, but he had not taken more than three or four slices, when both his elder brothers took flight into the air and disappeared. Shamsher also tried his utmost to follow his brothers, but the meat just taken by him had worked such an effect on his body that he could not even rise a little above the surface of the earth, and reproaching himself with the deed which had caused his separation from his beloved but faithless brothers, he remained content to pass his future days in the village. The inhabitants of Danyore who had seen his marvellous act, considered him, on account of his being "fairy-born," of a race superior to their own, and always showed him much respect and obedience. After a lapse of some months he related to a large gathering of the villagers around him, that he had just seen a big markhor frolicking hither and thither on the Hapukor Mountain (above Naupur and Naikoo villages), and that he wished to shoot it at once with his arrow. They were very surprised to know that he had seen a markhor from a distance of more than four miles, and they would not have believed him had they not already experienced his miraculous power of sight on the occasion of his 173 [341] 776

539 776 173 shooting the cow, and had they not believed him to be fairy-born. They all therefore expressed their pleasure at his wish to shoot the markhor. Shamsher then aimed at his victim, and, shooting the arrow with all his might, cried out that he had killed the markhor, to the great joy of the villagers, many of whom expressed their wish to accompany him in fetching the dead animal. They went up the hill and the Naspur stream and found the markhor lying on the self-same spot that had been pointed out by Shamsher, and they all heartily congratulated him on his success. The sun was high and the day hot, and the men, who were tired, searched for and found a spring well shaded by trees. There they slept for a while. Miyo Khki Soni, a daughter of Shri Badat, used also to live on the same mountain near the spring, in order to pass the hot summer days. A maid-servant of hers happened to come there to fetch water, and was surprised to find that some strangers were sleeping near the spring. She returned at once and reported the matter to her mistress, who became very angry and ordered all her maid-servants to capture and bring them before her. This was done. Shamsher was a youth of handsome and comely appearance, and as soon as the princess saw him her rage fled, so that she forgot every angry word she had thought of as befitting the occasion, and very politely and amiably asked after his health and the cause of his coming up the mountain. She was so much struck and pleased with his refined behaviour and elegant manners that she at once exclaimed

"I might call thee a thing divine: for nothing natural
I ever saw so noble."

Shamsher asked for her permission to leave and go down the hill, but this was refused and the party was amiably invited to stay the night. They devoted much of their time to conversation, and Miyo Khki modestly showed her preference by listening to the stories of the prince's adventures and deeds of valour from his own lips. At last he gained a tender place in her heart. The moment was a critical one for Shamsher, who thanked her courteously for her favourable consideration and told her that the idea of her giving her hand to a foreigner like himself would prove a sorrow to all concerned when the news reached Shri Badat. These words were hard to bear, and the soft-hearted princess began to weep and fell down at his feet. This action of Miyo Khki produced a sudden effect on the heart of Shamsher, who feeling for her unbearable grief, lifted her up from his feet and gently consented to their union, in spite of the fate that might await them at her father's hand. The princess was pleased beyond expression, and her subsequent devotion is a proof of her feelings. She ordered all her maid-servants to appear, and explained to them her desire. She also informed them how dear she was to Shri Badat and that this would cause him to listen to her appeal. But if any of them should tell the news, she must consider her life as at an end, and her property confiscated. They all trembled at the words of their mistress, and with due respect expressed themselves to the effect that her happiness was their heartfelt desire, and that they were extremely glad to know of this selection; and they promised that nobody else should hear a word about this engagement from their mouths. The marriage ceremonies were secretly performed on the same night, and Miyo Khki was, some people say, named Sakina, but according to others her name became Nur Bakht. Next morning Shamsher allowed his Daryni

St Mohammad G-3 (ca. 1900) 1907 AV3 Dard AV3

companions to go down to their village, with instructions to keep what they had seen a secret. Shamsher became filled with the desire to make himself ruler of Gilgit, and began to instigate his wife to murder her father and to raise the Dasyori people secretly against him. Sabina, whose passions had mastered her sense of duty, prepared to take her father's life for the sake of her beloved stranger. Shri Badat, being the descendant of giants, had no fear of being attacked by sword or arrow, as these weapons had no effect on his body, and no one knew what his soul was made of. The first thing therefore for Shamsher to inquire was the secret of his soul. So, on a certain day, in order to gratify this desire, and to prove the trust his wife had in him, he promised that as soon as the leaves of a certain tree should decay and become yellow, she should no more see her father. It happened that the leaves of the tree decayed much earlier than usual, and Sabina, thinking that it meant the death of her father, went down the hill lamenting; but she was much surprised to find that he was still alive. She related to her father that a few days ago a certain *fakir* had gone up the hill and had foretold that as soon as the leaves of a certain tree should turn yellow she should unfortunately find herself an orphan. On this day the leaves of the tree had turned yellow, and, considering this an ill-omen, her filial love had caused her to present herself at his feet, but she thanked God it was not so, and that the *fakir's* statement had proved false. Shri Badat said in reply, "O my affectionate daughter, nobody in the world can kill me, as no one knows of what my soul is made. How can it be injured until someone knows its nature? It is beyond a man's power to inflict harm on my body." Sabina said that her happiness depended on his life and safety. As she was dearest to him in the world, he should have no hesitation in informing her of the secret of his soul. She would, moreover, be able to forestall any unfavourable omens, and to show her filial love by devoting her life to the safety of her kind father. He used much *finesse* in turning the topic of conversation, and made many pretences in order to keep his secret from his daughter, in spite of her pertinacity. His paternal love at last compelled him to grant her wishes, and he informed her that his soul was made of *ghi* (butter), a substance which cannot be melted without much heat; and that whenever she should see a large fire burning in or around his fort, she must consider it the last day of his life. But he did not know that he was putting his life in danger by confiding in a weak-hearted woman, who was being used to take his life. Miyo Khki passed a few days with her father and then went up to her hill-abode, where she found her beloved Shamsher anxiously awaiting her arrival. To him she related her conversation with Shri Badat. He was extremely glad to receive this description of Shri Badat's soul, as he was prepared to spare no pains in taking his life. The information acquired now led him to think of the speedy fulfilment of his hopes. He is said to have sent for his Dasyori companions secretly, who had accompanied him to the hill, and whose loyalty was unquestionable, since they believed him to be born of a fairy. The cruelty of Shri Badat knew no bounds, so that he had earned the title of man-eater; and his subjects were already looking for an opportunity of getting rid of the tyrant in order to save the lives of their innocent children. In a few words therefore Shamsher won the Dasyore men's approval of the plot against the life of Shri Badat, adding that he was now master of the secret of their ruler's

539 776 173

soul. They agreed to lend a helping hand to Shamsher and to raise the subjects secretly against their merciless chief. On finding that the majority of the people had joined him, Shamsher fixed a date for accomplishing the deed by burning a large fire late at night round the fort of Shri Badat. A few days before the appointed day, he sent down Sakina to her father with instructions to keep the secret, while he himself went down to Danyore village to make his preparations. At about 3 A.M. on the night appointed for the purpose, all the people turned out of their homes with torches in their hands and a quantity of wood. Shri Badat's fort was situated about 200 yards east of the present Gilgit polo-ground on the site of the houses of the Bāirai family. The people were still some way from the fort when Shri Badat's spirit began to feel uneasy. He therefore asked his daughter to go out and see what was the cause of his restlessness. This undutiful and faithless woman, who had a perfect knowledge of the conspiracy, went out and returned after some delay, in order to let the people come closer, and said that there was nothing to be feared outside the fort. But Shri Badat's increasing uneasiness brought him out of his room. He found himself in a very awkward position, having by this time been surrounded by the enemy, who had succeeded in planting large fires round the fort. In this predicament he had no time to consider the necessity of punishing his wicked daughter, but at once jumped up in the air and took wing towards Chotur Khan, a snowy tract in the Ishkoman Valley. He is said to have rested at Yashpur (a deserted village near about 12 miles west of Gilgit) Hinzil, where he requested somebody to bring him a cup of cold water. The village had a plentiful produce of grapes, and the inhabitants used to make wine from them. The man therefore brought out a cup of wine to Shri Badat, who refused, saying angrily that, seeing that he had come there after having escaped from a fire which had done great injury to his soul, it was improper for the man to give him wine instead of cold water, which was what he had asked for. But none would bring him water, and, being thus dissatisfied with the treatment of the villagers, he cursed the place, saying that it would be totally ruined and laid waste, so as to produce no grapes again. It happened in the following year that the glacier which afforded a supply of water for the village melted away, thus effectually destroying the village cultivation forever. From Yashpur Shri Badat went to Chotur Khan and hid himself there under a big glacier, where he is still said to have his abode. The people have a firm belief that he will re-appear at Gilgit to renew his rule over them with redoubled fury. Being afraid of his regaining the kingdom, the people are in the habit of burning big fires in their homes throughout the night of the anniversary in November on which Shri Badat was driven from Gilgit, in order to keep away his ghost if it return. On this night no one ventures to sleep, but to while away the time they are in the habit of dancing and singing round the big fires. This ceremony is called "Talino." There is, however, a family of Kulchins (the kitchen servants of Shri Badat) who do not take part in the performance of the ceremony; for they are still loyal and faithful to their master, and are still desirous of his returning to his own. This is the only family now residing at Gilgit who are well-wishers of Shri Badat. It is curious that they should have escaped injury at the hands of the opposite party.

4 AV3 Dard AV3

military service in time of war. It also gives three hostages for good conduct, who are changed periodically. The people of Gor claim to have been Mussulmans for only three generations, and are all Soonnees.

There are three forts in Gor, named Loosonotkot, Doolotkot, and Tunelkot. The people of Gor have always been friendly with Chilas. At present Gor is noted in the Kohistan for the good quality of the wool it produces. The tradition is still preserved of the god Taiban, who was the tutelary deity of Gor, and whose worship was continued to a very recent date. A rude sculpture of a horse still exists, which is named "Taiban's horse." Even now Taiban is invoked occasionally as a witness of a solemn covenant. Along the river, at intervals the whole way from Gor to Seo, are said to be a number of ancient rock inscriptions.

A few miles above Gor the small detached village of Thalich forms the extreme limit of Yaghestan, consisting only of 11 houses: it forms, as Mr. Drew observes, the smallest of independent communities. The people of Thalich make common cause with those of Chilas, of whom they are an offshoot, and are protected by them against more powerful enemies.

Above Herbund, on the left bank, is the large community of Chilas, which embraces six valleys. The principal villages are Tor, 200 houses; Chilas, 140 houses; Geen, 5 houses; Takk, 80 houses; and Booner, 60 houses. Chilas can furnish about 1,500 fighting men, without counting a number of immigrants from other communities who have lately settled in the country. Roads lead from Khaghan in the Hazara country by the Babusar Pass to the Indus in seven days, and from Shardi in the Kishengunga Valley by the Shotô Pass in five days. There is also a road from Astor by the Mazenoo Pass, only practicable at any time for men on foot, and closed in winter, by which Booner is reached in four days. The road up the Indus from Chilas is difficult and almost impassable even for men on foot. This difficulty of access has given the Chilasis a spirit of independence, and a distinctive character among all the Kohistan communities. Though but comparatively recent converts to Islam, they are bigoted and fanatical beyond all other Dards, owing, it is said, to Chilas having been at all times a favourite resort of Moollahs from Swat. Being Soonnees, every Shiah who falls into their hands is put to death without being reserved for the usual alternative of slavery. The whole community can muster 3,000 men capable of bearing arms, and have at all times borne a high reputation for bravery.

D 805 D [178] The ordinary Mahommedan calendar is, however, coming into use, especially among the Ashimadek class. The days of the week are named according to the Mahommedan calendar, except that Friday is named Adinna.

In Bushkar and Torwal, the Mahommedan calendar is followed. In the latter place the ordinary names are preserved, in the former the months are named—

| | |
|---|---|
| Hussan Hoosein. | Sooepi (*Great month*). |
| Safar. | Shokudder. |
| Purum ishpo (*First sister*). | Roz. |
| Dowim ishpo (*Second sister*). | Lokyūl (*Small festival*). |
| Tlooi ishpo (*Third sister*). | Miâna (*Intervening*). |
| Chot ishpo (*Fourth sister*). | Gânyūl (*Great festival*). |

D B 821 The constellation of the Great Bear is called "the maiden's corpse," the four corner stars being supposed to represent a bier: the small star above the middle star of the tail is called the "star of life," as it is supposed to be invisible to a person forty days before death. The pleiades are called the flock of sheep; a comet, "the star with a tail," is supposed to portend the death of a king. The milky way is called the "track of the cow and horse," the tradition being that in the broad part about the middle the horse fell down from going too fast, while the cow travelled safely. The world is supposed to rest on the horns of a cow, which shakes its head occasionally at the sins of the inhabitants, and so causes earthquakes.

D B 776 The west and south are always spoken of as up, and the north and east as down. A man going west or south to a place talks of going up to it. Fairies and demons that live in caves among the mountains or in desert places, have a prominent place in the belief of the Dards. Dr. Leitner has already given an account of the Yetch and its female counterpart the Rooé. In Boorishki they are known as Phoot and Billuss. Madness is supposed to be caused by a demon casting its shadow over a person, while the shadow of a fairy confers the gift of prophecy. Demons assume the appearance of human beings to lure men to destruction, but they are recognisable by their feet being turned backwards.

D B 776 787 784 In Gilgit, Hunza, and Nager the ruler's family is supposed to be specially under the protection of a guardian fairy called Yoodeni. A drum, called the Yoodeni drum, is always kept on the top of the ruler's castle. When it is heard to sound at certain festivals and at critical times it presages good fortune. Nobody must try to see the Yoodeni, or look in that direction

~~12~~ Biddulph G-3 (1873-1878) 1880 ~~AUl-Afghanistan AUl~~
4 Av 3 Dard Av 3
Burusho Av 7.

when the drum is heard; if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodeni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nager are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the mane and forelock of favourite horses. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

(*c*) Mi dponpa: It comprises the following two families: Phanba, Kadcanpa. (The Tingdzinpa-family originated when a younger brother separated himself from the Kadcanpa family.)

(*d*) Rab blonpa: It comprises the following three families: bSod rnams phelpa, Bragcanpa, Skamburpa.

Besides those mentioned, there are three families which do not belong to any *pha-spunship*: Mon, Bhedapa and Starapa.

More families do not exist at Khalatse.

As regards the *Brushalpa*, they have taken their name from the village of Brushal near Gilgit, and they know for certain that their forefathers were colonists from Gilgit.

The *Pakorapa* also know that their forefathers once emigrated from the vicinity of Gilgit. Pakor is a Dard word meaning 'meadow.' Compare my Bono-na-songs, No. II.

Thus we see that out of 21 families which are members of *pha-spunships*, 16 trace their origin from the neighbourhood of Gilgit, which has remained Dard to the present day.

Mi dponpa means 'lord of men' and *Rab blonpa* means 'state-minister.' These two *pha-spunships* may go back to the Tibetan conquest of Khalatse, when their forefathers were perhaps the Tibetan lords of the Dard population.

From all this we see that the Dards, the lords of the country before the Tibetan conquest, were only colonists from Gilgit. Whom did they find in the country on their arrival? Did they perhaps find a Mon and Bheda population? All this I cannot solve.

T D 174 197 782 [776]

(3) *Remnant of the Dard language.*—It is most interesting that in one house of the Brushalpa, in the house Gongmapa, a last remnant of the Dard language has survived until the present day. On New Year's day when a new branch of the pencil-cedar is placed on the house-altar, the prayer is rendered in Dardi, because the spirit of the house is supposed to understand this language only. This is the prayer:

Dargyassi di zha nomo hla zhuni
Shuni bi zha nomo hla zhuni
Sinani bi zha nomo hla zhuni

As a Tibetan translation this is given:

ངས་རྒྱལ་གྱི་ཞལ་ལུ་སྐྱབས་སུ།
ཤུག་པོ་ཆ་སྐྱབས་སུ་སྐྱབས་སུ།
ངས་གྲུ་གྱི་ཞལ་ལུ་སྐྱབས་སུ།།

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

487 gave but just room for a horse to move along its face. We crossed a succession of great bowl-shaped
133 bays in the hills, several miles across from side to side, cut up by deep ravines, the whole bed of the saucer one mass of cultivation wherever water could be brought to bear. The outlet for the streams which drain these bays into the main river below is generally through a narrow gorge hundreds of feet deep, with walls so precipitous and fall so rapid that no regularly made path can be taken along it. The Chitralis averred that no man had ever succeeded in getting through one particular gorge.

538 We struck a vein of folk-lore which I should have
776 loved to explore, but I had no time to work it properly, and for really satisfactory results the enquirer must talk the language of the country, which I could not. We were sitting one night after dinner by our camp fire, looking across the valley at the dim form of Tirich Mir, rising ghostly and white in the pale moonlight, when one of our hosts casually mentioned the existence of a lake at the foot of the great mountain by the side of which are the flat stones on which the fairies wash their cloths. Readers need hardly be reminded of the Continental and Eastern habit of beating linen on a flat stone. You could also, he said, find their rice-pounding stones there in great numbers; these must be the round pot holes found in the rocks of all glacier streams, but what the washing-boards were I could not make out, and the lake was unfortunately miles away, so that time could not be spared to explore.

The conversation so begun gave rise to much talk about the fairies. We were told that they

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

538 were heard to sing or wail round the towers of
776 Shoghot Fort ten or twelve days before one of the ruling family died, and this led to the information that the present Mehtar's great-grandfather had married a fairy, having been a master of the lore which gives command over them. The king and his fairy bride lived on for years as husband and wife without any one knowing it, as he was in the habit of going to Gairat, a village seven miles below Chitral, where the fairies from Tirich Mir assemble every Friday night to say their prayers, and meeting her there. This place is still used by the fairies for their devotions, which take place at a spot marked by a large flat stone. No one will go shikaring there alone, and my informant, who was once belated, and had to spend the night close to the spot with a single companion, heard the ghostly call to prayer, and the air full of the voices of a great multitude talking Chitrali. The union of the old king with the fairy was blessed with one daughter, and she, though a very old woman now, has continued to take an interest in the fortunes of the royal family, and warns them of the approaching death of any member by the sounds heard at Shoghot. Many men had seen her, notably a man still living at Owir, with whom we were promised an interview which unluckily did not come off.

Those who have seen the fairies, and a couple of years before a large number of them were seen by many of the inhabitants of the valley, flying through the air to Tirich Mir, some on horseback and some on foot, describe them as exactly like

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

men and women, but very beautiful, and dressed mostly in white. Their only peculiarity seems to be that they have no knee or ankle joints, and that the toes of their feet point to the rear, the heel being to the front. This by the way must be inconvenient when riding. They occasionally carry off men for ten days or so, and treat them well. The man at Owir, who was carried off, lived with them for ten days, and saw the old king's fairy daughter. He reports having seen very large numbers of fairies, and that he was pressed to marry by them, but on his refusing was returned to his home. They appear never to do any one good, and to distribute their thievish tricks and the harm they do indiscriminately among the righteous and the evil-doers. 538 776

Asked what the fairies subsisted on, our informant explained that if any man lied about the amount he had harvested, and told his neighbour that he had only ten sacks of grain when he really had garnered twenty, the fairies took the balance, and left him with what he professed to have harvested. He had never heard of their doing any harm to cows, but said they undoubtedly rode the horses at night, and that if a man had done his horse's mane up nicely, he was likely to find him in the morning completely tired out, and with the mane tangled, knotted, or plaited. I could not quite make out which, or whether the knotting the mane corresponded with our "witches' stirrups." He also told us of a man living at a village above Chitral who had gone out shooting, and shot at and wounded an ibex, which escaped. A few days

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

538 after a man of the village, who is lame to this
776 day, came up and asked why he had shot him, and on the sportsman denying it, and saying he had only shot at an ibex, the lame man, who is known to be an expert in fairy lore, said, "I was the ibex."

We then unfortunately asked about their religion, and here got away from folk-lore proper to the made-up stories of the wizard, for we were told that those skilled in fairy art said the fairies were of all religions, Mahomedans who worship at Gairat, and who have Mullahs like terrestrial Mahomedans, Hindoos, and others. What the latter worshipped we could not discover. The fairies, we learnt, are at great enmity with the demons, whom they very much fear.

The principal harm they do is to deprive people of their senses and to carry them off. They occasionally make themselves obnoxious by infesting a village. Lately a fairy had taken possession of one, and had wounded several people by throwing
[789] stones at them. No one was killed, but the fairy made it especially unpleasant for any one opening any closed box in a house, and finally the nuisance became so great that the Mehtar was appealed to. He called in the help of a wise man who exorcised the fairy, and no further harm was done.

The whole of the above was got from our informant without asking a single leading question, except that I asked him if ever the fairies rode people's horses, but his answer was so ready and detailed that it could hardly have been made up at the moment. Everything he told us was said

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

with an air of conviction, and as if talking of an everyday matter: it was a most delightful experience, and I only wished I could take down the conversation in shorthand, for much of the detail must have been lost. Belief in fairies is universal in the Hindu-Kush, and, for the matter of that, in one form or another throughout the East.

A travelled and well-educated Kashmiri with us was with the greatest difficulty repressed during our talk; he was always wanting to break in with some Kashmiri variation, civilised and thereby ruined, of these local tales. The next day took us to Owir, where we camped at a height of ten thousand feet, having ridden up five thousand feet, and crossed at sixteen thousand a razor-back pass between the two valleys. It was beginning to be very cold, and we enjoyed making the descent on foot, plunging straight down the shaley slopes.

The sandstone strata at the top of the valley seemed full of fossils. I picked up a couple of large ones, some convoluted shell, but, unfortunately, my orderlies did not understand that I attached any importance to them, and they were lost. There is but one drawback to a march such as we were making, and that is the time limit. You pass many things of interest which you cannot visit; you are constantly tantalised by a half glimpse of some beauty or curiosity which you pass with a sigh, knowing that you will never have the chance of seeing it again. I longed to stop and dig, and to hunt for fossils here, as I had longed to explore the Buddhist topes on the road, or to spend days trying to get at the folk-lore, but the fates drove us on.

# CHAPTER VIII

## FOLK-LORE AND SPORT

788 THE folk-lore and the festivals are most interesting, but for want of time I could not follow up the researches I should have loved to make. Vestiges of dead faiths meet you at every turn. Fires blaze at certain seasons on the hill-sides and on the mountain top, and remind you that what we call fire-worship originated but a stone's-throw to the north on the 778 other side of the Hindu-Kush. The cedar, sacred in [776] Kafiristan, and still exported to India for Hindu ceremonials, is sacred here; outside every village almost is a stone altar yet visited by the women, the names of the village gods are remembered, often surreptitiously invoked, and soothsayers and witch- 789 craft abound. Some little distance up the Chaprot nulla is a clear spring of water, and if a piece of cowskin is thrown into this, by order of the Thum of Hunza, to the accompaniment of suitable incantations, the heavens are immediately obscured with clouds, and the most dreadful storms rage over the district, to the terror and danger of the obnoxious wayfarer or invader. I was solemnly warned on more than one occasion against this particular power for evil possessed by

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard A V3

"Chili" or cedar worship, and of the Shin feast of sowing synchronised, and the two thus became welded together. The connection now is limited to a certain amount of wheat being smoked over a cedar wood fire, and of cedar twigs being in use next day when the sowing takes place. From a portion of the smoked grain a large unleavened bannock is made overnight, which is carried before the Rá or Chief of Gilgit when he rides out next morning to the sowing. Arrived on the selected ground the headman of the village holds up to the Rá the skirt of his choga full of the smoked grain, and into this the Rá throws small quantities of gold dust. The golden grain is then scattered amongst the circle of villagers, the ceremony being repeated till the grain has been thrown to all four points of the compass. The Rá then dismounts, a plough is brought, and, taking the handles, the Chief draws two furrows, one running east, the second west, and over these he again scatters the golden seed. A goat is then sacrificed, the drums strike up, and the Rá rides off, the rest of the day being one of continuous feasting, polo-playing, drumming, and dancing.

There are many other festivals, almost all connected with agriculture; spring-time and harvest, autumn and winter, are all marked by appropriate feasts. The Yudeni drum, or fairy's drum, which was kept on the top of every Chief's castle, played a part in the ancient ceremonies. It was very unlucky to look towards it while the sounds rang out; if the fairy drummer was seen, the direst calamities followed. I never to my knowledge heard the fairy drum myself, but no feast in the old days was complete

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

without its note, no warlike expedition could be expected to succeed which started without the fairy approval. But if I never heard the fairy drum, I have seen what few will ever have the chance of seeing again, the Dainyal, the diviner or soothsayer inspired by the fairies. Dainyals are usually women, but men sometimes become possessed, and the seers are seemingly of all ages. The one I saw was a buxom married village girl of about twenty, held in great estimation in the village and district on account of her supernatural powers, and ruling her household with a rod of iron.

I had ridden up the Bagrot valley, down which a stream from the southern glaciers of Rakapushi reaches the Gilgit river, in order to see what could be done to improve the water channels, which were carried along very difficult cliffs, and which the people only kept in even partial repair with the greatest labour. It was a melancholy ride. The valley had been raided years ago by the Yasin ruler, and some two-thirds of the population carried off into slavery or killed, and the traces of the tragedy were recognisable on all sides. At the mouth of the Bagrot valley lay hundreds of acres of land gone out of cultivation, the terraced fields and the raised irrigation channels still intact, their lichen-grown and sunburnt stones showing that water had not run over them for decades. Further up the valley half, and sometimes two-thirds, of the village land lay in the same state, the dead and gone vineyards easily recognisable by the small stone vats, which had once run full of foaming must; the flat stones above them, on which the grapes had been trodden out, and the little stone runnels, through which the juice had poured, were still in their places.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

matter even for that most handy of creatures, the Royal Engineer, however well he may be equipped. For the poor villager it is a labour of Sisyphus. The stream is always cutting away a frail prop, undermining a high retaining wall, breaking the side of the water channel, or washing away the intake headworks, and the work has to be done all over again. Truly, the people compelled one's admiration by their steadfast patience and determination, and filled one with a desire to help them in every way in their desperate fight with nature.

As I passed through a stretch of abandoned cultivation given up to the barberry, the wild pomegranate, and the brier rose, we stumbled on a time-worn altar, the stones of which attested its great age. It was covered with a few cedar boughs, others lay scattered around as the wind had displaced them, and the men with me said it was the shrine of the village god, and that these were the offerings of women who had come to pray. It was a scene which made a vivid impression on me. Far away above us, the culminating point of the valley, rose a snow peak against a bright blue sky, open hillsides fell back on each hand, swept by a fresh spring wind, patches of bright cultivation lay across the stream whose voice rose from the gorge to our left, but no house marred the view. Before us, backed by the silent terraced fields of a dead generation, lay the little altar of a dead faith. And yet one felt it was not dead; the great god Pan laid his hand upon one's heart, all nature was filled by his presence, and one felt the impulse which brought the women there to offer their humble

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

sacrifice to the living god of the stream and the hillside rather than turn to the cold deity of Mahomedanism, so essentially the god for men, and not for women. I replaced the scattered boughs, and invoked peace and prosperity on the stricken valley.

Above the village where we were camped was a conical hill inhabited by the local fairies. It is easy to realise how certain their existence is to the people. It always seems to me that it is only in the heart of the great mountains, thousands of feet above the last trace of human habitation, when you lie by some time-worn rock, lulled by a silence which can be felt, and gazing at the eternal snows, that the real voice of Nature speaks to you. Then truly do the heavens declare the glory of God; you feel the pulse of the All-pervading Presence, the beauty and sublimity of Nature sink into your soul, and for the moment the mysterious veil which falls between us and the light wavers and half fades away. If Nature so speaks to us what must she say to men and children who spend days and weeks of absolute solitude on the mountain sides. A simple mountain people must have a simple faith, must bow to visible and tangible deities, not to abstract objects of pious belief. It needs the pure clear skies of the desert to produce a race which can recognise that "there is no god but God," centuries of high civilisation working on the acute and introspective Indo-Aryan mind are required to produce the Buddha. The gods of the valley and the mountain, of the mist and forest, the dwellers in the glacier and the

4 Av 3 Dard Av 3
Burusho Av 7.

when the drum is heard; if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodeni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nager are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the mane and forelock of favourite horses. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

Gilgitis. When a person is dead, the Mulla, assisted generally by a near friend of the deceased, washes the body which is then placed in a shroud. Women assemble, weep and relate the virtues of the deceased. The body is conveyed to the grave the very day of the decease. In Astor there is something in the shape of a bier for conveying the dead. At Gilgit two poles, across which little bits of wood are placed sideways and then fastened, serve for the same purpose. The persons who carry the body think it a meritorious act. The women accompany the body for some fifty yards and then return to the house to weep. The body is then placed in the earth which has been dug up to admit of its interment. Sometimes the grave is well-cemented and a kind of small vault is made over it with pieces of wood closely jammed together. A Pir or saint receives a hewn stone standing as a sign-post from the tomb. I have seen no inscriptions anywhere. The tomb of one of their famous saints at Gilgit has none. I have heard people there say that he was killed at that place in order to provide the country with a shrine. My Gilgiti who, like all his countrymen, was very patriotic, denied it, but I heard it at Gilgit from several persons, among whom was one of the descendants of the saint. As the Saint was a Kashmiri, the veracity of his descendant may be doubted. To return to the funeral. The body is conveyed to the cemetery, which is generally at some distance from the village, accompanied by friends. When they reach the spot the Mulla reads the prayers standing as in the "Djenazi"—any genuflexion, "ruku" رکوع and prostration are, of course, inadmissible. After the body has been interred the Mulla recites the Fatiha, [opening prayer of the Koran] all people standing up and holding out their hands as if they were reading a book. The Mulla prays that the deceased may be preserved from the fire of hell as he was a good man, etc. Then after a short benediction the people separate. For three days at Gilgit and seven days at Astor the near relatives of the deceased do not eat

St Lorimer L-S (1920-24) 1920 AVS Dard AVS

eye, rain-making, curse, and so on, I shall not here attempt to deal. 128

The first or animate category may be analysed as including :—

1. Beings whose supernatural operations are observable in ordinary daily life—the LIVING SUPERNATURAL. These may be superhuman or non-human beings, or they may be ordinary human beings.

2. Beings whose operations are chiefly found enshrined in folk tales—the "LEGENDARY" or "LITERARY" SUPERNATURAL. These may be regarded as superhuman or non-human.

At the top of the scale of the Superhuman, the God of Islam under his Persian name KHUDA appears to have created all rivals. Only among the Burushaski-speaking peoples are there traces of more primitive animal spirits, or spirits assuming animal forms, treated as objects of reverence or worship. The name under which their memory has been preserved is Bŏyo. This I believe to be the plural of a singular form Bŏ.in, but I should just mention that this is a point on which doubt is possible. 776

Among the Shina speakers the principal forms of superhuman being are sometimes referred to collectively in a phrase of association as "*Jinn, dŏ.ŏ, peri*".

*Jinn* as a foreign (Arabic) word of Islamic origin is given rather a wide and vague application, but Dŏ.ŏs and Peris can be roughly differentiated as demons and fairies.

The term Rāchi is generally used of inanimate protective objects, which belong to the impersonal side of magic, but in the form Rāchi it possesses also a personal significance. 778 ●

Chhĕ is the name of an important type of apparitional supernatural. 775

Whether Ghosts, the Spirits of the Dead, are to be reckoned as human or superhuman is a nice question. They are, I suppose, in fact sub-human. They seem to be recognised under the foreign (Arabic) title of Arwāḥ, but to play no very active part in popular belief.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

there by the local people till a few years ago, when it was stopped, I think, by the orders of the Mir of Hunza. Animals were slaughtered there "in the name of the Bōyo".

From a story of Hunza tribal history it appears that the Bōyo were regarded as the avengers of broken oaths taken in their names. In a dispute about the ownership of land between two brothers Khuru and Khamer, Khamer proposed that the case should be decided by their taking oath. Khuru, the weaker party, who was also incidentally in the right, agreed and said: "O brother, the Sahāla Bō.in and the Hālasa Bō.in are very powerful and they are quick to wrath." But Khamer, who meditated a ramp and had no mind to be caught in this way, would not even hear this proposal out. "If we swear by them," he said, "they will work us evil." So the idea was dropped and with it disappeared our chance of learning the methods of taking oath by the Bōyo.[1]

The Bōyo now bear the stigma attaching to the gods of a superseded religion. "Bōyo-worshipper" (bōyo ā.llikinas) is now used in the sense of heathen, pagan.

There seems to be a special association between the Bōyo and trees, and the trees share in their sanctity. Whether they each have their own independent virtue, or whether the one owes its worshipfulness in any measure to the merits of the other it is impossible to say.

In the two remaining texts in which I have references to the Bōyo the associate tree plays an important part. In a statement made in Ṣhiṇa by Ṣōbahdār Sulṭān 'Alī of Nagir regarding certain popular practices at Chapṛōt he said: "Further they say that all the people used to assemble to do worship to a pine-tree that was there. They used to take a grey goat and slay it at the foot of the tree and a great

[1] I have here accepted the relation of Bō.in and Bōyō as singular and plural which is morphologically quite in order, and is asserted by some, though denied by other, authorities. The word bō.in seems to survive in bō.inḍēgas (pl. bō.in dēgaṛā) which was explained as arwāḥ—the spirits of the dead. Dēg-, occurring in other compounds, appears to refer to a dead person.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

number of puppy-dogs used to come out from below the pine-tree to drink up the blood. Then the people used to return rejoicing to their homes, and they used to say among themselves: 'Thanks be! Sickness has now been banished from the country.'"

Here it is stated that the tree is worshipped, but that the puppies, who are doubtless the Bōyo, benefit by the sacrifice. The Ṣhiṇa word (śilō.iki) translated "worship" means to *appease, placate, propitiate, do reverence to.* It corresponds, I think, exactly to the Burushaski *-ilikinas.

The other story, in which the tree also plays the chief rôle, is briefly as follows: From ancient times there was a juniper-tree in the garden of a man called Keramo Derbēsh, living in the Dirāmiting territory. It was called the Bōyo Gal ("the Bōyo juniper"). It was said that formerly animals like puppy-dogs used to come out from under it. The people of Hunza used to propitiate them (worship them) and called them Bōyo. One, Bagher Tham, cut the tree down and he promptly died. Two stems grew up again from the stump and a man cut one of them. He became paralyzed and an idiot. A man called Māmad Shāh cut down the remaining bough and he fell down from a cliff and was killed. After this people were afraid to meddle with the tree and left one bough (not previously mentioned) unmolested. Last year and the preceding year (1923 and 1922) this bough was still *in situ*. Then a man Yaqīn, obtained permission from the owner (Keramo Derbēsh) and cut it down and took it to his house. But he had a dream in which a number of women appeared to him and asked him why he had cut down their juniper-tree, and intimidated him. In view of past history he became alarmed and returned the juniper bough to its original owner, Keramo Derbēsh, in whose house it now lies, for no one will venture to burn it.

Here we are left wondering whether there was any connection, other than topographical, between the juniper and the

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

Bōyo, and whether the ladies who resented the ill-treatment of the tree were an original dream-invention of Yaqīn's or were personages already known to the public. 776 778

This is all the information I can give about the Bōyo. As far as I know they have no counterpart in the present-day beliefs of the Shina-speaking peoples.

We next come to the association of the JINN, DE.Ū, PERI. The name Jinn, as already stated, is not an authentic local title, but has been derived from Islamic sources. It is used rather vaguely for all beings of the apparitional order. The popular mind is probably not very clear about the exact nature of all the supernatural phenomena which it encounters, and welcomes a non-committal term carrying all the flavour of high religious sanction. There are many stories in which Jinn appear, and it is probable that the foreign name has brought with it some foreign conceptions and associations. I am inclined to regard them with suspicion, though in the main I believe them to be merely re-christened Çhèçh and perhaps Dē.ūs. 776 177

Another foreign (Arabic) term, Balā, seems to be used even more vaguely for evil spirits or demons whose presence you suspect or perceive, but whom you have not yet clearly seen and to whom you cannot put a name.

On the other hand a third foreign (Arabic) name, Shaiṭān, seems to carry with it a more definite personality. Shaiṭān is a leader among malignant and malicious spirits, at least a demon with an individuality, the Devil, Satan. He is probably a foreign intruder. On these foreign or denationalized Devils whose antecedents are somewhat suspect I shall not here spend time.

I may just mention by way of illustration that if after "concocting" magic, a process which takes forty days, you then sit down in the open and draw a line round yourself on the ground, a Jinn will appear and try to frighten you. If you keep up your courage other Jinns, Dē.ūs and Peris will come and try to frighten you. Finally if you remain firm 776 789

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

I have recorded instances of human-peri marriages in Chitrāl, but that lies outside our present beat.

## Rāçh

The term rāçh, cf. the Sanskrit root *rakṣ-*, "to protect," is usually applied to material objects, which exercise protective powers over human beings. Among such objects are included articles worn as talismans. It is also said, however, that everyone has a guardian spirit in the form of a small girl—Rāçhe Mulai.i, or Rāçhi. There may be two of them. These Rāçhi communicate with the Pashū or Anti-witch when their protégés are in danger.

Again, if a bad woman rides on a horse the horse's Rāçhi is depressed. Here the Rāçhi was explained as the *sitāra*, "star" or "fortune", but it is not therefore to be assumed that it is an impersonal abstraction. The conception of a man's "luck" or "fortune" as a living being who is sometimes asleep and sometimes awake is very common.

In a Burushaski story there are three women who are the "Guardians" (rāçhakūyo) of a king of Irān. They know his fate beforehand and how he can escape it, but are not in direct communication with him. This story, however, is obviously of foreign origin, at least in its existing form, and the guardian women are an integral part of it and could hardly have been introduced as an afterthought.

## Chèçh

We now pass to a very active and vital group of the Living Supernatural—the Chèçh. The name is not identifiable as a foreign loan-word and has all the appearance of being good Shina. If I am right in believing the ch's to be cerebral, they would ordinarily correspond to Sanskrit kṣ or tr, but I cannot suggest a deriyation.

Chèçh appear to me to present features of interest and originality, but they may be commonplace to the instructed folklorist. I shall first mention some of the chief characteristics and then illustrate them by specific examples.

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

## V.

### The Ceremony of Nagi Suchemi.

Nagi Suchemi is said to be a goddess who lived at Nangam in the Astore district, on a stone altar situated at the foot of the Nagishi hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jungmi was specially appointed by the Rá to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present, in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sochemi, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this solemnity were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discoverer of the offending juryman at dawn of that day. For some days the case was left awaiting the decision of "Nagi Sochemi," and if in this period the suspected person suffered any kind of loss of property, of relatives, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

### "Khuran" or "Majari."

In Chilas and in the adjacent valleys of Jalkot, Palas, Koli, Darel, Tangir, Gor, Harban, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khuran" in Shinaki (Chilas, Darel, Tangir, Gor, Harban and Sazin), and "Majari" in Kohistan (Jalkot, Palas, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must needs submit.

## VI.

### Danyals.

There are some men and women of these parts who are called Danyals. When they are worked up into a state of frenzy the giants and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Danyals as well as the local musicians. A bundle of green chili leaves is then brought, and some of these, with a little *ghi*, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Danyals push their way towards the fire and begin to inhale the smoke, until

## YĀTHINI

[361] 778 532 539 173

Adjacent to and on the southern side of Basin, a village about three miles west of Gilgit, there stands a cliff at the junction of the Kargah and Naupur nullahs. A large image of an erect Buddha has been sculptured on the rock-face, about 30 feet above the ground. It is without doubt a sculpture of ancient date and shows that the valley was once inhabited by a race professing Buddhism. The people call it "Yāthini" (giantess), and relate an interesting story about it. They say that she was the sister of Shri Badat, a King of Gilgit who was the descendant of giants. She lived on the said rock and, being a man-eater like her brother, was in the habit of killing and devouring half as many of the men as happened to pass by, leaving the other half unmolested. The princess continued this practice for a long period, to the great distress of the inhabitants, until a certain Danyal named Soglio, feeling the loss of so many people dear to his heart, devised a successful plan of murdering her in order to save his beloved countrymen. With the above design in his mind he set out for the place with a party of brave and bold men. Reaching the spot he burnt a small fire at the foot of the said rock, and his companions took their seat around it in a small circle. The Danyal, according to his usual custom, put some *chili* (juniper) leaves on the fire and inhaled its smoke. Thus driving himself into a state of ecstacy, he commenced dancing and singing some magic incantations, which were repeated by his companions. The Yāthini was elated at the prospect of more victims. As soon as she approached the Danyal he stepped forward and addressed her in a song, of which the following is a translation :—

"Have not you heard, O lovely princess, that your father has expired to-day?" Hearing this sad news, she struck her breast with her right hand. Soglio, who had with him some long iron nails, thrust one of them through her hand, as it lay on her breast, with such rapidity and strength that the nail penetrated her chest and went far into the rock behind. Soglio then sang another song, in which he sang as follows :—"Have not you heard, O charming princess, that your brother has also died to-day? On this she struck her second hand on her thigh. Soglio quickly pierced this with another sharp nail. The Yāthini was thus firmly fixed to the rock, and was unable to move, or to take revenge. The party was much delighted at this success of the Danyal who further turned her into a stone by his prayer, and even more delighted were the inhabitants when they heard of the good news. The unfortunate Soglio requested the people to bury him on his death near the Yāthini, as otherwise she would return to life and continue her cruelties. The people, who had now obtained their desire, held a private council to discuss the matter. They argued that no one could tell when and where Soglio would die, and whether they would be alive or able to procure his body at the time, should he die in some far-away country or by drowning in the river; in which case the Yāthini would recommence her practices with renewed ferocity. After a long debate they thought it best to assassinate Soglio at once. A man was appointed to accomplish the horrible task, which he did, and Soglio was at the same time buried close to the figure on the rock.

773 keep trust in Provision, who was a servant of everybody. On this the Yaths sent "Trust" to the wolf, and he came with him to the ruler of the Yaths. The object was explained to him and he said that a bird called Garai Patan, who lived on the snows on the Coxus Mountain, should be sent for at once. Provision was first made the messenger; but the bird declined to come; whereupon Trust was sent to him and he came to see Bojare Shal and Yamlo Hal Singh. Bojare Shal now sent for a mouse which lived close to his home. When everything was ready the wolf gave orders that Yamlo Hal Singh should stand in water as a pillar upon which Gorai Pattan should spread his wings, while the mouse by the making a hole into the ice should bring out and spread all the soil over the wings of Gorai Pattan. The orders were obeyed and the wings of the bird covered all the water, while the mouse brought out all the soil which was beneath the water. In this way the earth was turned over the water.

## X.*

### "Neelo But" (The Blue Stone).

643 778 There used to be at Gilgit a blue stone called "Neelo But," about a yard square, where the present telegraph office is situated. No king was acknowledged in the country unless he had resorted to it and prostrated himself before the stone. There and then the people adorned his head with a crown, swore fealty and tendered their allegiance. This was the day when all the better class would gather to see the new "Rá" perform all the ceremonies, and undergo all obligations considered necessary to the office of leader of the nation. This was done in order to secure their confidence by a man who was to become sole director over their destinies, among them being many who had taken an active part in bringing him to the throne and proclaiming him their chief.

When the ceremonies were over, all came one by one to kiss his hands, to receive his blessings and to bless him in return. They would then dance to the beating of drums, make merry, sing praises and recite poems describing the heroic deeds already performed by the Rá, his ancestors and others whose lives had become endeared to all by self-sacrifice in the cause of their country.

[787] The *damyal* (soothsayer) was not left out on this occasion, for it was necessary to foretell the future of the king and his courtiers, and to exhibit the state of ecstacy that accompanies prophecy by the soothsayer. Before being dismissed at night all present partook of a feast; some were gratified with handsome *khilats* and other distinctions; some gratified by a gesture of kindliness

### The Ceremony of Shri Bai.

778 796 842 782 Shri Bai is the name of a goddess who, as the people say, lived on a rock at Nangam, a village in the Astore district. The rock too is called Shri Bai, and is always kept covered with branches of juniper, while an attendant called "Boh Bin" resides there to look after it. Barren women used to sacrifice goats to and pray before the sacred stone in the hope of progeny. In the hot weather, when the people had gathered their

* [See also p. 103 *antea*.—Ed.]

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

crops, the female population of the village proceeded to the Devi in their best attire. They sang on their way, and when they reached their destination presented a goat to the "Boh Bin." He then threw up some small branches of the juniper in the air, and the women attempted to catch them before they fell to the ground. It was believed that a woman would be blessed with as many children as the branches she succeeded in catching. Descendants of the original "Boh Bin" still remain, but the ceremony is no longer observed.

A stone of this kind is also found at Barmas near Gilgit. The ceremony performed upon this stone was exactly the same as stated above, but it has a different name, *viz*: "Mulkum."

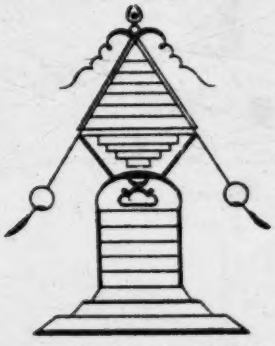
## "Rato" or "Chili."

At Farfuh, a village in the Bagrot valley, there are five small portions of land situated at the foot of a mountain and called Chuto Rato, Shilo Rato, Surgon Rato, Chilko Rato and Thoko Rato. In these tracts there are five very large boulders and five small stones, called respectively "Dev-ai-Maron" and "Mos Samaran Ken" (*i.e.*, stone for distributing flesh). Here the "Rato" ceremony, also called "Chili," used to be performed as follows. During the first six days of the ceremony, which lasted for seven days, the people wore new and clean clothes, the sexes being separated and inhabiting different houses. On the seventh or the last day, all the people of the different communities or families of the village assembled separately and went to their respective "Ratos" with a goat and some young branches of the chili or *Juniperus macrocarpa*. These branches were placed upon the "Dev-ai-Maron," and the blood of the goat which was now sacrificed was thrown on. The meat was placed on the "Mos Samaran Ken" and distributed among those present, who roasted and ate it at the same place. It was never given to any woman or to a man of any family other than that of "Rato." The shoulder-blade of the goat killed was then placed on a high stone and fired at by marksmen amidst the noisy acclamations of the people, and a dance was held in honour of the sacred ceremony. After this the people assembled round the "Dev-ai-Maron," while the oldest man present or the headman of the village sat quite close to the stone and addressed it in the following manner: "O iron-like Rato, O Shri Bagartham, we have come to thee to express our wants. We have no progeny: kindly endow us with children. We are destitute of money: kindly favour us with gold and silver. We are in want of grain: please supply us." In the same manner he related all their desires for cattle, clothes, goods, etc., while the other men followed him and expressed their assent to what he said by crying "Amen." The women of the village now appeared in their best attire, with some dry flour and small flat loaves. They threw the *atta* on the *chili* branches and prayed in the same manner for the fulfilling of their desires. The loaves were distributed among the men, who eat and rejoiced. At some places the women were strictly prohibited from going near the Rato stone. This ceremony was performed and known by the same name throughout the whole of Gilgit, but on stones of different names, so that the stones at Datuchi and Bulchi were called "Aju Bin," at Sinakar "Shri Bin," at Gilgit and Dainyor "Rato-denaken," and at Naugam "Shri Bai." The

000 "Shri Bai" ceremony, performed with a slight difference at Naugam, will be dealt with separately.

## Sculptured Stones.*

532 174 778 On the bank of the Indus river a big stone is seen about a mile's distance from the entrance of Botugah Nullah (Chilas Nullah) where there stand some boatmen's huts. It bears a figure of a Buddhist *Mane* [ ? ]. The carving begins a little above the foot of the stone. In height it is a little larger than a man. Though faintly engraved, it is so skilfully whitened that, although it has been exposed for so long a time to the action



of the weather, its white colour is still to be remarked from a distance. On this rock there are also many other figures of the same kind, but they are somewhat smaller in size than the one above mentioned. Some two or three miles below this place, there are numerous stones of various sizes on the river bank bearing the figures of goats and markhors, &c. Some of the stones show representations of axes, while the others are those of deer. At some places the carvings are seen on the top of a stone as well as on its sides. The same kind of figures are also seen in the Bagrot Valley engraved on rock-faces between the Sanikar and Bulchi villages.[1]

At Barmas, near Damot, in the Sai valley, there are two pictures of Buddha. One is carved on a stone, and the other is a painting of Buddha sitting among his disciples.

At another place, in the neighbourhood of Chilas, there is a rock still larger in size, and on its river side there are a good many figures. There are also two or three carvings of temples with a large number of men, goats, horses and cows, &c., engraved on them. On this stone there is an inscription written in some ancient character. The same carvings are noticed for some way along the river, which here does not rise sufficiently in summer to do them any injury. It shows that in a certain period, this part of Chilas was inhabited by Buddhists. The inhabitants of Chilas are under the impression that all these inscriptions are made by the fairies.[2] The tradition is that in ancient times the land was

532 174 776 778

[1] These villages are situated in the Leepar Valley.

[2] [A similar belief is held by the Malays (Mahammadans) of Lower Siam and Pahang regarding the "Orang Parai" (Peris), and certain clay tablets of Buddhistic origin found in caves. See Skeat, *Man*, 1902, No. 125.—Ed.]

113

*[See also p. 106 *ante*.—Ed.]

frequently visited by fairies who used to make these inscriptions, as in the opinion of the Chilasis it is beyond man's power to produce such inscriptions. It is also affirmed that these fairies were seen in those days by all men, but nowadays they are visible to no one except to a great Mullah by dint of his miracles. The Bagrot people say that the carvings were inscribed on stones by the fairies on the night of "Shino Bazono;" and that on the same night the fairies frequently used to rub away the figures from one stone and to engrave the same on another.

### The Ceremony of Sri Kun.

Sri Kun is said to be the sister of Nagi Sochemi, and lived at Shankank, a village near Godai in the District of Astore. The villagers used to present goats to this goddess and prayed before her seat for the supply of their wants. Her followers were strictly prohibited from keeping cows, or drinking their milk, and were under the impression that by so doing they were apt to lose their flocks, herds, or the produce of their lands.

### "Jainkish" and "Dewaro."

At Gilgit proper and in the surrounding villages there are seen two small tracts of land called "Jainkish" and "Dewaro." The former is situated on the river bank and the latter at the foot of a hill, except at some places in which they both are found at the foot of a hill. In ancient times, when Islam had not spread to these parts, the tribes used to burn the dead at "Jainkish," and a few days after they gathered and carried away the bones to "Dewaro," where they buried them in one pit. Remnants of bones still mark these places, though the traces have almost been obliterated by time. In these circumstances, however, one is not wrong in supposing that Muhammadanism is of recent growth.

Several old men still living at Gilgit relate that they used to play with the brass bangles and rings which they found in "Jainkish;" but to carry away such articles to their houses was considered improper. From this it appears that the dead bodies were burnt with their ornaments.

### Sankar Village and a "Chinar" Tree.

There is a small populous village named Sankar in the Bagrot Valley. It is said that when this tract was lying waste, a Fakir named Shah Burya passed through and halted there for a short time. Becoming thirsty and finding no water, he prayed to God for a good supply. His prayer was granted, and a sufficient quantity of water burst forth from an adjacent hill. After a few days Shah Burya felt the heat of the sun, and planting his stick, which was of *chinar* wood, deep into the ground, prayed again to the Almighty to make it into a large *chinar* tree. This prayer was also granted, and a big tree grew, under whose shadow he afterwards used to sit. The branches of this tree are said to have been once so large and spreading that they touched the neighbouring hill about 600 yards distant, across the Bagrot Nullah. The tree was afterwards burnt by the Mongols, but after a short period five shoots sprang out from its trunk, and these are still to be seen, forming an enclosure about 30 yards wide.

### A Pearl Tree on the Deobani Mountain.

361 776 539

On the east of Tashot, a village in the Bagrot Valley, there stands a snow-covered mountain called Deobani. The people say that there is a large pearl tree on its top, which is the property of the fairies and giants. A good mountaineer is said to have once reached its summit. Gathering a load of the pearls, he started down towards his home. But he was surprised to see a crowd of giants and fairies coming after him, and, being frightened by their approach, he thought it better to throw away all the pearls in order to save his life; he was surprised, however, to find that a fairy still followed him as far as his house. There he closed his door. While changing his clothes he found that a pearl was hidden in his shoes. The pearl was then thrown towards the fairy; she picked it up and disappeared. A similar story is related about Nanga Parbat, a mountain on the west of Astor.

### Shangali Ween.

361 778 539 695

At about two miles east of Danyore, a village about three miles east of Gilgit, there is seen on the northern side of the road leading to the Bagrot Valley a small piece of ground about one yard square surrounded by walls about three feet high. This place is called "Shangali Ween" (place of putting chain). It is said that there used to be a golden chain hanging in the air without any support. In ancient times, when any case was to be decided on oath, both the parties were carried there and each of them addressed the chain in the following manner: "O *Sayio Shangali* (sacred chain), whoever of us is sinful please accuse him by striking his neck; and the chain used miraculously to whirl round the neck of the man who was guilty. The man was then convicted and punished by the authorities according to law. No chain is now found at the spot, and the people relate an interesting story about its disappearance. They say that two men of the Bagrot Valley were once coming together to Gilgit: one of them had brought some gold with him which the other succeeded in stealing. Making a small hole in his stick, he put the gold secretly into it. The men, after a long quarrel about the lost gold, decided that the case should be settled by the Shangali. When they were entering the place, the guilty man gave his stick which contained the gold to the other, and they both began to beg before the Shangali, asking that, whichever of them had gold in his possession, he might be struck by the Shangali. The Shangali, who was aware of the trick, was much enraged at this attempt to deceive, and, considering itself offended, at once disappeared for ever without settling their case. The loser of gold was now very angry, and in a fit of his anger struck the stick on the walls of the enclosure. The stick broke and the lost gold was disclosed.

### Nong and Chakrot Bari.

778 789 823

Near Laos village in the Astor district there is a small fountain called Nong. The people consider it a sacred one and offer sacrifices at the place for the fulfilment of their wants. If owing to drought a loss of their crops is expected, or if for any other reason heavy rain is required, the people used to throw some unclean thing into the spring, such as the bone of a dog; it then began to rain, and continued until the object was taken out. Owing to the belief that the spring was sacred and, moreover, able

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

to inflict harm upon the people, they themselves did not dare to put an unclean thing into the spring; and therefore on such occasions a foreigner was employed to perform this act, receiving as remuneration a large quantity of grain collected for the purpose at the rate of two seers per house. After receiving this grain he threw some unclean thing into the spring; and took it out when the rain was no more required. There are two other similar springs: one in the Bagrot Valley, called Chakrot Bari; and the other near the Tarshing village in the Astor District, called Komachon uts.

778 789 823

### "Rashoo ai Yudaini."

(The Fairies' Drum of Rashoo.)

The Doms of Bulchhi, a village in the Bagrot Valley, have still in their possession a small drum about one foot in diameter and three feet in circumference. This is called "Rashoo ai Yudaini." It was once carefully kept in a handsome cover by Rashoo, a Rono Wazir of Gilgit, who had ruled for the chief in that place. It is said, that whenever Rashoo intended to advance against any chief, the Yudaini was brought and kept before him. If it made a noise, without having been beaten by anybody, Rashoo believed it an omen of success. But if it were silent, Rashoo postponed his expedition.

534 539 778 721

### The Hoof Mark of a Horse.

Between Edgah and Balan villages in the Astore district there are seen on a rock near the old road which faces the Phina village, a few small flags. It is said that at this place there is a mark on a stone of the hoof of a horse. The story of the hoof-print is this—The place was once haunted by a giantess, who was a bitter enemy of mankind, and had become the terror of the people. The people wished to get rid of her. By the providence of God, one day a venerable Darwesh—some say that the Darwesh was no one else but Hazrat Khizar himself—halted on the river-bank close to the foot of the Phina village, and saw the giantess across the stream. He flung himself on his horse and, spurring it vigorously, came upon the giantess with the speed of lightning. She had no alternative left but to take to her heels, which she did, leaving the noise of her shrieks behind, and was never seen again. The horse had come upon it with such a vigour that the stone gave way under its weight, and there burst forth from the stone a spring of cool, fresh water. Though there exists no trace of it now, it is still looked upon as a sacred place, and the people from far and near gather together annually to celebrate the event by killing a sheep, feasting upon it, and making merry.

361 539 778 796

## XI.

### The Foot of Malik the Rá of Gilgit.[1]

It is said that one of the feet of Malik, an ancient Rá of Gilgit, was naturally formed like the hoof of an ass. He took great care to conceal this defect from all people. One of his old servants had, however, a knowledge of the mystery; but he was strictly forbidden by the Rá to disclose the secret. The servant kept it from becoming known

539

[1] [Cf. the Greek story of Midas and his ears, and of how their asinine form was revealed to the people.—Ed.]

22 Biddulph G-3 (1873-1878) 1880 AU1 Afghanistan AU1
4 AV 3 Dard AV3
Burushe AV7

when the drum is heard; if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodeni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nager are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the mane and forelock of favourite horses. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

Biddulph G-3 (1873-1878) 1880 ~~AUI Afghanistan AUI~~
4 AV3 Dard AV3
Burusho AV7

D
778 storm of hail and wind arise. Mahmood having caused this
821 to be done, the effects became visible; for, instantly the sky lowered, and thunder, lightning, wind, and hail succeeded, turning the day into night, and spreading horror and destruction around."

D
787 Divination is still practised, in spite of the conversion of the country to Mahommedanism. The Dainyals, or diviners,
791 who are of both sexes but are more frequently women, are supposed to receive the gift of second sight by the shadow of a Barai, or fairy, having fallen on them in sleep. Dr. Leitner
B speaks of the gift as being supposed to be hereditary, but
787 this is not the case, though the daughters of Dainyals often become Dainyals also. Dainyals are said to be only found
791 among the shepherd population, and it is easy to understand how a solitary life among the wild crags of the Hindoo Koosh should encourage a belief in the power of intercourse with the unseen world. Quite young people become Dainyals, and the spirit of prophecy is supposed to remain with them for life.

The first intimation of the gift to the friends of the recipient is conveyed by their finding him or her in a deep trance. The requisite music is brought, flageolets being substituted for the ordinary clarionets, and softly modulated airs are played close to the ear of the entranced. Gradually he moves and begins to show signs of life, on which a goat is brought and decapitated, and the bleeding neck presented to the Dainyal novice. This is the test of a true Dainyal. If the gift of divination has really come to him, he seizes the bleeding neck, and sucks the blood. Some find this too much for them, and refusing to suck the blood are looked on afterwards as only feebly gifted with the spirit of prophecy. The idea of imposture never seems to be entertained by these simple-minded people. The recognised Dainyals are consulted on all special occasions, such as the yearly festivals in summer, or the declaration of war with a neighbouring state. The spirit of divination is supposed to lie dormant in winter, and to be strong in proportion to the heat of the weather.

On the first occasion of my witnessing an incantation, two Dainyals were brought from a considerable distance to prophesy at the Ganoni festival in June. They were both women, one of about twenty-five and the other about forty years of age, who showed by their wild and haggard looks the strain of the often-practised ceremony on their faculties. A circle

Biddulph G-3 (1872-1878) 1890 AUI Afghanistan AUI
4 AVS Dard AVS

Next to the Aiboi came the *Ganoni* feast, which celebrated the commencement of the wheat harvest. It is still kept up in Gilgit and all the neighbouring valleys. The day having been fixed with reference to the state of the crop, the last hour of day-light for the preceding ten days is spent in dancing on the Shawaran. At dusk on the evening before the festival, a member of every household gathers a handful of ears of corn. This is supposed to be done secretly. A few of the ears are hung over the door of the house, and the rest are roasted next morning and eaten steeped in milk. The day is passed in the usual rejoicings, and on the following day harvest operations are commenced. As some crops are always more forward than others, and ready to be reaped before the appointed day, no restriction is placed on their being cut; but to eat of the grain before the Ganoni would provoke ill-luck and misfortune. The festival is observed in Sirikol and Wakhan; in the latter place it is called *Shagit*. In Chitral it is called *Phindik*. The tribes in Torwal, Bushkar, and in the Indus Valley below Sazin do not observe it.

The next festival is the *Domenika*, "smoke-making," which celebrates the completion of the harvest. When the last crop of the autumn has been gathered, it is necessary to drive away evil spirits from the granaries. A kind of porridge called "mool" is eaten, and the head of the household takes his matchlock and fires it into the floor. Then, going outside, he sets to work loading and firing till his powder horn is exhausted, all his neighbours being similarly employed. The next day is spent in the usual rejoicings, part of which consists in firing at a sheep's head set up as a mark. In Chitral this festival is called *Justundikaik*, "devil-driving."

The last festival in the year, and the most important of all, is the *Chili*, which formerly celebrated the worship of the Chili tree (*Juniperus excelsa*), and marked the commencement of wheat-sowing. Within the last sixty years the rites connected with tree-worship have ceased, but the ceremonies connected with sowing are still maintained. The feast now lasts two days, beginning on the first day of the sun entering the sign of the Scorpion. The first is called the Ra's day, the second the people's day. The evening before the first day a procession goes to the Ra's granary, from which they receive between twenty and thirty pounds of the best wheat, which is placed in a skin mixed with sprigs of the sacred *chili* tree. A large bonfire of the sacred cedar wood is lighted, and the quantity of wheat to be used in the next

Mrs Biddulph G-3 (1873-1878) 1880 ~~AUS Afghanistan AUS~~
4 AV3 Dard AV3

then took some of the leaves, and pouring wine and water on them placed them on the fire, and the rest were sprinkled with flour and suspended from the ceiling. She then sprinkled flour on her husband's head and shoulders, and addressed him thus:—"Ai Shiri Bagerthum, son of the fairies, you have come from far!" *Shiri Bagerthum*, "the dreadful king," being the form of address to the cedar when praying for wants to be fulfilled. The next day the wife baked a number of cakes, and, taking them with her, drove the family goats to the Chili stone. When they were collected round the stone, she began to pelt them with pebbles, invoking the Chili at the same time. According to the direction in which the goats ran off, omens were drawn as to the number and sex of the kids expected during the ensuing year. Walnuts and pomegranates were then placed on the Chili stone, the cakes were distributed and eaten, and the goats followed to pasture in whatever direction they showed a disposition to go. For five days afterwards this song was sung in all the houses:— 782 782 539

Dread Fairy King, I sacrifice before you,
How nobly do you stand! you have filled up my house,
You have brought me a wife when I had not one,
Instead of daughters you have given me sons.
You have shown me the ways of right,
You have given me many children,
You have made me like the mountain,
I have brought the family of the mountain tops,
I have gone to Sargin Gilit,
That I might see the people.
You slay many wild goats,
You with the gun on your shoulder,
Oh you with the sword in your hand!
Oh you riding upon a horse!
Oh you clothed in a fine robe!
Dread king, I will slay you a ram.
Oh you that have come from the mountain,
I will rub your feet with butter.
Oh you that have come from below,
I will anoint you with oil.
I have been to the wide plain,
They have slain you a fine he-goat,
A ram has been slain, I have honoured you to-day,
To-morrow you will depart.
Go, dread Fairy King, I salute you,
You have given me prosperity,
How shall I let you depart!

The Chili stone is still to be seen at the entrance of every Shin village. [778]

Burush. Av7

D 762 178 It is also a matter of accepted tradition in Gilgit, Gor, Hunza, and Nager, that suttee was formerly practised. The dead man, with his finest clothes and his weapons girded on him was placed on the pyre, and as the fire burnt up, the woman, arrayed in her jewellery and her richest clothes, leaped into the flames.

B 762 178 The burning of the dead ceased to be practised more than sixty years ago. One or two old men have told me D [764] that they could remember hearing it mentioned, as a not uncommon occurrence, in their youth, but none could recollect having witnessed any actual instance. So lately as in 1877, a very old man in Darel scandalised his neighbours by calling his sons to him on his death bed, and after having his arms and valuables brought to him, desiring to be burnt with them when dead. His wish, however, was not carried out. He and a man of Gor, who died twenty years ago, are known to have always refused to be circumcised, or to call themselves Mahommedans. They were probably the very last Hindoos in Dangaristan. Suttee was abolished earlier, and has certainly not been practised in Dangaristan for the last hundred years.

D 771 171 It is to be remarked that none of these customs, which savour so strongly of modern Hindooism, are to be found, either as now existing or as resting on former tradition, in any of the valleys to which the Shin rule did not extend; nor is the term Dangarik applied in any cases except those mentioned. The difference between some types of Hindooism and Buddhism is not necessarily very great, but the existence of customs among them, not shared by their neighbours, the establishment of a caste system, the use of the title of Ra for their rulers, and the common suffix of *Sing* to their own names, with the frequent use of Sanscrit terms, show that considerable differences exist between the Shins and their neighbours of the Swat, Punjkorah, and Chitral Valleys, with whose language their own has so much in common.

D 778 783 In spite of the more severe type of Mahommedanism which prevails, and which gathers strength year by year, idolatrous customs still survive. In every village in which Shins are in the majority, there is a large stone, which is still more or less the object of reverence. Each village has its own name for this stone, but an oath taken or an engagement made over it, is often held more binding than where the Koran is used. In several villages goats are still annually

Riddolph G-8 (1873-1878) 1880
4 AV3 Dard AV3

sacrificed beside the stone, which is sprinkled with blood, and in other places the practice has only lately been discontinued. Though the religion introduced by the Shins would appear to have been of a Brahminical type, it must have contained also a considerable amount of demon worship, as is shown by Mr. Shaw in his account of the Hanu Darda.

I have been told that when the Cashmere troops first occupied Gilgit, there was in the fort a slab of stone about 3 feet long, bearing a Sanscrit inscription. My informant told me that he had made out the words, "Ishwar ling murti," or, "the Lingum incarnation of Shiva," but that the rest of the inscription was illegible. In 1871 the fort was destroyed by an earthquake which exploded the powder magazine and reduced the whole to ruins. The present fort was erected on the same site, and the stone was doubtless built into the foundations. The names of many of the rulers and of a number of places, not only in the Indus and Gilgit Valleys, but also in the Chitral Valley, point to a Brahminical origin. Amongst the names of places may be mentioned *Sau* (Siva, *or* Mahadeo), *Shagram* (Siva's village), *Shogaur* (Siva's priest), and *Swami*. In the Hunza and Nager genealogies we find the names of *Lullithum* (the beautiful Thum), *Hurrithum*,[1] and *Bookhatthum*,[2] and one of the last independent Ras of Gilgit, Suleiman Khan, is best known by the name of *Gowrithum*.[3]

With all this evidence it can scarcely be doubted that some form of Brahminism was introduced by the Shins into the Gilgit Valley, and, to a greater or less degree, wherever their rule extended. In valleys in which they were out-numbered by the former inhabitants, the result was, doubtless, a mixture of Buddhism and Hindooism, grafted on a form of demon-worship already existing in the country. The religious practices of the Hanu Dards described by Mr. Shaw, probably approach most nearly to those which formerly existed in Gilgit and the neighbouring valleys, when under Shin rule.

The Shins seem to have introduced, along with their form of Hindooism, a piece of tree-worship, which has been already described. Though no longer an object of public worship, supplications are still addressed to the *Chili*, especially by women desirous of children, by burning its branches, and it is still regarded as possessing special powers of puri-

[1] From Hari, a name for Mahadeo.

[2] Probably a corruption of *Mookhattum*, referring to *Mukhut* "the final transmigration."

D 771 174 778 fication. It plays a conspicuous part in the incantations of the Dainyals, and on a great man entering a Shin village a pan of burning Chili branches is waved before him. On certain occasions both men and women saturate themselves with the smoke, which is of a particularly pungent nature.

D 171 778 B 171 178 The custom of Chili worship does not appear to have penetrated to Hunza or Nager, nor is any trace of it to be found in the Oxus Valley, in Chitral, or among the tribes of the Swat Valley; but among the Siah-Posh it seems to exist in almost the same form as it did among the Shins. Chili wood, or Padam, is still taken down to the Punjab to be used in Hindoo ceremonials. According to Colonel Prejevalski, the same tree is also held sacred by the Mongols and Tangutans, who burn the branches for incense during prayer time. At Hemis Shukpa, within 20 miles of Leh, a few trees of great age exist, and are held in much veneration by the Tartars of the village, though the tree is not generally an object of Tartar respect.[1] It may be that the feeling of veneration was imbibed from the Shins, whose influence must have extended nearly to Leh. It is still usual in Gilgit to sprinkle goat's blood on a tree of any kind before cutting it down.

D 771 171 B 771 171 The religion of the whole country is now some form of Mahommedanism, and in the immense knot of mountains of which Yassin forms the centre, three different types of the same religion have met, and are now striving for the mastery. From the south, Soonnee Moollahs have carried their tenets up the different valleys with more or less success. From the eastward a current of Shiah doctrines has set in from Iskardo; and from the westward the curious Maulai, or Muglee,[2] tenets have found their way up the Oxus Valley. It is to be noticed that the subversion of Hindooism by Mahommedanism in the remoter valleys seems to have been extremely gradual, and to have been more owing to gradual conversion than to persecution.

D 771 173 B 771 173 The genealogical tables of the present ruling families of Hunza, Nager, and Gilgit, enable a fair idea to be formed of the date of the introduction of Islam into the country. Tradition records the death of the Gilgit Ra with the non-Mussulman name of Shiri Buddutt,[3] at the hands of a stranger bearing the Mussulman name of Azru, or Azor, from whom the present Ra of Gilgit, and the Thums of Hunza and Nager, trace

The precepts and observances of the sect are difficult to ascertain, one of their sayings being that "a man should conceal his faith and his women;" and the little I have been able to ascertain is from Maulais who have proselytised, and those only men of no education.

Soonnees speak of them as "Kaffirs" and "Rafzi," but they themselves do not refuse to pray or eat with Soonnees. They are sometimes accused of worshipping Ali, the son-in-law of the Prophet, and accordingly styled "Ali-purust," and they undoubtedly esteem Ali, who, they say, was born of Light as superior to the Prophet Mahommed, and an incarnation of the deity. They reject the idea of a future state, believing in the transmigration of souls. Evil deeds are punished by the spirit being translated into a dog or other mean animal. Good actions are rewarded by a future incarnation as a great or holy man. They claim little in common with other sects of Mahommedans, saying, the Soonnee is a dog and the Shiah is an ass. They question the divine character of the Koran, though they say that it was entrusted to the Angel Gabriel to give to Ali, but that he gave it by mistake to Mahommed.

They use in place of the Koran a book called the Kalam-i-Pir, a Persian work, which is shown to none but men of their faith. The precept most commonly quoted by them is, that a man should blind himself, so that he should not be moved with envy at sight of his neighbour's prosperity; he should weaken his hands, so that they can grasp nothing belonging to others; and lame himself, that he may be unable to disobey the commands of his Pir. Cattle that have strayed into standing crops are not to be driven out till they have satisfied themselves. A good Maulai is already as one dead, prayers therefore are unnecessary, as also is fasting. If any forcible attempt should be made to cause a Maulai to fast, he should resist it by devouring a pinch of dust. The only pilgrimage enjoined is to the living head of their faith, who is styled the Imam-i-Zeman, or Sahib-i-Zeman. Marriage can be performed by any man whose beard is white. Seating himself with the bridegroom on his right hand and the bride on his left, he takes a few pieces of roasted sheep's liver in both hands, and crossing his arms gives them to the man with his left hand and to the woman with his right. Then taking a cup of water he gives half to the woman, and after he has said a few words out of the Kalam-i-Pir, the ceremony is completed. The form of the Maulai Kalma is

Dard Arch

## CHAPTER VIII

### WAR-LORE AND SPORT

788 The folk-lore and the festivals are most interesting, but for want of time I could not follow up the researches I should have loved to make. Vestiges of dead faiths meet you at every turn. Fires blaze at certain seasons on the hill-sides and on the mountain tops, and remind you that what we call fire-worship originated but a stone's-throw to the north on the
• 778 other side of the Hindu-Kush. The cedar, sacred in
[778] Kafiristan, and still exported to India for Hindu ceremonials, is sacred here: outside every village almost is a stone altar yet visited by the women, the names of the village gods are remembered, often surreptitiously invoked, and soothsayers and witch-
789 craft abound. Some little distance up the Chaprot nullà is a clear spring of water, and if a piece of cowskin is thrown into this, by order of the Thum of Hunza, to the accompaniment of suitable incantations, the heavens are immediately obscured with clouds, and the most dreadful storms rage over the district, to the terror and danger of the obnoxious wayfarer or invader. I was solemnly warned on more than one occasion against this particular power for evil possessed by

4a Durand G-3 (1888-92) 1900 AVI Kashmir
Dard AVI

which the juice had poured, were still in their places.

For several miles the road runs up the narrow gulley between what was a lateral moraine and the hillside, not a drop of water is passed, not a tree or glimpse of vegetation is to be seen, not a sound is heard save the ring of one's horse's hoofs on the burning rock, for the stream frets a thousand feet below; not a sign of life is there, but perhaps the passing shadow of an eagle. I had been riding slowly on, lost in a reverie, my horse picking his own way, when there came a sudden change. There was a sharp turn in the path which led into a deep ravine cut by a side stream, and then rose in sharp zigzags to gain the crest of the opposite bank. The moment I turned the corner a shot rang out, the edge of the cliff "sprung to life with armed men," and a rapid *feu de joie* rippled along the crest above me. Arrived at the top I was met by the village elders, was incensed with the smoke from a platter of burning cedar twigs, and presented with a flat unleavened cake soaked in clarified butter, the local variant for bread and salt. As I broke a piece and ate it, I noticed that the bread itself was apparently consecrated, sprays of the sacred cedar lying on the dish on which it was carried.

I spent some days making friends with the people, and visiting every yard of their watercourses, which were, as usual, a monument of patient skill. To carry water channels across the face of perpendicular conglomerate cliffs cut out of moraines by the action of a stream which rages below, sometimes impinging on one bank, sometimes on the other, is no easy

10. the Liddar valley — Analysis

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

matter even for that most handy of creatures, the Royal Engineer, however well he may be equipped. For the poor villager it is a labour of Sisyphus. The stream is always cutting away a frail prop, undermining a high retaining wall, breaking the side of the water channel, or washing away the intake headworks, and the work has to be done all over again. Truly, the people compelled one's admiration by their steadfast patience and determination, and filled one with a desire to help them in every way in their desperate fight with nature.

As I passed through a stretch of abandoned cultivation given up to the barberry, the wild pomegranate, and the brier rose, we stumbled on a time-worn altar, the stones of which attested its great age. It was covered with a few cedar boughs, others lay scattered around as the wind had displaced them, and the men with me said it was the shrine of the village god, and that these were the offerings of women who had come to pray. It was a scene which made a vivid impression on me. Far away above us, the culminating point of the valley, rose a snow peak against a bright blue sky, open hillsides fell back on each hand, swept by a fresh spring wind, patches of bright cultivation lay across the stream whose voice rose from the gorge to our left, but no house marred the view. Before us, backed by the silent terraced fields of a dead generation, lay the little altar of a dead faith. And yet one felt it was not dead; the great god Pan laid his hand upon one's heart, all nature was filled by his presence, and one felt the impulse which brought the women there to offer their humble

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

sacrifice to the living god of the stream and the hillside rather than turn to the cold deity of Mahomedanism, so essentially the god for men, and not for women. I replaced the scattered boughs, and invoked peace and prosperity on the stricken valley.

Above the village where we were camped was a conical hill inhabited by the local fairies. It is easy to realise how certain their existence is to the people. It always seems to me that it is only in the heart of the great mountains, thousands of feet above the last trace of human habitation, when you lie by some time-worn rock, lulled by a silence which can be felt, and gazing at the eternal snows, that the real voice of Nature speaks to you. Then truly do the heavens declare the glory of God; you feel the pulse of the All-pervading Presence, the beauty and sublimity of Nature sink into your soul, and for the moment the mysterious veil which falls between us and the light wavers and half fades away. If Nature so speaks to us what must she say to men and children who spend days and weeks of absolute solitude on the mountain sides. A simple mountain people must have a simple faith, must bow to visible and tangible deities, not to abstract objects of pious belief. It needs the pure clear skies of the desert to produce a race which can recognise that "there is no god but God," centuries of high civilisation working on the acute and introspective Indo-Aryan mind are required to produce the Buddha. The gods of the valley and the mountain, of the mist and forest, the dwellers in the glacier and the

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

rose, and stood facing the orchestra, leaning her hand upon a drum. Bare-headed, her long black hair streaming down her back, she stood swaying slowly backwards and forwards to the accompaniment of low music from the band; gradually the band played faster and faster, the swaying quickened, until it seemed as if her neck must be dislocated by the violence of her movements, and her locks stretched to their full extent threshed in a heavy mass, at one moment over her face and bosom, the next down her back to her waist. She looked horrible, a very Mænad. Suddenly she ceased, and stood as if dazed. Then with slow and faltering step she began to wander round the circle, keeping the spectators on her right hand. The pace gradually increased until she danced round, the band keeping time to her every motion. The fairy hill lay to the north-west of the place where we were sitting, and her eyes were constantly fixed in its direction as she came round the circle and faced towards it. 787 791 [778]

I watched her very carefully, and for some time failed to detect anything but an expression of entire abstraction from her surroundings, till, in one of her circlings, she suddenly shot a glance at us, which showed that, however much the fairies possessed her, she was still fully conscious of our presence. At last, after many weary wanderings, she halted by the band, the music of which dropped to the faintest murmur, and listened first to a pipe then to a drum for the fairy voice, to be heard only by her. There was a slight pause, and then she sang a couplet, which was taken up and repeated by the village elders, who

1: Leitner L-3 (1866-93) 1693? AV3 Dard AV3
Bungho AV7

little stones of any shape—the longest and oval ones being preferred—are used. There is one kind of stone especially which is much used for that purpose; it is called "Balósh Batt," which is found in Hanza, Nagyr, Skardo, and near the "Demídeldèn" hill already noticed, at a village called Pareshinghi near Astor. It is a very soft stone and large cooking utensils are cut out from it, whence the name, "Balósh" Kettle, "Batt" stone, "Balósh Batt." The stone is cut out with a chisel and hammer; the former is called "Gútt" in Astori and "Gukk" in Gilgiti;" the hammer "toá" and "Totshúng" and in Gilgiti "sam-denn." The gunpowder is manufactured by the people themselves.*

The people also play at backgammon, [called in Astóri "Patshis," and "TAKK" in Gilgiti,] with dice [called in Astóri and also in Gilgiti "dall."]

Fighting with iron wristbands is confined to Chilasi women who bring them over their fists which they are said to use with effect.

The people are also fond of wrestling, of butting each other whilst hopping, etc.*

To play the Jew's harp is considered meritorious as King David played it. All other music good Mussulmans are bid to avoid.

The "Sitara" [the Eastern Guitar] used to be much played in Yassen, the people of which country as well as the people of Hunza and Nagyr excel in dancing, singing and playing. After them come the Gilgitis, then the Astoris, Chilasis, Baltis, etc. The people of Nagyr are a comparatively mild race. They carry on goldwashing which is constantly interrupted by kidnapping parties from the opposite Hanza.

* "Powder" is called "Jebati" in Astóri and in Gilgiti "Bilen," and is, in both dialects, also the word used for medicinal powder. It is made of Sulphur, Saltpetre and coal. Sulphur = dantzil. Saltpetre = Shór in Astori, and Shorá in Ghilgiti. Coal = Kári. The general proportion of the composition is, as my informant put it, after dividing the whole into six and a half parts to give 5 of Saltpetre, 1 of coal, and ½ of Sulphur. Some put less coal in, but it is generally believed that more than the above proportion of Sulphur would make the powder too explosive.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

yono=winter.] The snow is now becoming a little softer and out-of-door life is more possible The festivities are kept up for twelve days. Visits take place and man and wife are invited out to dinner during that period. Formerly when the Shins had a Raja or Nawab of their own, it used to be the custom for women to dance during those twelve days. Now the advent of the Sepoys and the ridiculous pseudo-morality of the Kashmir rule have introduced a kind of Pardah and the chaste Shin women do not like to expose themselves to the strangers. Then there is the Nauróz, which is celebrated for three, and sometimes for six, days.

There are now five great holidays in the year:

The I'd of Ramazân.
The Shinó-Náo.
The Nauróz.
Kurbani I'd.
The Kùy Náo,* } Astóri.
Dúmnikú, } Gilgiti.

On the last-named holiday the game of Polo is played, good clothes are put on, and men and women amuse themselves at public meetings.

The Shin people are very patriotic. Since the Maharaja's rule many of their old customs have died out, and the separation of the sexes is becoming greater. Their great national festival I have already described under the head of "Historical Legend of Gilgit" (pages 14 to 16).

## G. THE RELIGIOUS IDEAS OF THE DARDS.

If the Dards—the races living between the Hindu-Kush and Kaghán—have preserved many Aryan customs and traditions, it is partly because they have lived in almost perfect seclusion from other Muhammadans. In Chilás, where the Sunni form of that faith prevails, there is little to relieve the austerity of that creed. The rest of the Muhammadan Dards are Shiahs, and that belief is more elastic and seems to be more suited to a quick-witted race, than the orthodox form of Islam. Sunniism, however, is

* Is celebrated in Autumn when the fruit and corn have become ripe. For a detailed account of this and other festivals see "Hunza-Nagyr Handbook," and Parts II. and III. of the "Languages and Races of Dardistan."

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

178 advancing in Dardistan and will, no doubt, sweep away
779 many of the existing traditions. The progress, too, of the
[797] present invasion by Kashmir, which, although governed by Hindus, is chiefly Sunni, will familiarize the Dards with the notions of orthodox Muhammadans and will tend to substitute a monotonous worship for a multiform superstition. I have already noticed that, in spite of the exclusiveness of Hinduism, attempts are made by the Maharaja of Kashmir to gather into the fold those races and creeds which, merely because they are not Muhammadan, are
000 induced by him to consider themselves Hindu. For instance, the Siah Posh Kafirs, whom I venture also to consider Dards, have an ancient form of nature-worship which is being encroached upon by Hindu myths, not because they are altogether congenial but because they constitute the religion of the enemies of Muhammadans, their own bitter foes who kidnap the pretty Kafir girls and to kill whom establishes a claim among Kafirs to consideration. In the same way there is a revival of Hinduism in the Buddhist countries of Ladak and Zanskar, which belong to Kashmir, and ideas of caste are welcomed where a few years ago they were unknown. As no one can become a Hindu, but any one can become a Muhammadan, Hinduism is at a natural disadvantage in its contact with an advancing creed and, therefore, there is the more reason why zealous Hindus should seek to strengthen themselves by amalgamation with other idolatrous creeds. To return to the
779 Mussulman Dards, it will be easy to perceive by a reference to my ethnographical vocabulary what notions are Muhammadan and what traces there remain of a more ancient belief. The "world of Gods" is not the mere اخرة which their professed religion teaches, nor is the "serpent world" a Muhammadan term for our present existence. Of course, their Maulvis may read "religious lessons" and talk to them of Paradise and Hell, but it is from a more ancient source that they derive a kindly sympathy with the evil spirits "Yatsh;" credit them with good actions, describe their worship of the sun and moon, and fill the interior of

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

mountains with their palaces and songs. Again, it is not Islam that tells them of the regeneration of their country by fairies—that places these lovely beings on the top of the Himalayas and makes them visit, and ally themselves to, mankind. The fairies too are not all good, as the Yatsh are not all bad. They destroy the man who seeks to surprise their secrets, although, perhaps, they condone the offence by making him live for ever after in fairy-land. Indeed, the more we look into the national life of the Dards the less do we find it tinctured by Muhammadan distaste of compromise. Outwardly their customs may conform to that ceremonial, but when they make death an opportunity for jokes and amusement we cannot refuse attention to the circumstance by merely explaining it away on the ground that they are savages. I have noticed the prevalence of caste among them, how proud they are of their Shîn descent, how little (with the exception of the more devout Chilâsis) they draw upon Scripture for their personal names, how they honour women and how they like the dog, an animal deemed unclean by other Muhammadans. The Dards had no hesitation in eating with me, but I should not be surprised to hear that they did not do so when Mr. Hayward visited them, for the Hinduized Mussulman servants that one takes on tours might have availed themselves of their supposed superior knowledge of the faith to inform the natives that they were making an improper concession to an infidel. A good many Dards, however, have the impression that the English are Mussulmans—a belief that would not deter them from killing or robbing a European traveller in some districts, if he had anything "worth taking." Gouhar-Amán [called "Gôrmán" by the people] of Yasin used to say that as the Koran, the word of God, was sold, there could be no objection to sell an expounder of the word of God, a Mulla, who unfortunately fell into his hands. I did not meet any real Shîn who was a Mulla,* but I have no doubt that, especially in

* I have already related that a foreign Mulla had found his way to Gilgit, and that the people, desirous that so holy a man should not leave

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

Hunza, they are using the services of Mullas in order to give a religious sanction to their predatory excursions. I have said that the Dards were generally Shiahs—perhaps I ought not to include the Shiah Hunzas among Dards as they speak a non-Aryan language unlike any other that I know*—and as a rule the Shiahs are preyed upon by Sunnis. Shiah children are kidnapped by Sunnis as an act both religious and profitable. Shiahs have to go through the markets of Bokhara denying their religion, for which deception, by the way, they have the sanction of their own priests.† Can we, therefore, wonder that the Muláí Hunzas make the best of both worlds by preferring to kidnap Sunnis to their own co-religionists? A very curious fact is the attachment of Shiahs to their distant priesthood. We know how the Indian Shiahs look to Persia; how all expect the advent of their Messiah, the Imám Mahdi; how the appointment of Kazis (civil functionaries) is made through the Mujtehid [a kind of high priest] and is ratified by the ruling power, rather than emanate direct from the secular authorities, as is the case with Sunnis. The well-known Sayad residing at Bombay, Agha Khan, has adherents even in Dardistan, and any command that may reach them from him [generally a demand for money] is obeyed implicitly. Indeed, throughout India and Central Asia there are men, some of whom lead an apparently obscure life, whose importance for good or evil should not be underrated by the authorities. [See my "Hunza and Nagyr Handbook, 1893."]

What we know about the religion of the Siah-Posh

them and solicitous about the reputation that their country had no shrine, killed him in order to have some place for pilgrimage. Similar stories are, however, also told about shrines in Afghanistan. My Sazini speaks of shrines in Nagyr, Chilâs and Yasin, and says that in Sunni Chilâs there are many Mullahs belonging to all the castes—two of the most eminent being Kramins of Shatiál, about 8 miles from Sazin. About Castes, *vide* page 62.

* I refer to the Khajuná, or Burishki, a language also spoken in Nagyr and a part of Yasin, whose inhabitants are Dards.

† I refer to the practice of "Taqqiah." In the interior of Kabul Hazara, on the contrary, I have been told that Pathan Sunni merchants have to pretend to be Shiahs, in order to escape being murdered.

KOHISTANI.

1. To-morrow night to Lahore I will go.
*Douche rate Lahore bajanwa.*
2. Thou silent be.
*Tohe chut guda.*
3. Prepare, ye young men.
*Jubti masha.*

PUSHTO THE AFGHAN LANGUAGE). 197

1. To-morrow night to Lahore I will go.
*Sabe shapa ba Lahore shazam.*
2. Thou silent be.
*Tah chup shai.*
3. Prepared be, O young men.
*Saubhal she salmú.*

There is a song very current in Kohistan which begins,— 539
*Palas kulal mariga, Patane jirga hotiga, Johle johal madado propár asdli* = "In Palas a potter was killed, in Patan the jirga (or tribal assembly) sat."
"The corrupted (Jirga of Malaks) took a bribe, and retaliation was ignored." The Afghans are called Pathans.

*Religion.*—They have been converted to Islám since four or five generations, and they have forsaken their old religion so completely that no tinge of it now remains; and when a Kohistani is told that they are "nau-Muslims," that is, "new Muhammadans," he becomes angry. 779

Muslim learning, and the building of mosques have become common in Kohistan, and now we find twenty or thirty learned mullas in every considerable town, besides hundreds of students, studying in mosques. 793

*Dress.*—Their national dress consists of a woollen hat, brimmed like that of Europeans, and a loose woollen tunic having a long جاکی along the right breast, so that one can easily get out the right hand to wield one's arms in a fight. Their trousers are also made of wool and are very tight. In the summer they wear a kind of leathern shoes borrowed from the Afghans, but in the winter they wear a kind of boots made of grass (the straw of rice) reaching to the knees. They call it "pájola." 291 [177]

Till very lately their only arms were a small "khanjar" (dagger), bows and arrows; but they have borrowed the use of guns and long swords from the Afghans. 411 177

The dress of their women consists of a loose woollen head-dress with silken fringes, a woollen tunic and blue or black trousers of cotton cloth, which they call "*shakara.*" Generally their women work with their husbands in the corn-fields, and do not live confined to their houses. 291

*Government.*—They have no chiefs like the Afghans, but influential Malaks lead them to battle, who are paid no tribute, salary, etc. 701

When an enemy enters their country they whistle so sharply that the sound is heard for miles; then the whole tribe assembles in one place for the defence of their country, with their respective Malaks at their heads. [202]

*Mode of Living, and other Social Customs.*—In winter they live in the valleys, in houses made of wood and stones; but in summer they leave their houses in the valleys for those on the peaks of mountains, and the mass of the population spends the summer in the cooler region; but those who cultivate the land live the whole day in the valley, and when night comes go up to their houses on the heights. Their food is the bread of wheat, and milk furnished by their herds of cattle (gaómesh, cows, goats, and sheep), which is their sole property. There are no regular Bazárs even 342 221 262 422 000

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3 Kandiá

for many years a slave in Chilás, as Ahmad Shah reports). The Gabriális were converted to Muhammadanism by a saint named *Bâbâji*, whose shrine is in Gabriál, and is one of the most frequented places by pilgrims. The Gabriális say that this saint lived six or seven generations ago. Mir Abdulla (who is really of Afghanistan, but now lives in Gabriál,) says that the Gabriális were converted to Islám about 150 years ago. Lately, this religion has made great progress among the people of Kandiá generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attached to them, which are generally crowded by students from every caste. In Gabriál, the Mullahs or priests are, for the most part, of the Shîn caste, but men of every caste are zealous in giving education to their sons. Their education is limited to Muhammadan law (of the Hanifite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and caligraphy, that great Oriental art; so little, indeed, that Harifullah and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the caligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Punjab.

The most accomplished scholar in Kandiá is the high priest and chief of Patan, named Hazrat Ali, who is a Shîn.

The people generally are peaceful, and have a fair complexion and erect bearing. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the usual punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (wadán), but is seldom found among the common people.

GOVERNMENT.—Every village or town is governed by a Council of elders, chosen from among every tribe or "taifa." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shîns or Yashkun. No Kamîn can be elected an elder, though he may become a Mullá, but a Mulla-kamîn also cannot be admitted to the Council.

The reigning Council of Gabriál consists of 12 persons, of whom 9 are Shins and 3 Yashkuns. Patshé Khân is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influential of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose operation is limited to inter-tribal feuds.

CUSTOMS AND MANNERS.—Hockey on horseback, which is called "lughât" in Gabriál, is played on holidays; and the place where they meet for the sport is called "lughât-kárin-jha."

Guns are called "nâli" in Gabriál, and are manufactured in the town by blacksmiths.

Dancing is not practised generally, as in the other Shin countries. Only "Doms" dance and sing, as this is their profession; they play on the "surúi" (pipe), rabáb (harp), and shaṇdo (drum).

The "purdá" system, or "veiling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

# APPENDIX VI.

## A ROUGH ACCOUNT, COLLECTED IN 1886, OF ITINERARIES IN THE "NEUTRAL ZONE" BETWEEN CENTRAL ASIA AND INDIA. By RAJA KHUSHWAQTIA AND Dr. G. W. LEITNER.

### ROUTE I.

361 FROM GILGIT TO KABUL, viâ Dareyl, Tangir, Kandiá, Ujù, Torwál, Swat, Dir, Maidán, Jandûl, Bajaur, Muravarri, Pashàt, Kunèr, Jelalabad, Kabul.

GILGIT TO SHERKILA, 9 katsha (rough) kôs * (1½ miles), ruled by Isa Bahadur's son, Raja Akbar Khan, under Kashmîr, a faithful ally, contains 70 zemindars' (peasants') houses on the Yasin river.

SHERKILA TO PATÀRI (is uninhabited), over a ridge Pîr (17 katsha kôs) called Batrèt, which is a plateau on which the Dareylis graze their flocks in the spring.

487 PATÀRI TO YATSHÖT (12 katsha kôs), road stony and jungly. Yat-
361 shöt is a village of Dareyl of one hundred houses, occupied by zemindars who have cattle, sheep, goats, and *buffaloes* (which are not found in [241] Badakhshan). The ground produces much white maize (from which [579] bread is made), wheat, barley, grapes growing to a gigantic size, nuts, etc. There is excellent water, but it is very cold. The people are Sunnis, and [97] speak Shiná (the dialect of Chilás). [The Shins appear to have been a Hindu tribe expelled from Kashmir territory and converted to a sort of [784] Muhammadanism, both Shiah and Sunni. They are the highest caste in Dardistan; but, instead of the Brahminical veneration for the cow, they abhor everything connected with it—its flesh and milk—and only touch its [771] calf at the end of a prong.] Yatshöt has two mosques, and Mullas who understand Arabic well. The Dareylis are very religious, and attentive to their ceremonial practices. The streamlet of Dareyl runs past it.

YATSHÖT TO MANIKÁL, 3 katsha kôs, a plain easy march through a prairie. Manikál has two forts, one of which has about 500 houses, and is called Dòrkans; and the other, Manikál proper, which has 300 houses and an old Mosque. Manikál is surrounded by forests. When the Kashmîr troops reached Manikál, the Dareylis, after fighting, burned down their old fort rather than surrender. There are many Mullas and disciples there, some coming from Peshawar, Swat, etc.

MANIKÁL TO SAMANGÁL, 3 katsha kôs, over an inhabited plain. The fort contains 800 houses. A great elder (Djashtero) called Kalashmîr resides there, whom all the Dareylis respect and follow, although there are many other Djashteros, like Muqaddams (elders, mayors), in Kashmir villages. He is wise and rich, possessing, perhaps, in addition to cattle,

[804] * A kôs is a measurement of distance varying from 1 to 2½ miles, and often depending on the speaker's impression due to hardships encountered or to other causes. "Katsha" and "pakka," for "rough, unfinished," and "thorough" respectively, are terms well known to Anglo-Indians. "Katsha" and "pakka" are generally spelt "kucha" and "pucka."

Though their traditions as a separate race have long passed away, the Shins still look on themselves as the aristocracy of the country, and claim to be of a more honourable caste than others, without being able to show any foundation for this claim. A Shin considers it a disgrace to have to carry a load, and regards hunting and agriculture as the only honourable pursuits for a man. They are strictly confined to the Indus Valley and its affluents. D 186 D 554

The Shins who are found in Baltistan do not, however, arrogate to themselves any superiority over their Tartar neighbours. On the contrary, the position they occupy towards the Tartars is similar to that of the Yeshkuns in Gilgit towards themselves. They are called by the Tartars, contemptuously, "Brokpas," or highlanders, from their cultivating the highest—that is, the least fertile—ground. The Baltis habitually mention this fact when speaking of the Brokpas or Dards of the Iskardo district, but do not try to account for it. B 564

This, together with the difference of estimation in which the Shins are held in Gilgit and Iskardo, gives a valuable clue to changes which have taken place among the different races. It is evident that in Baltistan the Tartars, and not the Brokpas, are the last-comers. D 174

As already mentioned, the part of the Indus Valley from below Gor to the Afghan limits near Ghorband is called Shinkari, and it is in the lower part of this that the purest Shin community is now probably to be found; but the name of Shinkari, which still exists in Pukli, where the population is now entirely Afghan, perhaps indicates that the original home of the Shins was in that valley.

The most remarkable peculiarity of the Shins is their feeling with regard to the cow, to which Mr. Drew has already directed attention. In spite of their conversion to Mahommedanism, the feeling is still maintained in Nager, Gilgit, Astor, and the Indus Valley above Boonji. In the Indus Valley below Astor the feeling has died out, but in the places mentioned, orthodox Shins will not eat beef, drink cow's milk, or touch a vessel containing it A sucking calf, or any portion of a dead animal, is especially unclean, so that purification is necessary if even the garments should chance to touch them. It is not uncommon for a Shin to make over his cow and calf to a Yeshkun neighbour, to be restored to him when the calf is weaned. Shins also regard the domestic fowl as unclean, and in districts chiefly inhabited by them not a single fowl is to be seen. D 262 783 [779] D [235]

4 AVJ Dard AVJ

563 will no doubt before long be eliminated. Greatly as they dislike the Afghans, their hostility seldom rises to active opposition, their usual attitude being one of passive resistance. The Afghan, on his part, penetrates fearlessly into the Kohistan for purposes of trade, disregarding black looks and cold welcome so long as he can discern a profit to be made. Many of the villages have Pushtoo as well as local names.
241 The Torwal country is rich and fertile, yielding below Chodgram two crops of great abundance yearly. This would show that the elevation of Chodgram is about 7,000 feet. The
233 people own enormous flocks of sheep, goats, and cattle, yielding great quantities of butter, much of which finds its way into the Peshawur market by the hands of Afghan traders. Iron also is found in Torwal.

• 779 The Torwalik have been too long converted to Islam and exposed to the preaching of Swat Moollahs to have retained
535 any customs connected with other religions. Like most of the other Dard tribes, they have retained their national dances.

162 Bushkar is the name given to the community which inhabit the upper part of the Punjkorah Valley, whence they
361 have overflowed into the upper part of the Swat Valley,
101 and occupied the three large villages of Otrote, Ushoo, and Kalam. They live on good terms with their Torwal neighbours, and number altogether from 12,000 to 15,000 souls. Their principal villages are Tull and Kalkot in the Punjkorah
511 Valley, containing respectively 1,500 families. They are the most degraded of all the Dard tribes, and, in spite of a fertile soil and abundant flocks and herds, live in great squalor.
578 Amongst themselves they are exceedingly quarrelsome, and are adepts in the use of the sling, by means of which they hurl
651 stones with great force and precision. Exposed as they are to raids from every side, they seem unable to offer any resistance; and, notwithstanding a payment of yearly tribute, they are subjected to frequent attacks for the sake of wringing additional payments from them. The three villages in the Swat Valley pay tribute to Yassin, and the three northernmost villages in the Punjkorah Valley pay a double tribute to Yassin and Chitral. Birkot, Biar, and Rashkot pay a double tribute to Chitral and Dir, and the five Bushkar villages below Rashkot pay tribute solely to Dir. Rashkot is better
563 known under its Pushtoo name of Patrak. There is also
197 a large Goojur population, which pays tribute to Dir. In recent years a considerable migration of Kho has taken place

## CHAPTER VIII.

### FESTIVALS.

D
241
779
B
241
779

IN spite of the general conversion of the tribes to Mahommedanism, ancient semi-religious festivals, mostly connected with agriculture, are still observed by them more or less in accordance with ancient customs. About Gilgit, where Mahommedan ways of thought have as yet only penetrated skin-deep, the festivals are still observed with little less ceremony than formerly, and are called "Shiné baradesi," or "Great days of the Shins," which would appear to show that they are mainly of Shin introduction. The dates of the festivals connected with ploughing, sowing, and reaping, differ slightly according to the proper seasons for those operations in different places.

D
241
B
241

The first festival is that of *Nás*, at the time of the winter solstice in celebration of the beginning of the new year, which, according to ancient computation, commenced then. The name *Nás* means "fattening," and alludes to the slaughtering of cattle which takes place. The first day is one of work, and is devoted in every household to dressing and storing the carcases of bullocks, sheep, and goats slaughtered a few days previously. This is done by drying them in a particular way, so that they remain fit for food for several months. This is necessary because the pastures have become covered with snow, and only sufficient fodder is stored to keep a few animals alive through the winter.[1] The next morning, two hours before day-light, the *Taiwi*[2] celebration takes place. Bonfires are lighted, and everybody flocks to the Shawaran, torch in hand. The drums sound summoning all laggards, and as the first streaks of day-light appear, the torches are thrown in the direction of Gilgit, or in that place are scattered about at pleasure. Singing, dancing, and polo go on through the day, and are continued at intervals daily for a whole month.

[1] A similar process of storing meat is practised in Cabul.

[2] *Taiwi* is the name given to a bundle of strips of wood bound together and used as a torch.

1: Drew G-3 (1862-1872) 1875 AVI Kashmir
Card AV8

The Yashkun without any Shia are found in more distant places, 664
in the upper parts of the valleys of the Indus tributaries, namely in Nagar, Hunza, Ishkoman, Yasin, and Chitral.

## MUHAMMADANISM AMONG THE DARDS.

The Dards are now (with the exception that will be noted 779
farther on) Muhammadan.* Formerly they had some kind of idolatry of which we know not much, nor do we know at what period they were converted to Islam. At the time the Sikhs annexed Gilgit and Astor the people of those places were in some respects but very weak Muhammadans; it so happened that the Sikh commander, Nathu Shah by name, was a Muhammadan and a Syed; he acquired over these Dards a great influence, and he exerted it to make "good Muhammadans" of them, to get them to attend more carefully to the forms of their religion. It is a 764
fact that before Nathu Shah came (say in 1842) the Astor people used to burn their dead, and not bury them as Muhammadans should. A curious remnant of the custom still remains there—when they bury they light a fire by the grave; it is true they will now tell you that they light the fire to keep off jackals; this may be in some sense true, that is to say they could hardly reconcile themselves to leaving the body in its grave undestroyed, so they lit the fire as they had been used to, and this satisfied them in giving some security as against the beasts of prey and at the same time making a link with the past.

But it is not enough to say that these Dards are Muham- 795
madan; they are divided into three separate Muhammadan sects —Sunt, Shia, and Molai.

Sunt and Shia require no description, as the division exists in almost every part of the Muhammadan world. The Molai sect corresponds very nearly, or it may be exactly, with that sect called Nur Bakhsh which we found in Baltistan (see Chapter XVI.), which was a modification of the Shia. The name must have its

* This must be taken without prejudice to the question of the relationship of the Kafirs to the Dards. It is true at all events of those who have as yet been definitely classed as Dards.

1: Drew G-8 (1862-1872) 1875 AV1 Kashmir
Dard AVs

origin from the Arabic *Mumin*, God, they thus calling themselves "the Godly." In matters of prayer and fasting they follow the Sunni ways, but in creed (as regards the proper succession of Muhammad's successors to the Khalifat) they are Shias.

The Moláis and Shias will drink wine, the Sunis will not. Of the different castes it would seem that the people of each may belong to any of the three religious sects; the religious differences do not depend on the caste, but are more geographical; this is illustrated by the table given in Chapter XX.

## BUDDHIST DARDS.

I have now to record some facts as to an outlying portion of the Dárd race, which are of peculiar interest. In that narrow part of the Indus Valley which was described under the heading of "Central Ladákh" (Chapter XIII.), are some villages inhabited by Dárds who follow the Buddhist faith; who, though remnants left by a wave of immigration from the direction of Gilgit, have so far amalgamated with the Bhots that they obey the Lámás as spiritual leaders.

Muhammadan Dárds, whose locality is denoted on the map either as outlying or outstretching portions of the main area occupied by the Dárd race, reach up close to these Buddhist Dárds, but the villages of each are distinct. The following places —villages and hamlets—are inhabited by the Buddhist Dárds: Grugurdo, Sanácha, Urdus, Darchik, Garkon, Dáh, Phindár, Balden, Hanú, Lower and Upper.[A]

That they did come from the direction of Gilgit they have a tradition, and many circumstances of language and manners show that in spite of their being Buddhists in religion they are one in origin with those Dárds we have been describing. But I think they belong to an earlier immigration; probably a small number reached their present seat and settled there, separated from the main mass of their tribe-brethren, at a time before the Dárds were converted to Muhammadanism, so that the transition from their ancient faith to Buddhism was not difficult. At that time the neighbouring Baltis also may still have been Buddhists. Later,

[A] [See Category III, End Map E — Ansal]

1; Drew G-3 (1862-1872) 1875 AVI Kashmir
Dard AV3

when the Dárds had become Muhammadan, they spread again in this direction, and the newer comers have joined on with, or become next-door neighbours to, the earlier migrants. 779 174

The Race Map shows the area of these Buddhist Dárds under the same colour as all the rest of that race, while the Faith Map shows it under the same colour as the Ladákhís who are Buddhists. The Language Map shows a division of even this small area, for while in the greater number of villages above enumerated a truly Dárd language is spoken, in the Hanú side-valley the people have lost their original language, and speak only the Tibetan Ladákhí; in the Language Map, therefore, that valley is coloured with the rest of the country where the Tibetan tongue is spoken, while the other villages are classed as Dárd-speaking.[2]

These Buddhist Dárds have little or no trace of Tibetan in their faces; the two races have not mixed, or not much mixed; their face is Aryan, but not a fine stamp of Aryan; their noses are small, though often slightly hooked, their chin narrow.* In stature they are taller than the average Ladákhí, but they are not such fine men as the Dárds of Drás, Astor, or Gilgit. They wear the pigtail as the Ladákhís do, and their dress is the same as theirs, including the drooping cap figured at p. 240. 142 302, 291

They are a dreadfully dirty people, far more so than any other tribe I have ever met with; their faces are blotched with black dirt, which they never think of removing. As a means of purifying, instead of washing, they burn twigs of pencil-cedar, and let the smoke and the scent from it come over them and inside their clothes; they do this before eating, not perhaps generally but on feast-days, and at other times when they think purification to be necessary. Their women, who are not shy of being seen, surpass even the men in dirtiness, and altogether are the most miserable of objects. 515 783

I could not hear that there was any distinction of castes among them[1]; indeed what I heard made me think there was not. One 564

* Among the Muhammadan Dárds also, as in the upper part of the Hárpo Valley in Roráh, I have found this narrow-chinned, low-Aryan, form of face. It may after all be due to an admixture of blood, in this case with the Baltís.

1 [i.e. the Buddhist Dards. — ANALYST]
2 [See chapter III, End Map 2. — Analyst]

duck, and quail, pass up and down in the autumn and spring. Below the forest, on the lower and more barren hills, numerous flocks of wild sheep (*Ovis vignei* and *O. nahura*) are met with.

The climate is healthy and dry. At Gilgit itself it is never very cold, and snow seldom lies for more than a few hours. In the summer it is hot owing to the radiation from the rocky mountains, but it is cool compared with the climate of Northern India. The rainfall is very light.

The remains of ancient stone buildings and Buddhist carvings suggest that Gilgit was once the seat of a Buddhist or Hindu dynasty, while traces of abandoned cultivation point to the fact that the population in early times was far larger than it is at present. For many centuries the inhabitants of Gilgit have been Muhammadans, and nothing definite is now known of their Hindu predecessors. Tradition relates that the last of the Hindu Rās, Sri Badat, known as Adam-Khor, the 'man-eater,' was killed by a Muhammadan adventurer, who founded a new dynasty known as Trakhane. Sri Badat's rule is said to have extended to Chitrāl, and the introduction of Islām seems to have split up the kingdom into a number of small states carrying on a fratricidal warfare and incessant slave-raiding. The Trakhane dynasty is now extinct, though it is claimed that the present titular Rā of Gilgit has a slight strain of Trakhane blood. In the early part of the nineteenth century we find Yāsin giving a Rā to Gilgit. He was killed by the ruler of Punial, who in turn was killed by Tair Shāh, chief of Nagar. Tair Shāh was succeeded by his son, who was killed by Gauhar Aman, ruler of Yāsin. For the subsequent history of Gilgit, see Kashmīr. The history of Astor, or, as the Dogrās call it, Hasora, is intimately connected with that of Skārdu. More than 300 years ago Ghāzi Mukhpon, a Persian adventurer, is said to have married a princess of the Skārdu reigning family. The four sons born of this union became Rās of Skārdu, Astor, Rondu, and Kharmang respectively, and from them are descended the families of the present chiefs of those places. The independence of Astor ceased at the Dogrā conquest. The present titular Rā of Astor is the lineal descendant of Ghāzi Mukhpon. [illegible] peace to the people, but it will be long before the country recovers entirely from the desolating slave-raids of Chilās.

The Wazārat contains 264 villages, and the population, according to the Census of 1901, is 60,885. The pressure on the cultivated area is great, the density being 1,095 persons per square mile. The people of Astor and Gilgit would be

In Lectures 1–5 (1920–24) 1920 AV3 Dead AV3

776 Yeth and Yethlu still receive attention in some localities as beings capable of affecting, at least prejudicially, the prosperity of the crops.

784 Turning now to purely human beings gifted with supernatural powers we find two principal representatives of the class: the Bili, a woman displaying some of the powers and proclivities of the western witch, and the Datyěl, a person of either sex endowed with some of the abilities of the Seer and the Prophet.

There are also the possessors of the Evil Eye, voluntary or involuntary, and there are persons who have acquired powers of magic (white).

These are the principal Dramatis Personæ of the Living Supernatural, and we may now examine their peculiarities in somewhat greater detail, paying particular attention to the Bitye, the Chěch and the Bili, partly because of their peculiarly local character, as signalised by their purely local names, and partly because of their intrinsic importance.

## The Bitye

776 From what I have heard I very much fear that the Bitye are as extinct as the Dodo, though their extinction is of quite recent date. Perhaps they still enjoy a tenuous existence in the phantasies of some elderly minds, but their day of power and awe is gone, their cult is dead, and their worshippers departed.

776 From the little information I possess it appears that the
• 778 Bitye lived in holes at the foot of trees and rocks; and that the cult consisted in placing offerings of food, as raw eggs of slaughtered animals, at the foot of the trees, i.e. generally in front of the holes. The Bitye themselves are described as puppies, or animals like puppies, so this simple form of worship was probably acceptable to them. At any rate they condescended to eat the offerings.

There were Bitye in residence at a spot on the Dadiese Let a little above the foot at Hindi, and the cult was maintained

St Lawrence L-3 (1920-24) 1923 AV3 Dant AV3

there by the local people till a few years ago, when it was stopped, I think, by the orders of the Mir of Hunza. Animals were slaughtered there "in the name of the Bŏyo".

From a story of Hunza tribal history it appears that the Bŏyo were regarded as the avengers of broken oaths taken in their names. In a dispute about the ownership of land between two brothers Khuro and Khamer, Khamer proposed that the case should be decided by their taking oath. Khuro, the weaker party, who was also incidentally in the right, agreed and said: "O brother, the Sahkla Bŏ.in and the Hilum Bŏ.in are very powerful and they are quick to wrath." But Khamer, who meditated a romp and had no mind to be caught in this way, would not even hear this proposal out. "If we swear by them," he said, "they will work us evil." So the idea was dropped and with it disappeared our chance of learning the methods of taking oath by the Bŏyo.[1]

The Bŏyo now bear the stigma attaching to the gods of a superseded religion. "Bŏyo-worshipper" (bŏyo ŧ.ŏkimas) is now used in the sense of heathen, pagan.

There seems to be a special association between the Bŏyo and trees, and the trees share in their sanctity. Whether they each have their own independent virtue, or whether the one owes its worshipfulness in any measure to the merits of the other it is impossible to say.

In the two remaining texts in which I have references to the Bŏyo the associate two plays an important part. In a statement made in Ghizr by Ghulchhin Sultán 'Ali of Nagir regarding certain popular practices at Chaprót he said: "Further they say that all the people used to assemble to do worship to a pipe-tree that was there. They used to take a grey goat and slay it at the foot of the tree and a great

[1] I have here accepted the relation of Bŏ.in and Bŏyŏ as singular and plural which is morphologically quite in order, and is asserted by some, though denied by other, authorities. The word bŏ.in seems to survive in bŏ.ochingus (pl. bŏ.in thingus) which was explained as wrath—the spirits of the dead. Bŏng-, occurring in other compounds, appears to refer to a dead person.

2x Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

number of puppy-dogs used to come out from below the pine-tree to drink up the blood. Then the people used to return rejoicing to their homes, and they used to say among themselves: 'Thanks be! Sickness has now been banished from the country.'"

Here it is stated that the tree is worshipped, but that the puppies, who are doubtless the Bōyo, benefit by the sacrifice. The Ṣhiṇa word (ilō.iki) translated "worship" means to *appease, placate, propitiate, do reverence to.* It corresponds, I think, exactly to the Burushaski °-ilikinas.

The other story, in which the tree also plays the chief rôle, is briefly as follows: From ancient times there was a juniper-tree in the garden of a man called Keramo Derbēah, living in the Dirēmiting territory. It was called the Bōyo Gal ("the Bōyo juniper"). It was said that formerly animals like puppy-dogs used to come out from under it. The people of Hunza used to propitiate them (worship them) and called them Bōyo. One, Bagher Tham, cut the tree down and he promptly died. Two stems grew up again from the stump and a man cut one of them. He became paralysed and an idiot. A man called Māmad Shāh cut down the remaining bough and he fell down from a cliff and was killed. After this people were afraid to meddle with the tree and left one bough (not previously mentioned) unmolested. Last year and the preceding year (1923 and 1922) this bough was still *in situ*. Then a man Yoqin obtained permission from the owner (Keramo Derbēah) and cut it down and took it to his house. But he had a dream in which a number of women appeared to him and asked him why he had cut down their juniper-tree, and intimidated him. In view of [illegible] and returned the juniper bough to its original owner, Keramo Derbēah, in whose house it now lies, for no one will venture to burn it.

Here we are left wondering whether there was any connection, other than topographical, between the juniper and the

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

A Čhèčh is a sort of bogie which usually appears at night. 776
It is said to "fall"—čhèčh *dijen*. A sound is sometimes heard and the Čhèčh appears in the form of some animal, such as a horse, donkey, or cow, but sometimes as a human being. Sometimes it appears as a tall figure which reaches up to the sky and is swathed in white clothing—a guise which is also sometimes adopted by Jinns.

When a man sees a Čhèčh he may faint with fear and fall [782]
to the ground. If, however, he can manage to preserve his courage and presence of mind and repeat the Call to Prayer (aṣān) the apparition will disappear. The people then reckon them to be Jinns.

Čhèčh are commonly attached to particular localities, from which it appears they do not wander. There are many such Čhèčh-haunted places in Gilgit proper as well as outside.

A Čhèčh is known to frequent the garden of the Political Agency office. Another haunts the neighbourhood of the P.W.D. Staff Bungalow and has been seen by many people. Its beat extends from there to the Political Agency Office, a distance of a few hundred yards. Another haunts a tree in the garden of the Divisional Engineer's house in the same area. Some deserted houses above the Ranbīr Bāgh are the home of another.

A Čhèčh has been seen by many near the European cemetery. My informant's brother once saw a man wearing black clothes in the cemetery. This apparition pursued him, kicked him, and flung him into an irrigation channel.

Čhèčh, like ghosts, are rather addicted to graveyards. Many other Čhèčh-haunted places could be mentioned.

[illegible] Čhèčh and their doings. One night Ghulām Muhammad, Chaukīdār (night-watchman), was sleeping in pursuance of his duty with his brother in the verandah of the Political Agent's Office in Gilgit. The brother used to give the following account, reported in slightly differing versions, of their experiences: "We were sleeping in the verandah of

### The Ceremony of Nagi Suchemi.

Nagi Suchemi is said to be a goddess who lived at Nangam in the Astore district, on a stone altar situated at the foot of the Nagishi hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jungmi was specially appointed by the Rá to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present, in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sochemi, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this solemnity were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discoverer of the offending juryman at dawn of that day. For some days the case was left awaiting the decision of "Nagi Sochemi," and if in this period the suspected person suffered any kind of loss of property, of relatives, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

### "Khuran" or "Majari."

In Chilas and in the adjacent valleys of Jalkot, Palas, Koli, Darel, Tangir, Gor, Harban, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khuran" in Shinaki (Chilas, Darel, Tangir, Gor, Harban and Sazin), and "Majari" in Kohistan (Jalkot, Palas, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must needs submit.

## VI.

### Danyals.

There are some men and women of these parts who are called Danyals. When they are worked up into a state of frenzy the giants and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Danyals as well as the local [illegible]. A bundle of green chili leaves is then brought, and some of these, with a little *ghi*, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Danyals push their way towards the fire and begin to inhale the smoke, until

773 keep trust in Provision, who was a servant of everybody. On this the Yaths sent "Trust" to the wolf, and he came with him to the ruler of the Yaths. The object was explained to him and he said that a bird called Garai Patan, who lived on the snows on the Coxus Mountain, should be sent for at once. Provision was first made the messenger; but the bird declined to come; whereupon Trust was sent to him and he came to see Bojare Shal and Yamlo Hal Singh. Bojare Shal now sent for a mouse which lived close to his home. When everything was ready the wolf gave orders that Yamlo Hal Singh should stand in water as a pillar upon which Gorai Pattan should spread his wings, while the mouse by the making a hole into the ice should bring out and spread all the soil over the wings of Gorai Pattan. The orders were obeyed and the wings of the bird covered all the water, while the mouse brought out all the soil which was beneath the water. In this way the earth was turned over the water.

## X.*

### "Neelo But" (The Blue Stone).

643 778 There used to be at Gilgit a blue stone called "Neelo But," about a yard square, where the present telegraph office is situated. No king was acknowledged in the country unless he had resorted to it and prostrated himself before the stone. There and then the people adorned his head with a crown, swore fealty and tendered their allegiance. This was the day when all the better class would gather to see the new "Rá" perform all the ceremonies, and undergo all obligations considered necessary to the office of leader of the nation. This was done in order to secure their confidence by a man who was to become sole director over their destinies, among them being many who had taken an active part in bringing him to the throne and proclaiming him their chief.

When the ceremonies were over, all came one by one to kiss his hands, to receive his blessings and to bless him in return. They would then dance to the beating of drums, make merry, sing praises and recite poems describing the heroic deeds already performed by the Rá, his ancestors and others whose lives had become endeared to all by self-sacrifice in the cause of their country.

[787] The *dawyal* (soothsayer) was not left out on this occasion, for it was necessary to foretell the future of the king and his courtiers, and to exhibit the state of ecstacy that accompanies prophecy by the soothsayer. Before being dismissed at night all present partook of a feast; some were gratified with handsome *khilats* and other distinctions; some gratified by a gesture of kindliness

### The Ceremony of Shri Bai.

778 796 842 782 Shri Bai is the name of a goddess who, as the people say, lived on a rock at Nangam, a village in the Astore district. The rock too is called Shri Bai, and is always kept covered with branches of juniper, while an attendant called "Boh Bin" resides there to look after it. Barren women used to sacrifice goats to and pray before the sacred stone in the hope of progeny. In the hot weather, when the people had gathered their

* [See also p. 109 *ante*.—Ed.]

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

crops, the female population of the village proceeded to the Devi in their best attire. They sang on their way, and when they reached their destination presented a goat to the "Boh Bin." He then threw up some small branches of the juniper in the air, and the women attempted to catch them before they fell to the ground. It was believed that a woman would be blessed with as many children as the branches she succeeded in catching. Descendants of the original "Boh Bin" still remain, but the ceremony is no longer observed.

A stone of this kind is also found at Barmas near Gilgit. The ceremony performed upon this stone was exactly the same as stated above, but it has a different name, *viz*: "Mulkum."

## "Rato" or "Chili."

At Farfuh, a village in the Bagrot valley, there are five small portions of land situated at the foot of a mountain and called Chuto Rato, Shilo Rato, Surgon Rato, Chilko Rato and Thoko Rato. In these tracts there are five very large boulders and five small stones, called respectively "Dev-ai-Maron" and "Mos Samaran Ken" (*i.e.*, stone for distributing flesh). Here the "Rato" ceremony, also called "Chili," used to be performed as follows. During the first six days of the ceremony, which lasted for seven days, the people wore new and clean clothes, the sexes being separated and inhabiting different houses. On the seventh or the last day, all the people of the different communities or families of the village assembled separately and went to their respective "Ratos" with a goat and some young branches of the chili or *Juniperus macrocarpa*. These branches were placed upon the "Dev-ai-Maron," and the blood of the goat which was now sacrificed was thrown on. The meat was placed on the "Mos Samaran Ken" and distributed among those present, who roasted and ate it at the same place. It was never given to any woman or to a man of any family other than that of "Rato." The shoulder-blade of the goat killed was then placed on a high stone and fired at by marksmen amidst the noisy acclamations of the people, and a dance was held in honour of the sacred ceremony. After this the people assembled round the "Dev-ai-Maron," while the oldest man present or the headman of the village sat quite close to the stone and addressed it in the following manner: "O iron-like Rato, O Shri Bagartham, we have come to thee to express our wants. We have no progeny: kindly endow us with children. We are destitute of money: kindly favour us with gold and silver. We are in want of grain: please supply us." In the same manner he related all their desires for cattle, clothes, goods, etc., while the other men followed him and expressed their assent to what he said by crying "Amen." The women of the village now appeared in their best attire, with some dry flour and small flat loaves. They threw the *atta* on the *chili* branches and prayed in the same manner for the fulfilling of their desires. The loaves were distributed among the men, who eat and rejoiced. At some places the women were strictly prohibited from going near the Rato stone. This ceremony was performed and known by the same name throughout the whole of Gilgit, but on stones of different names, so that the stones at Datuchi and Bulchi were called "Aju Bin," at Sinakar "Shri Bin," at Gilgit and Dainyor "Rato-denaken," and at Naugam "Shri Bai." The

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

frequently visited by fairies who used to make these inscriptions, as in the opinion of the Chilasis it is beyond man's power to produce such inscriptions. It is also affirmed that these fairies were seen in those days by all men, but nowadays they are visible to no one except to a great Mullah by dint of his miracles. The Bagrot people say that the carvings were inscribed on stones by the fairies on the night of "Shino Bazono;" and that on the same night the fairies frequently used to rub away the figures from one stone and to engrave the same on another.

532 174 776 778

### The Ceremony of Sri Kun.

Sri Kun is said to be the sister of Nagi Sochemi, and lived at Shankank, a village near Godai in the District of Astore. The villagers used to present goats to this goddess and prayed before her seat for the supply of their wants. Her followers were strictly prohibited from keeping cows, or drinking their milk, and were under the impression that by so doing they were apt to lose their flocks, herds, or the produce of their lands.

776 782 262

### "Jainkish" and "Dewaro."

At Gilgit proper and in the surrounding villages there are seen two small tracts of land called "Jainkish" and "Dewaro." The former is situated on the river bank and the latter at the foot of a hill, except at some places in which they both are found at the foot of a hill. In ancient times, when Islam had not spread to these parts, the tribes used to burn the dead at "Jainkish," and a few days after they gathered and carried away the bones to "Dewaro," where they buried them in one pit. Remnants of bones still mark these places, though the traces have almost been obliterated by time. In these circumstances, however, one is not wrong in supposing that Muhammadanism is of recent growth.

361 771 764

Several old men still living at Gilgit relate that they used to play with the brass bangles and rings which they found in "Jainkish;" but to carry away such articles to their houses was considered improper. From this it appears that the dead bodies were burnt with their ornaments.

[174]

### Sankar Village and a "Chinar" Tree.

There is a small populous village named Sankar in the Bagrot Valley. It is said that when this tract was lying waste, a Fakir named Shah Burya passed through and halted there for a short time. Becoming thirsty and finding no water, he prayed to God for a good supply. His prayer was granted, and a sufficient quantity of water burst forth from an adjacent hill. After a few days Shah Burya felt the heat of the sun, and planting his stick, which was of *chinar* wood, deep into the ground, prayed again to the Almighty to make it into a large *chinar* tree. This prayer was also granted, and a big tree grew, under whose shadow he afterwards used to sit. The branches of this tree are said to have been once so large and spreading that they touched the neighbouring hill about 600 yards distant, across the Bagrot Nullah. The tree was afterwards burnt by the Mongols, but after a short period five shoots sprang out from its trunk, and these are still to be seen, forming an enclosure about 30 yards wide.

4 AV3 Dard AV3

241 day's sowing is held over the smoke. The rest is ground and made into a large cake about 2 feet in diameter, which is baked on the same fire and then placed in a secure place for the night, a man being specially placed on guard over it. The musicians have meanwhile been hard at work, and dancing is kept up by the firelight till a late hour. Next day the people having assembled on the Ra's land, the Ra rides out from his castle attended by all his family and retainers. Before him is borne in procession the large cake of leavened bread, on which wheat is heaped up, and a pomegranate, with a sprig of cedar stuck in it, placed on the top. This is carried by a man with his face smeared with flour, who is called Dono. The crowd having gathered round the Ra in a ring, the Yerfah approaches, holding two or three handfuls of the smoked wheat in the skirt of his robe, into which the Ra empties a small quantity of gold-dust. Then with a loud voice the Yerfah cries out: "Oh people, be ready, the Ra has mixed the gold and will scatter the seed; may your fortune be good!" Then the Ra, taking the mixed wheat and gold, throws it among the people, who scramble to catch it in their skirts. More wheat and gold-dust are then poured into the Yerfah's skirt and scattered, the ceremony being repeated four times, to the north, south, east, and west. Those to whom it has once been thrown are not allowed to shift their places so as to get more. Then a yoke of oxen is brought to the Ra, who takes the plough handle and ploughs two furrows, eastwards and westwards, scattering seed; he then returns to the castle, after making over the large cake to his ploughmen, whose perquisite it is.

241 After this the *Rátch Mooger*, or, "the Ra's he-goat," is
• 782 taken up to the tower of the castle and sacrificed by a Rono; one of this caste alone being permitted to officiate. Cutting off the head and feet, the officiating Rono holds them up in view of the assembled people, and all the drums strike up. The carcase of the goat is made over to those whose perquisite it is. In Gilgit it is the perquisite of the men of the village of Boormuss, who are Shins, and whose privilege it is to carry the Ra's standard in war, for which they receive a goat a day while in the field. Then, while the people stand expectant, the *Yoodeni durrung*, "the fairy's drum," is heard to sound. All faces are averted to prevent the evil that would surely happen to him who should catch sight of the performer, and the *Yoodeni-ai*, or, "fairy's she-goat," is brought and sacrificed. Some of the blood is sprinked on the

Biddulph G-3 (1873-1878) [redacted]
4 AV3 Dard AV3
Burush. AV7

fairy's drum, and the carcase is given to the Dom musicians, whose perquisite it is. This ends the ceremony, and the day is wound up with archery, dancing, singing, and polo. The mark for the bowmen is a block of wood, with a small wedge of silver, given by the Ra, beaten into it, which becomes the prize of the most skilful marskman.

On the second, or people's day, feasting and dancing go on almost the whole day. They visit one another's houses, being expected to eat something in each house. A few yards of ploughing are commenced as a matter of form by every land-holder, for without this a good crop could not be expected.

In Hunza and Nager this festival is called *Thumer Bepow*, or, "the Thum's sowing," and is celebrated in exactly the same way, but it does not take place till spring owing to the difference of climate. A somewhat similar festival takes place in Yassin and Chitral, where it is called *Bisnik*, "seed-sowing;" but the ruler does not take part in it, the present ruling class in Yassin and Chitral having never identified themselves with their humbler subjects. In Yassin the festival is accompanied by a curious custom. The Tarangfah is mounted on a good horse and clad in a robe of honour given him by the Mihter. In this way he is conducted to the polo ground, where all seat themselves while the music strikes up and the Tarangfah gallops twice up and down the ground. Should any accident happen to him, such as either himself or his horse falling, it is regarded as a presage of misfortune to the whole community, and of speedy death to himself. In order to avert evil, he and his family observe the day as a solemn fast.

In Wakhan no public ceremony takes place, but the first seed-sowing is a time of festivity in every household. A bowl of grain, half of which has been roasted, is carried out and scattered round the house. Then the goodman starts for his ploughing, but returning clambers up to his house-top and scatters seed through the central sky-hole which gives light and ventilation to the house. Then, proceeding to his field, he traces a circular furrow twice round it, scatters a little seed, and returns home, where he finds the door barred against him, and he is not admitted by the women till after much entreaty. The next morning he rises before daylight and drives an ass into the house, giving occasion for much fun and joking, after which the ass is sprinkled with flour and driven out again.

4 A43 Ward A43

000 — I think there can be little doubt that in this festival we see a relic of the Hindoo Dussehra. A native gentleman has obliged me with the following note on the subject :—

"The chief Hindoo festival connected with agriculture was Dussehra, the 10th day of Asvu Sukla, when the previous nine days have been spent in worshipping the goddess Doorga, barley being sown near the place of worship it is given to the Raja by the Brahmins as an emblem of success, and after that the sowing of spring crops commences. The Raja going through the form of ploughing and sowing was, in ancient days, considered to take away the sin which tilling land is supposed to convey, and the Raja being the master of the land must take the first and principal part in the operation before his subjects would consent to plough. I can find only one instance of the Raja being obliged to plough in person. It is in the Ramayana. Raja Janak, the father of Sita, the wife of Rama, when there was a drought of twelve years in his kingdom, was solicited by the people and Brahmins to plough in person. He did plough, and there was plenty of rain, and Sita was born."

● 782 The ceremonial of the cedar worship in Gilgit was as follows :—

For three days previously, three chosen unmarried youths underwent daily washing and purification. On the fourth day they started for the mountain, provided with wine, oil, bread, and fruit of every kind. Having found a suitable tree they chose a branch, on which the wine and oil were sprinkled, while the bread and fruit were eaten as a sacrificial feast. The branch was then cut off and carried to the village. At its entrance the party were met by all the people in holiday attire and conducted to the appointed place with music and rejoicing, where the branch of cedar was placed on a large stone by the side of running water. A goat was then sacrificed, its blood poured over the cedar branch, and a wild dance took place, in which weapons were brandished about, and the head of the slaughtered goat was borne aloft, after which it was set up as a mark for arrows and bullet-practice. Every good shot was rewarded with a gourd full of wine and some of the flesh of the goat. When the flesh was finished, the bones were thrown into the stream, and a general ablution took place, after which every man went to his house, taking with him a spray of the cedar. On arrival at his house he found the door shut in his face, and on his knocking for admission, his wife asked, "What have you brought?" to which he answered, "If you want children, I have brought them to you; if you want food, I have brought it; if you want cattle, I have brought them; whatever you want, I have it." The door was then opened and he entered with his cedar spray. The wife

Mr. Ralston G-8 (1873-1878) 1880 [redacted]
4 AV3 Dard AV3

then took some of the leaves, and pouring wine and water on them placed them on the fire, and the rest were sprinkled with flour and suspended from the ceiling. She then sprinkled flour on her husband's head and shoulders, and addressed him thus:—"Ai Shiri Bagertham, son of the fairies, you have come from far!" *Shiri Bagertham*, "the dreadful king," being the form of address to the cedar when praying for wants to be fulfilled. The next day the wife baked a number of cakes, and, taking them with her, drove the family goats to the Chili stone. When they were collected round the stone, she began to pelt them with pebbles, invoking the Chili at the same time. According to the direction in which the goats ran off, omens were drawn as to the number and sex of the kids expected during the ensuing year. Walnuts and pomegranates were then placed on the Chili stone, the cakes were distributed and eaten, and the goats followed to pasture in whatever direction they showed a disposition to go. For five days afterwards this song was sung in all the houses:— 712 539

Dread Fairy King, I sacrifice before you,
How nobly do you stand! you have filled up my house,
You have brought me a wife when I had not one,
Instead of daughters you have given me sons.
You have shown me the ways of right,
You have given me many children,
You have made me like the mountain,
I have brought the family of the mountain toys,
I have gone to Sargin Gilit,
That I might see the people.
You slay many wild goats,
You with the gun on your shoulder,
Oh you with the sword in your hand!
Oh you riding upon a horse!
Oh you [illegible]
Dread king, I will slay you a ram.
Oh you that have come from the mountain,
I will rub your feet with butter.
Oh you that have come from below,
I will anoint you with oil.
I have been to the wide plain,
They have slain you a fine he-goat,
A ram has been slain, I have honoured you to-day,
To-morrow you will depart.
Go, dread Fairy King, I salute you,
You have given me prosperity,
How shall I let you depart!

The Chili stone is still to be seen at the entrance of every Shin village. [778]

Gurais. Avj

D 742 178 B 742 178 D [749] It is also a matter of accepted tradition in Gilgit, Gor, Hunza, and Nager, that suttee was formerly practised. The dead man, with his finest clothes and his weapons girded on him was placed on the pyre, and as the fire burnt up, the woman, arrayed in her jewellery and her richest clothes, leaped into the flames.

The burning of the dead ceased to be practised more than sixty years ago. One or two old men have told me that they could remember hearing it mentioned, as a not uncommon occurrence, in their youth, but none could recollect having witnessed any actual instance. So lately as in 1877, a very old man in Darel scandalised his neighbours by calling his sons to him on his death bed, and after having his arms and valuables brought to him, desiring to be burnt with them when dead. His wish, however, was not carried out. He and a man of Gor, who died twenty years ago, are known to have always refused to be circumcised, or to call themselves Mahommedans. They were probably the very last Hindoos in Dangaristan. Suttee was abolished earlier, and has certainly not been practised in Dangaristan for the last hundred years.

D 771 171 It is to be remarked that none of these customs, which savour so strongly of modern Hindooism, are to be found, either as now existing or as resting on former tradition, in any of the valleys to which the Shin rule did not extend; nor is the term Dangarik applied in any cases except those mentioned. The difference between some types of Hindooism and Buddhism is not necessarily very great, but the existence of customs among them, not shared by their neighbours, the establishment of a caste system, the use of the title of Ra for their rulers, and the common suffix of *Sing* to their own names, with the frequent use of Sanscrit terms, show that considerable differences exist between the Shins and their neighbours of the Swat, Punjkorah, and Chitral Valleys, with whose language their own has so much in common.

D 778 742 In spite of the more severe type of Mahommedanism which prevails, and which gathers strength year by year, idolatrous customs still survive. In every village in which Shins are in the majority, there is a large stone, which is still more or less the object of reverence. Each village has its own name for this stone, but an oath taken or an engagement made over it, is often held more binding than where the Koran is used. In several villages goats are still annually

4 A V 3 Dard A V 3

sacrificed beside the stone, which is sprinkled with blood, and in other places the practice has only lately been discontinued. Though the religion introduced by the Shins would appear to have been of a Brahminical type, it must have contained also a considerable amount of demon worship, as is shown by Mr. Shaw in his account of the Hanu Dards.

I have been told that when the Cashmere troops first occupied Gilgit, there was in the fort a slab of stone about 3 feet long, bearing a Sanscrit inscription. My informant told me that he had made out the words, "Ishwar ling murti," or, "the Lingum incarnation of Shiva," but that the rest of the inscription was illegible. In 1871 the fort was destroyed by an earthquake which exploded the powder magazine and reduced the whole to ruins. The present fort was erected on the same site, and the stone was doubtless built into the foundations. The names of many of the rulers and of a number of places, not only in the Indus and Gilgit Valleys, but also in the Chitral Valley, point to a Brahminical origin. Amongst the names of places may be mentioned *Sas* (Siva, *or* Mahadeo), *Shigrum* (Siva's village), *Shigrur* (Siva's priest), and *Swami*. In the Hunza and Nagar genealogies we find the names of *Ladikkum* (the beautiful Thum), *Harrikkum*,[1] and *Bukkatikkum*,[2] and one of the last independent Ras of Gilgit, Suleiman Khan, is best known by the name of *Gowrikkum*.[3]

With all this evidence it can scarcely be doubted that some form of Brahminism was introduced by the Shins into the Gilgit Valley, and, to a greater or less degree, wherever their rule extended. In valleys in which they were out-numbered by the former inhabitants, the result was, doubtless, a mixture of Buddhism and Hindooism, grafted on a form of demon-worship already existing in the country. The religious practices of the Hanu Dards described by Mr. Shaw, probably approach most nearly to those which formerly existed in Gilgit and the neighbouring valleys, when under Shin rule.

The Shins seem to have introduced, along with their form of Hindooism, a piece of tree-worship, which has been already described. Though no longer an object of public worship, supplications are still addressed to the *Chili*, especially by women desirous of children, by burning its branches, and it is still regarded as possessing special powers of puri-

[1] From Hari, a name for Mahadeo.

[2] Probably a corruption of Mukhatikkum, referring to Mukhut "the first transmigration."

The precepts and observances of the sect are difficult to ascertain, one of their sayings being that "a man should conceal his faith and his women;" and the little I have been able to ascertain is from Maulais who have proselytized, and those only men of no education. D 795 B 795

Soonnees speak of them as "Kaffirs" and "Rafizi," but they themselves do not refuse to pray or eat with Soonnees. They are sometimes accused of worshipping Ali, the son-in-law of the Prophet, and accordingly styled "Ali-purust," and they undoubtedly esteem Ali, who, they say, was born of Light as superior to the Prophet Mahommed, and an incarnation of the deity. They reject the idea of a future state, believing in the tranamigration of souls. Evil deeds are punished by the spirit being translated into a dog or other mean animal. Good actions are rewarded by a future incarnation as a great or holy man. They claim little in common with other sects of Mahommedans, saying, the Soonnee is a dog and the Shiah is an ass. They question the divine character of the Koran, though they say that it was entrusted to the Angel Gabriel to give to Ali, but that he gave it by mistake to Mahommed.

They use in place of the Koran a book called the Kalam-i-Pir, a Persian work, which is shown to none but men of their faith. The precept most commonly quoted by them is, that a man should blind himself, so that he should not be moved with envy at sight of his neighbour's prosperity; he should weaken his hands, so that they can grasp nothing belonging to others; and lame himself, that he may be unable to disobey the commands of his Pir. Cattle that have strayed into standing crops are not to be driven out till they have satisfied themselves. A good Maulai is already as one dead, prayers therefore are unnecessary, as also is fasting. If any forcible attempt should be made to cause a Maulai to fast, he should resist it by devouring a pinch of dust. The only pilgrimage enjoined is to the living head of their faith, who is styled the Imam-i-Zeman, or Sahib-i-Zeman. Marriage can be performed by any man whose beard is white. Seating himself with the bridegroom on his right hand and the bride on his left, he takes a few pieces of roasted sheep's liver in both hands, and crossing his arms gives them to the man with his left hand and to the woman with his right. Then taking a cup of water he gives half to the woman, and after he has said a few words out of the Kalam-i-Pir, the ceremony is completed. The form of the Maulai Kalima is D B [782] D B [778] D B [545]

1904.] A. H. Francke—*A language map of West Tibet with notes.* 353

(c) **Mi dpongs**: It comprises the following two families: Phanko, Kalongpa. (The Tingkaiapa-family originated when a younger brother separated himself from the Kalongpa family.)

(d) **Rab bloopa**: It comprises the following three families: bKod rnams phalpa, Brogmapa, Skambarpa.

Besides those mentioned, there are three families which do not belong to any *pha-spunship*: Mon, Bhotapa and Starapa.

More families do not exist at Khalatse.

As regards the *Brushalpa*, they have taken their name from the village of Brushal near Gilgit, and they know for certain that their forefathers were colonists from Gilgit.

The *Pakarpa* also know that their forefathers once emigrated from the vicinity of Gilgit. *Pakar* is a Dard word meaning 'meadow.' Compare my Beso-na-senge, No. II.

Thus we see that out of 21 families which are members of *pha-spunships*, 16 trace their origin from the neighbourhood of Gilgit, which has remained Dard to the present day.

Mi dpongs means 'lord of men' and Rab bloopa means 'state-minister.' These two *pha-spunships* may go back to the Tibetan conquest of Khalatse, when their forefathers were perhaps the Tibetan lords of the Dard population.

From all this we see that the Dards, the lords of the country before the Tibetan conquest, were only colonists from Gilgit. Whom did they find in the country on their arrival? Did they perhaps find a Mon and Bhota population? All this I cannot solve.

(3) *Remnant of the Dard language.*—It is most interesting that in one house of the Brushalpa, in the house Gongmapa, a last remnant of the Dard language has survived until the present day. On New Year's day when a new branch of the pencil-cedar is placed on the house-altar, the prayer is rendered in Dardi, because the spirit of the house is supposed to understand this language only. This is the prayer:

Dargyasni di sha nomo kla shusi
Shusi bi sha nomo kla shusi
Sinani bi sha nomo kla shusi

As a Tibetan translation this is given:

ངས་རྒྱལ་བྱེད་ཀྱི་ཤ་ལ་ཕྱག་འཚལ་ལོ།།
ཤུ་སུ་ཡི་ཤ་ལ་ཕྱག་འཚལ་ལོ།།
ངས་གཅིག་གི་ཤ་ལ་ཕྱག་འཚལ་ལོ།།

Proj. 611

568 A. H. Francke: A language map of West Tibet with notes. [No. 4,

The following is my attempt at a restoration of the text according to the Dard dialect of Da-:

Dargyoni ila-lja nanno kla shoni
Shoni khi-lja nanno kla shoni
Shoni khi-lja nanno kla shoni

Translation:

Give abundance! Honour to them, oh god Shoni!
Crops also! Honour to them, oh god Shoni!
& sun also! Honour to them, oh god Shoni!

Notes on the Dard text:

*Dar-rgyas* is a Tibetan synonym sometimes meaning about 'clear, dawn;' *di* was probably in course of time contracted from *ila*, give, and *ni*, then; *nas* or *lja nanno* "to them," *she* and *ja* are frequently used terminations of the dative case; *nno* instead of *nno* is a case of assimilation of the vowel of the first syllable to that of the second syllable; *nanno* as well as *nano* often occur in the sense of 'glory, honour' in the Bono-ne-songs, Lolokki Songs, No. XXXI 6; *kla* is the Tibetan *Sa*, a Pre-Buddhist god; *Shoni* is the proper name of the brown god. *Shoni* means 'harvest'; it is supposed to be the same as Dard *khi*, meaning 'also.' *Khi* in the second and third lines the *i* of *nkha* was lost in the preceding word. The *oi* in *shoni* is the emphatic syllable of Tibetan.

(4) *Dard customs.*—To the present day the Shoni-festival is considered as a Dard custom. It is held 14 months after the Diet of Dawaskan. In Khalatse it is celebrated in this way.—Cooked heads of goats and sheep, and radishes called *ton ton*, are brought before an ancient tree of wild rose (*rankol mangpi spung*) which goes back to Dard times, and a feast is given to everybody who will partake in it. Strangers are welcome.

Also the Lolokki music and art of dancing is an entirely different from Tibetan music and dancing that non-Tibetan influences must be suspected here. In Lolokki music, besides the Chinese scale,—chromatic scales are in frequent use. Of chromatic scales I have discovered the following in my collection of Lolokki tunes: Ionian, Aeolian, Lydian, Mixo-Lydian. It is easier to believe that these scales came here through a Dard channel than from Tibet. Although the notes of the Tibetan Lolokki songs is almost invariably trochaic, the notes of the Lolokki tunes is iambic.

I have tried to prove the Dard origin of one single West Tibetan village only. It would probably be easy to demonstrate similar reasons

Dard A 43

"Chili" or cedar worship, and of the Shin feast of sowing synchronised, and the two thus became welded together. The connection now is limited to a certain amount of wheat being smoked over a cedar wood fire, and of cedar twigs being in the next day when the sowing takes place. From a portion of the smoked grain a large unleavened bannock is made overnight, which is carried before the Bá or Chief of Gilgit when he rides out next morning to the sowing. Arrived on the selected ground the headman of the village holds up to the Bá the skirt of his chogo full of the smoked grain, and into this the Bá throws a small quantities of gold dust. The golden grain is then scattered amongst the circle of villagers, the ceremony being repeated till the grain has been thrown to all four points of the compass. The Bá then dismounts, a plough is brought, and, taking the handles, the Chief draws two furrows, one running east, the second west, and over these he again scatters the golden seed. A goat is then sacrificed, the drums strike up, and the Bá rides off, the rest of the day being one of continuous feasting, polo-playing, drumming, and dancing.

There are many other festivals, almost all connected with agriculture; spring-time and harvest, autumn and winter, are all marked by appropriate feasts. The Tudusi drum, or fairy's drum, which was kept on the top of every Chief's castle, played a part in the ancient ceremonies. It was very unlucky to look towards it while the sounds rang out; if the fairy drummer was seen, the direst calamities followed. I never to my knowledge heard the fairy drum myself, but no feast in the old days was complete

men using the upper path could reach Nomal. There were ominous mutterings of a coming storm brewing in Hunza and Nagar, and it was imperative that I should be able to move troops to Nomal and reinforce the garrison at a moment's notice. The road was therefore taken in hand in November 1890, and in a couple of months we had driven a good six-foot road through the bad piece. It was not a pleasant road to ride over when it was finished, for there were sheer drops of two and three hundred feet into the river below, but it sufficed. The last hundred yards of the worst bit of cliff nearly broke our hearts. The hillside was formed of alternate layers of sand and loose water-worn stones, and, cut back as we would, we could not get to firm ground. Four times our carefully-built supporting walls went with a run. The men were in despair, even my ever-cheery Major Gokul began to despond. Then, at the men's request, we sacrificed a goat, and made offerings to the god whose business it was, erected a little cairn with a daily consecrated flag, rebuilt our walls with layers of brushwood between the stones, and our road stood. I could now sleep in peace so far as Nomal was concerned, and I turned my attention to the bad cliffs between Gilgit and Bunji, and to the road further back.

The labour question was an incessant difficulty. The people of the country were very bad at road-making, and, moreover, had already plenty of work, and I had not enough tools to employ, or money to pay, large numbers. The men of the Kashmir Imperial Service Troops could not be taken away from their drills, musketry, and hut-building. They

AVJ Dard AVJ
Balt: AVI

Though their traditions as a separate race have long passed away, the Shins still look on themselves as the aristocracy of the country, and claim to be of a more honourable caste than others, without being able to show any foundation for this claim. A Shin considers it a disgrace to have to carry a load, and regards hunting and agriculture as the only honourable pursuits for a man. They are strictly confined to the Indus Valley and its affluents. D 196 D 554

The Shins who are found in Baltistan do not, however, arrogate to themselves any superiority over their Tartar neighbours. On the contrary, the position they occupy towards the Tartars is similar to that of the Yeshkuns in Gilgit towards themselves. They are called by the Tartars, contemptuously, "Brokpas," or highlanders, from their cultivating the highest—that is, the least fertile—ground. The Baltis habitually mention this fact when speaking of the Brokpas or Dards of the Iskardo district, but do not try to account for it. B 564

This, together with the difference of estimation in which the Shins are held in Gilgit and Iskardo, gives a valuable clue to changes which have taken place among the different races. It is evident that in Baltistan the Tartars, and not the Brokpas, are the last-comers. D 174

As already mentioned, the part of the Indus Valley from below Gor to the Afghan limits near Ghorband is called Shinkari, and it is in the lower part of this that the purest Shin community is now probably to be found; but the name of Shinkari, which still exists in Pukli, where the population is now entirely Afghan, perhaps indicates that the original home of the Shins was in that valley.

The most remarkable peculiarity of the Shins is their feeling with regard to the cow, to which Mr. Drew has already directed attention. In spite of their conversion to Mohammedanism, the feeling is still maintained in Nagar, Gilgit, Astor, and the Indus Valley above Bunji. In the Indus Valley below Astor the feeling has died out, but in the places mentioned, orthodox Shins will not eat beef, drink cow's milk, or touch a vessel containing it. A sucking calf, or any portion of a dead animal, is especially unclean, so that purification is necessary if even the garments should chance to touch them. It is not uncommon for a Shin to make over his cow and calf to a Yeshkun neighbour, to be returned to him when the calf is weaned. Shins also regard the domestic fowl as unclean, and in districts chiefly inhabited D 243 D 718 [279] D [324]

A-3 Dard AV3
Burusho AV7

by them, not a single fowl is to be seen. These peculiarities are strictly confined to the Shin caste, and, together with other customs which will come under notice presently, afford good grounds for supposing that they were a race of Hindoos who came from the south, and, pressing up the Indus Valley, established a Hindoo state in these remote regions under the crest of the Hindoo Koosh.

The next in order and the most numerous caste are the Yeshkuns, who form the entire population of Hunza, Nager, and Ponyal, and nearly all the population of Yassin, besides being numerically superior in Gilgit, Sai, Darel, and Aster. In Hunza and Nager they do not call themselves Yeshkun, but Boorish; and in Yassin, Woorushk and Boorisho. The language spoken, in slightly varying dialects, in these three states is known as Boorishki, Boorushaski, or Woorishki. The term "Khajoona," applied by the Gilgitis to the language as spoken in Nager, is never used in that country, and the old name also lingers in Yassin, which is still known as Woorshigoom. This language, of which an account is given in Appendix A, differs markedly from all languages in the neighbouring valleys. It has, I believe, been pronounced on good authority to belong to the Turanian family of languages.

In the colder climate of Hunza and Yassin, the people of this caste have ruddy complexions, and fair and even red hair is not uncommon. The Boorish of Nager show a somewhat different type. Many of them are short, thick-set men, with prominent cheek-bones, thick features, and thin beards. These characteristics, joined to their unwarlike nature, are probably due to an infusion of Tartar blood from Iskardo, gained during the time that Nager was subject to the Makpun rulers of Iskardo. If the Boorish are originally of Turanian origin, they have received at some time so large an infusion of Aryan blood as to have almost entirely swamped their original characteristics. Mr. Drew points out that the restrictions on their intermarriage with the Shins makes them the purer race of the two, and though these restrictions are not always closely observed, the Yeshkuns of Hunza and Nager would have little opportunity for profiting by their non-observance, so that their dash of Aryan blood must have been obtained before the appearance of the Shins. There does not appear to be any good foundation for Dr. Leitner's suggestion that the Yeshkuns are probably the product of intermarriage between the Shins and some aboriginal race. Considerable enmity exists between the Shins and Yeshkuns,

Mr. Biddulph G-3 (1873-1878) 1880 AUI-Afghanistan-AUI
4 AV3 Dard AV3

good grounds for supposing that the religion of the Shins was of the Brahminical type.

Mention has already been made of the curious fact of the cow being esteemed unclean. Mr. Shaw has shown how the feeling among the Shins of Dah Hanu is one of aversion, and not of reverence, and Mr. Drew remarks that anything more opposed to modern Hindooism cannot be imagined. But the most orthodox Brahmin would consider himself defiled by touching leather, or any part of a dead cow, so that there does not appear to be anything in the present practice directly opposed to modern Hindooism, but rather a perverted feeling that has grown out of it.

This peculiarity of the ruling race led to the appellation of Dangarikí,[1] *i. e.*, "cow-people," being conferred on them by their neighbours, who apply the term to all the Shina-speaking people. Though this can hardly be cited as a proof in itself of the Hindoo origin of the Shins, I think that, when considered in connection with other points, it forms a strong argument. The feeling of the Shins with regard to the domestic fowl is shared with them by Hindoos all over India.

This feeling regarding the cow and domestic fowls is not shared by any other tribe in the Hindoo Koosh, except by a small one in Chitral, to whom the name of Dangarikí is also applied by their neighbours, and by the Kalash Kaffirs, who dwell close to them. I have not been able to obtain the language of the Chitral Dangarikí, but there seems to be no reason to suppose that they have any connection with the Shins of Gilgit.

Till a very recent period burning the dead was practised, the burning places being still called Jain, which would appear to be identical with Chán, the name by which burning places are called in some parts of the Punjab. The ashes were carefully collected and buried in rude wooden boxes, sometimes carved out of a solid block, or in round earthen jars. I have dug up several of both kinds. The bones are neatly packed in the boxes, which have previously been lined with birch bark. In one or two I found pieces of check cotton cloths, of a kind not now known in the country, with pieces of brass chains and other ornaments. Women's urns are readily distinguished by a number of wooden spindle whorls, mixed with the bones.

[1] Cunningham met with the term in Baltistan, and speaks of Gilgit being inhabited by Dangarikis, and of the Dangari language, as if it was the name of a tribe. The word Dangarikí, from *dangar*, cow, has no doubt come to be applied in the same manner.

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir

when the Dárds had become Muhammadan, they spread again in this direction, and the newer comers have joined on with, or become next-door neighbours to, the earlier migrants. 179 174

The Race Map shows the area of these Buddhist Dárds under the same colour as all the rest of that race, while the Faith Map shows it under the same colour as the Ladákhis who are Buddhists. The Language Map shows a division of even this small area, for while in the greater number of villages above enumerated a truly Dárd language is spoken, in the Hanú side-valley the people have lost their original language, and speak only the Tibetan Ladákhi; in the Language Map, therefore, that valley is coloured with the rest of the country where the Tibetan tongue is spoken, while the other villages are classed as Dárd-speaking.[1]

These Buddhist Dárds have little or no trace of Tibetan in their faces; the two races have not mixed, or not much mixed; their face is Aryan, but not a fine stamp of Aryan; their noses are small, though often slightly hooked, their chin narrow.* In stature they are taller than the average Ladákhi, but they are not such fine men as the Dárds of Drás, Astor, or Gilgit. They wear the pigtail as the Ladákhis do, and their dress is the same as theirs, including the drooping cap figured at p. 240. 142 302 291

They are a dreadfully dirty people, far more so than any other tribe I have ever met with; their faces are blotched with black dirt, which they never think of removing. As a means of purifying, instead of washing, they burn twigs of pencil-cedar, and let the smoke and the scent from it come over them and inside their clothes; they do this before eating, not perhaps generally but on feast-days, and at other times when they think purification to be necessary. Their women, who are not shy of being seen, surpass even the men in dirtiness, and altogether are the most miserable of objects. 505 783

I could not hear that there was any distinction of castes among them; indeed what I heard made me think there was not. One 584

* Among the Mohammedan Dárds also, as in the upper part of the Shigar Valley in Baltí, I have found this narrow-skinned, low-Aryan, form of face. It may after all be due to an admixture of blood, in this case with the Baltís.

[1] Cf. the Buddhist Dards = Aryans?

Dard AV3

789 the Hunza Chief. The power was not confined to him, and seemingly in some cases lay more in the spring than in the person, for I heard of various other springs in different places, the throwing into which of any defiling substance was followed by bad
783 weather. It is curious here to see the cowskin considered an impurity, and it shows the connection
231 with Hinduism. Sacred as the cow is, no high-caste Hindu will touch cow leather. The regard for the cow amongst the Shins is most marked, but I think that in the main valleys, where there is now considerable communication with the outer world, it is losing its hold. It has gained for the Shins the name of Dangarik, or the cow people. The Shin used to have some one of another caste to tend his cows, and nothing would induce him to touch a new-born calf. If there was no one else handy, and it was necessary to put the calf to the mother, the little creature's head would be caught at the end of a cleft stick, and pushed to the udder. The Shin hatred of hens was another distinct link with Hinduism.

178 The feasts, many of which must be of Hindu
241 rather than Buddhist origin, are beginning to fall into desuetude; Mahomedanism is gradually pushing them out, but they, and the observances which accompanied them, are still to be seen in some parts. I have assisted more than once at the "Chili" festival, which marks the commencement of wheat-sowing, and which had years ago a further connection with the worship of the cedar, now in the main dropped. What the connection was I failed to find out, most probably the dates of the aboriginal feast of

# APPENDIX VI.

## A ROUGH ACCOUNT, COLLECTED IN 1886, OF ITINERARIES IN THE "NEUTRAL ZONE" BETWEEN CENTRAL ASIA AND INDIA. By Raja Khushwaqtia and Dr. G. W. Leitner.

### Route I.

From Gilgit to Kabul, vii Darayl, Tangir, Kandia, Uji, Torwil, Swat, Dir, Maidan, Jandul, Bajaur, Mamvarri, Pushat, Kunar, Jelalabad, Kabul.

Gilgit to Sherrilla, 9 kattha (rough) kos* (15 miles), ruled by Isa Bahadur's son, Raja Akbar Khan, under Kashmir, a faithful ally, contains 70 zemindars' (peasants') houses on the Yasin river.

Sherrilla to Patari (is uninhabited), over a ridge Pir (17 kattha kos) called Barsil, which is a plateau on which the Darayls graze their flocks in the spring.

Patari to Yatshot (12 kattha kos), road stony and jungly. Yatshot is a village of Darayl of one hundred houses, occupied by zemindars who have cattle, sheep, goats, and Asgalaer (which are not found in Badakhshan). The ground produces much white maize (from which bread is made), wheat, barley, grapes growing to a gigantic size, nuts, etc. There is excellent water, but it is very cold. The people are Sunnis, and speak Shina (the dialect of Chilas). [The Shins appear to have been a Hindu tribe expelled from Kashmir territory and converted to a sort of Mohammedanism, both Shiah and Sunni. They are the highest caste in Dardistan; but, instead of the Brahminical veneration for the cow, they abhor everything connected with it—its flesh and milk—and only touch its calf at the end of a prong.] Yatshot has two mosques, and Mullas who understand Arabic well. The Darayls are very religious, and attentive to their ceremonial practices. The ziaratsh of Darayl runs past it.

Yatshot to Manikal, 3 kattha kos, a plain easy march through a pasture. Manikal has two forts, one of which has about 300 houses, and is called Dirkana; and the other, Manikal proper, which has 300 houses and an old Mosque. Manikal is surrounded by forests. When the Kashmir troops reached Manikal, the Darayls, after fighting, burned down their old fort rather than surrender. There are many Mullas and disciples there, some coming from Peshawar, Swat, etc.

Manikal to Sangarlik, 3 kattha kos, over an inhabited plain. The fort contains 600 houses. A great elder (Djadoona) called Kalashmir resides there, whom all the Darayls respect and follow, although there are many other Djadoonas, like Mangalikana (elders, mayors), in Kashmir villages. He is wise and rich, possessing, perhaps, in addition to cattle,

* A kos is a measurement of distance ranging from 1 to 4½ miles, and often depending on the speaker's impression due to hereditary encouragement as to other causes. "Kattha" and "pukka," for "rough, unfinished," and "thorough," respectively, are terms well known to Anglo-Indians. "Kattha" and "pukka" are generally spelt "kutcha" and "pucka."

equanimity with his stick till they reach the opposite goal. This ends this part of the festival. Polo then begins, and, as is the fashion in these parts, is continued without intermission till the evening of the great day.

### The "Ayi Boyi" Ceremony.

Ayi Boyi is the name of a Gilgiti month falling next to "Shino Bezino." The day fixed for performing the ceremony was publicly announced by the Rá throughout the village. All the boys and young men of the village assembled in the afternoon at a place just below the Rá's dwelling. The Rá used to sit on the roof of the house surrounded by his private servants, and a heap of walnuts was laid before him, while his followers laid a heap of ashes near them. The Rá then threw all the walnuts among the people below, who scrambled for them. While they were thus employed a heavy shower of ashes was hurled down by the Rá's servants upon them. In the merriment which followed, the people would rush towards the Rá, endeavouring to seize him or his servants, if they were strong enough to do so; while if they proved to be the weaker, the chief's followers would turn the tables against them. Should the chief himself or any of his suit fall into their hands, he was only released on the payment of a suitable forfeit; but, should the struggle result in the favour of the chief and his party, the prisoners made from among the people were released after a few days' captivity.

## II.

### The Ceremony of "Ganani."

The inhabitants of these parts are strictly prohibited from tasting any new crop before accomplishing the "Ganani" ceremony, which is celebrated in the middle of June, when the wheat and barley are ripe. The Rajah or headman of the village fixes and proclaims throughout his district the days for the performance of this ceremony, which is carried out in the following manner. On the afternoon of the day fixed the people set out to their fields with leaves fried in butter, which are greedily eaten at a corner of the field by all the members of the family. After this they cut some ears of barley, bring them to their houses, and keep them for a while on a fire. These husked and roasted grains are now put in a small basin filled with milk or curds. Of this milk every member of the family takes three wooden spoons full. Then national dances and vainglorious songs continue till late in the night.

### The Dona Nikka Ceremony.

When the people have finished the labour of reaping and winnowing their spring and autumn crops, and have put the grain into bags to carry to their houses, they recite the following prayer:—

(1) Bismillah ye Khodaya Barakat dah.

(2) Ganam, Dronam ai Barakat dah.

(3) Khashi jeetu ai Barakat dah.

The constellation of the Great Bear is called "the maiden's corpse," the four corner stars being supposed to represent a bier: the small star above the middle star of the tail is called the "star of life," as it is supposed to be invisible to a person forty days before death. The pleiades are called the flock of sheep; a comet, "the star with a tail," is supposed to portend the death of a king. The milky way is called the "track of the cow and horse," the tradition being that in the broad part about the middle the horse fell down from going too fast, while the cow travelled safely. The world is supposed to rest on the horns of a cow, which shakes its head occasionally at the sins of the inhabitants, and so causes earthquakes.

D B 823

D B 776

The west and south are always spoken of as up, and the north and east as down. A man going west or south to a place talks of going up to it. Fairies and demons that live in caves among the mountains or in desert places, have a prominent place in the belief of the Dards. Dr. Leitner has already given an account of the Yetch and its female counterpart the Rood. In Boorishki they are known as Phoot and Billuss. Madness is supposed to be caused by a demon casting its shadow over a person, while the shadow of a fairy confers the gift of prophecy. Demons assume the appearance of human beings to lure men to destruction, but they are recognisable by their feet being turned backwards.

D B [121]

D B 776 787 784

In Gilgit, Hunza, and Nagar the ruler's family is supposed to be specially under the protection of a guardian fairy called Yoodeni. A drum, called the Yoodeni drum, is always kept on the top of the ruler's castle. When it is heard to sound at certain festivals and at critical times it presages good fortune. Nobody must try to see the Yoodeni, or look in that direction

Biddulph G-3 (1873-1878) 1880 Afghanistan-Afgh
4 Av 3 Dard Av 3 Burusho Av 7

when the drum is heard; if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodeni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nager are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the mane and forelock of favourite horses. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

on travellers. On one occasion that came to my knowledge, it was ascertained that a Goojur travelling through Darel had a small packet in his waist—band which was supposed to contain gold-dust. Two men waylaid him, and shot him down at a narrow place in the road. On opening the packet it was found to contain snuff. 674

Though now used by all classes without distinction where the population is mixed, the difference between the Shin and Yeshkun nomenclature is great. Of the Shin names a great number have the suffix of *Sing*, which is retained in spite of the conversion of the people to Mahommedanism. These names are never found among the purely Bourish population of Hunza and Nager, but it is to be noted that the suffix *Sing* is found among the earlier Makpon Kings of Iskardo. The Yeshkun names have reference to animals or some familiar object, and are not always of a complimentary nature. When one or two children in a family die, it is the custom to give the next born a mean name, such as, "the unclean," "old rags," in order to avert misfortune. 192 [784]

for this extraordinary arrangement by the fact that originally the Durds were Mohammedans, and presumably have not been able entirely to throw off this allegiance. It is stated that in one of their villages, they actually found a burial ground; sure proof to them of a Mohammedan ancestry, for the Buddhist burns his dead, whilst it is the Mohammedan that inters. This may be a satisfactory explanation of their religious ideas, but from whence have they derived all their taboos? Thus the Broggpa must not raise fowl, nor may he eat their eggs. The cow may be employed for the ploughing of his fields, but the gods would most certainly be displeased were he to drink their milk, or even use the butter which is made from the same. In other villages the eating of fish is taboo, and by the look and smell of them washing surely must be also. In fact they avow that it is "Krima mul" not the custom. For some time it almost seemed to us as if vaccination was also on their list of prohibitions, for, although they had actually begged us to come for this very purpose, it took the three of us quite a long time, cajoling, threatening, entreating and advising them, before they would undergo this fearful operation. At last one faced it, soon to be followed by the others, so that eventually we had quite a busy morning vaccinating. A week later this must have been a sore village, where most of the people wished vaccination had been taboo, but by then we were well away with the knowledge that, should smallpox attack Hanu, it would find the defences fairly strong.

Now let us pay a visit to the Khampas, although it wants a George Borrow to describe these gipsies of Western Tibet. Kham, from whence they come, is a province of Tibet, but when we see the numbers of them who wander over the Indian parts of the Himalayas, we begin to wonder whether any of them are left "at home." Evidently the Khampa finds it more lucrative to wander like our own gipsies than to stay on his native soil. As the bazar in Leh provides most of the things needed by the people who inhabit the upper valley of

The people of Astor and Gilgit would be surprised if they were told that they were Dards living in Dardistán, and their neighbours of Hunza-Nagar and Yásin would be equally astonished. If consulted, they would probably describe their country as Shináka, or the land of the Shins, where Shiná is the spoken language. They are an Aryan people, sturdy built, cheery, honest, frugal, and sober. They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head, round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure Shin village no one will eat fowls or touch them. They practise inoculation for small-pox, their one epidemic. The people of Astor are Mussalmáns, two-thirds being of the Sunni persuasion, and the rest being either Shiáhs or Maulais. There is no religious intolerance in Astor.

Drew mentions the following caste divisions: Rons, Shins, Yashkuns, Kremins, and Doms. As regards the Rons caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the RAJÁ caste of Dardistán. The majority of the Astoris belong to the Yashkun caste, and the Shins are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shins, according to the Census, being 7,733. The Shins are regarded with great respect by the Yashkuns and the other castes. The Yashkuns claim the Shins as their forefathers. The Shins give their daughters to Rons and to Saiyids, but take wives from the Yashkuns. Far away in Central Ladákh, in the Shám valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they came and its Shiná dialect, but they wear the pigtail and the Ladákhi cap. It is said that, though Buddhist by name, they really worship local spirits and demons. They practise polyandry, but they will not eat with Tibetan Buddhists, and, like the Shins in Dardistán, they hold the cow in abhorrence.

In Gilgit, as in Astor, there are few social subdivisions, for

L. Leitner L-9 (1866-93) 1893? AVS Dard AVS

yono = winter.] The snow is now becoming a little softer and out-of-door life is more possible. The festivities are kept up for twelve days. Visits take place and man and wife are invited out to dinner during that period. Formerly when the Shins had a Raja or Nawab of their own, it used to be the custom for women to dance during those twelve days. Now the advent of the Sepoys and the ridiculous pseudo-morality of the Kashmir rule have introduced a kind of Pardah and the chaste Shin women do not like to expose themselves to the strangers. Then there is the Nauróz, which is celebrated for three, and sometimes for six, days.

There are now five great holidays in the year:

The I'd of Ramazán.
The Shimá-Nán.
The Nauróz.
Kurbani I'd.
The Kiy Nán,* } Astór.
Dimmikí, } Gilgit.

On the last-named holiday the game of Polo is played, good clothes are put on, and men and women amuse themselves at public meetings.

The Shin people are very patriotic. Since the Maharaja's rule many of their old customs have died out, and the separation of the sexes is becoming greater. Their great national festival I have already described under the head of "Historical Legend of Gilgit" (pages 14 to 18).

## G. THE RELIGIOUS IDEAS OF THE DARDS.

If the Dards—the races living between the Hindu-Kush and Kaghán—have preserved many Aryan customs and traditions, it is partly because they have lived in almost perfect seclusion from other Muhammadans. In Chilás, where the Sunni form of that faith prevails, there is little to relieve the austerity of that creed. The rest of the Muhammadan Dards are Shiahs, and that belief is more elastic and seems to be more suited to a quick-witted race, than the orthodox form of Islam. Sunniism, however, is

* Is celebrated in Autumn when the fruit and corn have become ripe. For a detailed account of this and other festivals see "Hunza-Nagyr Handbook," and Parts II. and III. of the "Languages and Races of Dardistan."

2x Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

earlier. This, however, is not the place to deal with the Dē.ū of myth or legend. 776 [173]

The Dē.ū of to-day is a shadowy and illusive being, scarcely to be isolated from the group of Jinn-dē.ū-pēri. He is evidently not endowed in the popular consciousness with a very definite or vivid personality. Demonic possession is usually attributed to Jinns, but it is noteworthy that there is the expression *dēwē.i dakhal shātin*, denoting possession by a Dē.ū. [786]

We know something of the general habits of the Dē.ū, which they share with their supernatural colleagues the Jinns and Peris. For instance, I have the following note among others: "At the time when the mulberries are ripe people do not eat them at midday. They say that Dē.ūs and Peris throw people down (from the trees at that hour)."

It should be explained that people, especially children, climb into the trees to eat mulberries and other fruit, and that there are often accidents and broken limbs due to their falling down.

Again: "In summer-time Jinns, Dē.ūs, and Peris live in the open country. In autumn they come to inhabited places." And: "At the time when a woman has given birth they do not keep an adze close by in the house. If there is an adze at hand, and if it goes by night and opens the door and brings the Dē.ūs, Peris, and Rū.is into the house, then the woman suffers injury." Why adzes go and open the door is duly explained (cp. p. 529).

It is possible by the "concoction of magic" followed by other rites to make the Jinns, Dē.ūs, and Peris subject to one. There was a man known as the Chīlègi Saiyid living a few years ago, and probably still alive, who had achieved this. [789]

Such general facts could be multiplied, but I can recall no Shina account of any definite individual Dē.ū taking part in any actual exploit at the present day.

In Burushaski there is a word Pfūt (plural Pfūtū or Pfūtants) which is interpreted as Dē.ū or Jinn. [197]

## V.

### The Ceremony of Nagi Sochemi.

Nagi Sochemi is said to be a goddess who lived at Naugam in the Astore district, on a stone altar situated at the foot of the Naglshi hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jurgai was specially appointed by the Rá to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present, in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sochemi, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this solemnity were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discoverer of the offending juryman at dawn of that day. For some days the case was left awaiting the decision of "Nagi Sochemi," and if in this period the suspected person suffered any kind of loss of property, of relatives, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

### "Khuran" or "Majari."

In Chilas and in the adjacent valleys of Jalkot, Palas, Koli, Darel, Tangir, Gor, Harban, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khuran" in Shinaki (Chilas, Darel, Tangir, Gor, Harban and Sazin), and "Majari" in Kohistan (Jalkot, Palas, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must needs submit.

## VI.

### Danyals.

There are some men and women of these parts who are called Danyals. When they are worked up into a state of frenzy the giants and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Danyals as well as the local musicians. A bundle of green chili leaves is then brought, and some of these, with a little *ghi*, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Danyals push their way towards the fire and begin to inhale the smoke, until

717 they lose their senses and commence to dance to the noise of the drums. They also use
716 some of the extremely bitter leaves of the "chili" (*Zanthoxylum macrospa*) while dancing.
791 The hosts then become fast and furious, and the onlookers cheer loudly. The Dasyuds glance from time to time towards the surrounding trees, among which the giants and fairies have taken up a position. After a short dance the Dasyuds place their hands on the shoulders of the drum-beaters and their ears on the drums, as if they are very attentively listening to what the drums says. In a short time they again commence dancing, and sing the prophecies they have been told by the drums. If there be anybody present wearing red clothes when a Dasyul is dancing, the Dasyul is much annoyed and rushes at him. No man clad in red clothes is therefore allowed to be present. After an hour's dance the performance closes, and two or two strong men appear in the circle, and the Dasyuds climb upon their backs and are carried away out of the enclosure to a house, on which after a short rest they recover from their frenzy.

I once asked a Dasyul woman of Gilgit how she had become a Dasyul, and after long hesitation she related to me the following story: "When about seven years of age I used to go with my flocks to the distant pastures on the hills. Once I saw a fairy sitting on a Chil tree and eating its leaves. Her eyes were brilliant and large, with thick eyebrows, which were high above the eyes and almost joining the hair of her head. She came towards me and asked me to accompany her, saying that her house was built of gold, and that I should be well treated there. Hearing this I lost my senses, and as I was then standing on the edge of a stream, I fell down into it and got a severe wound on the right thigh. Some of the shepherd boys who were also feeding their flocks at some distance saw me fall, and, hastily taking me out of the water, carried me to the village. My father then killed a goat in order to ascertain if I were really under the power of the fairies, and I drank all of its blood, but I was unconscious of what was going on around and remained in this state for about ten days without taking any food. During this time the number of giants and fairies which appeared to me increased to fourteen, of whom seven were Muhammadans and seven Hindus, each sect remaining apart. Their queen, who was Hindu, was clad like a fakir and had gathered her hair on the top of her head, upon which she wore a cap. They brought and showed me different kinds of food, but gave me nothing to eat. In three days they taught me to dance, and the following two incantations called "Ganos" and "Wiyas" [1]—

*Ganos.*

Ganos, Ganos, Trikhan ai *Zadi* ganos; Zadi ai Hasadi ganos; Yus ai ganadi ganos; Pi ai parosi ganos; Ding dalak ganos; Tip yhill ganos; Jat jarwar ganos; Ashpo ai chuno ganos; Jakus ai gulo ganos; Ajeh ai wrus ganos; Ayi ai chhai ganos; Terwah ai shudo ganos; Bus ai shara ganos; Nadi jat ganos; Shirl ai shani ganos; Dewah ai chhai ganos; Chai chatri jus ganos; Mudu birga ai jus ganos; Dewah ai pus ganos; Aga ai tare ganos; Birdi ai bathai ganos; Sat khap

1. When I first saw a dance by a Dasyul woman in Alligi or Gilgit, a man with a red umbrella came into the circle. This enraged the dancer, although she herself was dressed in red clothes.

[illegible] 48

[illegible] Gaman; Hul si ser gaman; Sar si nimi gaman; Vajan si bathol gaman; Bathol si Chhal gaman; Sun si sumaling gaman; Jor jaman gaman; Sasi sarpish gaman; Sar khap barsi gaman; Dung si dam gaman; Khetu dar gaman; Hamu rang gaman; Chu chil gaman; Nosh sama gaman; Jan si sain gaman; Tara si dhar gaman; Trakhan si Yulsini gaman; Yulsini si Hasnoli gaman; Gar si bashodli gaman.

Wyn.

Mati, Mati, Trakhan si Zonli mati; Zonli si Hasnoli mati, &c. &c., continue in the same way up to end of Gaun.

Translation—

*Gaun.*

I will bind, I will bind, I will bind Zonli (a fairy) of Trakhan (a river of Gilgit). I will bind Hasnoli the daughter of Zonli. I will bind Garnoli the daughter of Tra (a fairy, also the moon). I will bind the rain of the sun. I will bind Ding (a giant) of the lower strata of the earth. I will bind all the insects. I will bind giants and wild animals. I will bind the colt of a mare. I will bind the offspring of an ass. I will bind the lamb of a sheep. I will bind the kid of a goat. I will bind the bullet of a gun. I will bind the earthborn of the jungle. I will bind the green pastures. I will bind the battle of fairies. I will bind the key of demons. I will bind the pregnant women. I will bind men for fighting. I will bind the way of giants. I will bind the stars of the sky. I will bind the pieces of the earth. I will bind seven hundred fairies. I will bind the springs of water. I will bind the outlets of springs. I will bind Bathole (a fair of fairies) on Vajan (Nanga Parbat or Diyamir Mountain, situated on the west of Astore). I will bind the key of Bathole. I will bind Sumaling (a giant) of earth. I will bind all creation. I will bind Sasi (a giant) of the upper strata of the earth. I will bind seven hundred daughters of fairies. I will bind the booming of drums. I will bind the lower plains. I will bind the upper pastures. I will bind all the *chil* trees. I will bind the green banners of the fairies. I will bind the mouth of serpents. I will bind the voice of the fish. I will bind Yulsini (the fairy drum which is said to be beaten by fairies on Khutu, a mountain near Bulchi, a village in the Bagrot Valley) of Trakhan. I will bind Hasnoli (a fairy) of Yulsini. I will bind the call of the cow.

*Wyn.*

I will release, I will release, I will release Zonli of Trakhan. I will release Hasnoli, the daughter of Zonli.

&c. &c. &c.

If it is wished to restrain any person, phenomenon, thought, wish or desire, &c., from their natural course of action, the "Gaun" is read by the Dunyals on a small stone, which is then thrown towards the person or thing concerned. By reciting the "Wyn" in the same way on another stone, the person or thing is again rendered active. (771)

### 6.—The Fairy who Married her Human Lover.

It is not believed in Astor that fairies ever marry human beings, but in Gilgit there is a legend to that effect. A famous sportsman, Kibá Lorí, who never returned empty-handed from any excursion, kept company with a fairy to whom he was deeply attached. Once in the hot weather the fairy said to him not to go out shooting during "the seven days of the summer," "Canicular," which are called "Barda," and are supposed to be the hottest days in Dardistan. "I am," said she, "obliged to leave you for that period, and, mind, you do not follow me." The sportsman promised obedience and the fairy vanished, saying that he would certainly die if he attempted to follow her. Our love-intoxicated Nimrod, however, could not endure her absence. On the fourth day he shouldered his gun and went out with the hope of meeting her. Crossing a range, he came upon a plain, where he saw an immense gathering of game of all sorts and his beloved fairy milking a "Kill" (*markhor*) and gathering the milk into a silver vessel. The noise which Kibá Lorí made caused the animal to start and to strike out with his legs, which upset the silver vessel. The fairy looked up, and to her anger beheld the disobedient lover. She went up to him and, after reproaching him, struck him in the face. But she had scarcely done so when despair mastered her heart, and she cried out in the deepest anguish that "he now must die within four days." "However," she said, "do shoot one of these animals, so that people may not say that you have returned empty-handed." The poor man returned crestfallen to his home, lay down, and died on the fourth day.

### C.—Dayals = Wizards and Witches.

The gift of second sight, or rather the intercourse with fairies, is confined to a few families in which it is hereditary. The wizard is made to inhale the fumes of a fire which is lit with the wood of the *tráli*[1] (Panjabi = Padam), a kind

[1] Elsewhere called *tálá*.

of fir-wood which gives much smoke. Into the fire the milk of a white sheep or goat is poured. The wizard inhales the smoke till he apparently becomes insensible. He is then taken on the lap of one of the spectators, who sings a song which restores him to his senses. In the meanwhile, a goat is slaughtered, and the moment the fortune-teller jumps up, its bleeding neck is presented to him, which he sucks as long as a drop remains. The assembled musicians then strike up a great noise, and the wizard rushes about in the circle which is formed round him and talks unintelligibly. The fairy then appears at some distance and sings, which, however, only the wizard hears. He then communicates her sayings in a song to one of the musicians, who explains its meaning to the people. The wizard is called upon to foretell events and to give advice in cases of illness, etc. The people believe that in ancient times these Dryahs invariably spoke correctly, but that now scarcely one saying in a hundred turns out to be true. Wizards do not now make a livelihood by their talent, which is considered its own reward.

---

173 There are few legends so exquisite as the one which chronicles the origin, or rather the rise, of Gilgit. The traditions regarding Alexander the Great, which Vigne and others have imagined to exist among the people of Dardistan, are unknown to, at any rate, the Shins now, excepting in so far as any Mussulmi accompanying the Maharajah's troops may, perhaps, accidentally have referred to them in conversation with a Shin. Any such information would have been derived from the Sikandarnama of Nizami, and would, therefore, possess no original value. There exist no ruins, as far as I have gone, to point to an occupation of Dardistan by the soldiers of Alexander. The following legend, however, which not only lives in the memories of all the Shin people, whether they be Chilasis, Astoris, Gilgitis, or Brokhpâ (the latter, as I discovered, living actually side by side with the Baltis in Little Tibet), but which also an annual festival commemorates, is not devoid of interest from either a historical or a purely literary point of view.

[for text see category 539, pp. 9-14. -- Ansyal]

In Lectures 1-8 (1889-90) 1898 A'S Dead A'S

but if he dies there his soul will at home dies in a day or two. On this occasion there were present many Bilin from all quarters."

In taking leave of the Bilin it is, I presume, superfluous to lay stress on their similarity to the witches of the West. Almost every point that has been mentioned above can be duplicated from European records of witches.

## The Dajyáli.

We now come to the Dajyáli, the last of the characters whom I propose to treat of here. Dajyáli are supernaturally endowed human beings, who at the present day chiefly exhibit their powers by furnishing answers to recondite questions. They supply on request information relating to what lies outside the scope of the ordinary senses of sight and hearing, and regarding what is going to come to pass in the future.

Their sources of knowledge are hidden, but there is nothing obscure about their procedure, for they exhibit their powers before all the world in broad daylight.

The public attend on the local polo ground, which corresponds to the village green. At one side sit the local band of drums and pipes and the Dajyáli enters the circle formed by the spectators. There he primes himself by inhaling the smoke of burning juniper twigs which has some sort of intoxicating effect on him. After this he divides his time between stamping over and listening to the drums, dancing round the circle in various measures and posturing in the middle of it.

At certain points he may be asked questions by members of the general public, the answers to which he ostensibly obtains by listening to the drums or by watching the behaviour of some grains of corn thrown on the vibrating parchment of a drum. His answers are couched in language which is really I think unintelligible, but which someone eventually is always found to interpret.

## 2.

### The Ceremony of Nine Sections.

Nagi Sections is said to be a goddess who lived at Nangum in the Ashem district, on a stone altar situated at the foot of the Nagami hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jongmi was specially appointed by the Rāja to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present, in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sections, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this ceremony were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discomfort of the offending persons or those of that day. For some days the case was left awaiting the decision of "Nagi Sections," and if in this period the suspected person suffered any kind of loss of property, of relations, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

### "Khwan" or "Rhum."

In Chiku and in the adjacent villages of Jakoi, Pelim, Koli, Dayui, Tangju, Gor, Harlam, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khwan" in Shimale (Chiku, Dayui, Tangju, Gor, Harlam and Sazin), and "Hajui" in Kotimme (Jakoi, Pelim, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must remain submit.

## VI.

### Dreams.

There are some men and women of these parts who are called Daryais. When they are worked up into a state of frenzy the ghosts and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Daryais as well as the local musicians. A bundle of green chili leaves is then brought, and some of them, with a little ghi, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Daryais push their way towards the fire and begin to inhale the smoke, until

they lose their senses and commence to dance to the voice of the drums. They also eat some of the extremely bitter leaves of the "chili" (*Zanthoxylum macrocarpa*) while dancing. The music then becomes fast and furious, and the onlookers cheer loudly. The Daryals glance from time to time towards the surrounding trees, among which the giants and fairies have taken up a position. After a short dance the Daryals place their hands on the shoulders of the drum-beaters and their eyes on the drums, as if they are very attentively listening to what the drums say. In a short time they again commence dancing, and sing the prophecies they have been told by the drums. If there be anybody present wearing red clothes when a Daryal is dancing, the Daryal is much annoyed and rushes at him. No man clad in red clothes is therefore allowed to be present. After an hour's dance the performance closes, and one or two strong men appear in the circle, and the Daryals climb upon their backs and are carried away out of the enclosure to a house, on which after a short rest they recover from their frenzy.

I once asked a Daryal woman of Gilgit how she had become a Daryal, and after long hesitation she related to me the following story: "When about seven years of age I used to go with my flocks to the distant pastures on the hills. Once I saw a fairy sitting on a Chil tree and eating its leaves. She eyes were brilliant and large, with thick eyebrows, which were high above the eyes and almost joining the hair of her head. She came towards me and asked me to accompany her, saying that her house was built of gold, and that I should be well-treated there. Hearing this I lost my senses, and as I was then standing on the edge of a stream, I fell down into it and got a severe wound on the right thigh. Some of the shepherd-boys who were also feeding their flocks at some distance saw me fall, and, hastily taking me out of the water, carried me to the village. My father then killed a goat in order to ascertain if I were really under the power of the fairies, and I drank all of its blood, but I was unconscious of what was going on around and remained in this state for about ten days without taking any food. During this time the number of giants and fairies which appeared to me increased to four-teen, of whom seven were Mohammedans and seven Hindus, each sect remaining apart. Their queen, who was Hindu, was clad like a fakir and had gathered her hair on the top of her head, upon which she wore a cap. They brought and showed me different kinds of food, but gave me nothing to eat. In three days they taught me to dance, and the following two incantations called "Gaen" and "Miyu" —

Gaen.

Gaenta, Gaenan, Tvaishae ni *Zenti gaenan*; *Zenti* ni *Hanenti gaenan*; Yan ni *gaenti gaenan*; Fa ni *panni gaenan*; Ding dzink *gaenan*; Tiy *ghilli gaenan*; *Jat janwar gaenan*; Ashpa ni *chuny gaenan*; Jakoo ni *goha gaenan*; Ajah ni *wrus gaenan*; Ayi ni *chhal gaenan*; Turenik ni *dumbo gaenan*; Bun ni *chara gaenan*; Nanli jo *gaenan*; Shirli ni *rhani gaenan*; Dewak ni *chhai gaenan*; Chai *chanti jan gaenan*; Wudla *hoga* ni *jan gaenan*; Dewak ni *pan gaenan*; Aga ni *tare gaenan*; Birili ni *bathai gaenan*; Sat *bhay*

1 When I first saw a dance by a Daryal woman in May or June, a man with a red umbrella was one the field. This enraged the dancer, although she herself was wearing red clothes.

nanyan ganam: Hol ei nar ganam: Sar ei nimi ganam: Yajar ei tasholi ganam: Sasholi ei Chini ganam: Sun ei sunaling ganam: Jon jarow ganam: Soni sanjish ganam: Sar thap lazni ganam: Dwag ei Sun ganam: Khoto Sar ganam: Hunin rang ganam: Chin chili ganam: Nosli sanai ganam: Jon ei ayin ganam: Tara ei shor ganam: Trakhan ei Yudani ganam: Yudani ei Hazouli ganam: Gar ei Sashoshi ganam.

Wiyo.

Mori, Mori, Trakhan ei Zosli mori: Zosli ei Hazouli mori, &c. &c., continues in the same way up to end of Game.

Translation—

Game.

I will bind, I will bind; I will bind Zosli (a fairy) of Trakhan (a river of Gilgit). I will bind Hazouli the daughter of Zosli. I will bind Ganouli the daughter of Yus (a fairy, also the moon). I will bind the sole of the foot. I will bind Ling (a giant) of the lower strata of the earth. I will bind all the insects. I will bind giants and wild animals. I will bind the colt of a mare. I will bind the offspring of an ass. I will bind the lamb of a sheep. I will bind the kid of a goat. I will bind the bullet of a gun. I will bind the carnivora of the jungle. I will bind the green pastures. I will bind the fields of barley. I will bind the key of demons. I will bind the pregnant women. I will bind men for fighting. I will bind the way of giants. I will bind the stars of the sky. I will bind the pores of the earth. I will bind seven hundred fairies. I will bind the springs of water. I will bind the outlets of springs. I will bind Sathoi-a (a fort of fairies) on Yajar (Nanga Parbat or Diyamir Mountain, situated on the west of Astore). I will bind the key of Sathoi. I will bind Sunaling (a giant) of earth. I will bind all creation. I will bind Sun (a giant) of the upper strata of the earth. I will bind seven hundred daughters of fairies. I will bind the booming of drums. I will bind the lower plains. I will bind the upper pastures. I will bind all the Sholi trees. I will bind the green banners of the fairies. I will bind the mouth of serpents. I will bind the voice of the flute. I will bind Yudani (the fairy drum which is said to be beaten by fairies on Khamu, a mountain near Baltit, a village in the Hunza Valley) of Trakhan. I will bind Hazouli (a fairy) of Trakhan. I will bind the calf of the cow.

Wiyo.

I will release, I will release, I will release Zosli of Trakhan. I will release Hazouli, the daughter of Zosli.

&c. &c. &c.

If it is wished to restrain any person, phenomenon, thought, wish or desire, &c., from their natural course of action, the "Game" is read by the Dunyals on a small stone, which is then thrown towards the person or thing interested. By reciting the "Wiyo" in the same way on another stone, the person or thing is again rendered active. (79)

VII.

Omens.

Probably on account of the frequent attacks on Gilgit made by the chiefs of the surrounding States, certain signs and occurrences are considered to be omens among the Gilgitis. They are as follows:—

(1) If an unusually heavy rain falls at any season in Gilgit, it is supposed that the chief of Yasin will advance towards Gilgit.

(2) If innumerable kites are seen hovering over Gilgit, it is generally accepted that Gilgit is to be invaded by the Hagar people.

(3) If packs of wolves make frequent sights visits into Gilgit, and inflict heavy losses among the flocks, it is believed that the chief of Hunza is certainly going to invade and plunder Gilgit.

(4) If the harvest be unusually abundant, it is believed that Gilgit will be attacked by the Punyal Chiefs.

VIII.

Lunar Eclipses.

The Gilgitis say that Gaohar is the name of a giant, who is a lover of the moon. On the 14th of the lunar month, when the moon is in its full beauty, the Gaohar, whenever he pleases, catches hold of the moon, leaving untouched only a part which contains a fig tree. At such time the people of those parts beat their iron pans (on which they cook bread) like drums and cry loudly, "O Gaohar, we have brought a large force, bearing drums against thee; leave her (the moon), or we will rush upon thee!" In the meantime the Gilgit mob, and they become happy at their success.

Solar Eclipses.

The Gilgit people say that whenever any great king dies or is banished from his country, the giant Gaohar becomes angry against the sun, and darkens a whole or a part of his (the sun's) face, as a sign of grief for the death or the banishment of such a great king.

IX.

The Conquest of the Waxis.

It is said that the earth was at first enveloped in water, which was in some places frozen, and where the Yadus (giants) had taken their abode under Yandu Hal Singh, their ruler. On a certain day they held a council for the purpose of bringing earth over the water. Their ruler said that the task was above their power but, however, he knew of a wolf called Bajore Shah who lived at a place named Wilgamoh (old fort) and who, owing to his great strength, would be able to perform this work. "Provisions" was first sent as a messenger to Yadu Yadu, but the wolf refused to come, saying that he would not

[1] [illegible] regarding the name, the author of the paper informs us that the original word is ryp, which was the name "Yandu."—Ed.]

778 keep cows in Provision, who was a servant of everybody. On this the Vadis sent "Trust" to the well, and he came with him to the valley of the Vadis. The object was explained to him and he said that a bird called Garul Patan, who lived on the crown on the Circus Mountain, should be sent for as soon. Provision was now made the messenger; but the bird declined to come, whereupon Trust was sent to him and he came to see Bajare Shal and Vanda Mal Singh. Bajare Shal now went for a woman which lived close to his house. When everything was ready the well gave orders that Vanda Mal Singh should stand in water as a pillar upon which Garul Patan should spread his wings, while the women by the making a hole into the ice should bring out and spread all the soil over the wings of Garul Patan. The orders were obeyed and the wings of the bird covered all the water, while the women brought out all the soil which was beneath the water. In this way the earth was turned over the water.

X.*

"Shanka Ben" (The Bone Drum).

(47) 778 There used to be at Gilgit a blue stone called "Shanka Ben," about a yard square, where the present telegraph office is situated. No king was acknowledged in the country unless he had mounted on it and prostrated himself before the stone. There and then the people advanced his head with a crown, swore fealty and tendered their allegiance. This was the day when all the better class would gather to see the new "Raj" perform all the ceremonies, and undergo all obligations considered necessary to the office of leader of the nation. This was done in order to secure their confidence by a man who was to become sole director over their destinies, among them being many who had taken an active part in bringing him to the throne and proclaiming him their chief.

When the ceremonies were over, all came one by one to kiss his hands, to receive his blessings and to bless him in return. They would then dance to the beating of drums, make merry, sing praises and recite poems describing the heroic deeds already performed by the Raj, his ancestors and others whose lives had become endeared to all by self-sacrifice in the cause of their country.

• [778] The dasasi (soothsayer) was not left out on this occasion, for it was necessary to foretell the future of the king and his courtiers, and to exhibit the state of ecstasy that accompanies prophecy by the soothsayer. Before being dismissed at night all present partook of a feast; some were gratified with handsome dresses and other distinctions; some gratified by a gesture of kindliness.

The Custodians of Shiri Bai.

778 776 Fn 2 782 Shiri Bai is the name of a goddess who, as the people say, lived on a rock at Nangama, a village in the Astore district. The rock now is called Shiri Bai, and is always kept covered with branches of juniper, while an attendant called "Bab Bin" resides there to look after it. Barren women used to sacrifice goats to and pray before the sacred stone in the hope of progeny. In the late monthes, when the people had gathered their

AVS David AVS

his foster kindred accompany him. On the other hand, if he rises to influence, his foster-father is generally his most confidential adviser, and his foster-brothers are employed on the most important missions. 608

The custom of cementing friendship by the milk connection seems a favourite one. Should a woman dream that she has adopted any person as a son, or should any man dream that he has been adopted by a certain woman, the connection is carried out in the same way as the forced adoption before mentioned, and nobody would think of refusing to recognise it. The practice is now falling somewhat into disuse, but it was extremely common not many years ago. Milk from a woman's breast is esteemed a sovereign remedy for cataract and other eye-diseases. A resort to it also establishes the milk-tie for ever afterwards. [787] [757]

It is sometimes customary for a young couple, at the time of marriage, to induce a mutual friend to become their foster-father. The tie is ratified at the time of eating bread together. Bride and bridegroom being seated opposite to one another, the foster-father elect seats himself between them, and taking a piece of bread in each hand crosses his arms, observing to keep the right one uppermost, and puts the bread into their mouths. From that time he is regarded as their father.

The foster relationship is regarded as so close, that marriage between foster relations would be looked upon as incestuous, and, in spite of the precepts of the Koran, it would be impossible for a man to marry the widow of his foster-son. [735]

The formation of these ties is practised in a peculiar way among the Ashimadeh clans of Chitral. It is customary for every infant to be suckled in turn by every nursing mother of the clan; consequently there is a constant interchange of infants going on among the mothers, for the purpose of strengthening tribal unity. [853]

The Shins are noted for their miserly habits, which they sometimes carry to great extremes. Every man has a secret hiding place in the mountains, where he conceals his money, metal pots, wife's jewels, and all his most valuable property. Occasional stealthy visits are paid to the treasure, which is never taken out for use except on festive occasions. No feeling of honour seems to exist as to the appropriation of another's treasure should it by chance be discovered, and frequent quarrels arise from this cause. Treasures are frequently lost altogether by the sudden death of the owner, 854 [818]

The ordinary Mahommedan calendar is, however, coming into use, especially among the Ashimadeh class. The days of the week are named according to the Mahommedan calendar, except that Friday is named Adeena.

In Bushkar and Torwa the Mahommedan calendar is followed. In the latter place the ordinary names are preserved, in the former the months are named—

| | |
|---|---|
| Hamma Hamsin. | Sowyi (*Great month*). |
| Safir. | Shakrabbir. |
| Purum ishpo (*First sister*). | Ros. |
| Dowim ishpo (*Second sister*). | Lokyō (*Small festival*). |
| Thoi ishpo (*Third sister*). | Mihin (*Increasing*). |
| Chor ishpo (*Fourth sister*). | Ghoyō (*Great festival*). |

The constellation of the Great Bear is called "the maiden's corpse," the four corner stars being supposed to represent a bier: the small star above the middle star of the tail is called the "star of life," as it is supposed to be invisible to a person forty days before death. The pleiades are called the flock of sheep; a comet, "the star with a tail," is supposed to portend the death of a king. The milky way is called the "track of the cow and horse," the tradition being that in the broad part about the middle the horse fell down from going too fast, while the cow travelled safely. The world is supposed to rest on the horns of a cow, which shakes its head occasionally at the sins of the inhabitants, and so causes earthquakes.

The west and south are always spoken of as up, and the north and east as down. A man going west or south to a place talks of going up to it. Fairies and demons that live in caves among the mountains or in desert places, have a prominent place in the belief of the Dards. Dr. Leitner has already given an account of the Yetch and its female counterpart the Rooé. In Booroshki they are known as Phoot and Billusa. Madness is supposed to be caused by a demon casting its shadow over a person, while the shadow of a fairy confers the gift of prophecy. Demons assume the appearance of human beings to lure men to destruction, but they are recognisable by their feet being turned backwards.

In Gilgit, Hunza, and Nager the ruler's family is supposed to be specially under the protection of a guardian fairy called Yoodeni. A drum, called the Yoodeni drum, is always kept on the top of the ruler's castle. When it is heard to sound at certain festivals and at critical times it presages good fortune. Nobody must try to see the Yoodeni, or look in that direction

whom the drum is heard, if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodoni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nagyr are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the mane and forelock of favourite horses. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

[1] Baber's Memoirs by Erskine, p. 149. [2] Brigg's Ferishta, Vol. I, p. 16.

4 A43 Dard AV3 Burush. A47

storm of hail and wind arise. Mahmood having caused this to be done, the effects became visible; for, instantly the sky lowered, and thunder, lightning, wind, and hail succeeded, turning the day into night, and spreading horror and destruction around."

Divination is still practised, in spite of the conversion of the country to Mahommedanism. The Dainyals, or diviners, who are of both sexes but are more frequently women, are supposed to receive the gift of second sight by the shadow of a Burai, or fairy, having fallen on them in sleep. Dr. Leitner speaks of the gift as being supposed to be hereditary, but this is not the case, though the daughters of Dainyals often become Dainyals also. Dainyals are said to be only found among the shepherd population, and it is easy to understand how a solitary life among the wild crags of the Hindoo Koosh should encourage a belief in the power of intercourse with the unseen world. Quite young people become Dainyals, and the spirit of prophecy is supposed to remain with them for life.

The first intimation of the gift to the friends of the recipient is conveyed by their finding him or her in a deep trance. The requisite music is brought, flageolets being substituted for the ordinary clarionets, and softly modulated airs are played close to the ear of the entranced. Gradually he moves and begins to show signs of life, on which a goat is brought and decapitated, and the bleeding neck presented to the Dainyal novice. This is the test of a true Dainyal. If the gift of divination has really come to him, he seizes the bleeding neck, and sucks the blood. Some find this too much for them, and refusing to suck the blood are looked on afterwards as only feebly gifted with the spirit of prophecy. The idea of imposture never seems to be entertained by these simple-minded people. The recognised Dainyals are consulted on all special occasions, such as the yearly festivals in summer, or the declaration of war with a neighbouring state. The spirit of divination is supposed to lie dormant in winter, and to be strong in proportion to the heat of the weather.

On the first occasion of my witnessing an incantation, two Dainyals were brought from a considerable distance to prophesy at the Ganoni festival in June. They were both women, one of about twenty-five and the other about forty years of age, who showed by their wild and haggard looks the strain of the often-practised ceremony on their faculties. A circle

4 AV3 Dard AV3
Durusha AV7

being formed round which the spectators seated themselves, a bunch of cedar twigs was placed on a flat stone and set on fire, and while two or three men vigorously blew up the flame, the Dainyal with a cloth over her head inhaled the thick pungent smoke which curled round her head, while the music played softly. In a few minutes she became violently agitated, her hands were convulsively clasped over her head, and her whole body was shaken with uncontrollable muscular motion, till, dashing the burning branches aside, she fell prostrate at the feet of the musicians, grasping the drum with her hands, and violently throwing her head backwards and forwards in a way that threatened dislocation. At length, overcome by the violence of her exertions, she fell apparently senseless on the ground. The spectators shouted long and loud at this triumphant manifestation of the fairy's presence, and the music played its loudest. Then the second Dainyal entered the circle, and in a few minutes was also lying motionless. The music now changed to a harsh cadence, and soon one, and then the other, rose and staggered round the circle in a rude attempt at stepping in time to the music. With their long hair floating loose, half-closed eyes, drunk with the fumes of the cedar smoke, and occasionally coming into collision, they formed a most weird and somewhat painful spectacle, while the shouts of the spectators rose and fell at each uncouth gesture, varied by shrill whistles that would have done credit to the gallery of a popular London theatre. The violent exertion soon produced fatigue, while the worst effects of the cedar smoke seemed to disappear and the prophesying began. While the music played softly, the two witches reduced their movements to a sort of aimless walk round the circle, with fixed and vacant gaze, occasionally one would stop and place her head close to the flutes or the drum as if listening to a language that others could not hear, and then again resume the weary round. Sometimes, during one of these pauses, one would, after listening, raise a shrill chaunt which was attentively listened to by the musicians, and after being repeated once or twice was caught up by them and loudly chaunted to the audience, while murmurs of surprise or congratulation ran round the circle.

This, varied with intervals of leaping and dancing which seemed to excite both themselves and the spectators to the highest pitch, lasted for about an hour, when the palpable exhaustion of the Dainyals made it necessary to close the meeting. A man going into the circle gave a back, as at

D 787 791 B 787 791

Burushe AV7

D leapfrog, and one of the women, taking a flying leap on to
781 his shoulders, was carried out of the ring, the second Dainyal
791 following in like fashion on another back being offered,
B and the meeting broke up. No attempt is made to direct
787 the prophecy to any topic by hint or question, and the Dainyal
791 is always free to give, as the communication of the fairy, whatever comes into her head. Considerable freedom of speech is gained in this way, and an unpopular ruler often
D gets a broad hint given him. Dainyals only exist now in Gil-
[177] git, Hunza, and Nager, the stricter Mahommedanism of the neighbouring valleys having disestablished them. Circum-
B stances point to this mode of divination being of Shin intro-
[177] duction, the majority of Dainyals being of that caste. Stronger evidence is afforded by the fact that it is incumbent upon a Dainyal, of whatever caste, to refrain from cow's milk, like the most orthodox Shin.

During the ceremony the witches attempt, occasionally, to rush out of the circle, but are thrust back by the spectators, the idea being that they are forced to prophecy against their will. Occasionally, too, they affect to become excited by the sight of certain persons, bright colours, dogs, &c., and rush at and try to tear them, but are repelled by the spectators, and so are forced to content themselves with hurling stones at the object of aversion.

According to Elphinstone's account of the Siah Posh Kaffirs, something of the same kind exists among them. He says: "They have also persons who can procure an inspiration of some superior being, by holding their heads over the smoke of a sacrifice; but these are held in no particular reverence." Moorcroft mentions mountain witches at Nadaun who were called *Dain*, and a form of divination called *Dewalla* is still practised in some parts of the Punjab.

D Serious crimes, such as murder, are rare. In Wakhan
674 murder is punished by a fine of six horses, six guns, and
681 thirty woollen robes; should the murderer be unable to pay the fine, he is forced to give up a son or daughter as a slave to the family of the murdered person. Theft is punished by a fourfold restoration of the stolen property, and the thief is bound to a tree and beaten. Grave disturbances, in which deadly weapons are used, are punished by heavy fines, and an offender is not pardoned till he succeeds in bringing a live hare to the Meer, which at certain seasons is a matter of difficulty.

D Though bloodshed is rare among the Dards as compared
674 with the Afghans, brutal murders are sometimes committed

Dard AV3

000 torrent, are the natural first step in worship and in the supernatural. They are born of the solitary watching of the wandering flock in the day-time, of the sheepfold at night. The supernatural is ever with the lonely shepherd; the avalanche sweeping down the mountain side is the protest of the solitary god against any attempt to scale the approaches to his throne; the mountain sickness which seizes the wayfarer on some pass is the vengeance of the disturbed fairies; the shriek of the wind behind the veil of mist attests their presence; the snow flag streaming from some great peak is a sign of the god's abode; the voice of the gods speaks in the moaning forest and the rushing waterfall. The fairy and the god seem at first to trench on each other's domains, and the distinct separation between them is a thing of later growth. At least so it seemed to me was the case in the Hindu-Kush.

787 The last day before I left the valley I saw the
791 Dainyal. We were taken to the village dancing ground, round which sat all the men of the village, and were accommodated in the verandah of the guest house, from which an excellent view of the scene was obtained. A few old women and children were seated in an outer ring, but all the young women, dressed in their smartest clothes, were collected in the surrounding houses. The inevitable band formed part of the inmost ring. After a short interval of waiting the Dainyal stepped into the circle and sat down. She was at once covered with a woollen choga, and a platter of burning cedar-twigs was placed before her, over which she bent, inhaling the smoke. After a few minutes she

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV1

rose, and stood facing the orchestra, leaning her hand upon a drum. Bare-headed, her long black hair streaming down her back, she stood swaying slowly backwards and forwards to the accompaniment of low music from the band; gradually the band played faster and faster, the swaying quickened, until it seemed as if her neck must be dislocated by the violence of her movements, and her locks stretched to their full extent threshed in a heavy mass, at one moment over her face and bosom, the next down her back to her waist. She looked horrible, a very Mænad. Suddenly she ceased, and stood as if dazed. Then with slow and faltering step she began to wander round the circle, keeping the spectators on her right hand. The pace gradually increased until she danced round, the band keeping time to her every motion. The fairy hill lay to the north-west of the place where we were sitting, and her eyes were constantly fixed in its direction as she came round the circle and faced towards it.

I watched her very carefully, and for some time failed to detect anything but an expression of entire abstraction from her surroundings, till, in one of her circlings, she suddenly shot a glance at us, which showed that, however much the fairies possessed her, she was still fully conscious of our presence. At last, after many weary wanderings, she halted by the band, the music of which dropped to the faintest murmur, and listened first to a pipe then to a drum for the fairy voice, to be heard only by her. There was a slight pause, and then she sang a couplet, which was taken up and repeated by the village elders, who

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

787 formed a sort of chorus and sat by the band. The
791 onlookers listened with rapt attention, and it was easy to see that they were full of implicit faith in the genuineness of the "possession," and in the importance of the spoken words. Again and again the Dainyal spoke, her words being caught up and repeated by the chorus of old men. Then she wandered round the circle again, till she could think of something more to say.

We were not deprived of interludes, comic and otherwise. There was a man hanging some dyed cloths to dry in the bare branches of a walnut tree, beyond which rose the fairy hill. The man's presence, when he climbed high among the branches, infuriated the Dainyal, and she tried hard to break the ring of spectators, and to get at him. She was good-humouredly but firmly stopped, but the man was ordered out of his tree at once, and she solaced herself by throwing stones at him. I never quite made out what would have happened had she broken out of the ring while under the influence of inspiration, but it was evidently something bad, either for her or for the community at large, possibly for both.

At one period the Dainyal got tired, and sat down on a drum waiting for water to be brought. During this interval a baby began to cry, and was ordered to be removed by a peremptory glance and gesture, which were instantly obeyed. A dog came gently wandering by to investigate what was going on, and retired much injured in his feelings before a shower of stones, thrown by his familiar friends in the crowd, for dogs and babies were particularly distasteful to the Dainyal during her periods of active inspiration.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

When the water arrived, an old man pronounced a long incantation over the gourd containing it, then handed it to the woman, who, after drinking a little of it, began again her weary wanderings, sprinkling the water as she went round the circle. And so it went on, the Dainyal occasionally chewing a piece of the sacred cedar as an additional help, until all the subjects she had learnt up, or thought of interest to her hearers, were exhausted. She prophesied various things in our favour, and gave vent to one or two shrewd sayings about local abuses, which seemed to please her audience immensely. No doubt in the old days public opinion could often only reach a chief in this manner, and full advantage seems to have been occasionally taken of the opportunity, which the performance of the Dainyal afforded, of enlightening the mind of an unpopular ruler. Finally, when it was evident to all that the source of inspiration had for the day run dry, a couple of men came into the ring, and one of them stooping down and giving the Dainyal a back, she took a run and flying leap on to it, and was so gracefully carried out of the circle. A few minutes' rest in a neighbouring house, and a sprinkling of water, enabled her to come to. The whole performance was extremely curious, and there is no doubt whatever that the onlookers firmly believed in the woman being inspired.

The ceremony of initiation is unpleasant; we fortunately were spared seeing it. If any one, man or woman, claims to be inspired by the fairies, they have to go through the rites described above with a recognised Dainyal. At the end of the performance a goat is brought in and decapitated, and the novice

frequently visited by fairies who used to make these inscriptions, as in the opinion of the Chilasis it is beyond man's power to produce such inscriptions. It is also affirmed that these fairies were seen in those days by all men, but nowadays they are visible to no one except to a great Mullah by dint of his miracles. The Bagrot people say that the carvings were inscribed on stones by the fairies on the night of "Shino Bazono;" and that on the same night the fairies frequently used to rub away the figures from one stone and to engrave the same on another.

532 174 776 778

### The Ceremony of Sri Kun.

Sri Kun is said to be the sister of Nagi Sochemi, and lived at Shankank, a village near Godai in the District of Astore. The villagers used to present goats to this goddess and prayed before her seat for the supply of their wants. Her followers were strictly prohibited from keeping cows, or drinking their milk, and were under the impression that by so doing they were apt to lose their flocks, herds, or the produce of their lands.

776 782 262

### "Jainkish" and "Dewaro."

At Gilgit proper and in the surrounding villages there are seen two small tracts of land called "Jainkish" and "Dewaro." The former is situated on the river bank and the latter at the foot of a hill, except at some places in which they both are found at the foot of a hill. In ancient times, when Islam had not spread to these parts, the tribes used to burn the dead at "Jainkish," and a few days after they gathered and carried away the bones to "Dewaro," where they buried them in one pit. Remnants of bones still mark these places, though the traces have almost been obliterated by time. In these circumstances, however, one is not wrong in supposing that Muhammadanism is of recent growth.

361 771 764

Several old men still living at Gilgit relate that they used to play with the brass bangles and rings which they found in "Jainkish;" but to carry away such articles to their houses was considered improper. From this it appears that the dead bodies were burnt with their ornaments.

[174]

### Sankar Village and a "Chinar" Tree.

There is a small populous village named Sankar in the Bagrot Valley. It is said that when this tract was lying waste, a Fakir named Shah Burya passed through and halted there for a short time. Becoming thirsty and finding no water, he prayed to God for a good supply. His prayer was granted, and a sufficient quantity of water burst forth from an adjacent hill. After a few days Shah Burya felt the heat of the sun, and planting his stick, which was of *chinar* wood, deep into the ground, prayed again to the Almighty to make it into a large *chinar* tree. This prayer was also granted, and a big tree grew, under whose shadow he afterwards used to sit. The branches of this tree are said to have been once so large and spreading that they touched the neighbouring hill about 600 yards distant, across the Bagrot Nullah. The tree was afterwards burnt by the Mongols, but after a short period five shoots sprang out from its trunk, and these are still to be seen, forming an enclosure about 30 yards wide.

361 539 788 174

13: Heber and Heber D-3 (1914-25) 1926 AJ4 W. Tibetans
D>rd AV3

be difficult to recognize, that is if those who are less so are scrupulously honest! Although they now speak a dialect of Tibetan they must at one time have had a language of their own of which one sometimes strikes peculiar remnants. At Kalatse, for instance, the branches of the pencil cedar are freshly put on one of their *lhatos* at the New Year, accompanied by the mumbling of phrases which they do not understand themselves, but which are usually remains of their own Dardish language.

Nothing, however, can be more strange than their religious arrangements. As has already been mentioned, the *Brogpa* of Hanu and also of the village of Da, which is quite near-by, is a Buddhist, but often in a Buddhist family one member must of necessity be a Mohammedan. Of a similar, but converse arrangement, a most striking example is told. We passed through the village of Bot Kharbu on our way up to Leh. Here there lives a family of Mohammedan Brogpas, but one member of this family must always be a Buddhist priest of the neighbouring monastery of Lamayuru. Now the Mohammedan is only allowed to eat the meat of an animal that has been *hallalled*, that is to say has had its throat cut, whilst the butcher says "Bismillah—it is the will of God," whereas the Buddhist eats meat killed in any way, so long as he himself has not taken the life of the animal. This family avoids such complications by the simple expedient of cooking all the meat in one pot, irrespective of how the animal has been killed, then inserts a bit of stick into the cooking pot, which is said to separate off *hallalled* meat from *unhallalled*, and all the Mohammedan has to be careful about is that he shall not take meat from the wrong side of the stick. Another method they have of keeping on good terms with the spirit powers of both religions is to make members of successive generations of the same family belong to the religion of Mahomet and the lamas in turn. Thus the Brogpa supplies us with another version of the Vicar of Bray story. Some authorities account

# CHAPTER VIII

## FOLK-LORE AND SPORT

788 THE folk-lore and the festivals are most interesting, but for want of time I could not follow up the researches I should have loved to make. Vestiges of dead faiths meet you at every turn. Fires blaze at certain seasons on the hill-sides and on the mountain top, and remind you that what we call fire-worship originated but a stone's-throw to the north on the other side of the Hindu-Kush. The cedar, sacred in 778 [776] Kafiristan, and still exported to India for Hindu ceremonials, is sacred here; outside every village almost is a stone altar yet visited by the women, the names of the village gods are remembered, often surreptitiously invoked, and soothsayers and witch-craft abound. 789 Some little distance up the Chaprot nulla is a clear spring of water, and if a piece of cowskin is thrown into this, by order of the Thum of Hunza, to the accompaniment of suitable incantations, the heavens are immediately obscured with clouds, and the most dreadful storms rage over the district, to the terror and danger of the obnoxious wayfarer or invader. I was solemnly warned on more than one occasion against this particular power for evil possessed by

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

Bōyo, and whether the ladies who resented the ill-treatment of the tree were an original dream-invention of Yaqīn's or were personages already known to the public. 776 778

This is all the information I can give about the Bōyo. As far as I know they have no counterpart in the present-day beliefs of the Shina-speaking peoples.

We next come to the association of the JINN, DE.Ū, PERI. The name Jinn, as already stated, is not an authentic local title, but has been derived from Islamic sources. It is used rather vaguely for all beings of the apparitional order. The popular mind is probably not very clear about the exact nature of all the supernatural phenomena which it encounters, and welcomes a non-committal term carrying all the flavour of high religious sanction. There are many stories in which Jinn appear, and it is probable that the foreign name has brought with it some foreign conceptions and associations. I am inclined to regard them with suspicion, though in the main I believe them to be merely re-christened Ṭhèṭh and perhaps Dē.ūs. 776 177

Another foreign (Arabic) term, Balā, seems to be used even more vaguely for evil spirits or demons whose presence you suspect or perceive, but whom you have not yet clearly seen and to whom you cannot put a name.

On the other hand a third foreign (Arabic) name, Shaiṭān, seems to carry with it a more definite personality. Shaiṭān is a leader among malignant and malicious spirits, at least a demon with an individuality, the Devil, Satan. He is probably a foreign intruder. On these foreign or denationalized Devils whose antecedents are somewhat suspect I shall not here spend time.

I may just mention by way of illustration that if after "concocting" magic, a process which takes forty days, you then sit down in the open and draw a line round yourself on the ground, a Jinn will appear and try to frighten you. If you keep up your courage other Jinns, Dē.ūs and Peris will come and try to frighten you. Finally if you remain firm 776 789

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

776 the King of the Jinns, Dē.ūs and Peris himself appears,
789 confesses that he is in your power and enquires your wishes —and so on.

776 I think it is a pure coincidence that where I have the term
825 Balā it occurs usually in conjunction with horses. A groom and a horse—both later in my service—had a thrilling experience with a Balā which it would take too long to relate here, but the principle involved was elsewhere stated to me as follows: "If one mounts a horse at night and rides anywhere, then if the horse sees a Balā it will refuse to go forward. If at this moment the rider looks over the horse's head between its ears the Balā will be visible to him."

776 The more frivolous character of the Devil, Shaiṭān, is shown in the following: If in certain circumstances you can snatch the cap off the Devil's head and take refuge in a masjid and avoid his efforts to seize you by the seat of your trousers and go off with them, then if you put on the Devil's cap you will be able to see him, but he will not be able to see you and others will not be able to see either you or him—a piquant if not very useful situation.

[177] If these foreign—Arabic—names could be eliminated, as I confess I should like, I think it would be found that most of the beings rendered innominate, would readily gain admittance to the ranks of the Ċhèċh and the Dē.ūs.

## Dē.ū

776 The name Dē.ū, akin to the Sanskrit *dèva-*, may be regarded
173 as a legitimate Ṣhiṇa word. At any rate, its source need not be sought in Islam or Islamic influence.

Dē.ūs play a prominent part in the folktales of the country as demons, ogres, etc., usually of maleficent proclivities, but they also descend into legendary history. In the latter situation they probably represent a once locally dominant race which has died out or been absorbed. But that is probably only a later identification. Their origin must lie in or before the Folktale period which is presumably much

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

earlier. This, however, is not the place to deal with the Dē.ū of myth or legend.

The Dē.ū of to-day is a shadowy and illusive being, scarcely to be isolated from the group of Jinn-dē.ū-pēri. He is evidently not endowed in the popular consciousness with a very definite or vivid personality. Demonic possession is usually attributed to Jinns, but it is noteworthy that there is the expression *dēwē.i dakhal ṣhātin*, denoting possession by a Dē.ū.

We know something of the general habits of the Dē.ū, which they share with their supernatural colleagues the Jinns and Peris. For instance, I have the following note among others: "At the time when the mulberries are ripe people do not eat them at midday. They say that Dē.ūs and Peris throw people down (from the trees at that hour)."

It should be explained that people, especially children, climb into the trees to eat mulberries and other fruit, and that there are often accidents and broken limbs due to their falling down.

Again: "In summer-time Jinns, Dē.ūs, and Peris live in the open country. In autumn they come to inhabited places." And: "At the time when a woman has given birth they do not keep an adze close by in the house. If there is an adze at hand, and if it goes by night and opens the door and brings the Dē.ūs, Peris, and Rū.is into the house, then the woman suffers injury." Why adzes go and open the door is duly explained (cp. p. 529).

It is possible by the "concoction of magic" followed by other rites to make the Jinns, Dē.ūs, and Peris subject to one. There was a man known as the Chīlègi Saiyid living a few years ago, and probably still alive, who had achieved this.

Such general facts could be multiplied, but I can recall no Ṣhiṇa account of any definite individual Dē.ū taking part in any actual exploit at the present day.

In Burushaski there is a word Pfūt (plural Pfūtū or Pfūtants) which is interpreted as Dē.ū or Jinn.

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

paryan ganam; Hul ai sar ganam; Sar ai nista ganam; Yujan ai batheli ganam; Batheli ai Chhai ganam; Sum ai sumading ganam Joo janwar ganam; Soni sarplok ganam; Sat khap barai ganam; Drang ai dam ganam; Khirte das ganam; Hunte rong ganam; Chin chili ganam; Neeli nistai ganam; Jun i ayin ganam; Taru ai shur ganam; Trakhan ai Yudaini ganam; Yudaini ai Hazooli ganm; Gao ai bashoshi ganam. 787 786 791

*Wiyo.*

Muti, Muti, Trakhan ai Zooli muti; Zooli ai Hazooli muti, &c. &c., continues in the same way up to end of Gano.

Translation—

*Gano.*

I will bind, I will bind, I will bind Zooli (a faiy) of Trakhan (a chief of Gilgit). I will bind Hazooli the daughter of Zooli. I will bindGanooli the daughter of Yun (a fairy, also the moon). I will bind the sole of the foot. I wil bind Ding (a giant) of the lower strata of the earth. I will bind all the insects. I wil bind giants and wild animals. I will bind the colt of a mare. I will bind the offspring of an ass. I will bind the lamb of a sheep. I will bind the kid of a goat. I will bind the bullet of a gun. I will bind the markhors of the jungle. I will bind the green pastures. I will bind the fields of fairies. I will bind the key of demons. I will bind the pregnant women. I will bind men for fighting. I will bind the way of giants. I will bind the stars of the sky. I will bind the pieces of the earth. I will bind seven hundred fairies. I will bind the springs of ocean. I will bind the outlets of springs. I will bind Bathdo (a fort of fairies) on Yujan (Nanga Parbat or Dyamur Mountain, situated on the west of Astore). I will bind the key of Bathela. I will bind Sumading (a giant) of earth. I will bind all creation. I will bind Soni (a giant) of the upper strata of the earth. I will bind seven hundred daughters of fairies. I will bind the booming of drums. I will bind the lower plains. I will bind the upper pastures. I will bind all the *chili* trees. I will bind the green banners of the fairies. I will bind the mouth of serpents. I vill bind the voice of the flute. I will bind Yudaini (the fairy drum which is said to be beiten by fairies on Khama, a mountain near Bulchi, a village in the Bagrot Valley) of Trakian. I will bind Hazooli (a fairy) of Yudaini. I will bind the calf of the cow.

*Wiyo.*

I will release, I will release, I will release Zooli of Trakhan. I will release Hazooli, the daughter of Zooli.

&c. &c. &c.

If it is wished to restrain any person, phenomenon, thought, wish or desire, &c., from their natural course of action, the "Gano" is read by the Danyals on a small stone, which is then thrown towards the person or thing interested. By reciting the "Wiyo" in the same way on another stone, the person or thing is again rendered active. [789]

### A Pearl Tree on the Deobani Mountain.

361 776 539 On the east of Tashot, a village in the Bagrot Valley, there stands a snow-covered mountain called Deobani. The people say that there is a large pearl tree on its top, which is the property of the fairies and giants. A good mountaineer is said to have once reached its summit. Gathering a load of the pearls, he started down towards his home. But he was surprised to see a crowd of giants and fairies coming after him, and, being frightened by their approach, he thought it better to throw away all the pearls in order to save his life; he was surprised, however, to find that a fairy still followed him as far as his house. There he closed his door. While changing his clothes he found that a pearl was hidden in his shoes. The pearl was then thrown towards the fairy; she picked it up and disappeared. A similar story is related about Nanga Parbat, a mountain on the west of Astor.

### Shangali Ween.

361 778 539 695 At about two miles east of Danyore, a village about three miles east of Gilgit, there is seen on the northern side of the road leading to the Bagrot Valley a small piece of ground about one yard square surrounded by walls about three feet high. This place is called "Shangali Ween" (place of putting chain). It is said that there used to be a golden chain hanging in the air without any support. In ancient times, when any case was to be decided on oath, both the parties were carried there and each of them addressed the chain in the following manner: "O *Sojio Shangali* (sacred chain), whoever of us is sinful please accuse him by striking his neck; and the chain used miraculously to whirl round the neck of the man who was guilty. The man was then convicted and punished by the authorities according to law. No chain is now found at the spot, and the people relate an interesting story about its disappearance. They say that two men of the Bagrot Valley were once coming together to Gilgit: one of them had brought some gold with him which the other succeeded in stealing. Making a small hole in his stick, he put the gold secretly into it. The men, after a long quarrel about the lost gold, decided that the case should be settled by the Shangali. When they were entering the place, the guilty man gave his stick which contained the gold to the other, and they both began to beg before the Shangali, asking that, whichever of them had gold in his possession, he might be struck by the Shangali. The Shangali, who was aware of the trick, was much enraged at this attempt to deceive, and, considering itself offended, at once disappeared for ever without settling their case. The loser of gold was now very angry, and in a fit of his anger struck the stick on the walls of the enclosure. The stick broke and the lost gold was disclosed.

### Nong and Chakrot Bari.

778 ●789 823 Near Laos village in the Astor district there is a small fountain called Nong. The people consider it a sacred one and offer sacrifices at the place for the fulfilment of their wants. If owing to drought a loss of their crops is expected, or if for any other reason heavy rain is required, the people used to throw some unclean thing into the spring, such as the bone of a dog; it then began to rain, and continued until the object was taken out. Owing to the belief that the spring was sacred and, moreover, able

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

to inflict harm upon the people, they themselves did not dare to put an unclean thing into the spring; and therefore on such occasions a foreigner was employed to perform this act, receiving as remuneration a large quantity of grain collected for the purpose at the rate of two seers per house. After receiving this grain he threw some unclean thing into the spring; and took it out when the rain was no more required. There are two other similar springs: one in the Bagrot Valley, called Chakrot Bari; and the other near the Tarshing village in the Astor District, called Komachon uts.

### "Rashoo ai Yudaini."

(The Fairies' Drum of Rashoo.)

The Doms of Bulchhi, a village in the Bagrot Valley, have still in their possession a small drum about one foot in diameter and three feet in circumference. This is called "Rashoo ai Yudaini." It was once carefully kept in a handsome cover by Rashoo, a Rono Wazir of Gilgit, who had ruled for the chief in that place. It is said, that whenever Rashoo intended to advance against any chief, the Yudaini was brought and kept before him. If it made a noise, without having been beaten by anybody, Rashoo believed it an omen of success. But if it were silent, Rashoo postponed his expedition.

### The Hoof Mark of a Horse.

Between Edgah and Balan villages in the Astore district there are seen on a rock near the old road which faces the Phina village, a few small flags. It is said that at this place there is a mark on a stone of the hoof of a horse. The story of the hoof-print is this—The place was once haunted by a giantess, who was a bitter enemy of mankind, and had become the terror of the people. The people wished to get rid of her. By the providence of God, one day a venerable Darwesh—some say that the Darwesh was no one else but Hazrat Khizar himself—halted on the river-bank close to the foot of the Phina village, and saw the giantess across the stream. He flung himself on his horse and, spurring it vigorously, came upon the giantess with the speed of lightning. She had no alternative left but to take to her heels, which she did, leaving the noise of her shrieks behind, and was never seen again. The horse had come upon it with such a vigour that the stone gave way under its weight, and there burst forth from the stone a spring of cool, fresh water. Though there exists no trace of it now, it is still looked upon as a sacred place, and the people from far and near gather together annually to celebrate the event by killing a sheep, feasting upon it, and making merry.

## XI.

### The Foot of Malik the Rá of Gilgit.[1]

It is said that one of the feet of Malik, an ancient Rá of Gilgit, was naturally formed like the hoof of an ass. He took great care to conceal this defect from all people. One of his old servants had, however, a knowledge of the mystery; but he was strictly forbidden by the Rá to disclose the secret. The servant kept it from becoming known

[1] [Cf. the Greek story of Midas and his ears, and of how their asinine form was revealed to the people.—Ed.]

~~121~~ Biddulph G-3 (1873-1878) 1880 ~~AU1 Afghanistan AU1~~

when the drum is heard; if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodeni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nager are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the mane and forelock of favourite horses. Certain springs are supposed to have the power of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

[1] Baber's Memoirs by Erskine, p. 149. [2] Brigg's Ferishta, Vol. I, p. 16.

Dard AV3

make a present of more or less value on the part of Government.

We were not sorry to start; the valley was horribly hot and unhealthy, the rice cultivation in full swing, the fields a sea of putrid water, cholera was more or less all round us, and we had both been rather out of sorts. The measures taken to stop the cholera were curious. No attention was paid to such trifles as water-supply or sanitation, but morning and evening the Brahmins used to march round the camps of the troops, blowing conch-shells and invoking their gods, a plan which, however effective against the walls of Jericho, left something to be desired during a cholera epidemic.

We found the country we marched through to Gakuch, the last fort in Punyal, and for many marches beyond, wilder than anything we had yet seen. For the most part the road runs through a narrow valley just wide enough to give room for a roaring torrent sixty to eighty yards across, with an average fall of forty feet to the mile, the valley here and there opening out and showing alluvial fans and patches of cultivation. The two most marked features of the road for a hundred miles from Gilgit, and practically throughout the Hindu-Kush, are shingle slopes and the "parris." Thousands of feet above you are the mountain tops, shattered by frost and sun into the most fantastic outlines, from whose rugged summits fall masses of rock. Below any precipice you consequently see the shingle slope in existence; these slopes sometimes running up thousands of feet at a steep unbroken angle, almost universally of thirty degrees.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3
Chitral

538 776 after a man of the village, who is lame to this day, came up and asked why he had shot him, and on the sportsman denying it, and saying he had only shot at an ibex, the lame man, who is known to be an expert in fairy lore, said, "I was the ibex."

We then unfortunately asked about their religion, and here got away from folk-lore proper to the made-up stories of the wizard, for we were told that those skilled in fairy art said the fairies were of all religions, Mahomedans who worship at Gairat, and who have Mullahs like terrestrial Mahomedans, Hindoos, and others. What the latter worshipped we could not discover. The fairies, we learnt, are at great enmity with the demons, whom they very much fear.

The principal harm they do is to deprive people of their senses and to carry them off. They occasionally make themselves obnoxious by infesting a village. Lately a fairy had taken possession of one, and had wounded several people by throwing 789] stones at them. No one was killed, but the fairy made it especially unpleasant for any one opening any closed box in a house, and finally the nuisance became so great that the Mehtar was appealed to. He called in the help of a wise man who exorcised the fairy, and no further harm was done.

The whole of the above was got from our informant without asking a single leading question, except that I asked him if ever the fairies rode people's horses, but his answer was so ready and detailed that it could hardly have been made up at the moment. Everything he told us was said

## CHAPTER VIII

### FOLK-LORE AND SPORT

788 The folk-lore and the festivals are most interesting, but for want of time I could not follow up the researches I should have loved to make. Vestiges of dead faiths meet you at every turn. Fires blaze at certain seasons on the hill-sides and on the mountain top, and remind you that what we call fire-worship originated but a stone's-throw to the north on the
778 other side of the Hindu-Kush. The cedar, sacred in
[776] Kafiristan, and still exported to India for Hindu ceremonials, is sacred here; outside every village almost is a stone altar yet visited by the women, the names of the village gods are remembered, often surreptitiously invoked, and soothsayers and witch-
789 craft abound. Some little distance up the Chaprot nulla is a clear spring of water, and if a piece of cowskin is thrown into this, by order of the Thum of Hunza, to the accompaniment of suitable incantations, the heavens are immediately obscured with clouds, and the most dreadful storms rage over the district, to the terror and danger of the obnoxious wayfarer or invader. I was solemnly warned on more than one occasion against this particular power for evil possessed by

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
David AV3

789 the Hunza Chief. The power was not confined to him, and seemingly in some cases lay more in the spring than in the person, for I heard of various other springs in different places, the throwing into which of any defiling substance was followed by bad
783 weather. It is curious here to see the cowakin considered an impurity, and it shows the connection
231 with Hinduism. Sacred as the cow is, no high-caste Hindu will touch cow leather. The regard for the cow amongst the Shins is most marked, but I think that in the main valleys, where there is now considerable communication with the outer world, it is losing its hold. It has gained for the Shins the name of Dangarik, or the cow people. The Shin used to have some one of another caste to tend his cows, and nothing would induce him to touch a new-born calf. If there was no one else handy, and it was necessary to put the calf to the mother, the little creature's head would be caught at the end of a cleft stick, and pushed to the udder. The Shin hatred of hens was another distinct link with Hinduism.

178 The feasts, many of which must be of Hindu
241 rather than Buddhist origin, are beginning to fall into desuetude; Mahomedanism is gradually pushing them out, but they, and the observances which accompanied them, are still to be seen in some parts. I have assisted more than once at the "Chili" festival, which marks the commencement of wheat-sowing, and which had years ago a further connection with the worship of the cedar, now in the main dropped. What the connection was I failed to find out, most probably the dates of the aboriginal feast of

## 2.—The Fairy who Punished her Human Lover.

It is not believed in Astor that fairies ever marry human beings, but in Gilgit there is a legend to that effect. A famous sportsman, Kibá Lorí, who never returned empty-handed from any excursion, kept company with a fairy to whom he was deeply attached. Once in the hot weather the fairy said to him not to go out shooting during "the seven days of the summer," "Caniculars," which are called "Bardá," and are supposed to be the hottest days in Dardistan. "I am," said she, "obliged to leave you for that period, and, mind, you do not follow me.' The sportsman promised obedience and the fairy vanished, saying that he would certainly die if he attempted to follow her. Our love-intoxicated Nimrod, however, could not endure her absence. On the fourth day he shouldered his gun and went out with the hope of meeting her. Crossing a range, he came upon a plain, where he saw an immense gathering of game of all sorts and his beloved fairy milking a "Kill" (markhor) and gathering the milk into a silver vessel. The noise which Kibá Lorí made caused the animal to start and to strike out with his legs, which upset the silver vessel. The fairy looked up, and to her anger beheld the disobedient lover. She went up to him and, after reproaching him, struck him in the face. But she had scarcely done so when despair mastered her heart, and she cried out in the deepest anguish that "he now must die within four days." "However," she said, "do shoot one of these animals, so that people may not say that you have returned empty-handed." The poor man returned crestfallen to his home, lay down, and died on the fourth day.

## C.—Dayall = Wizards and Witches.

The gift of second sight, or rather the intercourse with fairies, is confined to a few families in which it is hereditary. The wizard is made to inhale the fumes of a fire which is lit with the wood of the *tshili*[3] (Panjabi = Padam), a kind

[3] Elsewhere called *tshi*.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

791 of fir-wood which gives much smoke. Into the fire the
787 milk of a white sheep or goat is poured. The wizard inhales the smoke till he apparently becomes insensible. He is then taken on the lap of one of the spectators, who sings a song which restores him to his senses. In the meanwhile, a goat is slaughtered, and the moment the fortune-teller jumps up, its bleeding neck is presented to him, which he sucks as long as a drop remains. The assembled musicians then strike up a great noise, and the wizard rushes about in the circle which is formed round him and talks unintelligibly. The fairy then appears at some distance and sings, which, however, only the wizard hears. He then communicates her sayings in a song to one of the musicians, who explains its meaning to the people. The wizard is called upon to foretell events and to give advice in cases of illness, etc. The people believe that in ancient times these Dayalls invariably spoke correctly, but that now scarcely one saying in a hundred turns out to be true. Wizards do not now make a livelihood by their talent, which is considered its own reward.

---

173 There are few legends[1] so exquisite as the one which chronicles the origin, or rather the rise, of Gilgit. The traditions regarding Alexander the Great, which Vigne and others have imagined to exist among the people of Dardistan, are unknown to, at any rate, the Shiná race, excepting in so far as any Munshi accompanying the Maharajah's troops may, perhaps, accidentally have referred to them in conversation with a Shîn. Any such information would have been derived from the Sikandarnama of Nizámi, and would, therefore, possess no original value. There exist no ruins, as far as I have gone, to point to an occupation of Dardistan by the soldiers of Alexander. The following legend, however, which not only lives in the memories of all the Shîn people, whether they be Chilasis, Astoris, Gilgitis, or Brokhpá (the latter, as I discovered, living actually side by side with the Baltis in Little Tibet), but which also an annual festival commemorates, is not devoid of interest from either a historical or a purely literary point of view.

2: Lorimer 1-3 (1920-24) 1929 AV3 Dard AV3

776 Yaçḥ and Yaçḥōlo still receive attention in some localities as beings capable of affecting, at least prejudicially, the prosperity of the crops.

•791 754 Turning now to purely human beings gifted with supernatural powers we find two principal representatives of the class: the Rū.i, a woman displaying some of the powers and proclivities of the western witch, and the Daīyāl, a person of either sex endowed with some of the abilities of the Seer and the Prophet.

There are also the possessors of the Evil Eye, voluntary or involuntary, and there are persons who have acquired powers of magic (ċḥíla).

000 These are the principal Dramatis Personæ of the Living Supernatural, and we may now examine their peculiarities in somewhat greater detail, paying particular attention to the Bōyo, the Ċḥèçḥ and the Rū.i, partly because of their peculiarly local character, as signalized by their purely local names, and partly because of their intrinsic importance.

## The Bōyo

776 From what I have heard I very much fear that the Bōyo are as extinct as the Dodo, though their extinction is of quite recent date. Perhaps they still enjoy a tenuous existence in the phantasies of some elderly minds, but their day of power and awe is gone, their cult is dead, and their worshippers departed.

776 782 From the little information I possess it appears that the Bōyo lived in holes at the foot of trees and rocks; and that the cult consisted in placing offerings of food, at any rate of slaughtered animals, at the foot of the trees, i.e. presumably in front of the holes. The Bōyo themselves are described as puppies, or animals like puppies, so this simple form of worship was probably acceptable to them. At any rate they condescended to eat the offerings.

There were Bōyo in residence at a spot on the Dadimo Lat a little above the fort at Hīndi, and the cult was maintained

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

754 and pleasure it is to come between the Rū.i and her prey. These are gifted with superhuman faculties of perception and with powers of locomotion not inferior to the Rū.i's.

●791 754 The PASHŪ—the word belongs to the root *pash-*, "to see"—is a "seer", a man or woman who sees what ordinary people cannot see. The Pashū can see not only Rū.is in action but also Dē.ūs and Peris.

By one means or another the Pashū gets to know that someone has been carried off. We have it generally stated that people's guardian spirits—Rāçhi—inform the Pashū when their protégés are threatened; but in one case a Pashū told me that the Rū.is themselves informed him, when he was asleep, that they were carrying off a victim and invited him to come along: a sporting action on their part, for the Pashū's function is to baulk them of their prey.

The moment the Pashū learns of an abduction he starts off in pursuit. He also flies through the air no less swiftly than the Rū.is, a feat which is all the more remarkable in that he flies in his proper person and not only in an immaterial semblance. When he is absent on a mission of rescue his place at home is empty.

Having come up with the Rū.is at their meeting-place the Pashū demands the surrender of the victim, but if the latter is already dead his labour has been in vain. If the victim is still alive he enters into negotiations with the Rū.is and as a rule succeeds in striking a bargain with them. For a ransom, in the shape it may be of a goat or an ox to be delivered within a certain period, they relinquish their prey.

All then return apparently to their various homes.

The Rū.is are not above making attempts to deceive the Pashū by concealing their victim in the skin of a goat, cow, or other animal.

A practising Pashū, who told me that he was peculiarly successful in rescue work, claimed that in two years he had had 200 successes against 100 failures. He had gone as far afield

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

as India. In his flights he was unconscious of mountains or other obstacles, but it is probable that like the Rū.is he must not touch water or a graveyard.

The other Anti-Rū.i is the MITŪ. I am unable to give any explanation of the name. Mitūs appear to be always men. The Mitū is a more ambiguous person than the Pashū. He is professedly an antagonist of the Rū.is, but he seems to slip very easily into the rôle of aider and abettor. Ostensibly his functions and practice are similar to the Pashū's, but he appears to have less authority and less firm moral purpose. When he fails, he yields to pressure or persuasion by the Rū.is and allows himself to be used as a sort of human anvil on which the victim is dismembered, or else he himself chops him up. He still, however, retains some of his original better feelings, for he refuses to accept a share of the victim's flesh.

Some doubt is cast on the Mitū's original good faith by a statement made to me by a Pashū: that the Mitū accompanies the Rū.is carrying an axe with him; but perhaps this imputation is due to professional jealousy.

I must confess to some doubt as to the use of the Mitū as a chopping-block. It is a curious idea and I have no actual vernacular text to support it, only notes made in English of what I understood at the time was told me.

The Mitū is unconscious when travelling on his errand of mercy, but if his foot touches water he returns to consciousness, is unable to proceed further, and returns home.

Mitūs are found in Nagir and Bagrōt, but there are non in Gilgit proper.

It may perhaps be useful to offer a few more facts about Rū.is. Rū.is are numerous and ubiquitous in the Gilgit area. They are found in Puniāl, Hunza, Nagir, and other districts, as well as in Gilgit proper.

My Pashū friend told me that in Gilgit there were some 300 of them, but this I can only take to be a gross exaggeration. I fancy he was something of a misogynist, for he also

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

754 but if he dies then his real self at home dies in a day or two. On this occasion there were present many Rū.is from all quarters."

In taking leave of the Rū.is it is, I presume, superfluous to lay stress on their similarity to the witches of the West. Almost every point that has been mentioned above can be duplicated from European records of witches.

## The Daĭyāl.

●791 787 We now come to the Daĭyăl, the last of the characters whom I propose to treat of here. Daĭyāls are superhumanly endowed human beings, who at the present day chiefly exhibit their powers by furnishing answers to recondite questions. They supply on request information relating to what lies outside the scope of the ordinary senses of sight and hearing, and regarding what is going to come to pass in the future.

Their sources of knowledge are hidden, but there is nothing obscure about their procedure, for they exhibit their powers before all the world in broad daylight.

The public attend on the local polo ground, which corresponds to the village green. At one side sit the local band of drums and pipes and the Daĭyāl enters the circle formed by the spectators. There he primes himself by inhaling the smoke of burning juniper twigs which has some sort of intoxicating effect on him. After this he divides his time between stooping over and listening to the drums, dancing round the circle in various measures and posturing in the middle of it.

At certain points he may be asked questions by members of the general public, the answers to which he ostensibly obtains by listening to the drums or by watching the behaviour of some grains of corn thrown on the vibrating parchment of a drum. His answers are couched in language which is really I think unintelligible, but which someone eventually is always found to interpret.

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

An account of a Daĭyāl display has been given by Colonel A. Durand in his " Making of a Frontier ", so I need not elaborate the matter here. It will be enough if I contribute a few more general facts about Daĭyāls themselves. [113]

In Burushaski the equivalent of Daĭyāl is Bītan (plural bitaiyo). Daĭyāls may belong to any class of the population and to either sex. In fact they are nowadays, I believe, confined to a few special families. The chief, perhaps the only seat of Daĭyāls at the present day, is the small side valley of Bagrōt. 791 ● 177

I have seen exhibitions by two female Daĭyāls in Hunza, but to the best of my recollection they were said to belong to a family which originally hailed from Bagrōt. Similarly the performer at a specially arranged display at Gilgit Headquarters, in this case a man, had been brought from that place for the occasion.

There is a possibility, however, of fresh recruitment to the ranks of Daĭyāls. " A certain number of people," I was told, " become new Daĭyāls." On the other hand, one may withdraw temporarily or permanently from the faculty. 791

Daĭyāls possess, or at any rate have in the past possessed, more than the mere powers of second sight and prophecy. They are on more intimate terms with the supernatural world than ordinary folk. In talking of the Peris I have already quoted the statement that the Peris come to watch the Daĭyāls' performances and that they are the source of the Daĭyāls' knowledge ; and again that it is on their account that the Daĭyāl objects to the use of green clothing by the laity.

At an actual performance I was warned that they disliked anything red, and that they were liable to lose self-control and to attack anyone wearing or displaying it. We nervously took stock of our belongings, for the wild-eyed officiating Daĭyāl looked only semi-human and capable of anything whether in his mind or out of it. But why should red be objectionable, except as the complementary colour to green ? 791 822

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

791 In the past Daĭyāls have had the power to "bind" superhuman beings, as is shown by the well-known story of the Daĭyāl who bound the Gilgit Yaçhini. We also have the Daĭyāl of Herāmosh and his Peri wife which I have already recounted (v. p. 521), and the great Hunza Bītan, Shon Gukur, bound the cannibal Bīlas, Dadi, and her seven daughters.

Whether or not present day Daĭyāls can "bind", they can at any rate be "bound" at least with their own consent, when presumably they are inhibited from the use of their special talents. The procedure was described to me, not very lucidly, as follows: "When a Daĭyāl thinks of having himself bound, they twist an iron bracelet and place the Daĭyāl in the hands of a man. Then they breathe on the bracelet and bind the Daĭyāl (with it ?). If the bracelet gets lost then the man again becomes a Daĭyāl."

Once a Daĭyāl, by no means always a Daĭyāl, for apart from having himself bound the Daĭyāl may definitely abandon the career. My Pashū friend told me that his family on the father's side had originally been Daĭyāls, but that his grandfather, under priestly influence had given up being a Daĭyāl and had become a Pashū. My friend's father, however, had wished to continue as a Daĭyāl, but the opposition of the family had been too strong for him, and though he quarrelled with them on the head of it, he too became a Pashū.

178 I very much fear that Daĭyāls in these evil days, whether of religion or scepticism, are losing credit and esteem, and that this interesting college of soothsayers may presently die out and their valuable gifts be lost to the world.

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

## V.

### The Ceremony of Nagi Suchemi.

Nagi Suchemi is said to be a goddess who lived at Nangam in the Astore district, on a stone altar situated at the foot of the Nagishi hill. In former times cases of theft requiring settlement by oath were decided by the defendant's swearing on this sacred platform in the following manner. A man called Jungmi was specially appointed by the Rá to accompany the defendant to the place, receiving eight yards of cloth from the suspected person. A she-goat was killed on the altar and the meat cooked and eaten by all those present, in utensils which were always kept and are still kept there. The defendant had now to utter the following words loudly: "O Nagi Sochemi, inflict punishment upon me if I am guilty of the crime, but, if the plaintiff has laid a false claim upon me, be so kind as to inflict a calamity on him!" They then returned quietly to their homes in the darkness of night. None of the men who had attended this solemnity were allowed to appear in daylight before others of the village, and if by chance one of them showed himself to any villager, he had to repay whatever loss there arose from the theft, or from any untoward circumstance happening to the discoverer of the offending juryman at dawn of that day. For some days the case was left awaiting the decision of "Nagi Sochemi," and if in this period the suspected person suffered any kind of loss of property, of relatives, etc., he was adjudged guilty, and the total amount of loss by the theft was recovered from him and repaid to the plaintiff.

### "Khuran" or "Majari."

In Chilas and in the adjacent valleys of Jalkot, Palas, Koli, Darel, Tangir, Gor, Harban, and Sazin, the disputes between two individuals or parties are settled by a peculiar ceremony called "Khuran" in Shinaki (Chilas, Darel, Tangir, Gor, Harban and Sazin), and "Majari" in Kohistan (Jalkot, Palas, and Koli). By this ceremony each of the opposite parties has to prove itself wealthier than the other, and whichever proves to be the poorer is forced to submit to the other. The ceremony is performed by each party giving food to all the villagers at a place called "Kai." Whichever party provides the larger feast gains the day, while the other must needs submit.

## VI.

### Danyals.

There are some men and women of these parts who are called Danyals. When they are worked up into a state of frenzy the giants and fairies instruct them concerning the future of the country, the chiefs, etc. Whenever a chief is inquisitive on the subject of his future, he sends for the Danyals as well as the local musicians. A bundle of green chili leaves is then brought, and some of these, with a little *ghi*, are put into a small fire and burnt in an enclosure set apart for the purpose. As soon as the smoke rises, one or two Danyals push their way towards the fire and begin to inhale the smoke, until

787 786 791

they lose their senses and commence to dance to the noise of the drums. They also eat some of the extremely bitter leaves of the "chili" (*Juniperus macrocarpa*) while dancing. The music then becomes fast and furious, and the onlookers cheer loudly. The Danyals glance from time to time towards the surrounding trees, among which the giants and fairies have taken up a position. After a short dance the Danyals place their hands on the shoulders of the drum-beaters and their ears on the drums, as if they are very attentively listening to what the drums says. In a short time they again commence dancing, and sing the prophecies they have been told by the drums. If there be anybody present wearing red clothes when a Danyal is dancing, the Danyal is much annoyed and rushes at him. No man clad in red[1] clothes is therefore allowed to be present. After an hour's dance the performance closes, and one or two strong men appear in the circle, and the Danyals climb upon their backs and are carried away out of the enclosure to a house, on which after a short rest they recover from their frenzy.

I once asked a Danyal woman of Gilgit how she had become a Danyal, and after long hesitation she related to me the following story: "When about seven years of age I used to go with my flocks to the distant pastures on the hills. Once I saw a fairy sitting on a Chili tree and eating its leaves. Her eyes were brilliant and large, with thick eyebrows, which were high above the eyes and almost joining the hair of her head. She came towards me and asked me to accompany her, saying that her house was built of gold, and that I should be well feasted there. Hearing this I lost my senses, and as I was then standing on the edge of a stream, I fell down into it and got a severe wound on the right thigh. Some of the shepherd boys who were also feeding their flocks at some distance saw me fall, and, hastily taking me out of the water, carried me to the village. My father then killed a goat in order to ascertain if I were really under the power of the fairies, and I drank all of its blood, but I was unconscious of what was going on around and remained in this state for about ten days without taking any food. During this time the number of giants and fairies which appeared to me increased to fourteen, of whom seven were Muhammadans and seven Hindus, each sect remaining apart. Their queen, who was Hindu, was clad like a fakir and had gathered her hair on the top of her head, upon which she wore a cap. They brought and showed me different kinds of food, but gave me nothing to eat. In these days they taught me to dance, and the following two incantations called "Gano" and "Wiyo":—

***Gano.***

Ganam, Ganam, Trakhan ai Zooli ganam; Zooli ai Hazooli ganam; Yun ai ganooli ganam; Pa ai paroni ganam; Ding dolok ganam; Tip philil ganam; Jir janwar ganam; Ashpo ai choro ganam; Jakun ai goko ganam; Ajeh ai oran ganam; Ayi ai chhal ganam; Turmuk ai shoolo ganam; Bun ai shara ganam; Neeli jut ganam; Shiril ai shani ganam; Dewak ai chhai ganam; Chai chatri joo ganam; Musha birga ai joo ganam; Dewak ai pun ganam; Aga ai tare ganam; Birdi ai bathai ganam; Sat khap

[1] When I first saw a dance by a Danyal woman in 1893 at Gilgit, a man with a red umbrella came into the circle. This enraged the dancer, although she herself was wearing red clothes.

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

paryan ganam; Hul ai sar ganam; Sar ai nistai ganam; Yujan ai batheli ganam; Batheli ai Chhai ganam; Sum ai sumading ganam; Joo janwar ganam; Soni sarplok ganam; Sat khap barai ganam; Drang ai dam ganam; Khirte das ganam; Hunte rong ganam; Chin chili ganam; Neeli nistai ganam; Jun ai ayin ganam; Taru ai shur ganam; Trakhan ai Yudaini ganam; Yudaini ai Hazooli ganam; Gao ai bashoshi ganam. 787 786 791

*Wiyo.*

Muti, Muti, Trakhan ai Zooli muti; Zooli ai Hazooli muti, &c. &c., continues in the same way up to end of Gano.

Translation—

*Gano.*

I will bind, I will bind, I will bind Zooli (a fairy) of Trakhan (a chief of Gilgit). I will bind Hazooli the daughter of Zooli. I will bind Ganooli the daughter of Yun (a fairy, also the moon). I will bind the sole of the foot. I will bind Ding (a giant) of the lower strata of the earth. I will bind all the insects. I will bind giants and wild animals. I will bind the colt of a mare. I will bind the offspring of an ass. I will bind the lamb of a sheep. I will bind the kid of a goat. I will bind the bullet of a gun. I will bind the markhors of the jungle. I will bind the green pastures. I will bind the fields of fairies. I will bind the key of demons. I will bind the pregnant women. I will bind men for fighting. I will bind the way of giants. I will bind the stars of the sky. I will bind the pieces of the earth. I will bind seven hundred fairies. I will bind the springs of ocean. I will bind the outlets of springs. I will bind Bathelo (a fort of fairies) on Yujan (Nanga Parbat or Dyamur Mountain, situated on the west of Astore). I will bind the key of Bathela. I will bind Sumading (a giant) of earth. I will bind all creation. I will bind Soni (a giant) of the upper strata of the earth. I will bind seven hundred daughters of fairies. I will bind the booming of drums. I will bind the lower plains. I will bind the upper pastures. I will bind all the *chili* trees. I will bind the green banners of the fairies. I will bind the mouth of serpents. I will bind the voice of the flute. I will bind Yudaini (the fairy drum which is said to be beaten by fairies on Khama, a mountain near Bulchi, a village in the Bagrot Valley) of Trakhan. I will bind Hazooli (a fairy) of Yudaini. I will bind the calf of the cow.

*Wiyo.*

I will release, I will release, I will release Zooli of Trakhan. I will release Hazooli, the daughter of Zooli.

&c. &c. &c.

If it is wished to restrain any person, phenomenon, thought, wish or desire, &c., from their natural course of action, the "Gano" is read by the Danyals on a small stone, which is then thrown towards the person or thing interested. By reciting the "Wiyo" in the same way on another stone, the person or thing is again rendered active. [789]

D 778 821 storm of hail and wind arise. Mahmood having caused this to be done, the effects became visible; for, instantly the sky lowered, and thunder, lightning, wind, and hail succeeded, turning the day into night, and spreading horror and destruction around."

D 787 791 Divination is still practised, in spite of the conversion of the country to Mahommedanism. The Dainyals, or diviners, who are of both sexes but are more frequently women, are supposed to receive the gift of second sight by the shadow of a Barai, or fairy, having fallen on them in sleep. Dr. Leitner B 787 791 speaks of the gift as being supposed to be hereditary, but this is not the case, though the daughters of Dainyals often become Dainyals also. Dainyals are said to be only found among the shepherd population, and it is easy to understand how a solitary life among the wild crags of the Hindoo Koosh should encourage a belief in the power of intercourse with the unseen world. Quite young people become Dainyals, and the spirit of prophecy is supposed to remain with them for life.

The first intimation of the gift to the friends of the recipient is conveyed by their finding him or her in a deep trance. The requisite music is brought, flageolets being substituted for the ordinary clarionets, and softly modulated airs are played close to the ear of the entranced. Gradually he moves and begins to show signs of life, on which a goat is brought and decapitated, and the bleeding neck presented to the Dainyal novice. This is the test of a true Dainyal. If the gift of divination has really come to him, he seizes the bleeding neck, and sucks the blood. Some find this too much for them, and refusing to suck the blood are looked on afterwards as only feebly gifted with the spirit of prophecy. The idea of imposture never seems to be entertained by these simple-minded people. The recognised Dainyals are consulted on all special occasions, such as the yearly festivals in summer, or the declaration of war with a neighbouring state. The spirit of divination is supposed to lie dormant in winter, and to be strong in proportion to the heat of the weather.

On the first occasion of my witnessing an incantation, two Dainyals were brought from a considerable distance to prophesy at the Ganoni festival in June. They were both women, one of about twenty-five and the other about forty years of age, who showed by their wild and haggard looks the strain of the often-practised ceremony on their faculties. A circle

AV3 Dard AV3
Burushe AV7

being formed round which the spectators seated themselves, a bunch of cedar twigs was placed on a flat stone and set on fire, and while two or three men vigorously blew up the flame, the Dainyal with a cloth over her head inhaled the thick pungent smoke which curled round her head, while the music played softly. In a few minutes she became violently agitated, her hands were convulsively clasped over her head, and her whole body was shaken with uncontrollable muscular motion, till, dashing the burning branches aside, she fell prostrate at the feet of the musicians, grasping the drum with her hands, and violently throwing her head backwards and forwards in a way that threatened dislocation. At length, overcome by the violence of her exertions, she fell apparently senseless on the ground. The spectators shouted long and loud at this triumphant manifestation of the fairy's presence, and the music played its loudest. Then the second Dainyal entered the circle, and in a few minutes was also lying motionless. The music now changed to a harsh cadence, and soon one, and then the other, rose and staggered round the circle in a rude attempt at stepping in time to the music. With their long hair floating loose, half-closed eyes, drunk with the fumes of the cedar smoke, and occasionally coming into collision, they formed a most weird and somewhat painful spectacle, while the shouts of the spectators rose and fell at each uncouth gesture, varied by shrill whistles that would have done credit to the gallery of a popular London theatre. The violent exertion soon produced fatigue, while the worst effects of the cedar smoke seemed to disappear and the prophesying began. While the music played softly, the two witches reduced their movements to a sort of aimless walk round the circle, with fixed and vacant gaze, occasionally one would stop and place her head close to the flutes or the drum as if listening to a language that others could not hear, and then again resume the weary round. Sometimes, during one of these pauses, one would, after listening, raise a shrill chaunt which was attentively listened to by the musicians, and after being repeated once or twice was caught up by them and loudly chaunted to the audience, while murmurs of surprise or congratulation ran round the circle.

This, varied with intervals of leaping and dancing which seemed to excite both themselves and the spectators to the highest pitch, lasted for about an hour, when the palpable exhaustion of the Dainyals made it necessary to close the meeting. A man going into the circle gave a back, as at

leapfrog, and one of the women, taking a flying leap on to his shoulders, was carried out of the ring, the second Dainyal following in like fashion on another back being offered, and the meeting broke up. No attempt is made to direct the prophecy to any topic by hint or question, and the Dainyal is always free to give, as the communication of the fairy, whatever comes into her head. Considerable freedom of speech is gained in this way, and an unpopular ruler often gets a broad hint given him. Dainyals only exist now in Gilgit, Hunza, and Nager, the stricter Mahommedanism of the neighbouring valleys having disestablished them. Circumstances point to this mode of divination being of Shin introduction, the majority of Dainyals being of that caste. Stronger evidence is afforded by the fact that it is incumbent upon a Dainyal, of whatever caste, to refrain from cow's milk, like the most orthodox Shin.

During the ceremony the witches attempt, occasionally, to rush out of the circle, but are thrust back by the spectators, the idea being that they are forced to prophecy against their will. Occasionally, too, they affect to become excited by the sight of certain persons, bright colours, dogs, &c., and rush at and try to tear them, but are repelled by the spectators, and so are forced to content themselves with hurling stones at the object of aversion.

According to Elphinstone's account of the Siah Posh Kaffirs, something of the same kind exists among them. He says: "They have also persons who can procure an inspiration of some superior being, by holding their heads over the smoke of a sacrifice; but these are held in no particular reverence." Moorcroft mentions mountain witches at Nadaun who were called *Dain*, and a form of divination called *Dewalla* is still practised in some parts of the Punjab.

D 674 681

Serious crimes, such as murder, are rare. In Wakhan murder is punished by a fine of six horses, six guns, and thirty woollen robes; should the murderer be unable to pay the fine, he is forced to give up a son or daughter as a slave to the family of the murdered person. Theft is punished by a fourfold restoration of the stolen property, and the thief is bound to a tree and beaten. Grave disturbances, in which deadly weapons are used, are punished by heavy fines, and an offender is not pardoned till he succeeds in bringing a live hare to the Meer, which at certain seasons is a matter of difficulty.

D 674

Though bloodshed is rare among the Dards as compared with the Afghans, brutal murders are sometimes committed

without its note, no warlike expedition could be expected to succeed which started without the fairy approval. But if I never heard the fairy drum, I have seen what few will ever have the chance of seeing again, the Dainyal, the diviner or soothsayer inspired by the fairies. Dainyals are usually women, but men sometimes become possessed, and the seers are seemingly of all ages. The one I saw was a buxom married village girl of about twenty, held in great estimation in the village and district on account of her supernatural powers, and ruling her household with a rod of iron.

I had ridden up the Bagrot valley, down which a stream from the southern glaciers of Rakapushi reaches the Gilgit river, in order to see what could be done to improve the water channels, which were carried along very difficult cliffs, and which the people only kept in even partial repair with the greatest labour. It was a melancholy ride. The valley had been raided years ago by the Yasin ruler, and some two-thirds of the population carried off into slavery or killed, and the traces of the tragedy were recognisable on all sides. At the mouth of the Bagrot valley lay hundreds of acres of land gone out of cultivation, the terraced fields and the raised irrigation channels still intact, their lichen-grown and sunburnt stones showing that water had not run over them for decades. Further up the valley half, and sometimes two-thirds, of the village land lay in the same state, the dead and gone vineyards easily recognisable by the small stone vats, which had once run full of foaming must; the flat stones above them, on which the grapes had been trodden out, and the little stone runnels, through which the juice had poured, were still in their places.

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

000 torrent, are the natural first step in worship and in the supernatural. They are born of the solitary watching of the wandering flock in the day-time, of the sheepfold at night. The supernatural is ever with the lonely shepherd; the avalanche sweeping down the mountain side is the protest of the solitary god against any attempt to scale the approaches to his throne; the mountain sickness which seizes the wayfarer on some pass is the vengeance of the disturbed fairies; the shriek of the wind behind the veil of mist attests their presence; the snow flag streaming from some great peak is a sign of the god's abode; the voice of the gods speaks in the moaning forest and the rushing waterfall. The fairy and the god seem at first to trench on each other's domains, and the distinct separation between them is a thing of later growth. At least so it seemed to me was the case in the Hindu-Kush.

787 The last day before I left the valley I saw the
791 Dainyal. We were taken to the village dancing ground, round which sat all the men of the village, and were accommodated in the verandah of the guest house, from which an excellent view of the scene was obtained. A few old women and children were seated in an outer ring, but all the young women, dressed in their smartest clothes, were collected in the surrounding houses. The inevitable band formed part of the inmost ring. After a short interval of waiting the Dainyal stepped into the circle and sat down. She was at once covered with a woollen choga, and a platter of burning cedar-twigs was placed before her, over which she bent, inhaling the smoke. After a few minutes she

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV1

rose, and stood facing the orchestra, leaning her hand upon a drum. Bare-headed, her long black hair streaming down her back, she stood swaying slowly backwards and forwards to the accompaniment of low music from the band; gradually the band played faster and faster, the swaying quickened, until it seemed as if her neck must be dislocated by the violence of her movements, and her locks stretched to their full extent threshed in a heavy mass, at one moment over her face and bosom, the next down her back to her waist. She looked horrible, a very Mænad. Suddenly she ceased, and stood as if dazed. Then with slow and faltering step she began to wander round the circle, keeping the spectators on her right hand. The pace gradually increased until she danced round, the band keeping time to her every motion. The fairy hill lay to the north-west of the place where we were sitting, and her eyes were constantly fixed in its direction as she came round the circle and faced towards it.

I watched her very carefully, and for some time failed to detect anything but an expression of entire abstraction from her surroundings, till, in one of her circlings, she suddenly shot a glance at us, which showed that, however much the fairies possessed her, she was still fully conscious of our presence. At last, after many weary wanderings, she halted by the band, the music of which dropped to the faintest murmur, and listened first to a pipe then to a drum for the fairy voice, to be heard only by her. There was a slight pause, and then she sang a couplet, which was taken up and repeated by the village elders, who

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

787 formed a sort of chorus and sat by the band. The
791 onlookers listened with rapt attention, and it was easy to see that they were full of implicit faith in the genuineness of the "possession," and in the importance of the spoken words. Again and again the Dainyal spoke, her words being caught up and repeated by the chorus of old men. Then she wandered round the circle again, till she could think of something more to say.

We were not deprived of interludes, comic and otherwise. There was a man hanging some dyed cloths to dry in the bare branches of a walnut tree, beyond which rose the fairy hill. The man's presence, when he climbed high among the branches, infuriated the Dainyal, and she tried hard to break the ring of spectators, and to get at him. She was good-humouredly but firmly stopped, but the man was ordered out of his tree at once, and she solaced herself by throwing stones at him. I never quite made out what would have happened had she broken out of the ring while under the influence of inspiration, but it was evidently something bad, either for her or for the community at large, possibly for both.

At one period the Dainyal got tired, and sat down on a drum waiting for water to be brought. During this interval a baby began to cry, and was ordered to be removed by a peremptory glance and gesture, which were instantly obeyed. A dog came gently wandering by to investigate what was going on, and retired much injured in his feelings before a shower of stones, thrown by his familiar friends in the crowd, for dogs and babies were particularly distasteful to the Dainyal during her periods of active inspiration.

4: Durand G-3 (1888-93) 1900 AVI Kashmir
Durd A43

When the water arrived, an old man pronounced a long incantation over the gourd containing it, then handed it to the woman, who, after drinking a little of it, began again her weary wanderings, sprinkling the water as she went round the circle. And so it went on, the Dainyal occasionally chewing a piece of the sacred cedar as an additional help, until all the subjects she had learnt up, or thought of interest to her hearers, were exhausted. She prophesied various things in our favour, and gave vent to one or two shrewd sayings about local abuses, which seemed to please her audience immensely. No doubt in the old days public opinion could often only reach a chief in this manner, and full advantage seems to have been occasionally taken of the opportunity, which the performance of the Dainyal afforded, of enlightening the mind of an unpopular ruler. Finally, when it was evident to all that the source of inspiration had for the day run dry, a couple of men came into the ring, and one of them stooping down and giving the Dainyal a back, she took a run and flying leap on to it, and was so gracefully carried out of the circle. A few minutes' rest in a neighbouring house, and a sprinkling of water, enabled her to come to. The whole performance was extremely curious, and there is no doubt whatever that the onlookers firmly believed in the woman being inspired.

The ceremony of initiation is unpleasant; we fortunately were spared seeing it. If any one, man or woman, claims to be inspired by the fairies, they have to go through the rites described above with a recognised Dainyal. At the end of the performance a goat is brought in and decapitated, and the novice

4: Durand G-3 (1888-93) 1900 AV1 Kashmir AV1
Dard AV3

D has to seize the neck and drink the spouting blood.
791 If successful in this, he or she is at once recognised as inspired. If the ordeal is too much, then a contemptuous pity is extended to the aspirant, as to one who has been on the verge of attaining to great things, but has failed owing to personal defect. Those who cannot fulfil the conditions are said invariably in the end to go mad.

D The Bagrot valley, where we saw the Dainyal,
135 was further of interest in that about the best gold
314 of the country is found in its bed, and in the Gilgit river below where the Bagrot stream runs in. Every year, after the summer floods are over, the deposits in back waters and sand-banks are carefully washed, and a fair amount of gold, considering the rough methods and unskilled labour of the prospectors, is collected.

K When we first went to Gilgit pure gold was selling
661 there at two-thirds its price in Srinagar, and the Kashmir officials and soldiers were doing a profitable trade. The amount collected by the officials each year must have been considerable. Every petitioner or visitor, as a rule, presented his little nazar—the complimentary offering from an inferior to a superior
K always given in the East—in gold dust. The gold
436 was poured into the blossom of a dried flower like a lupin, of a very tough texture. The mouth of the flower was screwed together, and the tiny packet was popped into another flower, and again screwed
K up, each packet containing a recognised weight. I
661 have had double handfuls of the little packets poured on to my table by an anxious royal petitioner, an unsatisfactory arrangement so far as I was concerned, for my nazars were returned to the donors. A

13: Heber and Heber D-3 (1914-25) 1926 AJ4 W. Tibetans
Dard AV3

be difficult to recognize, that is if those who are less so are scrupulously honest! Although they now speak a dialect of Tibetan they must at one time have had a language of their own of which one sometimes strikes peculiar remnants. At Kalatse, for instance, the branches of the pencil cedar are freshly put on one of their *lhatos* at the New Year, accompanied by the mumbling of phrases which they do not understand themselves, but which are usually remains of their own Dardish language.

Nothing, however, can be more strange than their religious arrangements. As has already been mentioned, the *Brogpa* of Hanu and also of the village of Da, which is quite near-by, is a Buddhist, but often in a Buddhist family one member must of necessity be a Mohammedan. Of a similar, but converse arrangement, a most striking example is told. We passed through the village of Bot Kharbu on our way up to Leh. Here there lives a family of Mohammedan Brogpas, but one member of this family must always be a Buddhist priest of the neighbouring monastery of Lamayuru. Now the Mohammedan is only allowed to eat the meat of an animal that has been *hallalled*, that is to say has had its throat cut, whilst the butcher says "Bismillah—it is the will of God," whereas the Buddhist eats meat killed in any way, so long as he himself has not taken the life of the animal. This family avoids such complications by the simple expedient of cooking all the meat in one pot, irrespective of how the animal has been killed, then inserts a bit of stick into the cooking pot, which is said to separate off *hallalled* meat from *unhallalled*, and all the Mohammedan has to be careful about is that he shall not take meat from the wrong side of the stick. Another method they have of keeping on good terms with the spirit powers of both religions is to make members of successive generations of the same family belong to the religion of Mahomet and the lamas in turn. Thus the Brogpa supplies us with another version of the Vicar of Bray story. Some authorities account

1: Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3
Balti AV2

D 564 [262] One might infer that they are, or have been, of the Shīn caste, from the fact that all those customs concerning the cow, which we saw to be characteristic of that caste, are held by these Buddhist Dārds to an extreme degree.

D 177 622 595 It is curious to trace how in some respects they keep to the customs of the race they sprang from, and how in others they have adopted the customs of the Buddhists.[1] There seems to be an instance of the former case in that their headmen of villages (at all events in the Hanū Valley) are elected for three years only, and even within that time are sometimes changed; this is certainly a trace of the republican system, of which something will be said in Chapter XX. On the other hand, we see them following the Buddhist Ladākhīs in the practice of polyandry, to which they are completely given; among these Buddhist Dārds a woman has sometimes as many as five husbands.

D 171 792 764 Their religion, I think, lies easy upon them; they are not so attentive to its ordinances as the Ladākhīs are; and I do not think that any of their young men are trained up to be Lāmās. Their dead they burn, and the bones of them they stow away in holes in the cliff, closing up these with stones.

## SUNDRY NOTES.

D 167 Leaving now the Buddhist Dārds, we will note a few isolated facts concerning the race generally.

It has been seen from the map that the Dārds have spread, driven by want, or by oppression, or by disturbances, from their own countries across certain ridges into valleys that were occupied by other races; in these they often live side by side with those other races—as with the Kashmīrīs and the Baltīs—sometimes in villages separate, sometimes occupying part of the same village.

B 563 D 564 262 167 At Rondū the Dārds nearly equal the Baltīs; the two do not intermarry. At Bāsho also the two races are about half and half, but here they have intermarried, and the distinctiveness has been broken up. At Dorū and at Satpūr they are of those who do not drink cow's milk; these must be of the Shīn caste.

| KOHISTANI. | PUSHTO THE AFGHAN LANGUAGE). |
|---|---|
| 1. To-morrow night to Lahore I will go.<br>*Douche rate Lahore bajawwa.* | 1. To-morrow night to Lahore I will go.<br>*Sabe shapa ba Lahore shawam.* |
| 2. Thou silent be.<br>*Tohe chut guda.* | 2. Thou silent be.<br>*Tuh chup shai.* |
| 3. Prepare, ye young men.<br>*Jubti masha.* | 3. Prepared be, O young men.<br>*Sambhal she zalmi.* |

There is a song very current in Kohistan which begins,—
*Palas kulal mariga, Patane jirga hotigu, Jokle johal madado propér asáli*=
"In Palas a potter was killed, in Patan the jirga (or tribal assembly) sat."
"The corrupted (Jirga of Malaks) took a bribe, and retaliation was ignored." The Afghans are called Pathans.

*Religion.*—They have been converted to Islám since four or five generations, and they have forsaken their old religion so completely that no tinge of it now remains; and when a Kohistani is told that they are "nau-Muslims," that is, "new Muhammadans," he becomes angry.

Muslim learning, and the building of mosques have become common in Kohistan, and now we find twenty or thirty learned mullas in every considerable town, besides hundreds of students, studying in mosques.

*Dress.*—Their national dress consists of a woollen hat, brimmed like that of Europeans, and a loose woollen tunic having a long جاکی along the right breast, so that one can easily get out the right hand to wield one's arms in a fight. Their trousers are also made of wool and are very tight. In the summer they wear a kind of leathern shoes borrowed from the Afghans, but in the winter they wear a kind of boots made of grass (the straw of rice) reaching to the knees. They call it "pájola."

Till very lately their only arms were a small "khanjar" (dagger), bows and arrows; but they have borrowed the use of guns and long swords from the Afghans.

The dress of their women consists of a loose woollen head-dress with silken fringes, a woollen tunic and blue or black trousers of cotton cloth, which they call "*shakera*." Generally their women work with their husbands in the corn-fields, and do not live confined to their houses.

*Government.*—They have no chiefs like the Afghans, but influential Malaks lead them to battle, who are paid no tribute, salary, etc.

When an enemy enters their country they whistle so sharply that the sound is heard for miles; then the whole tribe assembles in one place for the defence of their country, with their respective Malaks at their heads.

*Mode of Living, and other Social Customs.*—In winter they live in the valleys, in houses made of wood and stones; but in summer they leave their houses in the valleys for those on the peaks of mountains, and the mass of the population spends the summer in the cooler region; but those who cultivate the land live the whole day in the valley, and when night comes go up to their houses on the heights. Their food is the bread of wheat, and milk furnished by their herds of cattle (gaómesh, cows, goats, and sheep), which is their sole property. There are no regular Banks even

for many years a slave in Chilás, as Ahmad Shah reports). The Gabriális were converted to Muhammadanism by a saint named *Bâbâji*, whose shrine is in Gabriál, and is one of the most frequented places by pilgrims. The Gabriális say that this saint lived six or seven generations ago. Mir Abdulla (who is really of Afghanistan, but now lives in Gabriál,) says that the Gabriális were converted to Islám about 150 years ago. Lately, this religion has made great progress among the people of Kandiá generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attached to them, which are generally crowded by students from every caste. In Gabriál, the Mullahs or priests are, for the most part, of the Shîn caste, but men of every caste are zealous in giving education to their sons. Their education is limited to Muhammadan law (of the Hanifite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and caligraphy, that great Oriental art; so little, indeed, that Harifullah and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the caligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Punjab.

The most accomplished scholar in Kandiá is the high priest and chief of Patan, named Hazrat Ali, who is a Shîn.

The people generally are peaceful, and have a fair complexion and erect bearing. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the usual punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (wadán), but is seldom found among the common people.

GOVERNMENT.—Every village or town is governed by a Council of elders, chosen from among every tribe or "taífa." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shîns or Yashkun. No Kamîn can be elected an elder, though he may become a Mullá, but a Mulla-kamîn also cannot be admitted to the Council.

The reigning Council of Gabriál consists of 12 persons, of whom 9 are Shîns and 3 Yashkuns. Patshé Khân is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influential of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose operation is limited to inter-tribal feuds.

CUSTOMS AND MANNERS.—Hockey on horseback, which is called "lughât" in Gabriál, is played on holidays; and the place where they meet for the sport is called "lughât-kárin-jha."

Guns are called "nâli" in Gabriál, and are manufactured in the town by blacksmiths.

Dancing is not practised generally, as in the other Shîn countries. Only "Doms" dance and sing, as this is their profession; they play on the "surúi" (pipe), rabáb (harp), and shando (drum).

The "purdá" system, or "veiling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

Biddulph G-3 (1873-1878) 1880 ~~Afghanistan~~
4 Av3 Dard Av3

tutelary deity of Chilas whose worship was practised in former times.

The system of government is the same in all these small republics, and differs somewhat from what obtains among the Afghans. Each village, according to its size, has a certain number of Jushteros, or elders, who are appointed according to the general estimation in which they are held for bravery, liberality, and eloquence. They receive no benefit from their office, and are more the servants than the leaders of those they represent. Each village manages its own affairs irrespective of its neighbours, and it is in the superintendence of these details that the Jushteros are mostly occupied. All matters affecting the village are discussed in public. A meeting for this purpose is called *Sigas*. At the Sigas all who please join in the discussion, the Jushteros apparently encouraging individuals to give their advice, and when the general opinion has thus been elicited, the Jushteros announce the decision they have formed. At a Sigas of several villages, a single Jushtero is appointed by each village at a meeting previously held. At the close of the general discussion, which is open as before, a loud whistle is given, after which none but the representative Jushteros are allowed to speak. If war with a neighbouring valley is determined on, the Jushteros settle the way in which those they represent shall take part in it; but beyond their personal influence they have little voice in determining the general policy to be pursued. It is for them to decide who shall stay at home and who shall take the field, and in the innumerable disputes about land their decision is respected; but should the dispute involve men of another village, they are expected to do their best for their own townsmen. In more serious disputes the whole valley makes common cause against its neighbours; but this does not prevent all the communities combining, when threatened by an external foe. Criminal offences are not dealt with by the Jushteros, but by the Moollahs, who profess to administer the law according to the Sharyat; this is, however, set aside in many instances in favour of ancient custom, which is very strong in some communities, and the prompt redress of grievances depends greatly on the personal influence of the aggrieved. Murder is regarded as a personal matter to be avenged by the nearest relative; but should the case be of a very wanton nature, and the family of the murdered individual have sufficient influence with the community, reparation is enforced by general consent. Blood feuds are not permitted to last for an indefinite period, as

101 131 from the Burzil Pass to the Sharot village, a distance of 143 miles from south-east towards north-west with its small surrounding valleys of Kamri, Tarsing, Parising, Sai, Haramosh and Bagrot; and along the Hunza river from Gilgit to Guech, with its adjacent valley of Naltar, a distance of 24 miles.

175 631 The country was first conquered in 1846 by the troops of His Highness the Maharaja of Kashmir under Syed Nathe Shah from Gauhar Aman, the Khushwakti Chief of Yasin, who had usurped the district from Sikander Khan and his brother Karim Khan, the rightful rulers of Gilgit. Karim Khan had escaped to Kashmir to ask for help, and returned with a large force under Syed Nathe Shah. Hearing the news of their approach, Gauhar Aman fled to Yasin, leaving the country to be possessed by them without bloodshed. The country was restored to the rightful rulers, but some later events lead the Maharaja of Kashmir to keep the district under the direct jurisdiction of [648] his own officials. The British Agency was established in 1889. The Political Agent, an officer of the Government of India, and the Wazir-i-Wazarat, an official of His Highness the Maharaja of Kashmir, have their headquarters at Gilgit proper. The latter has jurisdiction over the district only, while the former, in addition to his control over Gilgit, has political relations with the surrounding states of Hunza, Nagir, Punial, Ishkuman, Yasin, Ghizr and the Chilas republic, which all acknowledge the suzerainty of the Kashmir Durbar. Gilgit is garrisoned by Kashmir Imperial Service Troops under a General Officer Commanding appointed by His Highness the Maharaja of Kashmir. The troops are relieved every two years.

491 205 206 A good pony road runs between Srinagar, Gilgit, Chitral and Hunza, remaining open for traffic from June to October. It is closed from November to May, owing to the heavy fall of snow on the Tragbal (Rajdiagan) and the Burzil passes. However, the ordinary letter post is carried across the passes at favourable opportunities by local runners. Kashmir, Gilgit and Chitral are also connected by a telegraph line.

162 795 619 101 [174] The present inhabitants of the country are all Muhammadans, chiefly of the Shia sect, with a few Sunnis and Maulais. The principal tribes are Ronos, Shins, Yeshkuns Kashmiris, Kramins, Dums and Gujars. They are again divided into several families called after the names of distinguished ancestors. I am of the opinion that the Kramins are the original inhabitants of Gilgit, while the Yeshkuns, Shins and Ronos came afterwards in the above order and conquered the former inhabitants.

101 619 523 The Yeshkuns are probably an Aryan race, having arrived from Central Asia *vid* the Hindu Kush. Being stronger than the aborigines, they succeeded in conquering these districts, made the original inhabitants their servants and named them "Kramins" (attendants).

101 [795] 619 The Shins profess to be the descendants of Arabs. They are probably Jews, and have come *vid* Afghanistan from either Persia or Turkey. They prefer a style of self-government, and endeavour wherever they settle to continue this form of their original government. It is of interest to note, however, that before embracing Islam the Shins, in this resembling the Hindus, disliked meat, milk or even *ghi* made from cow's milk, disapproved of the keeping of fowls and regarded even a fish diet with aversion. If a Shin had taken two wives, one of his own tribe and the other of the Yeshkun tribe, the children

~~10~~ Biddulph G-8 (1873-1878) 1880 ~~AUL Afghanistan AUL~~
4 AV3 Dard AV3

military service in time of war. It also gives three hostages for good conduct, who are changed periodically. The people of Gor claim to have been Mussulmans for only three generations, and are all Soonnees. 649 [795]

There are three forts in Gor, named Loosonotkot, Doolotkot, and Tunelkot. The people of Gor have always been friendly with Chilas. At present Gor is noted in the Kohistan for the good quality of the wool it produces. The tradition is still preserved of the god Taiban, who was the tutelary deity of Gor, and whose worship was continued to a very recent date. A rude sculpture of a horse still exists, which is named "Taiban's horse." Even now Taiban is invoked occasionally as a witness of a solemn covenant. Along the river, at intervals the whole way from Gor to Seo, are said to be a number of ancient rock inscriptions. 236 776 172

A few miles above Gor the small detached village of Thalich forms the extreme limit of Yaghestan, consisting only of 11 houses: it forms, as Mr. Drew observes, the smallest of independent communities. The people of Thalich make common cause with those of Chilas, of whom they are an offshoot, and are protected by them against more powerful enemies. 361 162

Above Herbund, on the left bank, is the large community of Chilas, which embraces six valleys. The principal villages are Tor, 200 houses; Chilas, 140 houses; Geen, 5 houses; Takk, 80 houses; and Booner, 60 houses. Chilas can furnish about 1,500 fighting men, without counting a number of immigrants from other communities who have lately settled in the country. Roads lead from Khaghan in the Hazara country by the Babusar Pass to the Indus in seven days, and from Shardi in the Kishengunga Valley by the Shotô Pass in five days. There is also a road from Astor by the Mazenoo Pass, only practicable at any time for men on foot, and closed in winter, by which Booner is reached in four days. The road up the Indus from Chilas is difficult and almost impassable even for men on foot. This difficulty of access has given the Chilasis a spirit of independence, and a distinctive character among all the Kohistan communities. Though but comparatively recent converts to Islam, they are bigoted and fanatical beyond all other Dards, owing, it is said, to Chilas having been at all times a favourite resort of Mooliahs from Swat. Being Soonnees, every Shiah who falls into their hands is put to death without being reserved for the usual alternative of slavery. The whole community can muster 3,000 men capable of bearing arms, and have at all times borne a high reputation for bravery. 487 181 798 181

AV3 Dard AV3

Great enmity exists between the people of Ponyal and those of Yassin and Chitral.

The principal place in Ponyal is Cher,[1] which has been corrupted into Sher by the Dogras. The people are, with few exceptions, Yeshkun or Boorish, but the language spoken is Shina. In religion they are mostly Maulais, a few Soonnees and Shiahs only being found amongst them. Ponyal contains about 2,000 inhabitants; the men are remarkable for their athletic figures. The soil, where cultivable at all, is fertile and yields two harvests in the year, but between the different patches of cultivation long stretches of sandy plain intervene, while at certain places the rocks close in on the river, which, for more than half the year, is an impassable torrent, so that the passage can be easily held by a few against superior numbers. In unsettled times guards are posted at these places to give the alarm by beacon fires.

At the western extremity of Ponyal is the fort and village of Gahkuch, which is the residence of the Rao Afiat Khan, a member of the Boorooshé family, who owns allegiance to Cashmere and receives a yearly subsidy in consideration of his holding this frontier post. Gahkuch is a place of some importance, as it commands the mouth of the Karoomber Valley as well as upper part of the main valley.

Opposite Gahkuch, the Karoomber Valley and river, running almost due south from the Hindoo Koosh, joins the main valley. Mr. Drew has described how this valley has during the last twenty years alternately belonged to Yassin and Gilgit. Nothing but extreme timidity or apathy can have induced the Cashmere Durbar to abandon it, as mentioned by Mr. Drew, for it is outside the natural boundary of Yassin, and could not have remained a portion of Yassin territory had the slightest disposition been evinced to retain it by the Dogras. For 25 miles the valley is broad and open, beyond that it contracts, and a road branches off past the village of Ishkaman or Ishkoman to the foot of the Durkot Pass. Continuing up the valley, which bends to the eastward, the Hindoo Koosh is crossed into the Oxus Valley by the Ishkoman Pass at a height of 12,000 feet. Formerly this road was a favourite one, but owing to recent physical changes it has now fallen into disuse.

The Karoomber Valley, which contains the ruins of several large villages, now supports only 300 souls. The former inhabitants are said to have been exposed to constant forays

[1] Meaning "an impregnable rock."

Chitral

563 197 "fakir mushkin." They are a portion of the race which occupies Munjan on the northern side of the Hindoo Koosh, and they speak the same language, with slight variation in dialect. [173] They claim to have migrated from Munjan seven generations ago, in consequence of an invasion of that district by the ruler of Badakhshan, in which the Meer of Munjan was slain. [715] They number about a thousand families, and, like the Munjanis, all belong to the Maulai sect. In Ludkho they call themselves Yidghâh,[1] and give the name of Yidokh to the whole valley with all ts branches from the Hindoo Koosh to the Chitral river.

By the people of Badakhshan and the Oxus Valley north of the Hindoo Koosh the valley is called Injigan. The principal place is Drooshp. At Ludkho in the Tirich Valley there are a few families who speak a different language from their neighbours; but it appears doubtful whether it is a purely separate language, or only a mixture of the dialects spoken around them.

Below Chitral the mixture of tribes becomes still more puzzling. On the western side are the two small valleys of Kalashgoom and Bidir, inhabited by Kalash Kaffirs, who have long been subject to Chitral. The villages of Jinjuret, Loi, Sawair, Nager, and Shishi are also inhabited by Siah Posh, who have become Mahommedans, though in other respects they adhere to their ancient customs. They speak the Kalash language.[2]

Tradition relates that the whole Chitral Valley was once occupied by Kaffirs; but it is impossible to say whether by this term a tribe of the Siah Posh is indicated, or merely that the people in question were not Mahommedans. At Madaglusht is a small Badakhshi colony who speak Persian. Ashuret, Beorai, Poorgal, and Kalkatak[3] are inhabited by a tribe, said to speak a language cognate with Shina, who are still styled Dangariks by their neighbours, though they have long ago embraced Islam. The term Dangarik would seem to show that they were Hindoos before being converted. The villages of Pasinger, Birkote, Langorbat, Gud, Narisat, Maimena, Sukai, Nawakali, and Choondak are inhabited by a tribe who call themselves Gubber, but are called by their neighbours Narisati.[4] Their name would seem to connect them with the Gabaré of the

AV3 Dard AV3

from Ghizr to Ushoo, where Khowar is in consequence beginning to be spoken. The Bushkarik proper are divided into three clans, the Moolanor, Kootchkhor, and Joghior. They say that they have been Mussulmans for nine generations, and the peculiar customs still common among the Shins do not exist among them. Till somewhat recently they used to expose their dead in coffins on the tops of hills. The Bushkar dialect[1] approaches more nearly to modern Punjabi than any other of the Dard languages; but in some respects seems to show some affinity to the dialects of the Siah Posh.

The Bushkarik intermarry with the Torwalik, but not with their other neighbours. Forts are not in use among them, but their villages are built in a peculiar fashion for safety. A hill side with a suitable slope is selected, against which the houses are built in a succession of terraces rising one above the other, so that the flat roof of each house is on a level with the floor of the one above it. The whole are connected by an outer wall, within the confines of which is a labyrinth of passages, and the site is often selected so that a stream of water runs through the mass of buildings. All the houses are built of wood, and those on the outside of the village have no parapets. Bushkar is said to be very thickly wooded, and the trees are said to grow to an unusual size.

a limited number of the inhabitants, and did not become general till the middle or end of the sixteenth century. Even then its acceptance was so irregular that it is not surprising that Hindooism has lingered on, and has only become extinct in the present day.

D
● 715
The tribes of the Indus Valley were exposed earlier to the fervid preaching of the Moollahs of Swat and Boneyr, and this has led to the adoption by them of the Soonnee tenets. The people of Chilas, who were always a less tractable race than their neighbours, make it their boast that, though travellers and traders are safe in their country, no Shiah ever escapes out of their hands. At Gor, also, a few miles above Chilas, the people are all Soonnees, but a looser type of Mahommedanism prevails, and prayers were till recently addressed to the god Taiban, whose horse is sculptured on the rock near the village.

In Gilgit the population is now three-fourths Soonnee and the rest Shiah, but at the commencement of the Sikh occupation, the greater proportion were Shiahs or Maulais, and it is related that any Soonnee falling into their hands was branded with a hot iron unless he consented to become a proselyte. Those who now still adhere to the Maulai tenets, are mostly old men, who keep the fact concealed as far as possible, and call themselves Shiahs. At Soomma, a secluded village in Yassin, the people, though professed Mussulmans, still make offerings to the god Shaitum. In several other places the names of local deities are still preserved, and objects, such as a peculiar-shaped rock near a village, are still regarded with veneration, and invoked in the registration of solemn covenants.

The influence of the Iskardo Princes introduced Shiah tenets into the north-eastern part of Dardistan, while the tenets of the Maulais have made their way from the Oxus Valley across the passes of the Hindoo Koosh. In Nager the entire population are Shiahs of the orthodox type, and so are two-thirds of the people of Baltistan; the rest belong to the Noor Buksh sect. In Hunza, till a few years ago, Shiah tenets found many followers; now the Meer and the whole population are Maulais.

B
[795]

The Shiahs in these countries lament the martyrdom of the sons of Ali twice a year; once at the usual time according to the Mahommedan calendar, and again in the month of August, the season at which they say the martyrdom actually occurred.

38a Biddulph G-3 (1873-1878) 1880 AU3 Afghanistan AU2
4 AV3 Dard AV3
Burusho AV7

Wherever Soonnees and Shiahs are found living together, they seem to practise a mutual tolerance rare in other purely Mahommedan communities. Intermarriage between the sects is so common as not to excite remark. D B 798

The whole of the people of Hunza, Ponyal, Zebak, Shighnan, Roshan, Munjan, Kolab, and Darwaz, more than half the people of Sirikol, Wakhan, Yassin, and the greater number of the inhabitants of the Ludkho Valley in Chitral, belong to the Maulai sect. A few Maulais are said to exist in Khokand, Karategin, and Badakhshan, among the poorest of the people, and in one district near Balkh, they are known as the disciples of Syud Jaffer Khan. Some are also to be found in Afghanistan, where they are known as Muftadis. A few may possibly exist in Bokhara and Khorasan, but in a fanatical country they would probably pass themselves off as Shiahs. D 795 B 795

The head of this sect is Agha Khan, the acknowledged spiritual chief of the Khojas of India and Persia, a gentleman of Khorasan, who came to India in 1840 for political reasons, and who has resided in Bombay ever since.

The countries inhabited by the Maulais are roughly divided among a number of Pirs, who are treated by their disciples with extraordinary respect, but residence does not give the Pir authority over the whole of any special district. The office is hereditary, and Maulai families transfer their spiritual obedience from father to son, regardless of changes of residence. For instance, Shah Abdul Rahim of Zebak, who is honoured and respected as being next in rank to Agha Khan himself, has disciples in Sirikol, Kunjoot, Zebak, Yassin, and Badakhshan, but other Pirs also have disciples in those places. The respect paid to the Pirs by their disciples is unbounded; nothing is refused them. If they ask for a son or a daughter of any house, no refusal is dreamt of. One of them once said to me, "If I ordered a father to kill his own son, he dare not refuse." Whenever they move about, they are attended by a large number of followers, who are fed and maintained out of their superfluities, and they live entirely on the offerings of their disciples. Presents of horses, cattle, clothes, fruit, wheat, &c., are continually being made them, and the best of everything a Maulai possesses is given to his Pir. A portion of these offerings is converted into coin and sent yearly to Agha Khan, and agents travel yearly from these remote parts to Bombay solely for the purpose of conveying these contributions to him.

B
795
173

Next in rank to the Pirs are Caliphas, whose duty consists in little more than the collection of offerings. The Pirs each correspond direct with Agha Khan.

The Maulais must not be confounded with the Maulavi sect of dancing Darweshes, with whom they have nothing in common. They assert that their sect was founded by the Imam Jaffer Ali Sadik (the just), a descendant of Ali, by the daughter of the Prophet, who died A.H. 148. Aboo Mahommed Hussain, however, writing in the *Zubdat-ool-akhbar*, says, that Mahommed, surnamed Mahdi, who claimed to be sixth in descent from the Imam Jaffer Ali Sadik, founded the sect, w[h]o were first known as Ismailyas,[1] in Egypt in the year A.H. 299. His followers recognised him as the twelfth Imam, nd quoted a supposed saying of the Prophet Mahommed that every 300 years the sun would rise in the west, explaining that Mahommed Mahdi's preaching 300 years after the Hijra was a fulfilment of the prophecy. Aboo Yezid, a Moolla who questioned Mahommed Mahdi's descent from Jaffer Ali Sadik, on the plea that Ismail's only son had died childless, was proclaimed to be Dejjal (Antichrist). The conquest of Egypt by Sultan Sala-oo-deen Yusuf destroyed the temporal power of the sect in that country. They were, at that time, ruled by Azid, a descendant of Mahommed Mahdi. Meanwhile, the tenets of the sect had been brought to Persia by Hassan-i-Sabbah, an Arab of the tribe of Himyar in Yemen, who established himself later in Alamot, where his grandson, on the seventh day of the Ramazan, A.H. 555, publicly proclaimed that fasting and other observances of the Sharyat were no longer obligatory.

Colonel Yule, in his notes on the Travels of Marco Polo, has given an interesting account of the "old man of the mountain," whose representative he recognises in Agha Khan. On this supposition the Maulais of the Hindoo Koosh and Oxus Valley belong to the sect of assassins, and are an offshoot of the sect to which the Druses of the Lebanon belong. They call themselves Muglees, Maulais, or Mawallis indifferently. Mr. Drew suggests that the name is derived from Maula, an Arabic name for God. The appellation may equally claim to be a corruption of Muwahideen, the name by which the Druses still call themselves, or Mulahidah, from *Mulhed*, "an infidel," the name given to the sect in old times.

[1] So named from Ismail, son of Imam Jafer.

98: Biddulph G-3 (1873-1878) 1880 AUS-Afghanistan-AUS
4 AV3 Dard AV3
Burushe AV7

The precepts and observances of the sect are difficult to ascertain, one of their sayings being that "a man should conceal his faith and his women;" and the little I have been able to ascertain is from Maulais who have proselytized, and those only men of no education. D 795 B 795

Soonnees speak of them as "Kaffirs" and "Rafizi," but they themselves do not refuse to pray or eat with Soonnees. They are sometimes accused of worshipping Ali, the son-in-law of the Prophet, and accordingly styled "Ali-purust," and they undoubtedly esteem Ali, who, they say, was born of Light as superior to the Prophet Mahommed, and an incarnation of the deity. They reject the idea of a future state, believing in the transmigration of souls. Evil deeds are punished by the spirit being translated into a dog or other mean animal. Good actions are rewarded by a future incarnation as a great or holy man. They claim little in common with other sects of Mahommedans, saying, the Soonnee is a dog and the Shiah is an ass. They question the divine character of the Koran, though they say that it was entrusted to the Angel Gabriel to give to Ali, but that he gave it by mistake to Mahommed.

They use in place of the Koran a book called the Kalam-i-Pir, a Persian work, which is shown to none but men of their faith. The precept most commonly quoted by them is, that a man should blind himself, so that he should not be moved with envy at sight of his neighbour's prosperity; he should weaken his hands, so that they can grasp nothing belonging to others; and lame himself, that he may be unable to disobey the commands of his Pir. Cattle that have strayed into standing crops are not to be driven out till they have satisfied themselves. A good Maulai is already as one dead, prayers therefore are unnecessary, as also is fasting. If any forcible attempt should be made to cause a Maulai to fast, he should resist it by devouring a pinch of dust. The only pilgrimage enjoined is to the living head of their faith, who is styled the Imam-i-Zeman, or Sahib-i-Zeman. Marriage can be performed by any man whose beard is white. Seating himself with the bridegroom on his right hand and the bride on his left, he takes a few pieces of roasted sheep's liver in both hands, and crossing his arms gives them to the man with his left hand and to the woman with his right. Then taking a cup of water he gives half to the woman, and after he has said a few words out of the Kalam-i-Pir, the ceremony is completed. The form of the Maulai Kalima is D B [792] D B [778] D B [545]

changed yearly in accordance with instructions from their spiritual head.

The following is a favourite poem recited in praise of the Imam-i-zeman :—

HALP ! on ALI.

Oh amulet of life, thou glory, Sahib-i-zeman,
Speak thy praise incessantly,
Sahib-i-zeman.

Sultan of both worlds from east to west,
All kings are beggars compared to you,
Sahib-i-zeman.

The sun of heaven shines by your beauty,
Sun and moon by your light,
Sahib-i-zeman.

When shall peace be from evil and strife of Dejjal,
Except it be your pleasure,
Sahib-i-zeman.

I hope that my heart may be lighted up
One day under the dust of your feet,
Sahib-i-zeman.

There will be a day with my last breath,
I shall speak your praises,
Sahib-i-zeman.

It is time that the sound of your trumpet
Be heard through the world,
Sahib-i-zeman.

From Kaf to Kaf take the whole world
In your world-conquering hand,
Sahib-i-zeman.

The time is come for the faithful to gird
Their loins and follow you,
Sahib-i-zeman.

Jesus will come down from the fourth heaven
To imitate you,
Sahib-i-zeman.

Nobody will worship or pay respect to God
Without worshipping also you,
Sahib-i-zeman.

4 AV3 Dard AV3 Burushō AV7 Dalti AV2

D 795 539 Bo 795 539

Others go their own way
But I am faithful to you,
Sahib-i-zeman.

I, Schem, the distracted in mind,
Have seized the skirts of your bounty,
Sahib-i-zeman.

D Bo 795 [24]

Wine is drunk by the Maulais without concealment, and they do not strictly abstain from eating the flesh of animals not killed in the orthodox manner. Being absolved from the constraints of prayer and fasting, the practical religion of the uneducated consists of little more than obeying the commands of their Caliphas and Pirs, and making offerings freely through them to their spiritual chief. They are by no means intolerant, and, where permitted, live on good terms with Soonnees and Shiahs, with whom they intermarry without restraint. The only cases I have known of ill-feeling between the sects have been caused in the first instance by Soonnees from other places. From Shiahs they seldom meet with hostility, owing probably to the respect they show to Ali; though they do not celebrate the martyrdom of Hassan and Hoossain.

D Bo [791]

D 795 764 Bo 795 764

On the death of a Maulai the choicest articles of his portable property are set aside for the Imam-i-zeman. No food is cooked in the house, for from three to eight days, according to the rank of the deceased, and the family subsist on food cooked elsewhere. Food is also placed on trees and exposed places for birds to eat. On the evening of the appointed day a Caliphs comes to the house, and food is cooked and offered to him. He eats a mouthful and places a piece of bread in the mouth of the dead man's heir, after which the rest of the family partake. The lamp is then lighted (from which the ceremony is called "Chiragh roshun"), and a six-stringed guitar called "gherba" being produced, singing is kept up for the whole night.

D Bo 795

I have sometimes shown the portrait of Agha Khan in Yule's Marco Polo to Maulais. They pass their fingers lightly over it and then touch their eyes and lips.

Bi 795 173

The Noor Buksh sect, which has been before referred to, is peculiar to Baltistan, where it numbers over twenty thousands followers, most of whom are to be found in Shigar and Khapelow. It is apparently an attempt to form a *via media* between Shiah and Soonnee doctrines. Mahommedanism is said to have been first introduced into Baltistan according to Soonnee tenets by Syud Ali Hamedani. Later, a certain

The Yashkun without any Shia are found in more distant places, 564
in the upper parts of the valleys of the Indus tributaries, namely in Nagar, Hunza, Ishkoman, Yásin, and Chitrál.

## MUHAMMADANISM AMONG THE DÁRDS.

The Dárds are now (with the exception that will be noted 779
farther on) Muhammadan.* Formerly they had some kind of idolatry of which we know not much, nor do we know at what period they were converted to Islám. At the time the Sikhs annexed Gilgit and Astor the people of those places were in some respects but very weak Muhammadans; it so happened that the Sikh commander, Nathe Shah by name, was a Muhammadan and a Syed; he acquired over these Dárds a great influence, and he exerted it to make "good Muhammadans" of them, to get them to attend more carefully to the forms of their religion. It is a 764
fact that before Nathe Shah came (say in 1842) the Astor people used to burn their dead, and not bury them as Muhammadans should. A curious remnant of the custom still remains there—when they bury they light a fire by the grave; it is true they will now tell you that they light the fire to keep off jackals; this may be in some sense true, that is to say they could hardly reconcile themselves to leaving the body in its grave undestroyed, so they lit the fire as they had been used to, and this satisfied them in giving some security as against the beasts of prey and at the same time making a link with the past.

But it is not enough to say that these Dárds are Muham- 795
madan; they are divided into three separate Muhammadan sects —Sunt, Shia, and Moláí.

Sunt and Shia require no description, as the division exists in almost every part of the Muhammadan world. The Moláí sect corresponds very nearly, or it may be exactly, with that sect called Núr Bakhsh which we found in Baltistán (see Chapter XVI.), which was a modification of the Shia. The name must have its

* This must be taken without prejudice to the question of the relationship of the Kafirs to the Dárds. It is true at all events of those who have as yet been definitely classed as Dárds.

1; Drew G-3 (1862-1872) 1875 AV1 Kashmir
Dard AV3

795 origin from the Arabic *Maula*, God, they thus calling themselves "the Godly." In matters of prayer and fasting they follow the Sunī ways, but in creed (as regards the proper succession of Muhammad's successors to the Khalifat) they are Shīas.

564 The Molās and Shīas will drink wine, the Sunīs will not. Of the different castes it would seem that the people of each may belong to any of the three religious sects; the religious differences do not depend on the caste, but are more geographical; this is illustrated by the table given in Chapter XX.

## BUDDHIST DĀRDS.

174 I have now to record some facts as to an outlying portion of the Dārd race, which are of peculiar interest. In that narrow part of the Indus Valley which was described under the heading of "Central Ladākh" (Chapter XIII.), are some villages inhabited by Dārds who follow the Buddhist faith; who, though remnants left by a wave of immigration from the direction of Gilgit, have so far amalgamated with the Bhots that they obey the Lāmās as spiritual leaders.

Muhammadan Dārds, whose locality is denoted on the map either as outlying or outstretching portions of the main area occupied by the Dārd race, reach up close to these Buddhist Dārds, but the villages of each are distinct. The following places —villages and hamlets—are inhabited by the Buddhist Dārds: Grugurdo, Sanācha, Urdus, Darchik, Garkon, Dāh, Phindūr, Baldes, Hanū, Lower and Upper.[4]

That they did come from the direction of Gilgit they have a tradition, and many circumstances of language and manners show that in spite of their being Buddhists in religion they are one in origin with those Dārds we have been describing. But I think they belong to an earlier immigration; probably a small number reached their present seat and settled there, separated from the main mass of their tribe-brethren, at a time before the Dārds were converted to Muhammadanism, so that the transition from their ancient faith to Buddhism was not difficult. At that time the neighbouring Baltis also may still have been Buddhists. Later,

Dard AV3
Balti AV4

D 167 195 B 53 D 171 101

At Drās the Dārds (who here are Sunīs) form more than half the community, the others being Baltīs, who are Shīas.

Wherever the Dārds are in contact with Baltīs or with Bhots, these others call them (whether they be Muhammadan or Buddhist Dārds) *Brokpā* or *Blokpā*. The word Brok or Blok means in Tibetan a high pasture-ground, and Brokpā or Blokpā must mean a "highlander." The origin of this appellation for the Dārds I take to be this, that they first came in contact with the Baltīs by coming over the Passes and settling in the higher parts of the valleys, parts that perhaps had been left unoccupied.

D 563 582

There is a colony of Kashmīrī among the Dārds at Gilgit, or rather there is an infusion of Kashmīrī blood in a certain section of the Gilgit people; many generations back there must have been a settlement of Kashmīrīs, who took unto themselves Gilgitī wives. The descendants have quite lost the language and the ways of Kashmir, and to a stranger's eye they are quite Gilgitī, but the Dārds themselves distinguish, and, as to intermarrying, keep separate from them.

D 174 B 174 142

In one or two higher valleys of Baltistān I have noticed a difference in the people, as compared with the ordinary Baltī, which may perhaps be due to some admixture of Dārd blood, although the fact is not noticed or known by the people themselves. Thus, at Pakora in Brāldū the men were much better looking than the ordinary Baltīs; they had well-shaped features, and had a manly bearing; I noted this at a time when I knew less about the Dārds than afterwards; now, it seems to me likely that some of that race came over the difficult Passes from Nagar and made a settlement among the Baltīs. Again, in the Turmik Valley, many villagers have a high and broad forehead, and hooked nose, though they call themselves Baltī; I have little doubt that here too is Dārd blood, the immigrating Dārds having become absorbed into the community of Baltīs, but still making a mark. These two cases I have not represented on the Race Map, not thinking them distinct enough for that; the area of Turmik and of Brāldū is coloured for Baltī alone.

000

There is one other peculiarity belonging to a class, which may

| PĀLUS .. | Republic .. .. | Shīn and Yashkun | | |

The first five divisions I have already treated of as fully as I was able. We now come to the countries that surround Gilgit.

*Nagar* lies along the left bank of the Hunza-Nagar River, having Hunza opposite on the right bank. Since about 1867 it has paid a small tribute to the Maharaja, receiving in return a present of larger value; this cannot be considered more than a compliment, and a mark of desire for friendly relations.

The people of Nagar are called Khajanī.

*Hunza* is a more warlike country than Nagar. As shown in the last chapter, it has often been actively at enmity with the Maharaja, and it has generally been in a state of unfriendliness to him. In 1870 the Hunza Raja sent an agent to Sirīnagar to open friendly relations, who was well received; I do not know

* I have never met any of these people, but I believe them to be Dārda. Goīje is another name by which they are called; that is the territorial name, while Wākhik is the caste name.

186 The people of Astor and Gilgit would be
101 surprised if they were told that they were Dards living in Dardistān, and their neighbours of Hunza-Nagar and Yāsīn would be equally astonished. If consulted, they would probably describe their country as Shīnāka, or the land of the Shīns, where Shīnā is the spoken language. They are an
517 Aryan people, stoutly built, cheery, honest, frugal, and sober.
291 They are devoted to polo, and are fond of dancing. The inhabitants of Astor wear a peculiar head-dress: a bag of woollen cloth, half a yard long, which is rolled up outwards at the edges until it gets to the size to fit comfortably to the head,
342 round which the roll makes a protection from cold or from sun, nearly as good as a turban. Their houses are small, with very small doors, and are usually built out from the mountain
784 side. Warmth is the one consideration. The Astoris have some very peculiar customs. Drew notices that they hold the cow in abhorrence. They will not drink cow's milk, nor will they burn cow-dung, the universal fuel of the East, and in a pure
751 Shīn village no one will eat fowls or touch them. They
● 795 practise inoculation for small-pox, their one epidemic. The people of Astor are Musalmāns, two-thirds being of the Sunni persuasion, and the rest being either Shiahs or Maulais.
564 There is no religious intolerance in Astor.
162 Drew mentions the following caste divisions: Ronu, Shīns, Yashkun, Kremins, and Dums. As regards the Ronu caste, he says that there are a small number of families in Gilgit. Biddulph, in his *Tribes of the Hindu Koosh*, states that it forms 6 per cent. of the Gilgit population, and that it is the most honoured caste of all, ranking next to Mukhpuns or the Rājā caste of Dardistān. The majority of the Astoris belong to the Yashkun caste, and the Shīns are few in number, under 3,000. They are more numerous in Gilgit, the total number of Shīns, according to the Census, being 7,733. The Shīns are regarded
[582] with great respect by the Yashkuns and the other castes. The
563 Yashkuns claim the Shīns as their forefathers. The Shīns give their daughters to Ronus and to Saiyids, but take wives from the Yashkuns. Far away in Central Ladākh, in the Hanu valley, live other Dards of the Buddhist religion. They have retained the Aryan type of the country whence they
[771] came and its Shīnā dialect, but they wear the pigtail and the Ladākhi cap. It is said that, though Buddhist by name, they
[595] really worship local spirits and demons. They practise poly-
[784] andry, but they will not eat with Tibetan Buddhists, and, like the Shīns in Dardistān, they hold the cow in abhorrence.
000 In Gilgit, as in Astor, there are few social subdivisions, for

3: Imperial Gazetteer G-3 (1889-95) 1909 AV1 Kashmir
Dard AV3

In Gilgit as in Astor, there are few social subdivisions, for the people are forced to depend on themselves for most wants of life. The language spoken is Shīnā, though only a small percentage of the population is Shīn. The religion is Islām, the Shiah sect preponderating. There is an entire absence of fanaticism. The national character is mild, and the men are unwarlike. The Gilgiti is attached to his home and his family, and is an industrious cultivator. Both men and women are strongly built, and of a fairer complexion than the people of India. The women paint their faces with a kind of thin paste to keep the skin soft and to prevent sunburn. They are fond of flowers, and decorate their caps with irises and roses.

571 197 795 181 302

The cultivation is of a high character. The fields are carefully tilled, heavily manured, and amply irrigated. In Gilgit itself good rice is grown; and crops of wheat, barley, maize, millet, buckwheat, pulses, rapeseed, and cotton are raised, while fruit is plentiful. There is very little grazing land, and cattle are scarce. Lucerne grass is largely cultivated for fodder. Agriculture. 241

In the cold dry climate of Astor cultivation is carried on to an elevation of 9,000 feet. It depends entirely on irrigation by little channels known as *kul*. The chief crops are wheat, barley, peas, maize, millet, and buckwheat. The people pay great attention to fodder and cultivate the lucerne grass. Cultivation is precarious in Astor, as the crops frequently do not ripen owing to the cold, and there are several vegetable pests in the shape of worms.

Many of the streams are rich in gold, especially those which flow from Hunza and Nagar, and also the Indus above Chilās. Gold-washing is carried on in the winter chiefly by the poorer members of the population, though the work is often remunerative. At Chilās whole families live by the work. The gold is of fair quality, the best being twenty carats. The Bagrot valley is celebrated for gold-washing, and contains many signs of mineral wealth. Minerals. 135

The only manufacture is the weaving of woollen cloth (*pattū*), but this is for home use and not for sale. Trade does not flourish. The local wants are few, and the only chance of Gilgit becoming an important commercial centre lies in the opening of a trade route to Yārkand. The chief staple of import is salt. Russian chintz is brought down from Yārkand, and is said to be more durable than the English article. Commerce and trade. 286 439

The most important roads are those leading to India. The 10-foot road over the Burzil and Rāj Diāngan passes has been Roads. 487

4: Durand G-3 (1888-93) 1900 AV1 Kashmir
Dard AV3

181 They[1] are unenterprising, wanting in stamina and in perseverance. They are men of fine enough physique, but they are soft, and have little or no warlike instinct.

[511] Very much attached to their lands, they will not move except under official pressure or the compulsion of the direst poverty. Half a dozen able-bodied men of one family prefer starving on a tiny piece of ancestral land to dividing their forces and taking up ample grants, distant perhaps but a few miles from

[661] their old home. The systematic oppression of their rulers, which deprived a man of much of the fruit of his labours, accounts in part for their attitude on this particular point, but, allowing for this, the race is sadly wanting in initiative. The Yeshkun is, I am inclined to think, a better man than the Shin, there is no doubt about his being a better fighting man, and the small caste or clan of the Ronu is the best of all.

[795] Taking the whole of Dardistan the inhabitants are not warlike, and in the southern portion alone, which is under the religious influence of the Mullahs of Swat, do you find fanaticism. The people are peaceful; there is none of the natural devilry, dash, love of war, and enterprise, which you find in the neighbouring Pathan, and they never have stood up, and never would stand up, against severe losses.

726 But that they could fight behind suitable defences I always felt was pretty certain, and we found this at Nilt. Centuries of desultory warfare have made them adepts at the art of field fortification, and awkward customers to deal with when on the defensive. In attack they are contemptible, and only dangerous when overwhelming numbers force disciplined troops on to the defensive, as at Chitral.

1 [the Shins -- Analyst]

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

765 meat. After that period the grave is again visited by the deceased's friends, who, on reaching the grave, eat some ghí and bread, offer up prayers, and, on returning, slaughter a sheep, whose kidney is roasted and divided in small bits amongst those present. Bread is distributed amongst those present and a little feast is indulged in, in memory of the 771 deceased. I doubt, however, whether the Gilgitis are [761] very exact in their religious exercises. The mention of death was always received with shouts of laughter by them, and one of them told me that a dead person deserved only to be kicked. He possibly only joked and there can be little doubt that the Gilgit people are not very communicative about their better feelings. It would be ridiculous, however, to deny them the possession of natural feelings, although I certainly believe that they are not over-burdened [177] with sentiment. In Astór the influence of Kashmir has made the people attend a little more to the ceremonies of the Mussulman religion.

In Chilâs rigour is observed in the maintenance of religious practices, but elsewhere there exists the greatest 212 laxity. In fact, so rude are the people that they have no written character of their own, and till very recently the art of writing (Persian) was confined to, perhaps, the Rajas of these countries or rather to their Munshis, whenever they had any. Some of them may be able to read the Koran. Even this I doubt, as of hundreds of people I saw only one who could read at Gilgit, and he was a Kashmiri who had travelled far and wide and had at last settled in that country.

## F. HOLIDAYS.

796 The great holiday of the Shîn people happened in 1867, during the month succeeding the Ramazan, but seems to be generally on the sixth of February. It is called the "Shinó náo," "the new day of the Shîn people." The Gilgitis call the day "Shinó bazóno," "the spring of the Shîn people." [The year, it will be remembered, is divided into bazono = spring; walo = summer; shero = autumn;

of the former would be Shins and those of the latter would be Yeshkuns. This shows that their family system takes the mother into consideration.

The Ronos are said to have come from Rajauri, a district in Kashmir, where they belonged to a ruling family of the district.

The Gujars have recently come to these parts and speak the same dialect as in India.

Besides these, there is another family of the former Muhammadan rulers of the country called "Rá." They originally came from Skardu about three centuries ago, and professed to be the descendants of Alexander the Great. The inhabitants considered them to have been born of a fairy, and this idea leads the people to think that their rulers were of a superior race touching on the divine, and that therefore it was necessary to honour and obey them.

The people live very simply, and their requirements are few. Each one is himself a cultivator, a weaver, a carpenter, etc. Their dress, which they weave from the wool of sheep and ibex, includes the *shuka* (cloak), woollen pantaloons, a woollen shirt and a rolled cap. The women wear loose trousers, a shirt and a cap, with a few silver ornaments and shell brooches. They wear on their feet a kind of leather socks called *pabboo*, made either of ibex skin or of cow hide. For hill journeys they wrap their feet in pieces of goat or ibex skin which they call *thauti*.

The chief amusement of the people is polo, which they play with the utmost zest, and shooting markhor, ibex and oorial with their matchlocks for the sake of meat, skin and wool.

The former language of the people was Sanskrit, but the dialect now spoken is generally called "Shina," though the Chitralis call it "Dangrik." It contains many Sanskrit as well as Persian words.

Such are the tribes to whom the folklore and customs appertain, but they have lived together for such a long period under the Buddhist and Muhammadan rulers that it is now difficult to know which of the ceremonies was originally observed by each separate tribe.

## I.*

### The Festival of "Shino Bazono."

The advent of spring in the Gilgit country brings with it the quaint festival of "Shino Bazono," which corresponds to the English May-day. It lasts about fifteen days, beginning in the middle of February and ending about the beginning of March. As indicating that the long cold winter is at an end with all its accompanying hardships, and that spring is nigh, bringing with it warmth and life and a renewal of the scanty stock of provisions which has run dangerously low during the past months, the festival is hailed with much rejoicing by the simple Gilgit folk. In order to observe this feast rightly, the people, twelve days before its commencement, put ten seers of wheat into a wooden basin. They fill this up with water and keep the mixture wet for five days, after which they take it out and place it in a small pit dug for the purpose in the ground, over which stones are heaped. The wheat is left in this pit for four days, after which the grain is seen

*[See also p. 119 *footn.*—Ed.]

796 252 to germinate. It is then taken out, dried and ground in one of the Gilgit water-mills. The flour so made is called *diram*, and of it a sweetmeat is compounded on the first of the month by adding some water, oil of apricots and walnuts to the flour and cooking the whole without the addition of any sugar. This sweetmeat has been tasted by the writer and is called *mailai diram*. It has a sweet flavour in spite of the absence of sugar, the fact being regarded as in a way miraculous. The remaining flour is utilized in making small flat loaves called *diram phiti*. This bread is eaten with raisins and oil. The combination is called *dracha bhat*. The feast is not, however, wholly of a vegetarian nature. In the month of "Nos" (about November) each family kills several sheep, and the meat is dried for future use. A leg and a tail are, however, set apart to be cooked on "Shino Bazono," and are then eaten with the *dracha bhat*.

796 539 The feast, which has been partaken of by all the members of the family together, being over, dancing commences and the following song is sung:—

(1) Aju kal ootá la Drároo aju kal chirring ga ootá.
(2) Goom ái chhani tharega, aju kal chirring ga ootá.
(3) Ghi ái chhani tharega, aju kal chirring ga ootá.
(4) Mos ái chhani tharega, aju kal chirring ga ootá.
(5) Mon ái sarai tharega aju kal chirring ga ootá.
(6) Ash to sho dez ik alo aju kal chirring ga ootá.

Translation:—

(1) May this year come again, oh Brethren, may such a year come again!
(2) We will have our stores filled with wheat, may such a year come again!
(3) Much *ghi* will be produced, may the next year be such a one!
(4) Quantities of meat will be stored, may the next year be such a one!
(5) Our vessels will be filled with wine, may such a year appear again!
(6) A blessed day has come to-day, may such a year appear again!

796 526 [563] At noon all the fighting men assemble and make preparations for polo, while the women ascend to the roofs of the houses on each side of the road along which the procession to the polo-ground will pass. In their hands are long slender sticks, with which, as the procession passes, they belabour their heroes unmercifully. Koliwals are specially made the victims of this castigation. They are the trading community of the country, and the opportunity of paying off old scores is one not to be lost. An unpopular general dealer may consider himself fortunate if he escapes from the hands of these viragos with the payment of a forfeit of gold dust. Next comes the turn of the Rá or chief, who runs the gauntlet mounted. Galloping through, he salams with both hands to the women on either side, but even he is not allowed to pass without the bestowal of liberal largess on his fair subjects. It must be admitted that the ladies generally let him off lightly, for which no doubt they have their reasons. Possibly their position at court depends on it. On the arrival of the procession at the polo-ground, a goat is killed on one of the goal-stones. This sacrifice is called "Barono-ai-Karai." The goat's head having been cut off, a rope is attached to it; the players then touch the head with their polo-sticks. After this a *doom* or drum-beater sets off at a run holding the end of the cord, to which the goat's head is attached behind. After him rides the raja or *trangfa* of the village, who strikes the head

repeatedly with his stick till they reach the opposite goal. This ends this part of the festival. Polo then begins, and, as is the fashion in these parts, is continued without intermission till the evening of the great day.

### The "Ayi Boyi" Ceremony.

Ayi Boyi is the name of a Gilgiti month falling next to "Shino Bozino." The day fixed for performing the ceremony was publicly announced by the Rá throughout the village. All the boys and young men of the village assembled in the afternoon at a place just below the Rá's dwelling. The Rá used to sit on the roof of the house surrounded by his private servants, and a heap of walnuts was laid before him, while his followers laid a heap of ashes near them. The Rá then threw all the walnuts among the people below, who scrambled for them. While they were thus employed a heavy shower of ashes was hurled down by the Rá's servants upon them. In the merriment which followed, the people would rush towards the Rá, endeavouring to seize him or his servants, if they were strong enough to do so; while if they proved to be the weaker, the chief's followers would turn the tables against them. Should the chief himself or any of his suit fall into their hands, he was only released on the payment of a suitable forfeit; but, should the struggle result in the favour of the chief and his party, the prisoners made from among the people were released after a few days' captivity.

## II.

### The Ceremony of "Ganoni."

The inhabitants of these parts are strictly prohibited from tasting any new crop before accomplishing the "Ganoni" ceremony, which is celebrated in the middle of June, when the wheat and barley are ripe. The Rajah or headman of the village fixes and proclaims throughout his district the days for the performance of this ceremony, which is carried out in the following manner. On the afternoon of the day fixed the people set out to their fields with loaves fried in butter, which are greedily eaten at a corner of the field by all the members of the family. After this they cut some ears of barley, bring them to their homes, and keep them for a while on a fire. These husked and roasted grains are now put in a small basin filled with milk or curds. Of this milk every member of the family takes three wooden spoons full. Then national dances and vainglorious songs continue till late in the night.

### The Duma Nikha Ceremony.

When the people have finished the labour of reaping and winnowing their spring and autumn crops, and have put the grain into bags to carry to their homes, they recite the following prayer:—

(1) Bismillah ya Khudaya Barakat deh.
(2) Doosum, Doosum ai Barakat deh.
(3) Kharki jawān ai Barakat deh.

585
539
Translation :—

(1) Do not weep, O flower-like girl, thy complexion will turn pale!
(2) Thou wilt go on a lofty hill, O girl, thy complexion will turn pale.
(3) Thou wilt (by weeping) burn your heart, thy complexion will turn pale.

In Shinaki there is a custom called "Kao." If a young man has determined to marry a certain girl but her parents are not willing to give her to him, the young man either calls out in an assembly of the village headmen:—"The girl is mine, and I will perform 'Kao' if she is not given to me." Sometimes in order to assemble the people he fires a gun outside the village and utters the same words in the presence of those who collect; or if he gets an opportunity he tears the girl's shirt slightly in the presence of some other men and says to her:—"You are mine." When this has been done, the parents are obliged to marry the girl to him, but they can demand from him whatever they like up to the limit of his means. If they marry the girl to anyone else, the young man will murder the girl as well as her husband as soon as he gets an opportunity.

[682]

## IV.

### The Ceremony of "Seelo-ai-Thali" (Seat of Chastity).

887
831
796
This ceremony was performed for old women, who have been virtuous and chaste throughout their lives. These women were called "Seelo," and their descendants were very proud of them, so that on the occasion of family quarrels they used to say to the opposite party, "What have you to say to us? Our mother is "Seelo," while yours is not." To accomplish this rite, an elevated stone platform, about five yards each in length and breadth and a yard in height, was erected by the woman's nearest relatives. On the day appointed all her kinsmen came to the place, with a white she-goat as a sacred judge, to decide the fate of the old woman. The latter was clad in silk and placed on a bench. The eldest of the family bound a silk turban on his head, as well as on that of the goat; and, placing the goat below the bench with its face westward, addressed it in the following manner:—

"O thou white goat, if my daughter" (or whatever relative the woman was to the speaker) "has throughout her life lived an honest, virtuous and pious life and has remained clear of the sins and crimes of falsehood, theft, debauchery and treachery, be pleased to salute this bench for the sake of such a righteous and godly woman." In the case of the woman having led a blameless life, the goat by touching the bench approved her virtue. The assembled crowd then broke forth in cheers, and as an expression of their joy the relatives killed several goats and fed the people present. But if it happened otherwise, and the goat instead of performing what was considered an obeisance to the bench, ran round it bleating, then a great shame took hold of all the woman's kinsmen, and they ran away to their homes, never to speak to her again during the remainder of her life.

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

crops, the female population of the village proceeded to the Devi in their best attire. They sang on their way, and when they reached their destination presented a goat to the "Boh Bin." He then threw up some small branches of the juniper in the air, and the women attempted to catch them before they fell to the ground. It was believed that a woman would be blessed with as many children as the branches she succeeded in catching. Descendants of the original "Boh Bin" still remain, but the ceremony is no longer observed.

A stone of this kind is also found at Barmas near Gilgit. The ceremony performed upon this stone was exactly the same as stated above, but it has a different name, *viz*: "Mulkum."

## "Rato" or "Chili."

At Farfuh, a village in the Bagrot valley, there are five small portions of land situated at the foot of a mountain and called Chuto Rato, Shilo Rato, Surgon Rato, Chilko Rato and Thoko Rato. In these tracts there are five very large boulders and five small stones, called respectively "Dev-ai-Maron" and "Mos Samaran Ken" (*i.e.*, stone for distributing flesh). Here the "Rato" ceremony, also called "Chili," used to be performed as follows. During the first six days of the ceremony, which lasted for seven days, the people wore new and clean clothes, the sexes being separated and inhabiting different houses. On the seventh or the last day, all the people of the different communities or families of the village assembled separately and went to their respective "Ratos" with a goat and some young branches of the chili or *Juniperus macrocarpa*. These branches were placed upon the "Dev-ai-Maron," and the blood of the goat which was now sacrificed was thrown on. The meat was placed on the "Mos Samaran Ken" and distributed among those present, who roasted and ate it at the same place. It was never given to any woman or to a man of any family other than that of "Rato." The shoulder-blade of the goat killed was then placed on a high stone and fired at by marksmen amidst the noisy acclamations of the people, and a dance was held in honour of the sacred ceremony. After this the people assembled round the "Dev-ai-Maron," while the oldest man present or the headman of the village sat quite close to the stone and addressed it in the following manner: "O iron-like Rato, O Shri Bagartham, we have come to thee to express our wants. We have no progeny: kindly endow us with children. We are destitute of money: kindly favour us with gold and silver. We are in want of grain: please supply us." In the same manner he related all their desires for cattle, clothes, goods, etc., while the other men followed him and expressed their assent to what he said by crying "Amen." The women of the village now appeared in their best attire, with some dry flour and small flat loaves. They threw the *atta* on the *chili* branches and prayed in the same manner for the fulfilling of their desires. The loaves were distributed among the men, who eat and rejoiced. At some places the women were strictly prohibited from going near the Rato stone. This ceremony was performed and known by the same name throughout the whole of Gilgit, but on stones of different names, so that the stones at Datuchi and Bulchi were called "Aju Bin," at Sinakar "Shri Bin," at Gilgit and Dainyor "Rato-denaken," and at Naugam "Shri Bai." The

3: Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

to inflict harm upon the people, they themselves did not dare to put an unclean thing into the spring; and therefore on such occasions a foreigner was employed to perform this act, receiving as remuneration a large quantity of grain collected for the purpose at the rate of two seers per house. After receiving this grain he threw some unclean thing into the spring; and took it out when the rain was no more required. There are two other similar springs: one in the Bagrot Valley, called Chakrot Bari; and the other near the Tarshing village in the Astor District, called Komachon uts.

778 789 823

### "Rashoo ai Yudaini."

### (The Fairies' Drum of Rashoo.)

The Doms of Bulchhi, a village in the Bagrot Valley, have still in their possession a small drum about one foot in diameter and three feet in circumference. This is called "Rashoo ai Yudaini." It was once carefully kept in a handsome cover by Rashoo, a Rono Wazir of Gilgit, who had ruled for the chief in that place. It is said, that whenever Rashoo intended to advance against any chief, the Yudaini was brought and kept before him. If it made a noise, without having been beaten by anybody, Rashoo believed it an omen of success. But if it were silent, Rashoo postponed his expedition.

534 539 778 721

### The Hoof Mark of a Horse.

Between Edgah and Balan villages in the Astore district there are seen on a rock near the old road which faces the Phina village, a few small flags. It is said that at this place there is a mark on a stone of the hoof of a horse. The story of the hoof-print is this—The place was once haunted by a giantess, who was a bitter enemy of mankind, and had become the terror of the people. The people wished to get rid of her. By the providence of God, one day a venerable Darwesh—some say that the Darwesh was no one else but Hazrat Khizar himself—halted on the river-bank close to the foot of the Phina village, and saw the giantess across the stream. He flung himself on his horse and, spurring it vigorously, came upon the giantess with the speed of lightning. She had no alternative left but to take to her heels, which she did, leaving the noise of her shrieks behind, and was never seen again. The horse had come upon it with such a vigour that the stone gave way under its weight, and there burst forth from the stone a spring of cool, fresh water. Though there exists no trace of it now, it is still looked upon as a sacred place, and the people from far and near gather together annually to celebrate the event by killing a sheep, feasting upon it, and making merry.

## XI.

### The Foot of Malik the Rá of Gilgit.[1]

It is said that one of the feet of Malik, an ancient Rá of Gilgit, was naturally formed like the hoof of an ass. He took great care to conceal this defect from all people. One of his old servants had, however, a knowledge of the mystery; but he was strictly forbidden by the Rá to disclose the secret. The servant kept it from becoming known

539

[1] [Cf. the Greek story of Midas and his ears, and of how their existence there was revealed to the people.—Ed.]

539 776 173 soul. They agreed to lend a helping hand to Shamsher and to raise the subjects secretly against their merciless chief. On finding that the majority of the people had joined him, Shamsher fixed a date for accomplishing the deed by burning a large fire late at night round the fort of Shri Badat. A few days before the appointed day, he sent down Sakina to her father with instructions to keep the secret, while he himself went down to Danyore village to make his preparations. At about 3 A.M. on the night appointed for the purpose, all the people turned out of their houses with torches in their hands and a quantity of wood. Shri Badat's fort was situated about 200 yards east of the present Gilgit polo-ground on the site of the houses of the Bhirai family. The people were still some way from the fort when Shri Badat's spirit began to feel uneasy. He therefore asked his daughter to go out and see what was the cause of his restlessness. This undutiful and faithless woman, who had a perfect knowledge of the conspiracy, went out and returned after some delay, in order to let the people come closer, and said that there was nothing to be feared outside the fort. But Shri Badat's increasing uneasiness brought him out of his room. He found himself in a very awkward position, having by this time been surrounded by the enemy, who had succeeded in planting large fires round the fort. In this predicament he had no time to consider the necessity of punishing his wicked daughter, but at once jumped up in the air and took wing towards Chotur Khan, a snowy tract in the Indarman Valley. *He is said to have rested* at Yashpur (a deserted village near about 12 miles west of Gilgit) Hinzil, where he requested somebody to bring him a cup of cold water. The village had a plentiful produce of grapes, and the inhabitants used to make wine from them. The man therefore brought out a cup of wine to Shri Badat, who refused, saying angrily that, seeing that he had come there after having escaped from a fire which had done great injury to his soul, it was improper for the man to give him wine instead of cold water, which was what he had asked for. But none would bring him water, and, being thus dissatisfied with the treatment of the villagers, he cursed the place, saying that it would be totally ruined and laid waste, so as to produce no grapes again. It happened in the following year that the glacier which afforded a supply of water for the village melted away, thus effectually destroying the village cultivation forever. From Yashpur Shri Badat went to Chotur Khan and hid himself there under a big glacier, where he is still said to have his abode.[1] The people have a firm belief that he will re-appear at Gilgit to renew his rule over them with redoubled fury. Being afraid of his regaining the kingdom, the people are in the habit of burning big fires in their houses throughout the night of the anniversary in November on which Shri Badat was driven from Gilgit, in order to keep away his ghost if it return. On this night no one ventures to sleep, but to while away the time they are in the habit of 578 dancing and singing round the big fires. This ceremony is called "Talian." There is, however, a family of Kuichins (the kitchen servants of Shri Badat) who do not take part in the performance of the ceremony; for they are still loyal and faithful to their master, and are still desirous of his returning to his own. This is the only family now residing at Gilgit who are well-wishers of Shri Badat. It is curious that they should have escaped injury at the hands of the opposite party.

796

1 [i.e. Shri Badat. See CAT. 116 pp. 114-113---ANALYST]

31 Muhammad G-3 (ca. 1900) 1907 AV3 Dard AV3

On the afternoon of the following day each family kills five goats for every house, as a token of their happiness at being free for one more year from the re-arrival of the cruel chief. The meat is dried and kept to be cooked during the following months. It is said that the meat of the goats killed on this day does not turn bad, even if kept for years. This ceremony is called by them "Nimalo." 796

A STORY OF THE KATCHATA FAMILY AND "CHILI" CEREMONY.

Once upon a time there resided at Gilgit a wealthy family of Katchatas. This family lived alone in a separate fort on the site of the fruit orchard in which Mr. Hayward is buried. The family grew so strong that it kept the chief afraid of its power. The Rá, who always used to keep a watchful eye over this clan, was so frightened by their doings that, being unable to fight them openly in the day-time, he thought at last of making a sudden night attack on the sleeping warriors. The proposed attack was so successfully carried out by the Rá that he left none alive in the fort except a pregnant woman, who managed to escape by a small window and took flight up the Kargah Valley, in order to seek a refuge in a secluded village of Darel. There she soon bore a son. None of the family survived to cultivate their lands, which were lying waste. The Rá, however, took this task upon himself, and wheat was sown over the land by his followers. But he was much vexed when he saw the whole crop turned black and become unfit for food, and that his labour was fruitless. For the five successive years the same state of things continued, and the Rá, being weary of cultivating the lands any longer, at last ordered the Dasyals to explain the real cause of this misfortune. According to their usual custom the Dasyals worked themselves into a state of frenzy by burning the leaves of the *chil*, and then, putting their ears for a short time upon the drums to listen to what these had to say, sang a song to the following effect :— 539 241

"The fertility, prosperity and abundance of Gilgit were due to the happiness and the blessed hands of the Katchata clan, and because they were extremely oppressed and tyrannised over by the Rá, the destruction of the land resulted and will continue until a man of the same family is brought here to plough the lands with his own oxen, and to put in the seed in the Rá's cloak. A few handfuls must be scattered by the Rá himself, while the remainder is sown by the Katchata or his followers in those fields. The other inhabitants must not precede the Katchata in ploughing and cultivating their lands." On this the chief gave orders to the assembly to bring a man of that clan, from any part of the country in which he could be found, and promised that a good reward would be given to the man who succeeded in finding him. A number of the Rá's followers at once started in all directions in the hope of gaining the reward. The man who had set out for Darel and Tangir came to know, to his great delight, that a woman of the family had at the time of the massacre escaped towards Darel, where she had since borne a son. He sought out her dwelling, and promising her safety as well as a good reward, obtained her consent to accompany him to Gilgit. He thus gained the reward, while she was welcomed by all the people. The Rá then assisted in the sowing of the fields according to the advice of the Dasyals, and with the returning happiness of

Dargyassi de tija namo hla zhuni
Shuni bhi tija namo hla zhuni
Sinani bhi tija namo hla zhuni

Translation:

Give abundance! Honour to thee, oh god Zhuni!
Crops also! Honour to thee, oh god Zhuni!
A son also! Honour to thee, oh god Zhuni!

Notes on the Dard text:

*Dar-gyyas* is a Tibetan synonym compositum meaning about 'abundance;' *di* was probably in course of time contracted from *de*, give, and *ti*, thee; *tisha* or *tija* means 'to thee,' *sha* and *ja* are frequently used terminations of the dative case; *nomo* instead of *namo* is a case of assimilation of the vowel of the first syllable to that of the second syllable; *namo* as well as *nomo* often occur in the sense of 'glory, honour' in the Bono-na-songs, Ladakhi Songs, No. XXXI ff; *hla* is the Tibetan *lha*, a Pre-Buddhist god; *Zhuni* is the proper name of the house god. *Shuni* means 'harvest'; *bi* is supposed to be the same as Urdu *bhi*, meaning 'also.' Also in the second and third lines the *ti* of *tisha* was lost in the preceding word. The *ni* in *sinani* is the emphatic syllable of Tibetar.

(4) *Dard customs.*—To the present day the Māmani-festival is considered as a Dard custom. It is held 1½ months after the 21st of December. In Khalatse it is celebrated in this way:—Cooked heads of goats and sheep, and omelettes called *ten ten*, are brought before an ancient row of *mchod rten* (mchod rtengyi sgang) which goes back to Dard times, and a feast is given to everybody who will partake in it. Strangers are welcome.

Also the Ladakhi music and art of dancing is so entirely different from Tibetan music and dancing that non-Tibetan influences must be suspected here. In Ladakhi music, besides the Chinese scale,—classical scales are in frequent use. Of classical scales I have discovered the following in my collection of Ladakhi tunes: Ionian, Aeolian, Lydian, Mixo-Lydian. It is easier to believe that these scales came here through a Dard channel than from Tibet. Although the metre of the Tibetan Ladakhi songs is almost invariably trochaic, the metre of the Ladakhi tunes is iambic.

I have tried to prove the Dard origin of one single West Tibetan village only. It would probably be easy to accumulate similar reasons

171 advancing in Dardistan and will, no doubt, sweep away
779 many of the existing traditions. The progress, too, of the
[797] present invasion by Kashmir, which, although governed by
Hindus, is chiefly Sunni, will familiarize the Dards with
the notions of orthodox Muhammadans and will tend to
substitute a monotonous worship for a multiform superstition. I have already noticed that, in spite of the exclusiveness of Hinduism, attempts are made by the Maharaja of Kashmir to gather into the fold those races and creeds which, merely because they are not Muhammadan, are
000 induced by him to consider themselves Hindu. For instance, the Siah Posh Kafirs, whom I venture also to consider Dards, have an ancient form of nature-worship which is being encroached upon by Hindu myths, not because they are altogether congenial but because they constitute the religion of the enemies of Muhammadans, their own bitter foes who kidnap the pretty Kafir girls and to kill whom establishes a claim among Kafirs to consideration. In the same way there is a revival of Hinduism in the Buddhist countries of Ladak and Zaskar, which belong to Kashmir, and ideas of caste are welcomed where a few years ago they were unknown. As no one can become a Hindu, but any one can become a Muhammadan, Hinduism is at a natural disadvantage in its contact with an advancing creed and, therefore, there is the more reason why zealous Hindus should seek to strengthen themselves by amalgamation with other idolatrous creeds. To return to the Mussulman Dards, it will be easy to perceive by a reference to my ethnographical vocabulary what notions are Muhammadan and what traces there remain of a more ancient belief. The "world of Gods" is not the mere عالم which their professed religion teaches, nor is the "serpent world" a Muhammadan term for our present existence. Of course, their Maulvis may read "religious lessons" and talk to them of Paradise and Hell, but it is from a more ancient source that they derive a kindly sympathy with the evil spirits "Yash;" credit them with good actions, describe their worship of the sun and moon, and fill the interior of

173 which marched straight on Yasin—the second to go to the right of Yasin by the village of Martal and the third to go to the left of the place, so that the inhabitants should not be able to escape. When the Sikhs entered Yasin with Asmat Khan preceding them (who got all his friends and relatives out of the way) acts of oppression occurred which I have heard related by the people of Kholi and which have never been surpassed by any nation of infidels. In traditions much is told, but all is nothing compared with the following atrocities which surpass the doings of demons, jins and witches. We, say the Kholi informants, with our own sinful eyes saw these ferocities practised by Mussulmans on Mussulmans. That blood thirsty Kafir, Isa Bahadur, ordered the houses to be entered and all the inhabitants, without regard to sex or age, to be killed. We swear that Isa Bahadur descended from his horse and distinctly ordered the soldiers to snatch the babes from their mothers' arms and kill them, so that his heart might be set at ease. He then put one knee on the ground, putting his hands on his knees and waiting for the babes. As they were brought to him, he put one of their small legs under his foot and tore the other off with his hand. Even the Sikh soldiery could not bear looking on this spectacle. However, this accursed infidel, (infidel, although he was a Sunni) kept on tearing them to pieces. The slaughter lasted five days and nights. The blood of the victims flowed in streams through the roads: there is not a word of exaggeration in all this. After these dreadful five days were over, Zoraweru sent for Asmat Shah and enquired after his relatives, whom he had put in safety. They were brought forward and Yasin committed to their charge, but what was left of Yasin!?* Thus 2,000 men, women, and children above ten years of age and a countless number of infants and babes became martyrs at the hands of the bloody Sikhs—3,000 persons (chiefly women) a very few children as also a few old men were kept as prisoners and brought in three days to Gilgit, Zoraweru being elated with excessive joy which he manifested in various ways *en route*. When he came to Gilgit, Isa Bahadur and Asmat Shah, selecting 1,000 of the more beautiful women, took them to Jammu with 3,000 soldiers. They were so delighted that they took double marches in order to be early with their good news. At a public assembly at Jammu, these scoundrels narrated, with much boasting and eloquence, their own achievements and those of the Sikhs and spoke with the loud tone in which victories are reported.

When they had finished, the Maharaja asked them whether their hearts were pleased with all these doings. Isa Bahadur said that all his heart's desire had not been accomplished, though he certainly had experienced a slight satisfaction in the fate of the people of Yasin, who had been his enemies in the times of Gauhar Aman. "God be praised," he said, "that I have lived to revenge myself on them." The Maharaja enquired what else there remained to afford him complete satisfaction. "Perhaps," he said, "I may be able to meet your views." Isa Bahadur replied. "Alas,

[795]

* Here my informant, himself a Sunni Mussulman and always calling his Shiah co-religionists Kafirs, was raving with indignation against the orthodox Sunnis, Isa and Asmat and the Sunni soldiers of Kashmir, for murdering the Shiahs of Yasin. He ascribed the atrocities of the Sikhs entirely to the orders of the ex-fugitives.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3 Kandiá

000 When Najmuddin left his country, it was governed by a servant of the court of Bukhárá.

The houses are generally built of mud, cut into smooth and symmetrical walls, and are plastered by a kind of lime called *guch*. Burnt bricks are very rare, and only the palace of the governor is made partially of them. The walls are roofed by thatch made of "damish" (reeds), which grow abundantly on the banks of the Amoo.

The *dress* consists of long, flowing choghás (stuffed with cotton) and woollen turbans. The Khatlanis wear a kind of full boot which they call *chamush*, but lately a kind of shoe is introduced from Russia, and is called *nughai*.

The country is connected with Yarkand by two roads, one running through Kokand and the other through the Pamir.

---

The above and following accounts were in answer to questions by Dr. Leitner, whose independent researches regarding Kandiá in 1866–72 were thus corroborated in 1881, and again in 1886, when the photographs which serve as the basis of our illustrations were taken.

---

## IV. THE LANGUAGE, CUSTOMS, SONGS, AND PROVERBS OF GABRIÁL.

10 / 131 Position.—A town in *Kandiá*, a part of Yaghistan (the independent, or wild, country) situated beyond the river Indus (Hawá-sinn), which separates it from *Childs*. The country of *Kandiá* extends along both sides of the *Kheri Ghá*, a tributary of the Indus, and is separated from *Tangir* by a chain of mountains.

361 The town of *Gabriál* is situated three days' march from *Jalkót*, in a north-west direction, and is one day's march from *Patan*, in a northerly direction. *Patan* is the chief city of Southern Kandiá.

161 Inhabitants.—The whole tract of Kandiá can send out 20,000 fighting men. They are divided into the following castes:—

564 (1) Shín, the highest, who now pretend to be Quraishes, the Arabs of the tribe to which the Prophet Muhammad belonged. (Harif Ullá, the Gabriáli, and Ghulam Mohammad, of Gilgit, *call themselves Quraishes.*)

(2) Yashkun, who now call themselves Mughals, are inferior to the Shín. A Yashkun man cannot marry a *Shín* woman. Ahmad Shah, the Jalkoti belonged to this caste.

3 (3) Doedzgar, carpenters. (4) Jolá, weavers. (5) Akhár, blacksmiths. (6) Dóm, musicians. (7) Kámin, lowest class. } In reality these people constitute no distinct castes, but all belong to a third, the Kamin, caste.

101 The people of *Northern Kandiá* (Gabriál) are called *Bunárí*, and of the southern part (*i.e.*, Patan) *Mani*, as the Chilasis are called *Boli*. A foreigner is called *Rarówi*, and fellow-countryman, *Mugámi*.

798 Religion.—The Gabriális, as well as all the people of *Childs*, *Patan*, and *Palas*, are Sunnis, and are very intolerant to the *Shias*, who are kidnapped and kept in slavery (Ghulam Mohammad, the Gilgiti, has been for many years a slave in Chilas, as Ahmad Shah reports).

4 AV3 Dard AV3

military service in time of war. It also gives three hostages for good conduct, who are changed periodically. The people of Gor claim to have been Mussulmans for only three generations, and are all Soonnees.

There are three forts in Gor, named Loosonotkot, Doolotkot, and Tunelkot. The people of Gor have always been friendly with Chilas. At present Gor is noted in the Kohistan for the good quality of the wool it produces. The tradition is still preserved of the god Taiban, who was the tutelary deity of Gor, and whose worship was continued to a very recent date. A rude sculpture of a horse still exists, which is named "Taiban's horse." Even now Taiban is invoked occasionally as a witness of a solemn covenant. Along the river, at intervals the whole way from Gor to Seo, are said to be a number of ancient rock inscriptions.

A few miles above Gor the small detached village of Thalich forms the extreme limit of Yaghestan, consisting only of 11 houses: it forms, as Mr. Drew observes, the smallest of independent communities. The people of Thalich make common cause with those of Chilas, of whom they are an offshoot, and are protected by them against more powerful enemies.

Above Herbund, on the left bank, is the large community of Chilas, which embraces six valleys. The principal villages are Tor, 200 houses; Chilas, 140 houses; Geen, 5 houses; Takk, 80 houses; and Booner, 60 houses. Chilas can furnish about 1,500 fighting men, without counting a number of immigrants from other communities who have lately settled in the country. Roads lead from Khaghan in the Hazara country by the Babusar Pass to the Indus in seven days, and from Shardi in the Kishengunga Valley by the Shotô Pass in five days. There is also a road from Astor by the Mazenoo Pass, only practicable at any time for men on foot, and closed in winter, by which Booner is reached in four days. The road up the Indus from Chilas is difficult and almost impassable even for men on foot. This difficulty of access has given the Chilasis a spirit of independence, and a distinctive character among all the Kohistan communities. Though but comparatively recent converts to Islam, they are bigoted and fanatical beyond all other Dards, owing, it is said, to Chilas having been at all times a favourite resort of Moollahs from Swat. Being Soonnees, every Shiah who falls into their hands is put to death without being reserved for the usual alternative of slavery. The whole community can muster 3,000 men capable of bearing arms, and have at all times borne a high reputation for bravery.

Wherever Soonnees and Shiahs are found living together, they seem to practise a mutual tolerance rare in other purely Mahommedan communities. Intermarriage between the sects is so common as not to excite remark.

D
795
B
795

The whole of the people of Hunza, Ponyal, Zebak, Shighnan, Roshan, Munjan, Kolab, and Darwaz, more than half the people of Sirikol, Wakhan, Yassin, and the greater number of the inhabitants of the Ludkho Valley in Chitral, belong to the Maulai sect. A few Maulais are said to exist in Khokand, Karategin, and Badakhshan, among the poorest of the people, and in one district near Balkh, they are known as the disciples of Syud Jaffer Khan. Some are also to be found in Afghanistan, where they are known as Muftadis. A few may possibly exist in Bokhara and Khorasan, but in a fanatical country they would probably pass themselves off as Shiahs.

The head of this sect is Agha Khan, the acknowledged spiritual chief of the Khojas of India and Persia, a gentleman of Khorasan, who came to India in 1840 for political reasons, and who has resided in Bombay ever since.

The countries inhabited by the Maulais are roughly divided among a number of Pirs, who are treated by their disciples with extraordinary respect, but residence does not give the Pir authority over the whole of any special district. The office is hereditary, and Maulai families transfer their spiritual obedience from father to son, regardless of changes of residence. For instance, Shah Abdul Rahim of Zebak, who is honoured and respected as being next in rank to Agha Khan himself, has disciples in Sirikol, Kunjoot, Zebak, Yassin, and Badakhshan, but other Pirs also have disciples in those places. The respect paid to the Pirs by their disciples is unbounded; nothing is refused them. If they ask for a son or a daughter of any house, no refusal is dreamt of. One of them once said to me, "If I ordered a father to kill his own son, he dare not refuse." Whenever they move about, they are attended by a large number of followers, who are fed and maintained out of their superfluities, and they live entirely on the offerings of their disciples. Presents of horses, cattle, clothes, fruit, wheat, &c., are continually being made them, and the best of everything a Maulai possesses is given to his Pir. A portion of these offerings is converted into coin and sent yearly to Agha Khan, and agents travel yearly from these remote parts to Bombay solely for the purpose of conveying these contributions to him.

Have seized the skirts of your bounty,
Sahib-i-zeman.

D Bo 795 [262]

Wine is drunk by the Maulais without concealment, and they do not strictly abstain from eating the flesh of animals not killed in the orthodox manner. Being absolved from the constraints of prayer and fasting, the practical religion of the uneducated consists of little more than obeying the commands of their Caliphas and Pirs, and making offerings freely through them to their spiritual chief. They are by no means intolerant, and, where permitted, live on good terms with Soonnees and Shiahs, with whom they intermarry without restraint. The only cases I have known of ill-feeling between the sects have been caused in the first instance by Soonnees from other places. From Shiahs they seldom meet with hostility, owing probably to the respect they show to Ali; though they do not celebrate the martyrdom of Hassan and Hoossain.

D Bo [798]

D 795 764 Bo 795 764

On the death of a Maulai the choicest articles of his portable property are set aside for the Imam-i-zeman. No food is cooked in the house, for from three to eight days, according to the rank of the deceased, and the family subsist on food cooked elsewhere. Food is also placed on trees and exposed places for birds to eat. On the evening of the appointed day a Calipha comes to the house, and food is cooked and offered to him. He eats a mouthful and places a piece of bread in the mouth of the dead man's heir, after which the rest of the family partake. The lamp is then lighted (from which the ceremony is called "Chiragh roshan"), and a six-stringed guitar called "gherba" being produced, singing is kept up for the whole night.

643 The Mehtar ruled his country with a rod of iron
651 and none dared gainsay his commands. But his
567 rule was not popular—far from it. His oppression
159 extended in all directions: he sold large quantities of timber yearly to Peshawari merchants, and the whole of it was cut and conveyed to the streams by forced labour—of course unpaid for; he interfered in trade, and levied prohibitive taxes on merchandise passing through his country; he bought the goods of passing merchants, if he wanted them, at his own valuation; he sold his subjects into slavery, and sent presents of slave boys and girls to the Amir
159 and to neighbouring chiefs. At the same time he
[798] had many good points. He was deeply religious according to his lights, yet he was no bigot. His view was that so long as a man was a good subject the ruler had no call to interfere with his religious opinions, and while I was in Chitral he soundly rated his son Murid for trying to enforce orthodoxy among his people. He was a kind and indulgent father, and devoted to his small sons, who used to form a pretty group round him when he came to see me, clustering about him with the fearlessness of affection. In a country where unnatural vices were rampant he was unstained. He had a religious horror of them, and attributed his success over the Kushwakt chiefs to their depravity, against which
[595] God's wrath had kindled. He was much married, not "cursedly confined" to one wife, or for the matter of that, to some dozens of wives and concubines. Like David, he "scattered his Maker's image through the land," and at every village you found a small son or heard of a daughter. He had eighty children.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

173 Nazr-ud-din, Shîn of Sazîn; Hajem Khan, Shîn of Sazîn; Lala Khan, Yashkkunn of Dareyl; Jeldár, Yashkkunn of Dareyl; Izzat, Shîn of Phúgotsh (Dareyl); Rahmi, Shîn of Samagiál in Dareyl; Matshar Khan (a great Sirdár) Shîn, Samagial; Losîn, Shîn of Barzîn; Mirza Khan, Shîn, Barzîn; Shah Merdán, Shîn of Hudúr; Kazilbik, Yashkunn of Búder.

After a year had passed, the Chilasis and the Yaghistánis* assembled at Chilás with the intention of plundering Astór, whose Governors then was Jabr Khan and Wazîr Gurbúnd, subjects of Kashmîr and of the Shiah faith, and therefore fit objects for the attack of orthodox Mussulmans [802] (Sunnis). We were in all about 108,000 Yaghistanis (the ideas of number are very vague in those countries—though not so vague as in Lughmáni where there is not a separate name for a number above 400, and the foreign appellation of *hazár* = 1,000 is the equivalent for 400. *Vide* Lughmáni and Kandiá Vocabularies in which numeration is by twenties). The Astóris were only 6,000, but we went in large numbers, as we counted on having to meet the Dogras of Kashmir.

The following is the List of the confederate Yaghistanis: From Koli, 1,000; Palus, 4,000; Jalkót, 3,000; Sazîn, 500; Shatiál, 500; Harbann, 1,000; Takk, 1,000; Chilas, 3,000; Torr, 1,000; Tangir, 4,000; Dareyl, 10,000; Gôrdjan, 5,000 (probably Gôr); Gîne, 100; Bûder, 100; Gormáni, 2,000 (probably auxiliaries from Gauhar-Amán, ruler of Yasin, popularly called Gôrmán); Gilgit, 5,000; Sai, 5,000.

(This only brings the allied Dard forces up to 48,200, perhaps only 19,000, as already explained. Since then the Dards have been more than decimated, and the destruction of Gilgit with all its traditions, etc., is one of the saddest results of the Kashmir frontier war. There are, however, Gilgit emigrants to be found in Sazîn and other places.) We marched on to the mountains of Astor and Gauhar-Amán with 2,000 men stopped at Jalkôt (j as in French) in the Sái territory, 6 koss far. He told us that when the Dogras came up to assist Astor, he would at once advance with more troops to that place. When we came near Astor, the Governor was informed of our approach. Most of the Astoris fled, many leaving their property behind. The 6,000 fighting men remained; they had, however, sent most of their property away. The people of the Astor village, Dashkin, had not heard of our arrival; so we surprised it about midnight, killed 2 men and wounded 9—100 were captured (men and women). We took 80 cows, 500 goats, clothes to the value of 400 Rupees, 40 hatchets, 100 swords, and 100 muskets. Out of the house of the Wazîr Gorbúnd we got 8 kettles. There are many Yashkunns at Astor, three-fourths being of that race and the remainder being half Shîns and the other half Kamíns.† Our arrival at Astor was announced by a man whom with his companion we surprised seated at the bridge of Sugarkôt. A man of Shatiál killed the companion by throwing a stone at him; the other effected his escape and 173 567 enabled the Astoris to get away with their property. The reason why we killed so few was because we wanted to make the people our slaves, either

* "Yaghistáni" means inhabitant of the "wild" or "independent" country.

# APPENDIX VI.

## A ROUGH ACCOUNT, COLLECTED IN 1886, OF ITINERARIES IN THE "NEUTRAL ZONE" BETWEEN CENTRAL ASIA AND INDIA. By RAJA KHUSHWAQTIA AND Dr. G. W. LEITNER.

### ROUTE I.

361 FROM GILGIT TO KABUL, viâ Dareyl, Tangir, Kandiá, Ujù, Torwál, Swat, Dir, Maidán, Jandûl, Bajaur, Muravarri, Pashàt, Kunèr, Jelalabad, Kabul.

GILGIT TO SHERKILA, 9 katsha (rough) kôs * (1½ miles), ruled by Isa Bahadur's son, Raja Akbar Khan, under Kashmîr, a faithful ally, contains 70 zemindars' (peasants') houses on the Yasin river.

SHERKILA TO PATÀRI (is uninhabited), over a ridge Pîr (17 katsha kôs) called Batrèt, which is a plateau on which the Dareylis graze their flocks in the spring.

487 PATÀRI TO YATSHÔT (12 katsha kôs), road stony and jungly. Yat-
361 shôt is a village of Dareyl of one hundred houses, occupied by zemindars who have cattle, sheep, goats, and *buffaloes* (which are not found in [241] Badakhshan). The ground produces much white maize (from which bread is made), wheat, barley, grapes growing to a gigantic size, nuts, etc. [579] There is excellent water, but it is very cold. The people are Sunnis, and [97] speak Shiná (the dialect of Chilás). [The Shins appear to have been a [584] Hindu tribe expelled from Kashmir territory and converted to a sort of Muhammadanism, both Shiah and Sunni. They are the highest caste in Dardistan; but, instead of the Brahminical veneration for the cow, they abhor everything connected with it—its flesh and milk—and only touch its [771] calf at the end of a prong.] Yatshôt has two mosques, and Mullas who understand Arabic well. The Dareylis are very religious, and attentive to their ceremonial practices. The streamlet of Dareyl runs past it.

YATSHÔT TO MANIKÁL, 3 katsha kôs, a plain easy march through a prairie. Manikál has two forts, one of which has about 500 houses, and is called Dòrkans; and the other, Manikál proper, which has 300 houses and an old Mosque. Manikál is surrounded by forests. When the Kashmîr troops reached Manikál, the Dareylis, after fighting, burned down their old fort rather than surrender. There are many Mullas and disciples there, some coming from Peshawar, Swat, etc.

MANIKÁL TO SAMANGÁL, 3 katsha kôs, over an inhabited plain. The fort contains 800 houses. A great elder (Djashtero) called Kalashmîr resides there, whom all the Dareylis respect and follow, although there are many other Djashteros, like Muqaddams (elders, mayors), in Kashmir villages. He is wise and rich, possessing, perhaps, in addition to cattle,

[804] * A kôs is a measurement of distance varying from 1 to 2½ miles, and often depending on the speaker's impression due to hardships encountered or to other causes. "Katsha" and "pakka," for "rough, unfinished," and "thorough" respectively, are terms well known to Anglo-Indians. "Katsha" and "pakka" are generally spelt "kucha" and "pucka."

12: Biddulph G-3 (1873-1878) 1880 AU1 Afghanistan AU1
4 AV3 Dard AV3 Burusho AV7

to furnish him each with a yoke of oxen for ploughing his own lands. This service he could commute if he pleased for one baghaloo of gold for each yoke of oxen. He was also responsible for the collection of the "Koodkool" tax, but no authority could be exercised over him by the Wuzeers or Tarangfahs.

Next to the Tarangfah among the district officials was the Charboo, who acted as an assistant to the Tarangfah in each village. His *luspik* consisted in exemption from all taxes, and two of the ruler's fees on marriage a year; it being part of his duty to collect the "Garé toloo" tax. He also received a certain amount of the meat tribute. To help him in his work he was allowed four men called "Zeytoo," who only served for a year as peons to the Charboo, and were paid by an impost of 12 lbs. of grain from each house, which was divided among them.

Dr. Leitner suggests that these names of officials are of Tartar origin. None of them now exist in Baltistan except Wuzeer and Trangpah (Tarangfah). If it be the case that they are originally Tartar titles, it may be taken as a proof of the influence which the Iskardo rulers once exercised in Dardistan.

Justice was administered by the Wuzeers in their own districts. Cases which principally arose out of disputes about land were generally settled by a fine of cattle, sheep, or gold-dust. Any case involving a larger fine than one baghaloo of gold-dust was heard by the Ra. Serious crimes, such as murder or treason, were punished by the destruction of the whole family of the offender. His house was razed to the ground, and his relations reduced to slavery, and sold or distributed according to the will of the Ra.

The dues above mentioned are still paid, some of them to the Cashmere Government, and some to the present Ra of Gilgit.

The same system exists in Hunza and Nager, and in some respects in Wakhan. The following measures are in common use; in some cases they differ only in name, in others they differ slightly in amount:—

*Dry measure.*

| | | |
|---|---|---|
| 1 haiy | = 2½ lbs. English | Shina. |
| 6 haiy | = 1 kot | |
| 1 heejootee | = 3 double handfuls, about 2 lbs. | Boorish. |
| 8 heejootee | = 1 heechok | |

[CF. category 116, pp. 41-44 -- Analyst]

Av3 Dard Av3
Burusho AV7

D
804
B
804

*Gold-dust measure.*

2 surkhoo = 1 rut.
2 ruts = 1 baghaloo (Shina), or Khur (Boorish).
2 baghaloo = 1 toloo (Shina), or Bai (Boorish).

The hollow formed between the thumb and the back of the hand, placed palm downwards with the fingers extended, was the old measure of a Baghaloo.

*Land measure.*

1 chookili = the amount it takes 6 kots of wheat to sow.
2 chookili = 1 chooni.
2 chooni = 1 makhmi.

*Long measure.*

A span is called Ditt (Shina), or Tishti (Boorish).
2 spans = 1 hutt (Shina), or khash (Boorish).

Sir Biddulph G-3 (1873-1878) 1880 AUL-Afghanistan-AUL
4 AV3 Dard AV3
Chitral

651 might have furnished a pretext for their being sold. Failing
517 an excuse of this sort, the requisite number was made up by forcible seizure. Of late years the market for the disposal of slaves has become circumscribed, and in Chitral the system is now limited to little more than the selling or giving away of female children to supply the harems of Cabul, Badakhshan, and Yaghestan. In Chitral the Ashimadek class can hold slaves without special permission, but none of the "Fakir Mushkin" are allowed to do so.

804 The weights and measures in use are—

*Dry measure.*

4 cheiraks = 1 batti.
8 battis = 1 mun.
3 muns = 1 bel.

A cheirak equals about 1¼ lb. English.

*Long measure.*

A span = 1 eisht.
2 dishts = 1 hast.
2 hasts = 1 gaz.

*Land measure.*

2 chooruns = 1 chakwarun.
4 chakwaruns = 1 tukt.

A chooruns is the extent of land which it takes three battis, or about 15 lbs., of wheat to sow. The money in use is the Cabul coinage.

D 173

ready to take a tin containing pork and could scarcely be restrained till "lawful" food was brought to them by my servants. Men were forced to go with the troops. One Hakim Ali Shah, a teacher at Amritsar, was compelled to serve as a physician, a post to which he had no other claim, except that his name happened to be "Hakim." I rescued him. A virulent fever was destroying the troops at Gilgit, who, even after the siege of the fort had been raised, were liable to be shot down by prowlers from the tribes within a few yards of the fort. I ordered the fort, etc., to be cleaned and, although myself in danger of life from my Kashmir friends, if not from the tribes, I insisted on my orders being obeyed, the assumption of an authoritative tone being often a traveller's only chance of safety among Asiatics. I distributed medicine among the troops and was afterwards told in Durbar by the Maharajah that some medicine which I had sent to Wazir Zoorawra, who was then on his Dawyl expedition, had saved his life.

---

D 177 [164] [771]

Since then, the Dards have made the acquaintance of diseases for which there was not even a name in 1866. I refer chiefly to cholera and syphilis, which Kashmiri and Indian troops have introduced. Simultaneously, the indigenous methods of treatment, which are full of lessons for the imperial learner, are dying out. Industrial battlefields, historical superstitions or reminiscences, national feasts which existed in 1866 exist no longer, and what exists now will soon vanish before the monotony of orthodox Muhammadanism and the vulgarity of so-called European civilisation. "*Und der Götter heut Gewimmel, Hat sogleich der stille Hain gefüllt.*" The fairies and prophetesses of Dardistan are silent, the Thum of Hunza no longer brings down rain, the family axes are broken, the genealogists have been destroyed, and the sacred drum is heard no longer. The quaint computations of age, of months, seasons, years and half-years, and the strange observations of shadows thrown at various times are dying out or are already dead. Worse than all for enquiry into ancient human history, the languages which contain the words of "*what once was*," are being flooded by foreign dialects, and what may survive will no longer appeal to the national understanding. This result is most lamentable as regards Hunza, where the oldest human speech still showed elementary processes of development. I fear that my attempt to commit, for the first time, to writing, in an adapted *Persian* character, the Khajuná language, has only been followed in a document of honour which the venerable Chief of Nagyr sent me some years ago. Already do some European writers call him and his people "ignorant" when their own ignorance is alone deserving of censure. I deeply regret that the friendship of so many Dard Chiefs for me has made them scapegoats of Europeans, and may have thus indirectly led to the loss of their independence, but I rejoice that for over twenty-five years I have not attracted the European adventurer to Dardistan by saying anything about Pliny's "*fertilissimi tractûs Dardæ*," except in Khajuná Ethnographical Dialogues in the "Hunza-Nagyr Handbook," which explorers were not likely to read. Now others have published the fact, but not the accompanying risks.

As Kandiá is learned, Nagyr pious, Chilás puritanical, and all true Dard tribes essentially peaceful and strenuously republican, so, no doubt, Hunza was the country of free love and of raiding, that had ceased in 1865, which we practically revised (see Appendix I.). I doubt, however, whether

Biddulph G-3 (1873-1878) 1880
4
AV3 Dard AV3
Burushe AV7

D 726 cut off or their stores fail, and they are obliged to make terms. On the other hand, if they are well supplied, the invader gets tired after a short time and retires. If they feel strong and confident, the garrison sallies out to offer battle outside the walls, but the taking of a fort by assault is unknown. On account of the supplies it is usual to plan an attack for the time when the standing crops in the invaded country are just ripe.[1] The store in the fort is then at its lowest, and the invader finds no difficulty in subsistence.

D ● 805 [77] B 805 Though Islam has introduced the inconvenient Mahommedan calendar, the ancient method of computation by the sun is still in use. In Gilgit and the valleys to the south the months are now distinguished by the Arabic names of the zodiacal signs. In Hunza and Nager a more ancient nomenclature still exists, as it did till lately in Gilgit, though most of the names in the latter place are now lost. The year is divided into two seasons, from solstice to solstice, called "yôl" (Boorish) and "hallôl" (Shina). The season commencing at the winter solstice is called "haiy," and the one commencing at the summer solstice "shini." Each season is divided into six months, the names of which are repeated in each season in a different order; the second season beginning with the first month, and then the other names being taken backwards. The months are named from certain objects or fancied resemblances on the horizon behind which the sun sets at certain dates, as seen from the gate of the ruler's castle, so that each place has a different set of names for the month. The calendar as it still exists in Nager will give a sufficiently good idea of the system.

The months are as follows, commencing with the winter solstice:—

1. Baiy Isha.
2. " Gamoosa (*ice-sun*, the sun sets behind a glacier).
3. " Tikhidir, (*earth line*, the sun sets behind a level space).
4. " Kabula, (*kibla*, the direction of Mecca).
5. " Hinghalter (*door-way*, from a rock resembling a gateway).
6. " Booye (*shoulder-blade*, from a rock resembling the blade bone of a sheep).
7. Shini Isha (commencing with the summer solstice).
8. " Booye.
9. " Hinghalter.
10. " Kabula.
11. " Tikhidir.
12. " Gamoosa.

Lee Beddulph G-3 (1873-1878) 1880 Afgh-afghanistan-AUS-
4 AVJ Dard AVJ
Burusho AVJ

Isha literally means a mill-pond, but in this case it is not meant to represent a mark on the horizon, but to signify a receptacle, the place beyond which there is no going. The Kebla month is no doubt a name of modern introduction. In ancient times computation seems to have been by these seasons. The term "yôl" has now come to be used for the whole year, and the half year is called "yôl trang," but a man of forty when asked his age will often say that he is eighty "yôl-trang." According to Mr. Schuyler, the Kirghiz make the same computation. The half-month is called *toonts* (Boorish), and *putch* (Shina), and no smaller division of days is recognised, though in Shina there are but seven names of days, which closely resemble the Sanscrit days of the week thus—

D 805 B 805

| | | | |
|---|---|---|---|
| Sunday | Adit | *in Sanscrit* | Aditya bar. |
| Monday | Tsundora | „ | Sambar. |
| Tuesday | Ungaroo | „ | Mangal bar. |
| Wednesday | Bodo | „ | Budh bar. |
| Thursday | Bressput | „ | Brihaspati bar. |
| Friday | Shooker | „ | Suka bar. |
| Saturday | Shimshere | „ | Sanischar bar. |

These names are used in Gilgit, Hunza, and Nager, and were most probably introduced by the Shins, as they were in use long before the Sikh power was felt across the Indus. It would seem as if the Shins, while introducing the Hindoo days of the week, adopted in other respects the mode of computing time already existing in the country.

D B [177]

In Chitral the calendar is computed by the solar year commencing with the winter solstice; but the months take their names from peculiarities of season or agricultural operations, not from local land marks. They are—

D 805

1. Toongshal (*long nights*).
2. Phutting (*Extreme cold*).
3. Aryan (*Wild ducks*).
4. Shalakh (*Black work*, in allusion to the black appearance of the earth when the snow melts).
5. Boi (*Sparrows*).
6. Ronnuk (*Trembling*, in allusion to the waving appearance of the growing corn).
7. Yugh (*Full*).
8. Muoj (*Middle*, alluding to summer being half over)
9. Poiyanano (*The end*).
10. Kolkoni (*Threshing*).
11. Kirman (*Sowing*).
12. Chunchooni (*Leaf falling*).

D
• 805 D [178]

The ordinary Mahommedan calendar is, however, coming into use, especially among the Ashimadek class. The days of the week are named according to the Mahommedan calendar, except that Friday is named Adinna.

In Bushkar and Torwal, the Mahommedan calendar is followed. In the latter place the ordinary names are preserved, in the former the months are named—

| | |
|---|---|
| Hussan Hossein. | Scorpi (*Great month*). |
| Safar. | Shekombar. |
| Purum ishpo (*First sister*). | Roz. |
| Dowim ishpo (*Second sister*). | Lokyil (*Small festival*). |
| Tioei ishpo (*Third sister*). | Mikus (*Intervening*). |
| Chot ishpo (*Fourth sister*). | Ghoyil (*Great festival*). |

D B 821

The constellation of the Great Bear is called "the maiden's corpse," the four corner stars being supposed to represent a bier: the small star above the middle star of the tail is called the "star of life," as it is supposed to be invisible to a person forty days before death. The pleiades are called the flock of sheep; a comet, "the star with a tail," is supposed to portend the death of a king. The milky way is called the "track of the cow and horse," the tradition being that in the broad part about the middle the horse fell down from going too fast, while the cow travelled safely. The world

D B 823

is supposed to rest on the horns of a cow, which shakes its head occasionally at the sins of the inhabitants, and so causes earthquakes.

D B 776

The west and south are always spoken of as up, and the north and east as down. A man going west or south to a place talks of going up to it. Fairies and demons that live in caves among the mountains or in desert places, have a prominent place in the belief of the Dards. Dr. Leitner has already given an account of the Yetch and its female counterpart the [illegible] and Billuss. Madness is supposed to be caused by a demon casting its shadow over a person, while the shadow of a fairy confers the gift of prophecy. Demons assume the appearance of human beings to lure men to destruction, but they are recognisable by their feet being turned backwards.

D [828]

D B 776 787 784

In Gilgit, Hunza, and Nager the ruler's family is supposed to be specially under the protection of a guardian fairy called Yoodeni. A drum, called the Yoodeni drum, is always kept on the top of the ruler's castle. When it is heard to sound at certain festivals and at critical times it presages good fortune. Nobody must try to see the Yoodeni, or look in that direction

VII.

Omens.

Probably on account of the frequent attacks on Gilgit made by the chiefs of the surrounding States, certain signs and occurrences are considered to be omens among the Gilgitis. They are as follows:— 787 324

(1) If an unusually heavy rain falls at any season in Gilgit, it is supposed that the chief of Yasin will advance towards Gilgit.

(2) If innumerable kites are seen hovering over Gilgit, it is generally accepted that Gilgit is to be invaded by the Nagar people.

(3) If packs of wolves make frequent night visits into Gilgit, and inflict heavy losses among the flocks, it is affirmed that the chief of Hunza is certainly going to invade and plunder Gilgit.

(4) If the harvest be unusually abundant, it is believed that Gilgit will be attacked by the Punyal Chiefs.

VIII.

Lunar Eclipse.

The Gilgitis say that Gwahr is the name of a giant, who is a lover of the moon. On the 14th of the lunar months, when the moon is in its full beauty, the Gwahr, whenever he pleases, catches hold of the moon, leaving untouched only a part which contains a fig tree. As such time the people of those parts beat their iron pans (on which they cook bread) like drums and cry loudly, "O Gwahr, we have brought a large force, bearing drums against thee, leave her (the moon), or we will rush upon thee!" In the meantime the eclipse ends, and they become happy at their success. 321 776

Solar Eclipse.

The Gilgit people say that whenever any good king dies or is banished from his country, the great Gwahr becomes angry against the sun, and darkens a whole or a part of his (the sun's) face as a sign of grief for the death or the banishment of such a good king.

IX.

The Creation of the World. 773

It is said that the earth was at first enveloped in water, which was of some places frozen, and above some Yachs (giants) had taken their abode under Yachi Hal Singh, their ruler. On a certain day they held a council for the purpose of bringing earth over the water. Their ruler said that the task was above their power but, however, in favor of a saying of his ghost-guide, who had [illegible] named Wazeerh, (old man) and who, sent as a messenger by the Yachs, but the wolf refused to come, saying that he would not

The ordinary Mahommedan calendar is, however, coming into use, especially among the Ashimadek class. The days of the week are named according to the Mahommedan calendar, except that Friday is named Adinna.

In Bushkar and Torwal, the Mahommedan calendar is followed. In the latter place the ordinary names are preserved, in the former the months are named—

| | |
|---|---|
| Hassan Hossein. | Soorji (*Great month*). |
| Safer. | Shukubber. |
| Perum ishpo (*First sister*). | Rua. |
| Dowim ishpo (*Second sister*). | Lokyil (*Small festival*). |
| Thoi ishpo (*Third sister*). | Milina (*Intervening*). |
| Chor ishpo (*Fourth sister*). | Ghoyil (*Great festival*). |

The constellation of the Great Bear is called "the maiden's corpse," the four corner stars being supposed to represent a bier: the small star above the middle star of the tail is called the "star of life," as it is supposed to be invisible to a person forty days before death. The pleiades are called the flock of sheep; a comet, "the star with a tail," is supposed to portend the death of a king. The milky way is called the "track of the cow and horse," the tradition being that in the broad part about the middle the horse fell down from going too fast, while the cow travelled safely. The world is supposed to rest on the horns of a cow, which shakes its head occasionally at the sins of the inhabitants, and so causes earthquakes.

The west and south are always spoken of as up, and the north and east as down. A man going west or south to a place talks of going up to it. Fairies and demons that live in caves among the mountains or in desert places, have a prominent place in the belief of the Dards. Dr. Leitner has already given an account of the Yetch and its female counterpart the Rood. In Bootiahki they are known as Phoot casting its shadow over a person, while the shadow of a fairy confers the gift of prophecy. Demons assume the appearance of human beings to lure men to destruction, but they are recognisable by their feet being turned backwards.

In Gilgit, Hunza, and Nagar the ruler's family is supposed to be specially under the protection of a guardian fairy called Yoodeni. A drum, called the Yoodeni drum, is always kept on the top of the ruler's castle. When it is heard to sound at certain festivals and at critical times it presages good fortune. Nobody must try to see the Yoodeni, or look in that direction

Rh Bibliothek G-8 (1873-1878) 1880 Aus-Afghanistan-Aus
4 Aus 3 Dard Aus
Burushe Aus

when the drum is heard; if he did so, some evil would be certain to happen to the daring individual, the least he could expect would be that his head would be twisted round to his back, and remain so for the rest of his life. A warlike expedition undertaken without the sounding of the Yoodeni drum would certainly end in disaster.

Trial by appeal to the ordeal of fire is still practised. Seven paces are measured, and a red-hot axe-head is placed on the open palm of the accused, on which a green leaf has first been spread. He must then deposit the hot iron at the spot appointed seven paces distant, and should any mark of a burn remain on his hand, it is a proof of guilt. The Vakeel of the Thum of Hunza on one occasion offered to subject himself to the ordeal before me, in order to clear his master of a false accusation.

Magic has a prominent place in Dard ideas, and many individuals are credited with the power of exercising magical arts. The rulers of Hunza and Nager are credited by their subjects with the power of producing rain. During a very severe winter I captured a full-grown markhor, which had wandered during the night into the cultivated land. The occurrence being unusual, the animal was at once regarded as a *jin*, and a deputation came to me shortly after it was captured, asking me to release it lest it should bring misfortune on the place. The death of the Wuzeer, which happened unexpectedly a few days afterwards, is still ascribed to the occurrence. Written charms are in great request, and every person wears one or more suspended to different parts of the dress by circular brass buckles. Those most in demand are charms conferring invulnerability and courage on the wearer. Charms are also attached to the maps and to [illegible] of causing tempests if anything impure, such as a cowskin, is placed in them. This seems to have been an old and widely-spread superstition. Baber mentions it in his memoirs. "Some books mention that in Ghazni there is a fountain, into which if any filth or ordure be thrown, immediately there rises a tempest and hurricane with snow and rain."[1] The same is mentioned by another writer.[2] "Many days elapsed without the opponents having engaged each other, when it was mentioned to Mahmood that in the camp of Jeipal was a spring into which if a mixture of ordure should be thrown, the sky would immediately become overcast, and a dreadful

Joh Riddulph G-3 (1873-1878) 1880 AV3 Afghanistan AV1
4 AV3 Dard AV3
Burusho AV7

D 778 • 821

storm of hail and wind arise. Mahmood having caused this to be done, the effects became visible; for, instantly the sky lowered, and thunder, lightning, wind, and hail succeeded, turning the day into night, and spreading horror and destruction around."

D 787 791

Divination is still practised, in spite of the conversion of the country to Mahommedanism. The Dainyals, or diviners, who are of both sexes but are more frequently women, are supposed to receive the gift of second sight by the shadow of a Barai, or fairy, having fallen on them in sleep. Dr. Leitner

B 787 791

speaks of the gift as being supposed to be hereditary, but this is not the case, though the daughters of Dainyals often become Dainyals also. Dainyals are said to be only found among the shepherd population, and it is easy to understand how a solitary life among the wild crags of the Hindoo Koosh should encourage a belief in the power of intercourse with the unseen world. Quite young people become Dainyals, and the spirit of prophecy is supposed to remain with them for life.

The first intimation of the gift to the friends of the recipient is conveyed by their finding him or her in a deep trance. The requisite music is brought, flageolets being substituted for the ordinary clarionets, and softly modulated airs are played close to the ear of the entranced. Gradually he moves and begins to show signs of life, on which a goat is brought and decapitated, and the bleeding neck presented to the Dainyal novice. This is the test of a true Dainyal. If the gift of divination has really come to him, he seizes the bleeding neck, and sucks the blood. Some find this too much for them, and refusing to suck the blood are looked on afterwards as only feebly gifted with the spirit of prophecy. The idea of imposture never seems to be entertained by these simple-minded people. The recognised Dainyals are consulted on all special occasions, such as the yearly festivals in summer, or the declaration of war with a neighbouring state. The spirit of divination is supposed to lie dormant in winter, and to be strong in proportion to the heat of the weather.

On the first occasion of my witnessing an incantation, two Dainyals were brought from a considerable distance to prophesy at the Ganoni festival in June. They were both women, one of about twenty-five and the other about forty years of age, who showed by their wild and haggard looks the strain of the often-practised ceremony on their faculties. A circle

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

any blood relationship. The name is identical with the Persian word represented in Avestan by *pairika* to which there seems to be no recorded parallel in Sanskrit, but it is conceivable that in Ṣhiṇa it is an original and not a borrowed word.

However this may be, the Peris are quite firmly established under that title in popular belief in Gilgit, Chitrāl, and among the Paṭhans. The word is known in Burushaski, both in foreign stories and as a complimentary epithet for women and boys, but I have come on no Peris in the definitely local stories of Hunza and Nagir.

The Peris of the Ṣhiṇa-speaking peoples are of both sexes. The female is called a Peri and the male a Periān. They are not spoken of as "little folk", and appear in general to resemble human beings. They eat "pillau", as is attested by Pashūs (anti-witches) and others who have seen them. Their eyes are said to be vertical, that is with the axis set vertically. I fancy they have only one eye placed in the middle of the forehead as is recorded of Jinns and others, but I cannot quote authority for this. They can fly; but if cow-dung is thrown on a Peri, or if its clothes are held in the smoke of a cow-dung fire it becomes unable to move. This point is illustrated in a Burushaski story, which is, however, of foreign origin. I have only one instance of a Peri with a name: a Peri called Mādi is said to live on the mountain of Diāmer (Nanga Parbat).

Peris wear green clothing and consider that they have exclusive rights in that colour. Hence we are told: "If anyone puts on green clothes it is said that the Peris get angry and snatch at the man and crush him. The reason is this: the Peris say: 'Green garments are our clothing. Why have they put them on?' and they become angry."

This claim is supported by their human confidants, the Daiyāls. As witness: "Daiyāls say that when a Daiyāl dances the Peris come flying through the air and remain watching the people. The Daiyāls say, 'We understand

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

what the Peris say. We communicate it in songs to the people.' If the Daiyāl sees anyone wearing green clothes he gets angry. The reason for this is that the peris wear green clothes, they say, and therefore if any earthly being puts on green clothing the peris become angry and do him injury."

The attitude of the Peris towards ordinary mortals cannot be described as cordial or benevolent. For instance: "They say that if anyone goes to the desert at midday the peris will snatch at his eyes and make him blind."

If a new house proves to be poor or unlucky it may be due to the adverse influence of a Periān. Again: "When a woman, all of whose children have died, gives birth to a child the mother cuts the umbilical cord and licks the blood that comes from it. The reason for this is that over every woman there is a Peri woman. The Peri woman says, 'Now that this woman has drunk the blood of her child she will never do me any good,' and fearing the woman the Peri clears out."

Here the reluctance to relinquish power over a human being indicates how such power is prized. Various methods are employed to obtain it even to the point of stealing or carrying off children or adults. In this we have an important resemblance between the Peris and the fairies of the West. The following notes are relevant in this connection: "A *dernīji mā* (i.e. 'outside mother') is a fairy in the jungle who gives milk to a child and rears it. When the boy grows up he is a good mountaineer." In one known case the peri-fosterling says he only sees his Peri mother when he is alone.

"[illegible] years ago (i.e. counting from 1922) a boy was carried off by the Peris from Nāpur. His clothes were found on the hills but he has never returned again."

One of the grooms of the Assistant Political Agent, Chilās, made the following statement: "Every day (i.e. always) at the (end of the) dark period of the moon the peris carry me off. I see them and they see me. They say to me, 'You stay with us and we'll look after you well. If you don't

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

An account of a Daiyāl display has been given by Colonel A. Durand in his " Making of a Frontier ", so I need not elaborate the matter here. It will be enough if I contribute a few more general facts about Daiyāls themselves. [113]

In Burushaski the equivalent of Daiyāl is Bītan (plural bitaiyo). Daiyāls may belong to any class of the population and to either sex. In fact they are nowadays, I believe, confined to a few special families. The chief, perhaps the only seat of Daiyāls at the present day, is the small side valley of Bagrōt. 791 177

I have seen exhibitions by two female Daiyāls in Hunza, but to the best of my recollection they were said to belong to a family which originally hailed from Bagrōt. Similarly the performer at a specially arranged display at Gilgit Headquarters, in this case a man, had been brought from that place for the occasion.

There is a possibility, however, of fresh recruitment to the ranks of Daiyāls. " A certain number of people," I was told, " become new Daiyāls." On the other hand, one may withdraw temporarily or permanently from the faculty. 791

Daiyāls possess, or at any rate have in the past possessed, more than the mere powers of second sight and prophecy. They are on more intimate terms with the supernatural world than ordinary folk. In talking of the Peris I have already quoted the statement that the Peris come to watch the Daiyāls' performances and that they are the source of the Daiyāls' knowledge; and again that it is on their account that the Daiyāl objects to [illegible] by the laity.

At an actual performance I was warned that they disliked anything red, and that they were liable to lose self-control and to attack anyone wearing or displaying it. We nervously took stock of our belongings, for the wild-eyed officiating Daiyāl looked only semi-human and capable of anything whether in his mind or out of it. But why should red be objectionable, except as the complementary colour to green? 791 822

# LEGENDS, SONGS, AND CUSTOMS OF DARDISTAN,*

## (GILGIT, YASIN, HUNZA, NAGYR, CHITRÁL, &C., AND KAFIRISTAN).

I. DARDU LEGENDS, *in Shiná* (the language, with dialectic modifications, of Gilgit, Astor, Guraiz, Chilás, Hódur, Dareyl, Tanglr, etc., and the language of historical songs in Hunza and Nagyr).

(*Committed to writing for the first time in* 1866,
*By* DR. G. W. LEITNER,
*from the dictation of Dards. This race has no written character of its own.*)

### A.—DEMONS = YATSH[1] (YUECCI ?).

DEMONS are of a gigantic size, and have only *one eye, which is on the forehead.* They used to rule over the mountains and oppose the cultivation of the soil by man. They often dragged people away into their recesses. Since the adoption of the Muhammadan religion, the demons have relinquished their possessions, and only occasionally trouble the believers.

They do not walk by day, but confine themselves to promenading at night. A spot is shown near Astor, at a village called Bulent, where five large mounds are pointed out which have somewhat the shape of huge baskets. Their existence is explained as follows. A Zemindar (cultivator) at Grukôt, a village farther on, on the Kashmir road, had, with great trouble, sifted his grain for storing, and had put it into baskets and sacks. He then went away. The demons came—five in number—carrying huge leather-

* "Dardistan," or the country of the Daradas of Hindu mythology, embraces, in the narrowest sense of the term, the Shiná-speaking countries (Gilgit, &c.); in a wider sense, Hunza, Nagyr, Yasin, and Chitrál; and in the widest, also parts of Kafiristan. (See my "Dardistan," part III.)

[1] "Yatsh" means "bad" in Kashmiri.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

776 sacks, into which they put the grain. They then went to a
823 place which is still pointed out and called "*Gué* Gutumé Yatsheyn gau boki," or "The place of the demons' loads at the hollow"—Gué being the Shiná name for the present village of Grukōt. There they brought up a huge flat stone—which is still shown—and made it into a kind of pan, "tawa," for the preparation of bread. But the morning dawned and obliged them to disappear; they converted the sacks and their contents into earthen mounds, which have the shape of baskets and are still shown.

## 1.—The Wedding of Demons.

776 A Shikari (sportsman) was once hunting in the hills.
539 He had taken provisions with him for five days. On the sixth day he found himself without any food. Excited and fatigued by his fruitless expedition, he wandered into the deepest mountain recesses, careless whither he went as long as he could find water to assuage his thirst, and a few wild berries to allay his hunger. Even that search was unsuccessful, and, tired and hungry, he endeavoured to compose himself to sleep. Even that comfort was denied him, and, nearly maddened with the situation, he again arose and looked around him. It was the first or second hour of night, and, at a short distance, he descried a large fire blazing a most cheerful welcome to the hungry, and now chilled, wanderer. He approached it quietly, hoping to meet some other sportsman who might provide him with food. Coming near the fire, he saw a very large and curious assembly of giants, eating, drinking, and singing. In great terror, he wanted to make his way back, when one of the assembly, who had a squint in his eye, got up for the purpose of fetching water for the others. He overtook him, and asked him whether he was a "child of man." Half dead with terror, he could scarcely answer that he was, when the demon invited him to join them at the meeting, which was described to be a wedding party. The Shikari replied: "You are a demon, and will destroy me"; on which the spirit took an oath, *by the sun and the moon*, that

### A Pearl Tree on the Deobani Mountain.

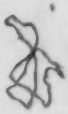
361 776 539 On the east of Tashot, a village in the Bagrot Valley, there stands a snow-covered mountain called Deobani. The people say that there is a large pearl tree on its top, which is the property of the fairies and giants. A good mountaineer is said to have once reached its summit. Gathering a load of the pearls, he started down towards his home. But he was surprised to see a crowd of giants and fairies coming after him, and, being frightened by their approach, he thought it better to throw away all the pearls in order to save his life; he was surprised, however, to find that a fairy still followed him as far as his house. There he closed his door. While changing his clothes he found that a pearl was hidden in his shoes. The pearl was then thrown towards the fairy; she picked it up and disappeared. A similar story is related about Nanga Parbat, a mountain on the west of Astor.

### Shangali Ween.

361 778 539 695 At about two miles east of Danyore, a village about three miles east of Gilgit, there is seen on the northern side of the road leading to the Bagrot Valley a small piece of ground about one yard square surrounded by walls about three feet high. This place is called "Shangali Ween" (place of putting chain). It is said that there used to be a golden chain hanging in the air without any support. In ancient times, when any case was to be decided on oath, both the parties were carried there and each of them addressed the chain in the following manner: "O *Sejio Shangali* (sacred chain), whoever of us is sinful please accuse him by striking his neck; and the chain used miraculously to whirl round the neck of the man who was guilty. The man was then convicted and punished by the authorities according to law. No chain is now found at the spot, and the people relate an interesting story about its disappearance. They say that two men of the Bagrot Valley were once coming together to Gilgit: one of them had brought some gold with him which the other succeeded in stealing. Making a small hole in his stick, he put the gold secretly into it. The men, after a long quarrel about the lost gold, decided that the case should be settled by the Shangali. When they were entering the place, the guilty man gave his stick which contained the gold to the other, and they both began to beg before the Shangali, asking that, whichever of them had gold in his possession, he might be struck by the Shangali. The Shangali, who was aware of the trick, was much enraged at this attempt to deceive, and, considering itself offended, at once disappeared for ever without settling their case. The loser of gold was now very angry, and in a fit of his anger struck the stick on the walls of the enclosure. The stick broke and the lost gold was disclosed.

### Nosh and Chakrot Barl.

778 789 823 Near Lace village in the Astor district there is a small fountain called Nosh. The people consider it a sacred one and sacrifices at the place for the fulfilment of their wants. If owing to drought a loss of their crops is expected, or if for any other reason heavy rain is required, the people used to throw some unclean thing into the spring, such as the bone of a dog; it then began to rain, and continued until the object was taken out. Owing to the belief that the spring was sacred and, moreover, able



to inflict harm upon the people, they themselves did not dare to put an unclean thing into the spring; and therefore on such occasions a foreigner was employed to perform this act, receiving as remuneration a large quantity of grain collected for the purpose at the rate of two seers per house. After receiving this grain he threw some unclean thing into the spring; and took it out when the rain was no more required. There are two other similar springs: one in the Bagrot Valley, called Chakrot Bari; and the other near the Tarshing village in the Astor District, called Komachon uts.

778 789 823

### "Rashoo ai Yudaini."

(The Fairies' Drum of Rashoo.)

The Doms of Bulchhi, a village in the Bagrot Valley, have still in their possession a small drum about one foot in diameter and three feet in circumference. This is called "Rashoo ai Yudaini." It was once carefully kept in a handsome cover by Rashoo, a Rono Wazir of Gilgit, who had ruled for the chief in that place. It is said, that whenever Rashoo intended to advance against any chief, the Yudaini was brought and kept before him. If it made a noise, without having been beaten by anybody, Rashoo believed it an omen of success. But if it were silent, Rashoo postponed his expedition.

534 539 778 721

### The Hoof Mark of a Horse.

Between Edgah and Balan villages in the Astore district there are seen on a rock near the old road which faces the Phina village, a few small flags. It is said that at this place there is a mark on a stone of the hoof of a horse. The story of the hoof-print is this—The place was once haunted by a giantess, who was a bitter enemy of mankind, and had become the terror of the people. The people wished to get rid of her. By the providence of God, one day a venerable Darwesh—some say that the Darwesh was no one else but Hazrat Khizar himself—halted on the river-bank close to the foot of the Phina village, and saw the giantess across the stream. He flung himself on his horse and, spurring it vigorously, came upon the giantess with the speed of lightning. She had no alternative left but to take to her heels, which she did, leaving the noise of her shrieks behind, and was never seen again. The horse had come upon it with such a vigour that the stone gave way under its weight, and there burst forth from the stone a spring of cool, fresh water. Though there exists no trace of it now, it is still looked upon as a sacred place, and the people from far and near gather together annually to celebrate the event by killing a sheep, feasting upon it, and making merry.

## XI.

### The Foot of Malik the Rá of Gilgit.[1]

It is said that one of the feet of Malik, an ancient Rá of Gilgit, was naturally formed like the hoof of an ass. He took great care to conceal this defect from all people. One of his old servants had, however, a knowledge of the mystery; but he was strictly forbidden by the Rá to disclose the secret. The servant kept it from becoming known

539

[1] [Cf. the Greek story of Midas and his ears, and of how their existence came was revealed to the people.—Ed.]

Mrs Biddulph G-3 (1873-1878) 1880 Afgh-Afghanistan-Alli

136 be found numerous flocks of the wild sheep (*O. Vignei*). At an elevation of 11,000 feet, wild onions grow in great profusion, and to this fact the range is indebted for its Chinese name Tsungling. (The Onion Mountains.)

133 The principal difficulty in communication is caused by
135 the rivers, which in winter are shrunk to small dimensions,
but in summer, fed by snow-fields and glaciers of enormous
316 extent, become impassable torrents, bringing down tons of soil in their turbid waters. Many of the streams are rich in gold, especially those flowing from the great Rakiposh Mountain, and it is probable that a scientific search for minerals
● [823] would be well repaid. The natives believe that the gold is generated by the glaciers, because the greatest quantity is found in the glacier mud, and there are traditions of small but rich veins of earth having been occasionally laid bare by earthquakes. Gold-washing is only practised in winter, and then by none but the poorest and meanest of the population, though the quantity found even with the rude apparatus employed is sometimes very remunerative. The gold itself is of fair quality, the best being of twenty carats.

361 Nearly half way between Gilgit and the Indus is the
316 Bagrot Valley, which contains several flourishing villages, and is capable of supporting a population of 2,000 or 3,000 souls. The Bagrot gold-washings are celebrated for the quantity and fine quality of the gold they yield, and the valley contains many signs of mineral wealth. It was a favourite summer resort of the old Gilgit rulers, and was their last place of
[564] refuge when hard pressed by external enemies. The Bagrot people belong almost entirely to the Shin caste.

133 A mile below Gilgit itself the Hunza River joins that of Gilgit. Though fordable in winter, this is in summer a deep and rapid torrent more than a hundred yards in breadth, bringing down with it an enormous quantity of soil from the lofty
[648] mountains it drains. Cashmere jurisdiction extends some 25 miles up the valley to a point at which the river makes a sudden bend from a westerly course to south-south-east. As generally happens where these abrupt changes of course in a stream are found, the river here flows between perpendicular rocks, across the face of which none but the most expert cragsmen can find a path. On the occasion of my visit to Hunza in 1876, I suddenly found myself confronted with a more difficult and dangerous piece of ground than I had ever traversed in a tolerably large experience of Himalayan sport. For nearly half a mile it was necessary to scramble over

D 805 D [179] The ordinary Mahommedan calendar is, however, coming into use, especially among the Ashimadek class. The days of the week are named according to the Mahommedan calendar, except that Friday is named Adinna.

In Bushkar and Torwal, the Mahommedan calendar is followed. In the latter place the ordinary names are preserved, in the former the months are named—

| | |
|---|---|
| Hussan Hoosein. | Soorpi (*Great month*). |
| Safar. | Shokubber, |
| Puroun ishpo (*First sister*). | Roz. |
| Dowim ishpo (*Second sister*). | Lokyül (*Small festival*). |
| Thoi ishpo (*Third sister*). | Milna (*Intervening*). |
| Chot ishpo (*Fourth sister*). | Ghnyül (*Great festival*). |

D B 821 The constellation of the Great Bear is called "the maiden's corpse," the four corner stars being supposed to represent a bier: the small star above the middle star of the tail is called the "star of life," as it is supposed to be invisible to a person forty days before death. The pleiades are called the flock of sheep; a comet, "the star with a tail," is supposed to portend the death of a king. The milky way is called the "track of the cow and horse," the tradition being that in the broad part about the middle the horse fell down from going too fast, while the cow travelled safely. The world is supposed to rest on the horns of a cow, which shakes its head occasionally at the sins of the inhabitants, and so causes earthquakes.

D B 776 The west and south are always spoken of as up, and the north and east as down. A man going west or south to a place talks of going up to it. Fairies and demons that live in caves among the mountains or in desert places, have a prominent place in the belief of the Dards. Dr. Leitner has given an account of the Yetch and its female counterpart the Roo. In Boorishki they are known as Phoot and Billuss. Madness is supposed to be caused by a demon casting its shadow over a person, while the shadow of a fairy confers the gift of prophecy. Demons assume the appearance of human beings to lure men to destruction, but they are recognisable by their feet being turned backwards.

D B 776 787 784 In Gilgit, Hunza, and Nager the ruler's family is supposed to be specially under the protection of a guardian fairy called Yoodeni. A drum, called the Yoodeni drum, is always kept on the top of the ruler's castle. When it is heard to sound at certain festivals and at critical times it presages good fortune. Nobody must try to see the Yoodeni, or look in that direction

4: Durand G-3 (1888-92) 1900 AVI Kashmir
Dard A 43

"Chili", or cedar worship, and of the Shin feast of sowing synchronised, and the two thus became welded together. The connection now is limited to a certain amount of wheat being smoked over a cedar wood fire, and of cedar twigs being in use next day when the sowing takes place. From a portion of the smoked grain a large unleavened bannock is made overnight, which is carried before the Rá or Chief of Gilgit when he rides out next morning to the sowing. Arrived on the selected ground the headman of the village holds up to the Rá the skirt of his choga full of the smoked grain, and into this the Rá throws small quantities of gold dust. The golden grain is then scattered amongst the circle of villagers, the ceremony being repeated till the grain has been thrown to all four points of the compass. The Rá then dismounts, a plough is brought, and, taking the handles, the Chief draws two furrows, one running east, the second west, and over these he again scatters the golden seed. A goat is then sacrificed, the drums strike up, and the Rá rides off, the rest of the day being one of continuous feasting, polo-playing, drumming, and dancing.

There are many other festivals, almost all connected with agriculture; spring-time and harvest, autumn and winter, are all marked by appropriate feasts. The Yuleni drum, or fairy's drum, which was kept on the top of every Chief's castle, played a part in the ancient ceremonies. It was very unlucky to look towards it while the sounds rang out; if the fairy drummer was seen, the direst calamities followed. I never to my knowledge heard the fairy drum myself, but no feast in the old days was complete

## *LEGENDS RELATING TO ANIMALS.**

### 1.—A BEAR PLAYS WITH A CORPSE.

It is said that bears, as the winter is coming on, are in the habit of filling their dens with grass and that they eat a plant, called "ajall," which has a narcotic effect upon them and keeps them in a state of torpor during the winter. After three months, when the spring arrives, they awake and go about for food. One of these bears once scented a corpse which he disinterred. It happened to be that of a woman who had died a few days before. The bear, who was in good spirits, brought her to his den, where he set her upright against a stone and fashioning a spindle with his teeth and paws gave it to her into one hand and placed some wool into the other. He then went on growling "mû-mû-mû" to encourage the woman to spin. He also brought her some nuts and other provisions to eat. Of course, his efforts were useless, and when she after a few days gave signs of decomposition he ate her up in despair. This is a story based on the playful habits of the bear.

### 2.—A BEAR MOURNS A GIRL.

Another curious story is related of a bear. Two women, a mother and her little daughter, were one night watching their field of Indian corn "mahai," against the inroads of these animals. The mother had to go to her house to prepare the food and ordered her daughter to light a fire outside. Whilst she was doing this a bear came and took her away. He carried her into his den, and daily brought her to eat and to drink. He rolled a big stone in front of the den, whenever he went away on his tours, which the girl was not strong enough to remove. When she became old enough to be able to do this he used daily to lick her feet, by which they became swollen and gradually dwindled down to mere misshapen stumps. The girl eventually died in childbirth, and the poor bear after vain efforts to restore her to life roamed disconsolately about the fields.

### 3.—ORIGIN OF BEARS.

It is said that bears were originally the offspring of a man who was driven into madness by his inability to pay his debts, and who took to the hills in order to avoid his creditors.†

### 4.—THE BEAR AND THE ONE-EYED MAN.

The following story was related by a man of the name of Ghalib Shah residing at a village near Astór, called Parishing. He was one night looking out whether any bear had come into his "tromba" field.‡ He

* These legends should be compared with the Chitrál Fables published by Mihtar Wisám-ul-Mulk in the *Asiatic Quarterly Review* of January, 1891, namely: "the vindictive fowl," "the golden mouse," "the mouse and the frog," "the quail and the fox." See Appendix III. as also Légends in "The Hunza-Nagyr Handbook."

† The *arrepalonness* of the Gipsies in discharging such obligations, when contracted with a member of the same race, used to be notorious. The Dôms or Rôms of the Shins are the "Romany" of Europe and our "Zingari" is a corruption of "Sinkari" or inhabitants on the borders of the River or Sin = the (Upper) Indus.

‡ Tromba, to be made eatable, must be ground into flour, then boiled in water and placed in the "tahmúl" [in Astori] or "paydah" [Ghilgiti], a receptacle under the fourth, and has to be kept in this place for one night, after which it is fit for use after being roasted or put on a tawa [pan] like a Chapatti [a thin cake of unleavened bread].

"barśo" or tahtú barśo = sour barśo [mśro barśo = sweet barśo].

1: Leitner L-3 (1866-68) 1937 AV3 Dard AV3

639
82

saw that a bear was there and that he with his forepaws alternately took a pawful of "trumba," blew the chaff away and ate hastily. The man was one-eyed [abéo = blind; my Ghilgiti used "Kyun," which he said was a Persian word, but which is evidently Turkish] and ran to his hut to get his gun. He came out and pointed it at the bear. The animal who saw this ran round the blind side of the man's face, snatched the gun out of his hand and threw it away. The bear and the man then wrestled for a time, but afterwards both gave up the struggle and retired. The man, after he had recovered himself went to look for the gun, the stock of which he found broken. The match-string by which the stock had been tied to the barrel had gone on burning all night and had been the cause of the gun being destroyed. The son of that man still lives at the village and tells this story, which the people affect to believe.

## 5.—WEDDING FESTIVAL AMONG BEARS.

A Mulla, of the name of Lal Mohammad, said that when he was taken a prisoner into Chilás,* he and his escort passed one day through one of the dreariest portions of the mountains of that inhospitable region. There they heard a noise, and quietly approaching to ascertain its cause they saw a company of bears tearing up the grass and making bundles of it which they hugged. Other bears again wrapped their heads in grass, and some stood on their hind-paws, holding a stick in their forepaws and dancing to the sound of the hoots of the others. They then ranged themselves in rows, at each end of which was a young bear; on one side a male, on the other a female. These were supposed to celebrate their marriage on the occasion in question. My informant swore to the story and my Ghilgiti corroborated the truth of the first portion of the account, which he said described a practice believed to be common to bears.

## 6.—THE FLYING PORCUPINE.

There is a curious superstition with regard to an animal called "Hargiss," which appears to be more like a porcupine than anything else. It is covered with bristles; its back is of a red-brownish and its belly of a yellowish colour. That animal is supposed to be very dangerous, and to contain poison in its bristles. At the approach of any man or animal it is said to gather itself up for a terrific jump into the air, from which it descends unto the head of the intended victim. It is said to be generally about half a yard long and a span broad. Our friend Lal Mohammad, a saintly Akhunzada, but a regular Münchhausen, affirmed to have once met with a curious incident with regard to that animal. He was out shooting one day when he saw a stag which seemed intently to look in one direction.

[72]

* Almost every third man I met had, at some time or other, been kidnapped and dragged off either to Chilás, Chitrál, Badakhshán or Bokhára. The surveillance, however, which is exercised over prisoners, as they are being moved by goat-paths over mountains, cannot be a very effective one and, therefore, many of them escape. Some of the Kashmir Maharajah's Sepoys, who had invaded Dardistan, had been captured and had escaped. They narrated many stories of the ferocity of these mountaineers; *e.g.*, that they used their captives as fireworks, etc., etc., in order to enliven public gatherings. Even if this be true, there can be no doubt that the Sepoys retaliated in the fiercest manner whenever they had an opportunity, and the only acts of barbarism that came under my observation, during the war with the tribes in 1888, were committed by the Kashmir invaders.

We fired off six guns, which however did not divert the attention of the stag. At last, he found out what it was that the stag was looking at. It turned out to be a huge "Bhagiun," which had swallowed a large Markhor with the exception of his horns! There was the gunsmith one of whose guns had perforated the head and horns of the Markhor!! My Ghilghit, on the contrary, said that the Bhagiun was a great snake "like a big fish called Nang." Perhaps, Bhagiun means a monster or dragon, and is applied to different animals in the two countries of Ghilghit and Astor.

### 3.—A FIGHT BETWEEN WOLVES AND A BEAR WHO WANTED TO DIG THEIR GRAVE.

A curious animal something like a wolf is also described. The species is called "Ki."* These animals are like dogs; their snouts are of a red colour, and are very long; they hunt in herds of ten or twenty and track game which they bring down, one hind or one Ki, as the case may be, relieving the other at certain stages. A Shikári once reported that he saw a large number of these animals. They were all ranged in a single long line. A bear approached, and by the aid of a long branch measured the line. He then went to some distance and measuring the ground dug it out to the extent of the line in length. He then went back to measure the breadth of the sleeping troop when his branch touched one of the animals which at once jumped up and roused the others. They all then pursued him and brought him down. Some of them harassed him in front, whilst one of them went behind and cracked his stomach clean out. This seems to be a favourite method of these animals in destroying game. They do not attack men, but bring down horses, sheep and goats.

* This is undoubtedly the *ssoo* *rankoo*, a species of wild dog, which hunts in packs after the wild goat, so commonly found in the high mountains round Gilgit. The natives also pursue it. Dardistan, specially Shuna, is the paradise of the dog, the wild ones, including the *ssoo* *pari*, and the red bear.

---

The Flora and Fauna of Dardistan have been so minutely described in Part II. of my "Languages and Races of Dardistan," though mainly from a linguistic standpoint, that I have nothing to say here about the products and animals of that country. Nor need I say anything about the dress of its people, except that its rolled-up woollen cap is, practically, the sign of the brotherhood (reminiscent like that of Cain) among all members of the Dard race, and, at once, distinguishes them from Pathans, Afghans, Kafiristán, and others. The beautifully knit stockings are also a Dard article, and seem to have suggested, rather than followed, Kashmir patterns. Above all, the quasi-Cltic lyres (*sraches*) of the women, and the fossil-like *asas* of the Shuna Magpie denote the antiquity of the Dard race. Curious to say the dress, light as air and softly warm, made of the fluff of the white "giant vulture or of that of the wild fowl. I must also refer the reader who wishes to know details about the rivers, mountains, etc., of Dardistan, and the occupations of its people, to Part II. of my "Languages and Races of Dardistan," and to the same volume, of which this is a Supplement, namely, the so-called "Home and Sport Handbook," a volume of 23 folio pages.

In Lectures L-S (1920-24) 1928 AVS Dust AVS

the King of the Jinns, Dú.ta and Paris himself appears, 776
exclaims that he is in your power and enquires your wishes 777
—and so on.

I think it is a pure coincidence that where I have the term 776
Bali it occurs usually in conjunction with horses. A groom 125
and a horse—both later in my service—had a thrilling
experience with a Bali which it would take too long to relate
here, but the principle involved was elsewhere stated to me
as follows: "If one mounts a horse at night and rides any-
where, then if the horse sees a Bali it will refuse to go forward.
If at this moment the rider looks over the horse's head between
its ears the Bali will be visible to him."

The more frivolous character of the Devil, Shaitán, is 778
shown in the following: If in certain circumstances you can
snatch the cap off the Devil's head and take refuge in a
masjid and resist his efforts to seize you by the seat of your
trousers and go off with them, then if you put on the Devil's
cap you will be able to see him, but he will not be able to see
you and others will not be able to see either you or him—
a piquant if not very useful situation.

[177] If these foreign—Arabic—names could be eliminated, as
I confess I should like, I think it would be found that most
of the beings rendered immortal would readily gain
admittance to the ranks of the Christ and the Dú.ta.

## Dú.ta

776 The name Dú.ta, akin to the Sanskrit *dūta*-, may be regarded
173 as a legitimate Shina word. At any rate, the whole need not
be sought in Islam or Islamic influence.

Dú.ta play a prominent part in the folk-tales of the country
as demons, ogres, etc., usually of malevolent proclivities,
but they also descend into legendary history. In the latter
situation they probably represent a once locally dominant
race which has died out or been absorbed. But that is
probably only a later identification. Their origin must lie
in or before the Prākrtaic period which is presumably much

St Gervais T-8 (no date) 1954 AVI Kashmir ANK

being Afghans who have migrated over the frontier—"All are Mohammedans except the tribes of Kafiristan." 181 363.

These Aryan features, those blue eyes, that light complexion, where does it come from? Not a few of the sons, grandsons and great-grandsons of the chiefs who once ruled in those parts, surprisingly claim to be descended from one of the Generals of Alexander the Great, if not from the Emperor himself. There is no record in history of his having visited those parts, but the people of Gilgit maintain that he came as close as the Tashkurgan and the Killik Pass, and then sent an expedition down through Hunza to Gilgit. It is known that Alexander did visit Dir, and it is believed that the expedition to Gilgit was to move on to Chitral and then join the main army at Dir. 174

I have never seen it hinted at in any book, but I dare to suggest that these Aryan features, blue eyes and the occasional tinge of gold in the hair found among these men of Gilgit—and also those of Kashmir—might have come about by their owners having been descended from the prisoners, deserters, or even soldiers who had become lost from the forces of Alexander. It is known that until not long ago on the North-West Frontier of India, a exposed European who was fortunate enough to be the possessor of red hair was treated with more respect than his fellows, who, if not tortured, suffered a ghastly, untimely death. Although not released, he, like the others, was handed over to the women, but remained alive to "husband" the widows, so that they might breed red-haired sons. Natural red hair is considered among some of the tribes to be a sign that the owner is the descendant of their particular prophet, if not The Prophet. A beautiful red-haired camp follower—and most "red-heads" have blue eyes—would make a fitting concubine for any King or Chieftain; a powerful, magnificent, red-headed soldier of the forces of Alexander, a fitting lover for his widow, or even husband—if he happened to be an officer—for a daughter he had been unable to marry off to one of his own rank. Can it be from such alliances as these that the red heads, pale faces and blue eyes have come to these parts? 174 826 832

2: Lorimer L-3 (1920-24) 1929 AV3 Dard AV3

754 [071] informed me, with all the seriousness that the statement deserved, that there is a trace of the Rō.i in all women.

All women in fact are potential Rō.is—a truly terrible thought.

[F 48] Fortunately, in practice Rō.is are products of heredity rather than education. The potential Rō.i does not seem as a rule to pass spontaneously into the practising Rō.i, but if a woman is a Rō.i her daughter will also be a Rō.i.

As regards their external distinguishing features the infallible sign of a Rō.i is that her feet are turned backwards. This must only be when she is functioning as a Rō.i, and even then it is noteworthy that when she is in animal form the animal's feet are not reversed in this way. Rō.is' hair and clothes are said to be repulsive. Their hair stands up on end. Their mouth is red (query—with blood?) when they have been maltreating anyone and at night they vomit. People then say, "Perhaps she has killed some one to-day."

It is a very remarkable thing that Rō.is and their doings do not seem to arouse any active resentment either in the public or in private individuals. There are many women who are notorious as being practising Rō.is, but they do not appear to be subjected to any form of persecution. I have heard of no case of Rō.i-baiting.

Tests and ordeals, such as ducking, may be unnecessary where the quality of at least the most important Rō.is is known to everyone and is beyond dispute, but then one would expect that they would be dealt with summarily and drastically by the irate relatives of their victims.

The above is a dry summary of the main facts about Rō.is. It would be possible to support it by many actual instances, but that would take too much space. I will, however, quote just a couple of stories which illustrate some of the main points.

754 The following is the story of a Nagir Rō.i which I recorded in English: "Two young men in Nagir one day wanted water. There was a shortage of water so they went to the head of an

D 8 821

The constellation of the Great Bear is called "the maiden's corpse," the four corner stars being supposed to represent a bier: the small star above the middle star of the tail is called the "star of life," as it is supposed to be invisible to a person forty days before death. The pleiades are called the flock of sheep; a comet, "the star with a tail," is supposed to portend the death of a king. The milky way is called the "track of the cow and horse," the tradition being that in the broad part about the middle the horse fell down from going too fast, while the cow travelled safely. The world is supposed to rest on the horns of a cow, which shakes its head occasionally at the sins of the inhabitants, and so causes earthquakes.

D 8 823

D 8 776

The west and south are always spoken of as up, and the north and east as down. A man going west or south to a place talks of going up to it. Fairies and demons that live in caves among the mountains or in desert places, have a prominent place in the belief of the Dards. Dr. Leitner has already given an account of the Yetch and its female counterpart the Rand. In Boorishki they are known as Phoot and Bilkus. Madness is supposed to be caused by a demon casting its shadow over a person, while the shadow of a fairy confers the gift of prophecy. Demons assume the appearance of human beings to lure men to destruction, but they are recognisable by their feet being turned backwards.

D 8 [824]

D 8 778 787 784

In Gilgit, Hunza, and Nagar the ruler's family is supposed to be specially under the protection of a guardian fairy called Yoodeni. A drum, called the Yoodeni drum, is always kept on the top of the ruler's castle. When it is heard to sound at certain festivals and at critical times it presages good fortune. Nobody must try to see the Yoodeni, or look in that direction

1: Letter L-3 (1866-93) 1893? AV3 Dard AV3

brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the fields at their work or at festive gatherings. Love declarations often take place on these occasions, but if any evil intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love," "pâk ishiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. No objection to lawful love terminating in matrimony is ever made unless the girl or the boy is of a lower caste. In Gilgit, however, the girl may be of a lower caste than the bridegroom. In Astôr it appears that a young man, whose parents—to whom he must mention his desire for marrying any particular person—refuse to intercede, often attains his point by threatening to live in the family of the bride and become an adopted son. A "Shin" of true race at Astor may live in concubinage with a girl of lower caste, but the

(i) Do not weep, O flower-like girl, thy complexion will turn pale!
(i) Thou wilt go on a lofty hill, O girl, thy complexion will turn pale.
(i) Thou wilt (by weeping) burn your heart, thy complexion will turn pale.

In Shinaki there is a custom called "Kao." If a young man has determined to marry a certain girl but her parents are not willing to give her to him, the young man either calls out in an assembly of the village headmen :—" The girl is mine, and I will perform 'Gao' if she is not given to me." Sometimes in order to assemble the people he fires a gun outside the village and utters the same words in the presence of those who collect ; or if he gets an opportunity he tears the girl's shirt slightly in the presence of some other men and says to her :—" You are mine." When this has been done, the parents are obliged to marry the girl to him, but they can demand from him whatever they like up to the limit of his means. If they marry the girl to anyone else, the young man will murder the girl as well as her husband as soon as he gets an opportunity.

## IV.

### The Ceremony of "Seeto-ai-Thaki" (Seat of Chastity).

887
831
796

This ceremony was performed for old women, who have been virtuous and chaste throughout their lives. These women were called "Seeto," and their descendants were very proud of them, so that on the occasion of family quarrels they used to say to the opposite party, "What have you to say to us? Our mother is "Seeto," while yours is not." To accomplish this rite, an elevated stone platform, about five yards each in length and breadth and a yard in height, was erected by the woman's nearest relatives. On the day appointed all her kinsmen came to the place, with a white she-goat as a sacred judge, to decide the fate of the old woman. The latter was clad in silk and placed on a bench. The eldest of the family bound a silk turban on his head, as well as on that of the goat, and, placing the goat before the bench with its face outward, addressed it in the following manner :—

"O thou white goat, if my daughter" (or whatever relative the woman was to the speaker) "has throughout her life lived an honest, virtuous and pious life and has remained clear of the sins and crimes of falsehood, theft, debauchery and treachery, be pleased to salute this bench for the sake of such a righteous and godly woman." In the case of a woman having led a blameless life, the goat by touching the bench approved her virtue. The assembled crowd then broke forth in cheers, and as an expression of their joy the relatives killed several goats and fed the people present. But if it happened otherwise, and the goat instead of performing what was considered an obeisance to the bench, ran round it bleating, then a great shame took hold of all the woman's kinsmen, and they ran away to their homes, never to speak to her again during the remainder of her life.

539 *Chorus* falls in with "*kai, kai, armán bulbúl*" = "oh, oh, the longing [for the] nightingale!"*

*Translation.*

After having discharged my usual religious duties in the early morning, I offer a prayer which, oh thou merciful God, accept from thy humble worshipper. [Then, thinking of his beloved.] Her teeth are as white as ivory, her body as graceful as a reed, her hair is like musk. My whole longing is towards you, oh sweet nightingale.

Chorus: Alas, how absorbing this longing for the nightingale.

8. GURAIZI SONGS.

184 This district used to be under Ahmad Shah of Skardo, and has since its conquest by Ghulab Singh come permanently under the Maharajah of Kashmir. Its possession used to be the apple of discord between the Nawabs of Astor and the Rajahs of Skardo. It appears never to have had a real Government of its own. The fertility of its valleys always invited invasion. Yet the people are of Shiná origin and appear much more manly than the other subjects of Kashmir. Their loyalty to that power is not much to be relied upon, but it is probable that with the great intermixture which has taken place between them and the Kashmiri Mussulmans for many years past, they will become equally demoralized. The old territory of Guraiz used in former days to extend up to Kuyam or Bandipur on the Wular Lake. The women are reputed to be very chaste, and Colonel Gardiner told me that the handsomest women in Kashmir came from that district. To me, however, they appeared to be tolerably plain, although rather innocent-looking, which may render them attractive, especially after one has seen the handsome, but sensual-looking, women of Kashmir. The people of Guraiz are certainly very dirty, but they are not so plain as the Chilásis. At Guraiz three languages are spoken: Kashmiri, Guraizi (a corruption of a Shiná dialect), and Pan-

## C. BIRTH CEREMONIES.

As soon as the child is born the father or the Mulla repeats the "Bâng" in his ear "Allah Akbar" (which an Astôri, of the name of Mirza Khan, said was never again repeated in one's life!). Three days after the reading of the "Bâng" or "Namáz" in Gilgit and seven days after that ceremony in Astor, a large company assembles in which the father or grandfather of the newborn gives him a name or the Mulla fixes on a name by putting his hand on some word in the Koran, which may serve the purpose or by getting somebody else to fix his hand at random on a passage or word in the Koran. Men and women assemble at that meeting. There appears to be no pardah whatsoever in Dardu land, and the women are remarkably chaste.* The little imitation of pardah amongst the Ranis of Gilgit was a mere fashion imported from elsewhere. Till the child receives a name the woman is declared impure for the seven days previous to the ceremony. In Gilgit 27 days are allowed to elapse till the woman is declared pure. Then the bed and clothes are washed and the woman is restored to the company of her husband and the visits of her friends. Men and women eat together everywhere in Dardu land. In Astôr, raw milk alone cannot be drunk together with a woman unless thereby it is intended that she should be a sister by faith and come within the prohibited degrees of relationship. When men drink of the same raw milk they thereby swear each other eternal friendship. In Gilgit this custom does not exist, but it will at once be perceived that much of what has been noted above belongs to Mussulman custom generally. When a son is born great rejoicings take place, and in Gilgit a musket is fired off by the father whilst the "Bâng" is being read.

* This is said to be no longer the case, except in [illegible] and not introduced. In [illegible] Yasin, and, [illegible] great. AVJ Dard AVJ

628 [illegible] permitted to wait for an indefinite period
amongst the Afghans, and after a time the parties are brought
674 together and made to swear peace on the Koran. The crime
of murder is rare, and the readiness to spill blood on slight
423 occasions so noticeable among the Afghans is unknown. No
public measure can be carried out except by general agree-
ment, the details being left for the Jushtoros to arrange.

171 The communities in the lower part of Shinkari, being more
exposed to Afghan influence, and having been longer con-
verted to Mahommedanism, have lost many of their character-
istic customs; but the remoter valleys of Chilas, Gor, Darel,
and in a lesser degree Tangir, are probably little changed from
• 334 what they were two hundred years ago. A very singular
custom exists in these valleys, by which the sexes are kept
strictly apart during the summer, from May till September.
The custom is apparently very ancient, and any attempt to
evade it is punished by fine; the old women of the family
165 being specially charged with the responsibility of seeing that
the rule is observed. Great difficulty is said to be expe-
rienced in rearing children in Chilas. The great mortality
among them is ascribed to the climate, but it is more pro-
bably due to too close intermarriage.

442 Agriculture is left entirely to the women, with the excep-
tion of ploughing, which demands more strength than they
can afford. In summer the men spin wool and attend to their
flocks on the mountain pastures; but in winter the duty of
caring for the herds is relegated to the women.

647 Slavery is a recognised institution in all the Shinkari
republics—a matter in which they contrast unfavourably with
the Afghans and Neemchas of the Indus Valley, among whom
it is unknown. Prisoners taken in war, and the children born
of slave parents, form the servile class.

AVS Dard AVS

his foster kindred accompany him. On the other hand, if he rises to influence, his foster-father is generally his most confidential adviser, and his foster-brothers are employed on the most important missions. 608

The custom of cementing friendship by the milk connection seems a favourite one. Should a woman dream that she has adopted any person as a son, or should any man dream that he has been adopted by a certain woman, the connection is carried out in the same way as the forced adoption before mentioned, and nobody would think of refusing to recognise it. The practice is now falling somewhat into disuse, but it was extremely common not many years ago. Milk from a woman's breast is esteemed a sovereign remedy for cataract and other eye-diseases. A resort to it also establishes the milk-tie for ever afterwards. [787] [757]

It is sometimes customary for a young couple, at the time of marriage, to induce a mutual friend to become their foster-father. The tie is ratified at the time of eating bread together. Bride and bridegroom being seated opposite to one another, the foster-father elect seats himself between them, and taking a piece of bread in each hand crosses his arms, observing to keep the right one uppermost, and puts the bread into their mouths. From that time he is regarded as their father.

The foster relationship is regarded as so close, that marriage between foster relations would be looked upon as incestuous, and, in spite of the precepts of the Koran, it would be impossible for a man to marry the widow of his foster-son. [735]

The formation of these ties is practised in a peculiar way among the Ashimadek clans of Chitral. It is customary for every infant to be suckled in turn by every nursing mother of the clan; consequently there is a constant interchange of infants going on among the mothers, for the purpose of strengthening tribal unity. [353]

The Shins are noted for their miserly habits, which they sometimes carry to great extremes. Every man has a secret hiding place in the mountains, where he conceals his money, metal pots, wife's jewels, and all his most valuable property. Occasional stealthy visits are paid to the treasure, which is never taken out for use except on festive occasions. No feeling of honour seems to exist as to the appropriation of another's treasure should it by chance be discovered, and frequent quarrels arise from this cause. Treasures are frequently lost altogether by the sudden death of the owner, 454 [815]

2: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

brother asks her if she consents to the marriage. In receiving, or imagining, an affirmative, he turns round to the Mulla, who after asking three times whether he, she and the bridegroom as well as all present are satisfied, reads the prayers and completes the ceremonial. Then some rice, boiled in milk, is brought in, of which the boy and the girl take a spoonful. They do not retire the first night, but grace the company with their presence. The people assembled then amuse themselves by hearing the musicians, eating, &c.

It appears to be the custom that a person leaves an entertainment whenever he likes, which is generally the case after he has eaten enough.

It must, however, not be imagined that the sexes are secluded from each other in Dardistan. Young people have continual opportunities of meeting each other in the fields at their work or at festive gatherings. Love declarations often take place on these occasions, but if any evil intention is perceived the seducer of a girl is punished by this savage, but virtuous, race with death. The Dards know and speak of the existence of "pure love," "pâk âshiqi." Their love songs show sufficiently that they are capable of a deeper, than mere sexual, feeling. 4 Adj Dard Adj
Burushe Adj

which would point to polygamy, and not to communal marriage, as an ancient institution in the Chitral Valley. In the Bushkarik language the terms point towards polyandry.

Cases of infidelity are extremely common, and the men show none of the jealousy of their wives usual in older Mahommedan communities. In cases of adultery the injured husband has the right to slay the guilty couple when he finds them together; but should he slay one and not the other, he is held guilty of murder. This practice is followed in Sirikol and Wakhan as well as south of the Hindoo Koosh. It is said that the Afghans of Swat, Dir, and Asmar take no notice of a wife's infidelity if, when it comes to their knowledge, they are able to disguise the knowledge from others; but should they learn it through a third person, a bloody vengeance is inflicted. In cases where conclusive proof is wanting, and which are brought for settlement before the ruler or Wuzeer, guarantee is taken for the future by the accused placing his lips to the woman's breast. She thenceforth is regarded as his foster-mother, and no other relations but those of mother and son can exist between them. So sacred is the tie thus established esteemed, that it has never been known to be broken, and the most jealous husband ceases to suspect even though a confession of previous guilt may have been made. In such a case a sheep and a toloo of gold are placed at the feet of the husband by the offender, who humbly sues for forgiveness.

It would appear that morals were more lax formerly than they are now. In Hunza, where the community approaches most nearly to its pre-Mahommedan state, infidelity is not regarded as an offence, and custom requires that a man shall place his wife at his guest's disposal, as in Hazara. The *droit de seigneur* was exercised by the father of the present ruler, and though the custom has been allowed to fall into disuse, it is evident from the accounts given of weekly orgies held by Ghazan Khan that the right is only held in abeyance and not formally renounced. In Nager things are but slightly better, and a man considers himself highly honoured if his wife attracts the attention of the Thum. Islam has not yet brought about the seclusion of the women, who mix freely with the men on all occasions. Young men and maidens of different families eat and converse together without restraint, and great liberty is allowed to young women, with frequent evil results. Infanticide arising from illicit connections is common, and is not considered a crime.

## C. BIRTH CEREMONIES.

As soon as the child is born the father or the Mulla repeats the "Bâng" in his ear "Allah Akbar" (which an Amîr, of the name of Mirza Khan, said was never again repeated in one's life!). Three days after the reading of the "Bâng" or "Namâz" in Gilgit and seven days after that ceremony in Astor, a large company assembles in which the father or grandfather of the newborn gives him a name or the Mulla fixes on a name by putting his hand on some word in the Koran, which may serve the purpose or by getting somebody else to fix his hand at random on a passage or word in the Koran. Men and women assemble at that meeting. There appears to be no purdah whatsoever in Dardu land, and the women are remarkably chaste.* The little imitation of purdah amongst the Ranis of Gilgit was a mere fashion imported from elsewhere. Till the child receives a name the woman is declared impure for the seven days previous to the ceremony. In Gilgit 27 days are allowed to elapse till the woman is declared pure. Then the bed and clothes are washed and the woman is restored to the company of her husband and the visits of her friends. Men and women eat together everywhere in Dardu land. In Astor, raw milk alone cannot be drunk together with a woman unless thereby it is intended that she should be a sister by faith and come within the prohibited degrees of relationship. When men drink of the same raw milk they thereby swear each other eternal friendship. In Gilgit this custom does not exist, but it will at once be perceived that much of what has been noted above belongs to Mussulman custom generally. When a son is born great rejoicings take place, and in Gilgit a musket is fired off by the father whilst the "Bâng" is being read.

* This is said to have been the case, except in those Dard republics, where foreigners have not yet interfered. In monarchical Yasin, and, above all, in Hunza, sexual laxity has ever been great. Where Sunni rulers have substituted dancing-boys for the dancing of men (formerly both men and women danced together), a worse evil has been introduced. A most unnatural relationship is the one created by the foster-mother. The linguistic portion of "The Hunza-Nagyr Handbook," as also of Parts I. and II. of "Dardistan" answers the questions of whether and where polygamy, endogamy, etc., existed among the Dards, who, in appearance and sentiment as regards women, as also in legendary lore, are very "European," but whom invasion will convert into strict Mahommedans and haters of the "Firenghi."

When a son is born great rejoicings take place, and in Gilgit a musket is fired off by the father whilst the "Bâng" is being read.

* This is said to be no longer the case, except in those Dard countries, where foreigners have not yet interfered. In accordance with pure, and, above all, in Hunza, women hardly have ever been seen. Where Sunni rulers have exercised dancing together the dancing of men (formerly both men and women danced together), a worse evil has been introduced. A new sexual relationship is the one created by the fancy-mother. The linguistic portion of "The Hunza Bagrot Handbook," as also of Parts I. and II. of "Dardistan," solves the questions of whether and where polygamy, endogamy, etc., existed among the Dards, who, in appearance and sentiment as regards women, as also in legendary lore, are very "Europæan," but whose progress will convert into strict Mohammedans and haters of the "Feringhi."

718 keep cool in Provision, who was a servant of everybody. On this the Vadia took "Tuna" to the well, and he came with him to the palm of the Vadia. The object was explained to him and he said that a bird called Garai Paran, who lived on the snows on the Lunsu Mountain, should be sent for at once. Provision was then sent the messenger, but on his arrival he found a mouse, whereupon Tuna was sent to him and he came to see Bajan Dhal and Vanta Hal Singh. Bajan Dhal saw one for a mouse which lived close to his home. When everything was ready the wall gave orders that Vanta Hal Singh should stand in water as a pillar upon which Garai Paran should spread his wings, while the mouse by the making a hole into the ice should bring out and spread all the soil over the wings of Garai Paran. The orders were obeyed and the wings of the bird covered all the water, while the mouse brought out all the soil which was beneath the water. In this way the earth was turned over the water.

X.°

"Shinku Bai" (Tree Bore Stone).

(17) 718 There used to be at Gilgit a blue stone called "Shinku Bai," about a yard square, where the present telegraph office is situated. No king was acknowledged in the country unless he had resorted to it and prostrated himself before the stone. There and then the people adorned his head with a crown, swore fealty and tendered their allegiance. This was the day when all the lower class would gather to see the son "Bai" perform all the ceremonies, and undergo all obligations considered necessary to the office of leader of the nation. This was done in order to secure their confidence by a man who was to become sole director over their destinies, among them being many who had taken an active part in bringing him to the throne and proclaiming him their chief.

When the ceremonies were over, all came one by one to kiss his hands, to receive his blessings and to bless him in return. They would then dance to the beating of drums, make merry, sing praises and recite poems describing the heroic deeds already performed by the Ra, his ancestors and others whose lives had become endeared to all by self-sacrifice in the cause of their country.

[719] The dasawi (soothsayer) was not left out on this occasion, for it was necessary to foretell the future of the king and his courtiers, and to exhibit the state of victory that accompanies prophecy by the soothsayer. Before being dismissed at night all present partook of a feast; some were gratified with handsome dresses and other distinctions; some gratified by a gesture of kindness.

The Custodian of Shinku Bai.

778 776 ● [illegible] 782 Shri Bai is the name of a goddess who, as the people say, lived on a rock at Nangam, a village in the Astore district. The rock too is called Shri Bai, and is always kept covered with branches of juniper, while an attendant called "Bab Bia" resides there to look after it. Barren women used to sacrifice goats to and pray before the sacred stone in the hope of progeny. In the hot weather, when the people had gathered their

---

* [illegible]

songs, the female population of the village proceeded to the Dirri in their best attire. They sang on their way, and when they reached their destination presented a goat to the "Bab Bin." She then threw up some small branches of the juniper in the air, and the women attempted to catch them before they fell to the ground. It was believed that a woman would be blessed with as many children as the branches she succeeded in catching. Descendants of the original "Bab Bin" still remain, but the ceremony is no longer observed.

A stone of this kind is also found at Barmas near Gilgit. The ceremony performed upon this stone was exactly the same as stated above, but it has a different name, viz. "Mullum."

## "Rato" or "Chilo."

At Parkuh, a village in the Bagrot valley, there are five small portions of land situated at the foot of a mountain and called Chato Rato, Shilo Rato, Sargun Rato, Chilo Rato and Thako Rato. In these tracts there are five very large boulders and five small stones, called respectively "Dee-ai Mama" and "Mee Sasiawa Kee" (i.e., stone for distributing flesh). Here the "Rato" ceremony, also called "Chil," used to be performed as follows. During the first six days of the ceremony, which lasted for seven days, the people were new and clean clothes, the sexes being separated and inhabiting different houses. On the seventh or the last day, all the people of the different communities or families of the village assembled separately and went to their respective "Ratos" with a goat and some young branches of the chili or *Juniperus macrocarpa*. These branches were placed upon the "Dee-ai Mama," and the blood of the goat which was now sacrificed was thrown on. The meat was placed on the "Mee Sasiawa Kee" and distributed among those present, who roasted and ate it at the same place. It was never given to any woman or to a man of any family other than that of "Rato." The shoulder-blade of the goat killed was then placed on a high stone and fixed on by northern amidst the noisy acclamations of the people, and a dance was held in honour of the sacred ceremony. After this the people assembled round the "Dee-ai-Mama," while the elders near present or the headmen of the village sat quite close to the stone and addressed it in the following manner: "O you-like Rato, O Shri Bagurtham, we have come to you to express our wants. We have no progeny; kindly endow us with children. We are destitute of money; kindly favour us with gold and silver. We are in want of grain; please supply us." In the same manner he related all their desires for cattle, clothes, goods, etc., while the other men followed him and expressed their assent to what he said by crying "Amen." The women of the village now appeared in their best attire, with some dry flour and small fat leaves. They threw the ash on the *chili* branches and prayed in the same manner for the fulfilling of their desires. The leaves were distributed among the men, who ate and rejoiced. As usual places the women were strictly prohibited from going near the Rato stone. This ceremony was performed and known by the same name throughout the whole of Gilgit, but its stones of different names, so that the stones at Darashi and Bubin were called "Aja Bin," at Sherkot "Shri Bin," at Gilgit and Danyore "Rato-dandam," and at Nomgam "Shri Bin." The

In Gor, rings are exchanged at marriage. In the ruling families of Hunza and Nagar, it is the custom, when a daughter is married, for the bridegroom to present her at betrothal with a gold and silver needle. In Yasin, when, as not unfrequently happens, the bridegroom is too poor to pay the required price, the young couple elope, with the consent of the bride's parents. At the end of ten days the bridegroom comes to them and asks forgiveness, promising to pay the required sum by degrees. A little scene is acted, forgiveness is granted, the neighbours are summoned to the feast which has been already prepared, and the wedding is celebrated. This is to save the credit of the bride's family in not having received a sufficient price for her.

The old marriage barriers between the castes are beginning to be broken down under the levelling influence of Mahommedanism, and in a few generations will probably disappear altogether. The birth of a son is always a matter of general rejoicing. The friends of the happy father at once make it an excuse to stop work for the day, and seizing their matchlocks keep up a general *feu-de-joie* till their powder flasks are empty. The village band is summoned, and dancing kept up round the door for the rest of the day. No notice is taken of the birth of daughters. In the Otuo Valley and in Sirikol, when a son is born, all the father's friends hang their weapons on the walls of his house, so as to accustom the infant to martial sights. After seven days the weapons are returned to the owners, except those belonging to near relations, who receive special presents in exchange.

After the birth of a child a woman is esteemed unclean, and no one will eat from her hand for seven days. North of the Hindoo Koosh this period is extended to forty days, and for the first seven the infant is not allowed to suckle its mother.

I have elsewhere discussed the old custom of disposing of the dead by burning. Now the common form of Mussulman interment is used. A small flat slab of earth about two feet long is neatly plastered over the graves, and a light is kept burning at night by newly-made graves, under the pretence of keeping away wild beasts till the earth has hardened; but, as Mr. Drew has remarked, this is more probably a relic of the old practice of cremation. No attention or care is paid to old graves, which constantly present a most unpleasant appearance, owing to the falling-in of the arched roof. I remarked in Sirikol the same want of attention to old graves

## C. BIRTH CEREMONIES.

As soon as the child is born the father or the Mulla repeats the "Bâng" in his ear. "Allah Akbar" (which an Astôri, of the name of Mirza Khan, said was never again repeated in one's life). Three days after the reading of the "Bâng" or "Nakâi" in Gilgit and seven days after that ceremony in Astor a large company assembles in which the father or grandfather of the newborn gives him a name or the Mulla fixes on a name by putting his hand on some word in the Koran, (both may serve the purpose or by getting somebody else to fix his hand at random on a passage or word in the Koran. Men and women assemble at that meeting. There appears to be no purdah whatsoever in Dardu land, and the women are remarkably chaste.* The little imitation of purdah amongst the Ranis of Gilgit was a mere fashion imported from elsewhere. Till the child receives a name the woman is declared impure for the seven days previous to the ceremony. In Gilgit 07 days are allowed to elapse till the woman is declared pure. Then the bed and clothes are washed and the woman is restored to the company of her husband and the visits of her friends. Men and women eat together everywhere in Dardu land. In Astôr, raw milk alone cannot be drunk together with a woman unless thereby it is intended that she should be a sister by faith and come within the prohibited degrees of relationship. When men drink of the same raw milk they thereby swear each other eternal friendship. In Gilgit this custom does not exist, but it will at once be perceived that much of what has been noted above belongs to Mussulman custom generally. When a son is born great rejoicings take place, and in Gilgit a musket is fired off by the father whilst the "Bâng" is being read.

* This is said to be no longer the case, except in those Dard republics, where foreigners have not yet introduced. In monarchical Yasin, and, elsewhere, in Hunza, several lately have even learnt from Sunni rulers have substituted dancing together (the dancing of men (formerly of women danced together), a worse evil has been introduced. A most sacred bath men ... in the one created by the female member. The linguistic portion of "The relationship ... Handbook," as also of Parts I. and II. of "Dardistan," answer the questions Hunza-Na... and where polygamy, endogamy, etc., existed among the Dards, who, in appear- of whether ... ment as regards women, as also in legendary lore, are very "European," ance and ... women will convert into great Mohammedans and haters of the "Firenghi," but whom

In Lankester L-3 (1920-24) 1929 AV3 Dent AV3

what the Peris say. We communicate it in songs to the people.' If the Deity[1] sees anyone wearing green clothes he gets angry. The reason for this is that the peris wear green clothes, they say, and therefore if any earthly being puts on green clothing the peris become angry and do him injury."

The attitude of the Peris towards ordinary mortals cannot be described as cordial or benevolent. For instance: "They say that if anyone goes to the desert at midday the peris will snatch at his eyes and make him blind."

If a new house proves to be poor or unlucky it may be due to the adverse influence of a Peri[n]. Again: "When a woman, all of whose children have died, gives birth to a child the mother cuts the umbilical cord and licks the blood that comes from it. The reason for this is that over every woman there is a Peri woman. The Peri woman says, 'Now that this woman has drunk the blood of her child she will never do me any good,' and fearing the woman the Peri clears out."

How the reluctance to relinquish power over a human being indicates how such power is prized. Various methods are employed to obtain it even to the point of stealing or carrying off children or adults. In this we have an important resemblance between the Peris and the fairies of the West. The following notes are relevant in this connection: "A *dewijo mai* (i.e. 'outside mother') is a fairy in the jungle who gives milk to a child and rears it. When the boy grows up he is a good mountaineer." In one known case the peri-fostering says he only sees his Peri mother when he is alone.

"Ten or more years ago (i.e. counting from 1922) a boy was carried off by the Peris from *Nápur*. His clothes were found on the hills but he has never returned again."

One of the grooms of the Assistant Political Agent, Chilka, made the following statement: "Every day (i.e. always) at the (end of the) dark period of the moon the peris carry me off. I see them and they see me. They say to me, 'You stay with us and we'll look after you well. If you don't

St Lorimer L-S (1929-34) 1929 AVS Dard AVS

weakness he does come to her, she recovers and he in his turn dies. 959

When the Rā.i succeeds in her attack she flies off with the victim to the Rā.is' meeting-place. Rā.is fly mounted on leaves or on spinning-wheels. They are debarred from the use of the broomstick, for that is an implement of Western civilization unknown in Gilgit. The victim is carried along in a sheet. As it is stated that at certain places Rā.is are sometimes *heard* flying through the air, one may conclude that they are not visible when they fly and that they conduct their revels in spiritual, immaterial forms and not in their everyday fleshly bodies. Similarly with the victim, for his bodily presence remains to all appearance safe in his home. What the Rā.i secures is only some spiritualized, but still edible, presentation of him.

A Rā.i in action has to look where she is going and to mind her steps, for if her foot touches water or a graveyard she can proceed no further.

When the victim has been safely conveyed to the place of assembly where all the Rā.is of the district are collected, it simply remains to chop him up and distribute him in fragments to the company. The chopping-up is effected with an adze. Hence, incidentally, the adze has acquired [544] a taste for human flesh and is a dangerous house-mate for a woman at child-birth as it is apt to go and open the door to give admittance to Dā.ūs, Peris, and Rā.is (*cp.* 317).

No time is wasted on cooking or dressing the flesh, for the Rā.i likes her meat raw. Nor does dancing, so far as my information goes, enter into the order of the day. This is curious in view of the procedure at the Sabbats of the Western Witches and the popularity of dancing on festive occasions in Gilgit at the present day.

I have mentioned physical obstacles which may intervene between the Rā.i and the indulgence of her tastes, but she has other more active interference to reckon with.

There are two kinds of human Arri-Rā.i, whose business

The most curious custom which seems to
permeate these countries is to foster relationship in nursing, where 853
a nurse and all her relations come not only within the prohibited 608
degrees, which is against the spirit of Muhammedanism, but also create the only real bond of true attachment that I have seen in Dardistan, where other relatives seemed always engaged in murdering one another.

Nearly all the chiefs in Dardistan give their children to persons of low degree to nurse, and these and the children of the nurse become attached to them throughout life and are their only friends. But this foster-relationship is also taken in order 609
to get rid of the consequences, say, of crime; for instance, in the case of adultery, or supposed adultery, the suspected person who declares that he enters into the relationship of a son to the woman with whom he is suspected, after a certain penalty, is really accepted in that position, and the trust is in no case betrayed. It is the only kind of forgiveness which is given in [564]
Dardistan generally to that sort of transgression; but, further than that, drinking milk with some one, or appointing some one as foster-father, which is done by crossing two vases of milk, creates the same relationship, except amongst the noble caste of Shins, who were expelled by the Brahmins from India or Kashmir, and who hold the cow in abhorence as one of their religious dogmas, whereas, in other ways, they are really Brahmins, among whom we find Hinduism peeping out through the thin crust of Muhammedanism.

The subject of caste, by the way, is also one which is generally 000
misunderstood, and which, if developed on Christian lines, would give us the perfection of human society, and solve many of the problems with which we are dealing in Europe in more advanced civilisations. I have just read with concern some remarks against caste by Sir John Petheram, who has been in India some three or four years. I think that before people speak on subjects of such intricacy, they should take the position of students of the question, learn at least one of the classical and one of the vernacular languages of India, and then alone assume the role of teachers whilst continuing to be learners; even in regard to such subjects of infant-marriage and the prohibition of widow remarriage, there is a side of the question which has not yet been put sufficiently before the British public. Infant-marriage, when

his foster kindred accompany him. On the other hand, if he rises to influence, his foster-father is generally his most confidential adviser, and his foster-brothers are employed on the most important missions. 608

The custom of cementing friendship by the milk connection seems a favourite one. Should a woman dream that she has adopted any person as a son, or should any man dream that he has been adopted by a certain woman, the connection is carried out in the same way as the forced adoption before mentioned, and nobody would think of refusing to recognise it. The practice is now falling somewhat into disuse, but it was extremely common not many years ago. Milk from a woman's breast is esteemed a sovereign remedy for cataract and other eye-diseases. A resort to it also establishes the milk-tie for ever afterwards. [787] [757]

It is sometimes customary for a young couple, at the time of marriage, to induce a mutual friend to become their foster-father. The tie is ratified at the time of eating bread together. Bride and bridegroom being seated opposite to one another, the foster-father elect seats himself between them, and taking a piece of bread in each hand crosses his arms, observing to keep the right one uppermost, and puts the bread into their mouths. From that time he is regarded as their father.

The foster relationship is regarded as so close, that marriage between foster relations would be looked upon as incestuous, and, in spite of the precepts of the Koran, it would be impossible for a man to marry the widow of his foster-son. [835]

The formation of these ties is practised in a peculiar way among the Ashimadek clans of Chitral. It is customary for every infant to be suckled in turn by every nursing mother of the clan; consequently there is a constant interchange of infants going on among the mothers, for the purpose of strengthening tribal unity. [953]

The Shins are noted for their miserly habits, which they sometimes carry to great extremes. Every man has a secret hiding place in the mountains, where he conceals his money, metal pots, wife's jewels, and all his most valuable property. Occasional stealthy visits are paid to the treasure, which is never taken out for use except on festive occasions. No feeling of honour seems to exist as to the appropriation of another's treasure should it by chance be discovered, and frequent quarrels arise from this cause. Treasures are frequently lost altogether by the sudden death of the owner, 454 [685]

for many years a slave in Chilás, as Ahmad Shah reports). The Gabriális were converted to Muhammadanism by a saint named *Bábáji*, whose shrine is in Gabriál, and is one of the most frequented places by pilgrims. The Gabriális say that this saint lived six or seven generations ago. Mir Abdulla (who is really of Afghanistan, but now lives in Gabriál,) says that the Gabriális were converted to Islám about 150 years ago. Lately, this religion has made great progress among the people of Kandiá generally. Every little village has a mosque, and in most of the towns there are numerous mosques with schools attached to them, which are generally crowded by students from every caste. In Gabriál, the Mullahs or priests are, for the most part, of the Shín caste, but men of every caste are zealous in giving education to their sons. Their education is limited to Muhammadan law (of the Hanifite school), and Arabian logic and philosophy. Very little attention is paid to Arabic or Persian general literature and caligraphy, that great Oriental art; so little, indeed, that Harifullah and Mir Abdulla, who are scholars of a very high standard, are wholly ignorant of any of the caligraphic forms, and their handwriting is scarcely better than that of the lowest primary class boys in the schools of the Punjab.

The most accomplished scholar in Kandiá is the high priest and chief of Patan, named Hazrat Ali, who is a Shín.

The people generally are peaceful, and have a fair complexion and erect bearing. Their social and moral status has lately been raised very high. Robbery and adultery are almost unknown, and the usual punishment for these crimes is death. Divorce is seldom practised; polygamy is not rare among the rich men (wadán), but is seldom found among the common people.

GOVERNMENT.—Every village or town is governed by a Council of elders, chosen from among every tribe or "taffa." The most influential man among these elders for the time being is considered as the chief of the Council. These elders are either Shíns or Yashkun. No Kamín can be elected an elder, though he may become a Mullá, but a Mulla-kamín also cannot be admitted to the Council.

The reigning Council of Gabriál consists of 12 persons, of whom 9 are Shíns and 3 Yashkuns. Patshé Khân is the present chief of the Council. The post of Chief of the Council is not hereditary, but the wisest and the most influential of the elders is elected to that post. Justice is administered by the Mullahs without the interference of the Council, whose operation is limited to inter-tribal feuds.

CUSTOMS AND MANNERS.—Hockey on horseback, which is called "lughât" in Gabriál, is played on holidays; and the place where they meet for the sport is called "lughât-kárin-jha."

Guns are called "nâli" in Gabriál, and are manufactured in the town by blacksmiths.

Dancing is not practised generally, as in the other Shín countries. Only "Doms" dance and sing, as this is their profession; they play on the "surúi" (pipe), rabáb (harp), and shando (drum).

The "purdá" system, or "veiling" women, is prevalent among the gentry, but it is only lately that the system was introduced into this country.

585 539 Translation :—

(1) Do not weep, O flower-like girl, thy complexion will turn pale!
(2) Thou wilt go on a lofty hill, O girl, thy complexion will turn pale.
(3) Thou wilt (by weeping) burn your heart, thy complexion will turn pale.

In Shinaki there is a custom called "Kao." If a young man has determined to marry a certain girl but her parents are not willing to give her to him, the young man either calls out in an assembly of the village headmen:—"The girl is mine, and I will perform 'Kao' if she is not given to me." Sometimes in order to assemble the people he fires a gun outside the village and utters the same words in the presence of those who collect; or if he gets an opportunity he tears the girl's shirt slightly in the presence of some other men and says to her:—"You are mine." When this has been done, the parents are obliged to marry the girl to him, but they can demand from him whatever they like up to the limit of his means. If they marry the girl to anyone else, the young man will murder the girl as well as her husband as soon as he gets an opportunity. [682]

## IV.

### The Ceremony of "Seelo-ai-Thali" (Seat of Chastity).

887 831 791 This ceremony was performed for old women, who have been virtuous and chaste throughout their lives. These women were called "Seelo," and their descendants were very proud of them, so that on the occasion of family quarrels they used to say to the opposite party, "What have you to say to us? Our mother is "Seelo," while yours is not." To accomplish this rite, an elevated stone platform, about five yards each in length and breadth and a yard in height, was erected by the woman's nearest relatives. On the day appointed all her kinsmen came to the place, with a white she-goat as a sacred judge, to decide the fate of the old woman. The latter was clad in silk and placed on a bench. The eldest of the family bound a silk turban on his head, as well as on that of the goat; and, placing the goat below the bench with its face westward, addressed it in the following manner:—

"O thou white goat, if my daughter" (or whatever relative the woman was to the speaker) "has throughout her life lived an honest, virtuous and pious life and has remained clear of the sins and crimes of falsehood, theft, debauchery and treachery, be pleased to salute this bench for the sake of such a righteous and godly woman." In the case of the woman having led a blameless life, the goat by touching the bench approved her virtue. The assembled crowd then broke forth in cheers, and as an expression of their joy the relatives killed several goats and fed the people present. But if it happened otherwise, and the goat instead of performing what was considered an obeisance to the bench, ran round it bleating, then a great shame took hold of all the woman's kinsmen, and they ran away to their homes, never to speak to her again during the remainder of her life.

1: Leitner L-3 (1866-93) 1893? AV3 Dard AV3

A HOOKA.

539 5. *G. méy* DADI *shishédji agár, lúpenu*
my father's mother on her head fire is burning.

The top of the Hooka is the *dadi's* or grandmother's head.

A SWORD.

6. *Tutâng gotéjo rúi nikai*

"Darkness from the house the female demon is coming out," viz., "out of the dark sheath the beautiful, but destructive, steel issues." It is remarkable that the female Yatsh should be called "Rûi."

RED PEPPER.

7. *Lólo bakuró shé tshá lá há—búja !*

In the red sheep's pen white young ones many are—attend !

This refers to the Redpepper husk in which there are many white seeds.

## B. PROVERBS.

DOTAGE.

To an old man people say:

8. *Tú djarro môto shúdung* { "You are old and have thou and old brains delivered, { got rid of your senses."

[889] Old women are very much dreaded and are accused of creating mischief wherever they go.

DUTIES TO THE AGED.

9. (*G.**) *Djuwanie keneru digasus, djarvelo betshumus*
In youth's time I gave, in old age I demand

"When young I gave away, now that I am old you should support me."

A BURNT CHILD, ETC., ETC.

10. *Ek damm agáru dáddo dugúni shang thé !*

Once in fire you have been burnt, a second time take care !

EVIL COMMUNICATIONS, ETC., ETC.

11. *Ek khatsh látshek bilo búdo donate she.*

One bad sheep if there be, to the whole flock is an insult = One rotten sheep spoils the whole flock.

12. *Ek khatsho manújo budote sha* = *one* bad man is to *all* an insult.

* The abbreviations "G." and "A." stand respectively for "in the Gilgiti dialect" and "in the Astori dialect."
